It would be one of the greatest tragedies in the history of America if this country should, in an attempt to avoid responsibility at the local level, turn to federalized education. Basically, education fosters and encourages individual thinking and investigation. It is not an assembly line process in which the same models should be turned out.

Education is a local responsibility, and must be tailored to fit the needs of the community and the individual student. Federalized education would only complicate these needs.

[From the Greenville (S.C.) News, July 7, 1959]

EDUCATION IS CHEAPER THIS WAY

The advocates of Federal aid for education just won't give up, despite the many contradictions in their position. The bureaucrats in the Federal Government and the National Education Association are determined to entrench themselves and expand their power.

The theory on which Federal aid is based is that it would tax the wealthier States to assist in educating the children in the poorer States.

But comes now a University of Chicago professor who has made a study of the situation and finds that the wealthier States are the ones whose education facilities are farthest behind.

As has been said so many times before by so many persons, if a relatively poor State like South Carolina can lift its public school system to the level it is beginning to reach, then all of the other States can do likewise.

The self-styled liberals have come to look on Federal aid as a cure-all for any deficiency or any evil. It is not. Quite the contrary.

It has become trite through repetition, but it seems that it has to be repeated again and again. The Federal Government has to go to the same source for tax dollars that the State and local governments must tap to meet their needs. And Federal aid dollars are the most expensive kind. By the time a tax dollar is extracted from the pocket of the taxpayer and is returned in the form of Federal aid, it is sadly depleted.

For instance, a year or so ago the Congress enacted a law establishing a form of Federal aid to higher education, mainly to stimulate study in the sciences. It was a relatively small program, but, immediately, the agency in charge hired over 600 persons to administer the program.

And that is only a sample of what would happen if the Federal Government adopted a program calling for billions instead of millions.

If the advocates of Federal aid had worked as hard to increase State and local support of the schools as they have to put over their program, the need would already have been met in the best way that it can be met.

The true friends of public education are those who are working at the State and local level to increase State and local funds for the support of public schools and State institutions of higher learning.

As for the private colleges, individuals and corporations will find it far cheaper to make voluntary contributions for the support of higher learning than to submit to the taxation that will result from a large-scale Federal program for the same purpose.

[From the Greenville (S.C.) News, July 6, 1959]

WELFARE STATERS STILL CONTROL NEA

The results of the annual convention of the National Education Association clearly indicate that the group is still controlled by a professional clique dedicated to a powerful Central Government and the welfare state.

Even the rejection of a statement flatly endorsing racial integration—an important byproduct of the welfare state—seemed to be an act of expediency rather than conviction.

The association voted overwhelmingly to increase its lobbying activities in behalf of Federal aid to education. It called for a letter writing campaign supporting the Murray-Metcalf bill to provide Federal grants for school construction and teachers' salaries.

The professionals who run NEA have apparently succeeded in persuading a majority of its members (certainly a majority of those who are able to attend its conventions) that only a vast outpouring of dollars from the Federal Government can save education in the United States.

But to save it in this manner is really to destroy it. No matter how often the NEA's leadership proclaims the theory that it is possible to have Federal aid without Federal control, they have yet to point to one major field in which this miracle has been performed.

The professionals in the NEA hierarchy are not concerned with the threat of Federal controls. What they want is power. Under a system of local control and local supervision, this is denied them. But if authority is moved to Washington, these petty tyrants will have vastly increased their strength locally.

One commonsense note in the proceedings was sounded by a delegate from Virginia. Said Harold Bell of Harrisonburg:

"To me it seems incongruous to send $1 to Washington to get 60 cents back."

Unfortunately, Mr. Bell's warning went unheeded. The NEA is still convinced that, somehow, Federal money is unlike any other kind; that because it comes from everywhere it really comes from nowhere, and thoughts of ultimate cost need not disturb anyone.

The fact, of course, is that Federal money is just like any other and that, if the lack of money is really the root of America's educational troubles, it can be raised more easily at the local level than at the national.

But, because the NEA's leaders are more concerned with building their own empires than with solving the problems of education, this fact is ignored. They have tied their fate in with the centralized state and they are not yet ready to give up.

Their kinship with the liberal school of politics is again demonstrated by their action on the question of racial integration in public schools. The delegates did not reject the idea of endorsing integration outright. Instead they readopted last year's statement which called on the people to approach the problem in a "spirit of fair play, good will, and respect for law."

On its face, this seems innocuous enough. But to many of the Northern NEA "law" is defined as the decrees of the Supreme Court. Where that leaves the southern delegates is difficult to say.

More revealing than this, however, is the behind-the-scenes maneuvering as reported by the Associated Press. Said the AP:

"Ever since the convention opened last Sunday, officials of the 635,000-member organization have been pleading with the delegates not to take a stand on integration which might be resented in the South and hamper the effectiveness of the organization."

The AP report is evidence that the sentiments of the officials are not with the South. Instead the southern members are being catered to momentarily, like bad children with rich parents.

Behind this mask of friendliness lies the true sentiments of the officialdom of NEA. If their goal of massive Federal aid is attained, it may be expected that the mask will be dropped. With the tool of Federal control in their hands, they will then be able to put into practice their real convictions on the question of racial separation.

Kenosha, Wis.: Boom Town

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. WILEY. Mr. President, we recognize that the economic problems still confronting the Nation deserve our serious consideration.

Unfortunately, there are still pockets of unemployment, business lags, and other problems.

Today, however, I would like to call attention to a great city—Kenosha, Wis.—that, in the midst of our national problems, is experiencing a kind of boom.

How did this happen?

The bright economic outlook for Kenosha is largely the result of foresighted planning in the best tradition of our free enterprise system.

Particularly, the American Motors Corp. has been the main wellspring of new economic health for Kenosha and the surrounding community.

We recall that in recent years, the general trend has been toward production of bigger and bigger cars—at higher

and higher prices to the consumers. However, the budget of the American family—as we all know—has its limits.

By an accurate reading of the "handwriting on the wall," American Motors Corp. has created a smaller, economy car to meet the needs of the auto-driving public.

The result has been improved prospects for industry and the community; and the availability of a car that serves the transportation, as well as the budget needs, of the American family. Significantly, the economic upturn in Kenosha includes: an increase of 5,000 jobs in the last 12 months; stepped up business activity throughout the community; and generally better living for the citizens of Kenosha.

I want to make it clear that—even though I have real respect for the ingenuity of the officials and workers of American Motors—I am not here plugging a car; rather, I am commending a principle of "free enterprise in action" that is serving consumers in Wisconsin and the country.

Recently, the New York Times carried a detailed article on the boom in Kenosha. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECORD OUTPUT RATE FOR RAMBLER CARS SPARKS UPTURN

(By Austin C. Wehrwein)

KENOSHA, WIS., July 4.—This middle-size Wisconsin lake port city is riding the crest of a small—or, as they insist here the compact—car craze.

The only unhappy voices are those of some merchants who complain tongue-in-cheek, hand-on-the-cash-register:

The auto workers don't get enough time off to spend their money.

To help the workers solve this problem the stores stay open now on Mondays as well as on Friday nights. But time is indeed scarcer than money.

THREE SHIFTS COMMON

The American Motors Corp., the city's largest employer and the cause of it all, is running assembly lines 6 days a week, double shift. Other departments go 'round the clock to keep production lines supplied, so that 65 percent of the work force is in three-shift, 6-day-a-week departments.

But it's not all work. The Tyson brothers, Robert and Eugene, are doing a thriving business at their sporting goods store in all lines, from bar bells to boats.

"It's surprising," Eugene Tyson said, "how many men walk in here in work clothes and buy golf clubs."

A union official said: "Everybody seems happy."

American Motors is making 1,635 Rambler cars a day, a record high. Its present schedule calls for a model-year output of 376,087, or 210,704 more than in the first schedule set up a year ago.

This compared with a low of 250 a day in June 1954, and 73,393 in all of 1954.

Employment in the last 12 months has risen by 5,000 jobs to more than 12,000, also a new high—higher than in World War II. The company recently invested $5 million to increase capacity.

Only a year ago, Kenosha was still classed as a place with critical unemployment, with 7½ percent of its working force out of work.

Today the unemployment compensation office is deserted, and other businesses find it almost impossible to get extra help. Even maids are scarce.

The 1950 Federal census found 54,800 people in Kenosha. The population is now estimated at 62,000, not counting heavy growth in environs.

The influx of new people has created a housing shortage, too. But the city's new Rambler prosperity has created fresh optimism.

"We're thinking bigger," Mayor Eugene R. Hammond said. "We're planning for the future on the basis that we're going to grow. We're moving away from conservative type of thinking."

George Epstein, owner of Bell Clothing, a leading store, summed it up this way:

"A few years ago there was fear that American Motors was dying. But they have gone from the bottom of the bottom to the top of the top. It's wonderful to be on a winning team."

BUSINESS UP 20 TO 30 PERCENT

Mr. Epstein said that business was up 20 to 30 percent from year ago levels, and added: "People are buying in a lighthearted vein."

In line with this, the Tyson Bros. noted a marked increase in quality bicycle sales. Parents, it seemed, were doing something for their children, too. Two other signs of Rambler prosperity: more foreign sports cars and a booming market for power lawn mowers.

Spot interviews with men and women on the line and with the officers of United Auto Workers Local 72 indicated there was a fierce pride in the product.

"We are definitely trying to get as much production as possible," Leo Downing, local 72 president, said. "We're going to make the big three (Ford Motor Co., General Motors Corp., Chrysler Corp.) compete. We're going to make them hustle."

The union, at its own expense, has set up a committee to urge the United Automobile Workers, State and local governmental units to buy American Motors' cars.

And it tell its members: "You earn your bread and butter here—buy the product.

"Any car produced off the end of the production line could be our own—the cars we make could be our own," George Nordstrom, local 72 vice president, declared. Heads nodded in agreement around the conference table at union headquarters.

With all the fervor of a sales manager, the union men said that the American Motors' cars were the best on the market.

In a separate interview, a former local president, Jack Beni, declared that the morale is the plant was at its highest point.

To beef up its payroll the company didn't go far afield to recruit help. And its careful screening of applicants has, according to the Mayor, enabled the city to absorb the thousands of workers arriving here without any increase in crime or other social problems.

Most of the new people come from Wisconsin, some commuting long distances.

There is a romantic sidelight resulting from the employment of small-town lads from Northern Wisconsin. They get lonesome for their girls, and on the old principle that absence makes the heart grow fonder, have sharply increased for engagement and wedding-ring business at local jewelry stores.

While the bulk of the new people come from Wisconsin, some 400 have migrated from the Michigan auto centers. Jack R. Bell, 29, a native of West Virginia, used to work in the Flint Buick plant. After being out of work for 6 months in 1957, for 9 months last year, and 4 months this year, he came here and found work in the body plant. His take-home pay is $109 a week.

Michael Morris, 22, worked in a Detroit filling station after he got out of the Marines. Then when it went out of business, he was out of a job a year. Now he makes nearly $100 a week take-home pay.

A woman production line worker, Mrs. Florence Koessl, the mother of five children and whose husband is a fireman, said the family's extra cash above savings was going into a new garage. Lyle Krahn, a 29-year-old inspector, who was laid off in 1953 and 1954, but who now has take-home pay of $112 a week, said he had confidence in the company's future and was building a home.

William Thurn, president of the First National Bank, also reported savings deposits up—about 10 percent above last year's.

R. F. Kingsley, editor and publisher of the Kenosha Evening News and president of the Kenosha Savings and Loan Association, reported a better than three-fold increase in applications for home loans.

Milton Wittenberg, secretary of the Chamber of Commerce, noted that in May 1958, Kenosha had 24,000 wage and salaried workers. This May there were 31,000.

Factory production payrolls in May 1958 covered 14,300 jobs, a figure that rose in a year to 20,200.

He reported smaller but similar gains in wholesale and retail and transportation jobs.

The St. Lawrence Seaway is bringing in new business. Perhaps ironically the Ford Motor Co. has selected Kenosha as its Midwest port of entry for its imported small English cars.

World Refugee Year Represents Challenge to Our Humanity

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. NEUBERGER. Mr. President, the price of war and violent political change is human suffering. Many pay who were only bystanders to the actual conflict.

Today 15 million persons are homeless and without economic security as a result of war or force during the last two decades. The current World Refugee Year was proclaimed to draw attention to the plight of these people and help to find new homes for them. The United States is a participant in this worthy endeavor. The Oregon Journal, a daily newspaper in Portland, Oreg., has correctly described the effort as a challenge to our humanity. I endorse the view of the Journal and ask unanimous consent that the paper's able editorial of July 10, 1959, expressing this belief be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, July 10, 1959]

CHALLENGE TO OUR HUMANITY

Governments and private agencies, both religious and sectarian, have been working at the refugee problem ever since the end of World War II, but there are still some 15 million persons who have been cut loose from their homes and who need some kind of resettlement.

By far the greater part of these, an estimated 13,400,000 have fled from behind the Iron Curtain, most of them from East to West Germany. New groups of refugees include 180,000 Algerians driven into Tunisia by the French Army and some 15,000 Tibetans who fled from the Chinese Reds.

In refugee camps in several Arab countries nearly 1 million persons are living on United Nations relief. They are the Palestinians, or their children, who were displaced as a result of the Arab-Israeli war in 1948. Their number has increased rapidly through births.

The enormity of this total problem, a challenge to mankind's better instincts, has caused 52 nations to band together, under auspices of the United Nations, in observance of a World Refugee Year, just started.

It has been endorsed by major religious groups. The World Council of Churches, which includes 173 Protestant, Anglican, and Orthodox churches in the 52 countries, has declared that "the refugee and his family have, for more than a decade, been a challenge to our compassion, and must be a first call on the ministry of those whose Lord had nowhere to lay His head."

Pope John XXIII has broadcast an appeal to all Roman Catholics to aid those unfortunate brothers uprooted by war or political change and appealed to governments to open up their frontiers "more generously and speedily" to help resettle these distressed people.

Dag Hammarskjold, U.N. Secretary-General, recently proposed a plan to encourage the absorption of Arab refugees into Middle Eastern life, but this runs counter to Arab insistence that they be returned to Israel, a course which appears to any objective observer not to be feasible. It seems obvious, at least, that aid from the United Nations relief and works agency, which is keeping these people alive, will have to be renewed when it runs out in June 1960.

Throughout World Refugee Year there will be an attempt to coordinate government and private efforts to find new homes for displaced peoples. Many governments are taking a really serious look at this problem. In Britain, Queen Elizabeth II heads the special Refugee Year committee. President Eisenhower has proclaimed the observance in this country.

It is hard for the rank-and-file American, beset by problems much closer home, to work up sympathy for these faceless masses in other countries. But they are people, too, and their plight is a reproach to our civilization. One may pray that the extra effort being put forth this year will mean the rekindling of hope and the rebuilding of lives among a substantial number of these homeless millions.

A Tribute to President Ngo Dinh Diem of Vietnam

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. ZABLOCKI. Mr. Speaker, the New York Times of July 7, 1959, contained a noteworthy editorial which paid personal tribute to President Ngo Dinh Diem of Vietnam. I fully concur with the views so aptly and emphatically expressed in the editorial, and I would like to include it in the RECORD.

I feel that this is an appropriate occasion to record in the RECORD the part which a number of Members of Congress played in helping President Diem to achieve what he has done in his country.

It was during the critical moments when the Republic of Vietnam was beginning to make headway in face of Communist aggression and considerable dissension within, that a word reached us indicating that some people in the administration were advocating the withdrawal of our country's support of President Diem.

A number of members of the Committee on Foreign Affairs, including the Honorable Edna F. Kelly, Hon. Wayne L. Hays, Hon. John Vorys, Hon. Walter Judd, Hon. Marguerite Stitt Church, and myself, met immediately in Congresswoman KELLY'S office to review the situation in Vietnam and the information which was made available to us.

On the basis of that information, we took prompt steps in emphatically urging the administration to continue to support President Ngo Dinh Diem. Fortunately that policy was carried out, and today Vietnam remains within the free world. President Diem consolidated the democratic forces in his country, established sound government, and advanced the cause of freedom in that vital area of the world.

I am certain that other individuals took a position similar to ours, and share in the satisfaction that their efforts aided a just and honorable cause.

I believe that special tribute is due to Walter Robertson, the then Assistant Secretary of State for Far Eastern Affairs, and to the late Secretary of State, John Foster Dulles, who felt as we did and who carried out our viewpoint.

There is no doubt in my mind that all who understood the early trials and difficulties of the Government of Vietnam join in extending sincere congratulations to President Ngo Dinh Diem on the fifth anniversary of his leadership and, through him, to his nation.

The editorial follows:

[From the New York Times, July 7, 1959]

ANNIVERSARY IN VIETNAM

Five years ago today Ngo Dinh Diem took over as chief of state of the Republic of Vietnam. He seemed to be a shy, retiring sort of person, nonpolitical in his background and deeply religious by conviction. He took over the reins in a country that had been divided and all but lost by the disastrous compromises at Geneva, that was beset with internal warfare, poverty stricken, threatened by strong Communist forces to the immediate north and honeycombed by the Communist network within.

Not many observers, even the sympathetic ones, gave him even an outside chance of survival. And almost immediately his shaky new free regime was inundated by the flood of almost a million refugees from the Communist north. One problem was piled upon another.

Now 5 years have passed. The dissident sects have been brought under control. There is unity and public order. The refugees have been put on the land with increasing success and there is real, not Communist-style, land reform. With American help the country has been made less vulnerable from a military point of view and the Communists have obviously thought it better to think twice before attacking. It is worth while noting, also, that this has been done within the framework of a real constitutional democracy.

The road ahead is still long and hard. The little Asian country is still in the very front line in the defense against the Communist onslaught. There are still a thousand things that need to be done for its good people before they can have the full measure of happiness that should be theirs. But a 5-year miracle, not a plan, has been carried out. Vietnam is free and is becoming stronger in defense of its freedom and of ours. There is reason, today, to salute President Ngo Dinh Diem.

Printing Press Money and Inflation

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. MUNDT. Mr. President, in these days when our Nation is enjoying the benefits of the greatest national prosperity era known to mankind, it is perhaps an easy thing for some to believe that we can "reap only good fruits, regardless of the seeds we sow."

Unfortunately, those who follow such a philosophy refuse or ignore the economic realities entailed in achieving prosperity.

In fact, there are two kinds of prosperity. One is the false prosperity developed upon the dreams of wishful thinking that all we have to do to achieve success is to spend our way there, and in particular, by spending the taxpayers money to reach this pot of gold at the end of some far-off rainbow.

The other prosperity is realistic. It is attained—perhaps the hard way, no fancy theories or grandiose schemes—through sound programs in which the integrity of the dollar and our financial institutions builds a firm foundation for the future.

The false prosperity is false because it can never be attained. It is false because it makes people believe that government does not have to account for its financial affairs. And it is false because as it fills one pocket it empties the other just as quickly through the cruel tax of inflation.

On the other hand, our real prosperity is something tangible, something which can be achieved, because it is developed on initiative, effort, and enterprise. It, simply stated, is following the old truism of "a dollar's value for a dollar earned."

Part of the scheme of the advocates of spend our way to prosperity includes so-called cheap money, or printing press money, perhaps the greatest force there is to inflate the currency of a nation.

An excellent article on this subject has been written by Mr. Thurman Sensing, who brings to attention a fine analysis of this problem. Mr. President, I ask permission to have printed in the Appendix of the RECORD the article by Mr. Sensing, which appeared in the July issue of the Southern States Industrial Council Bulletin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRINT THE STUFF

(By Thurman Sensing)

It is to be wondered if the advocates of cheap money policies know that they are in effect saying, "Print the stuff." That is exactly what they are doing. And by doing so, they are rushing our economy—and therefore our whole way of life—straight down the road to destruction.

Neither the Government nor anyone else can dodge basic economic laws. One of these laws is that something for sale must meet competitive prices.

In other words, when the Government has bonds to sell, it cannot sell them to the general public unless the bonds yield a competitive rate. The public just won't buy them; and there is no reason why they should. We are witnessing that situation right now.

The Government can do this: it can sell them to banks—or force the banks to buy them—but when that happens, they are simply "printing the stuff," because the banks use them as basis for issuing more currency.

What the proponents of cheap money are afraid of—if they care at all what happens to our economy—is the greatly increased cost of carrying our national debt if the Government had to meet competitive money rates.

They should be afraid of it. The annual interest charge now on our national debt is approximately $8 billion—the second largest item in the budget. Meeting competitive rates—in order to avoid "printing the stuff"—would mean a great deal higher annual interest cost.

But that is no reason for advocating cheap money. That is reason for reducing the national debt—now amounting to more than the combined debts of all the other nations of the world. That is reason for cutting the national budget—now the highest we have ever known in time of peace. That is reason for reducing the inordinate load of taxation in this country—where the personal income tax is the highest known in the world.

If we would do these things, we would not have to worry about our ability to sell Government bonds. These bonds would once more be the "safest buy in the world"—and they could be sold without adding in any way to the inflationary pressure upon our economy.

As it is now, the way our Government handles its affairs simply feeds the inflation which lies like a damp blanket over our whole economy. No nation living under constant inflation has ever been able to retain indefinitely any value in its currency. One of the current notable examples is France, the value of whose franc has practically disappeared during the past 40 years. More than half the value of our own dollar has disappeared over the last 25 years.

The first two things our Government should do are, start (1) living within its income, and (2) paying off its national debt. That is commonsense. But just as important is the need for cutting unessential expenditures (welfare state expenditures) out of the national budget so that taxes can be reduced. This in itself would add the impetus to our economy that more than anything else would enable the Government to do the first two things. As important as it is to pay your way, the worst thing we could do right now would be to raise taxes to pay the unnecessary items that the national budget now includes.

This is important for all the people—but it is especially important to the wage earner, the clerk, the schoolteacher, the rank and file of the people, the "little man"—because of necessity they must carry the major share of an excessive national budget. The taxes cannot be collected from corporations; in fact, it is fallacious to believe that corporations actually pay taxes. They are taxed all right, but they add this to the cost of doing business and pass it on to the consumers. That is the only way they can do it and stay in business. The taxes cannot be collected from those with larger incomes; in fact, to raise the extra $12 billion to $13 billion necessary to balance the current budget would require the confiscation of everyone's taxable income in excess of $4,000. To attempt any such thing is foolish on the face of it. No, the taxes must come from the so-called masses of the people—there is no other source.

That is why the "little man," more than anyone else, should be interested in stopping the Government from "printing the stuff." His future welfare and his whole standard of living are at stake.

How U.S. Worker's Life Has Changed

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. WILEY. Mr. President, we recognize that today there are still a great many improvements that we can, and must, make in the standards of living of our people. Particularly, there are specific problems that need to be resolved. These include: "hangovers" of unemployment from the economic setback; slum areas in a great many American cities; inadequate income for too many small family farmers; and a variety of other challenges that demand a constructive approach to bettering life for all Americans—especially those who now share inadequately in the overall development and progress of the Nation.

As we take a look at these challenges, however, it is important, I believe, that we keep the picture in perspective. The years gone by have not been without their marks of progress. Today, the majority of American families enjoy higher standards of living than have ever been achieved in the history of the world. A study of living patterns over a 50-year period reveals that so-called class lines are fading. More and more people live in their own homes; also, a higher percentage own cars, dress better, and in many other ways share in the good things of life that have been created through our free enterprise system. As specific examples of progress, I cite the following changes in the life of the U.S. worker: In 1901 only 19 percent of these workers owned their own homes; by contrast, about 51 percent now are homeowners; the 55-hour or more workweek in 1900—without vacation—has now been reduced to about 40 hours—with paid vacation; according to a Labor Department study there were about 8,000 automobiles in the Nation in 1900; recently, the 175 millionth motor vehicle rolled off the assembly lines. This output has enabled 97 percent of the workers in many urban areas to benefit from automobile ownership; today, too, U.S. workers benefit from a great many home conveniences that are still luxuries reserved only for the wealthy in most other countries of the world.

In view of the fact, that all too often, a great many folks have difficulty in seeing the "forest for the trees"—that is, they become so immersed in the problems yet to be resolved that they tend to discredit the progress already made—I am particularly delighted to find, from time to time, illustrations of the kind of progress we are making, thus keeping the picture in perspective.

Recently, the Milwaukee Journal printed an article entitled "How U.S. Worker's Life Has Changed." The article portrays significant marks of progress that, I believe, we should bear in mind as we grapple with the challenges ahead.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, July 12, 1959]

HOW U.S. WORKER'S LIFE HAS CHANGED

There is nothing startling to Americans about an ever higher material level of living. As a nation, we accept without wonder what in other parts of the world would be considered extraordinary.

Even so, the evidence of the economic progress of the typical American adds up to an impressive story. The U.S. Department of Labor has told it in a new 267-page book called "How American Buying Habits Change." The report, made last week, gathers into one volume data from six major studies of prices and the family budgets of urban factory wage earners and office clerical workers.

WORKING CLASS LESS DISTINCT

The social implications of the report are more remarkable than the obvious economic facts. What is shown is a revolution in class relations. There has been a rapid fading of a distinctive working class and a widespread adoption of middle class attitudes.

In the new, motorized suburbs, it is no longer possible to tell who people are by what they own, how much leisure they have, or how they use it.

Consider, for example, the automobile.

In 1900, according to the Labor Department's study, there were 8,000 of them in the Nation, some powered by steam or electricity, bumping along on crude, unpaved roads. They cost about $1,000 each. Since the average family made $650 a year, not many of them owned cars.

And, even if they had, they would not have had much time to drive around in them, because the average Joe's workweek ran 55 or more hours, and the 2-day weekend and paid vacation were virtually unknown.

ONE-EIGHTH SPENT ON CARS

By midcentury, automobile ownership was commonplace. It ranged from a high among urban wage earner and clerical worker families of 97 percent of the skilled workers in the suburbs in Western States to a low of 22 percent of the unskilled workers in the larger cities of the South.

The car had become a priority item in the family budget. Families spent $1 of every $8 income on their cars—more than they spent for clothing or any other item save food and shelter.

What had happened?

Real family incomes were up. They rose enough between 1901 and 1950, despite a rise in prices that cut the purchasing power of each dollar by two-thirds, to support the purchase of 2¼ times as many goods and services.

The proportion of total income needed for food, shelter, and clothing—subsistence, in other words—had decreased, leaving an ever widening margin available for conveniences and luxuries. The amount spent on sundries rose from 20.1 cents out of every dollar in 1901 to 43 cents in 1950.

CREDIT USE UP SHARPLY

Credit was increasingly available and relied on. In 1948, more than a third of car purchases involved the use of credit; by 1955, it was closer to two-thirds.

Back in 1901, unprotected by social security, workmen's compensation, private health insurance plans and unemployment compensation, workers' families put larger portions of their earnings into direct cash savings than they do today. At the turn of the century, only one in six families reported a deficit.

In 1957, two of three workers' families had some personal debts, excluding charge accounts and mortgages, and liquid assets were less than debts for about half.

If the worker was a good risk for the auto dealer, he was equally so when it came to buying a house.

At the turn of the century, his low income, the difficulty of borrowing money, and the high cost of financing presented almost insurmountable obstacles to the would-be worker homeowner. The maximum loan offered was typically about half of the appraised value on a 1- to 5-year note payable in full at maturity and bearing interest at from 6 to 10 percent. Renewal of the note involved heavy refinancing charges.

FIFTY-ONE PERCENT OWN HOMES

It was surprising, under the circumstances, that 19 percent of the workers owned their own homes in 1901. By 1917–19 some 27 percent of the city workers occupied dwellings they owned. The 1934 survey showed the proportion at 30 percent. By 1950 the cumulative effect of veterans' guarantee programs, Federal Housing Authority insurance, higher incomes, and improved building techniques had pushed the percentage of home ownership among urban workers to 51.

City workers' families in 1950, with more than twice the purchasing power that their counterparts had in 1901, were able to devote a substantially smaller share of their expenditure to housing, fuel, and light—15 percent instead of 24 percent.

That the workers' families participated in the migration to the suburbs is indicated by the fact that in recent years about 70 percent of the new housing in metropolitan areas has been built outside of the central cities.

As indicative of the climb in the level of living as home ownership itself was what was in the homes by the mid-1950's. Typically there was electricity, hot and cold water, a fully equipped bathroom, central heating, a vacuum cleaner, a washing machine, perhaps a dryer, a telephone, one or more radios, a television set, a gas or electric stove, a refrigerator and completely furnished rooms. In many cases, the heat was automatic and the kitchen would contain a dishwasher, a garbage disposal unit and an exhaust fan. Electric air conditioners, electric blankets, fans, mixers, power lawnmowers and a multitude of other equipment were within the range of the worker's family budget.

WORKER FAMILIES BETTER DRESSED

In the first half of the 20th century, the dress of American city workers and their families underwent a greater transformation than in any other 50-year period in the Nation's history, according to the Labor Department study.

Not only did styles change, but there were major improvements in the number, design and quality of garments owned and in the variety of clothing, fabrics and colors available. Improvements in dress went far toward eliminating differences in appearance between the Nation's factory workers and their families and other economic groups.

And workers and their families were better dressed for a smaller relative outlay. With higher earnings, they allocated a smaller share of expenditures to clothing than they did in 1901.

The same was true of food. Urban workers' families obviously are better fed now than in 1901, yet the proportion of expenditure for food and beverages has dropped from 43 percent to 32 percent. That is particularly noteworthy since food prices have risen more since 1901 than prices for all other items commonly bought by city families.

As the proportion of income absorbed by food, clothing and shelter declined, money was freed for other things. One of those was health care.

HEALTH CARE COST UP

The urban worker's family spent roughly four times as much for medical care in 1950 as in 1900 in dollars of equivalent purchasing power and received better care.

Perhaps no single feature of the urban worker's level of living better illustrates its spectacular improvement in the last half century, according to the Labor Department study, than the expansion and use of his leisure time.

A workweek of five 8-hour days became widespread with the passage of the Fair Labor Standards Act of 1938, requiring the payment of premium rates for work exceeding 40 hours a week. By 1957, 86 percent of the collective bargaining agreements negotiated by labor unions called for 2 or more weeks' vacation with pay and 20 percent provided for 4 weeks. So the workers have time for leisure.

They also have the money. In 1901, families allotted 2.7 percent of their expenditures to recreation, education, and reading. By 1950, it was 5.8 percent.

By 1950, the expenditure patterns for leisure time activity of American workers and their families did not differ significantly from national norms. In 1901 they were distinctly working class.

OUTPUT TRIPLED, WORKWEEK CUT

The main factor in the increase in leisure—indeed, in the whole dramatic hike in the level of living in the last half century—the Labor Department calls the golden trace of productivity.

The individual American worker's output today in a 40-hour week is three times that of his grandfather working 70 hours weekly.

In the process, the average American city wage earner and clerical worker family traded a drab, working class existence for a more secure, more relaxed, and more comfortable middle class life.

Holloran Calls Upon Butler To Resign

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story from the St. Louis Globe-Democrat. The story deals with the views and comments of the Honorable Mark R. Holloran who, as Democratic National Committeeman from Missouri, has long served the Democratic Party with honor and integrity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOLLORAN CALLS UPON BUTLER TO RESIGN

(By Carl E. Major)

Mark R. Holloran, Democratic national committeeman of Missouri, told the Globe-Democrat Sunday he believes Democratic National Chairman Paul Butler should resign in the interests of the party.

Mr. Butler has sharply criticized the Democratic leadership in Congress. He said the Democratic-controlled Congress is moving too slowly toward enactment of "positive and aggressive legislation."

"We can't win the elections of 1960 if we are to ape the Republican Party," said Mr. Butler, whose criticism has caused a furor within the party.

"I think Mr. Butler is wrong and is stirring up a lot of unnecessary trouble," said Mr. Holloran, a St. Louisan.

QUESTIONS MOTIVE

He said Senate Leader LYNDON B. JOHNSON and House Speaker SAM RAYBURN, both of Texas, have made a "commendable record and are working in the best interests of the whole country."

"I think they are getting through the best program they can under a Republican President and Republican Vice President," he added.

"There is something behind Mr. Butler's action. Maybe he is working with some candidate for the Democratic Presidential nomination to take some control away from the southerners.

"I can't see what the purpose is in stirring up trouble now so far ahead of the 1960 election."

There have been reports that a resolution may be introduced in the Democratic National Committee at its mid-September meting asking Mr. Butler to resign.

HE'S "PRETTY FOXY"

Asked if he would vote for such a motion, Mr. Holloran said, "On the basis of the statements he has made up to now, I would if the motion were not tied in with something else."

He said Mr. Butler is "pretty foxy and might try to tie in such a motion with civil rights or some other project."

"He has a few cronies who would work for him," Mr. Holloran added.

Tribute to the Late Thomas L. Stokes

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. NEUBERGER. Mr. President, one of the most courageous and able crusading journalists of our era was the late Thomas L. Stokes. All of us are the poorer, now that his trenchant and effective pen is no longer at the disposal of the causes he fought for so strenuously. On May 5, 1959, eloquent tribute was paid to the memory of Tom Stokes in an address made at the National

Press Club by Richard L. Strout, of the staff of the Christian Science Monitor. Mr. Strout and the late Mr. Stokes were close personal friends, and the glow of friendship gleams throughout Mr. Strout's tribute. I ask unanimous consent that the address, entitled "Tom Stokes: What He Was Like," as published in the July 1959 issue of Nieman Reports at Harvard University, be printed in the Appendix of the RECORD.

There beifig no objection, the address was ordered to be printed in the RECORD, as follows:

TOM STOKES: WHAT HE WAS LIKE

(By Richard L. Strout)

Every now and then some exceptional new reporter joins the Washington press corps, some crusader, some hell-raiser, and it's funny how after the years the experienced newspaperman can generally spot him. He may be aggressive, like the late Paul Y. Anderson, or Bob Allen, or he may start out relatively young and shy and mild as Tom Stokes did.

These men are a little different from their fellows. Journalism to them isn't just a business. They would shudder at the word but it's a kind of lifetime crusade. It's a way of tilting at the smug and mighty, and of somehow yanking out the truth against obstacles. That kind of reporter when he hits Washington is likely to stay, and die, in harness: You can't somehow imagine a Nate Robertson or an Ed Lahey or a Ray Clapper or a Clark Mollenhoff ending up in a fat-cat public relations job for General Motors or United States Steel. They don't necessarily have to be radicals though a lot of them are; Joe Alsop is a good Republican but it's hard trying to imagine him toeing some chamber of commerce line or passing out handouts for some corporation.

These men have a purpose in life, a goal, a fire in their bellies; they are not using journalism as a stepladder to something else; they are generally here to stay. That's what Tom Stokes was when he came to Washington way back in 1921, 38 years ago.

He was 23 years old. Outwardly, I am told, he looked mild and shy and amiable. He was bright, he had got a Phi Beta Kappa key at the dreamy old Confederate university at Athens, Ga. I arrived in Washington 3 or 4 years later and ultimately came to know Tom. He liked to tell how he was in the SATC camp at college and one day was told to report to the 6-foot Regular Army officer. Tom presented himself with a snappy salute. "What's your name?" demanded the officer crisply.

For the life of him, Tom couldn't remember. It was part of Tom's personality both that this incident actually happened and that later he could look back on it without mortification. The officer dismissed Tom kindly and told him to come back some time when he could remember his name.

Once as a youngster Tom volunteered in church to go as a missionary to China and though he didn't go he remained a bit of a missionary all his life. His mother died when he was 13 and his world seemed to crash about his ears. He came to Washington from a small town newspaper in Georgia where a hideous lynching has occurred. He was a sensitive, imaginative person and I think the sickening affairs haunted him. There was that element in Tom under his gaiety. I guess that most of us, whether we admit it or not, feel some degree of guilt over the state of the world and some go their quiet way, as well as they can, trying to expiate it.

I asked some of Tom's old friends what was the single characteristic that they thought differentiated him from anybody else.

He was a liberal, of course; not a namby-pamby liberal but rather a fierce liberal when he discovered what he considered to be injustice. But there are a lot of liberals. He was also cheerful, and intelligent, and good company. Granted all that, there are other people like that, too (not enough, but some).

It got to be funny, the way I constantly got the same answer to my question, expressed in different ways but meaning the same thing.

"It was the way he managed to hold his own strong views and yet managed to retain the affection of people whose views were harshly antagonistic to his." In my lifetime I have never seen anyone who had this attribute to a stronger degree than Tom Stokes. He liked people and he was gay and companionable.

I don't mean that Tom didn't have critics—or perhaps even enemies. But consider the fact that Tom never hesitated to lecture the South on civil rights and that he yet remained one of the few columnists the South would listen to on that subject. It was the same with most people of all shades of opinion. I have seen it many and many a time. When he sat down at the press table in the Senate restaurant, or at his favorite place in the National Press Club, others would always crowd in. They would sit down and not go away.

People who weren't on speaking terms with one another would drop down if Tom were there, chat amiably and then go off and perhaps not be on speaking terms again. It was really something to analyze. He was a warm, comfortable stove; he was a walking truce, and yet he would not yield his liberalism an inch in the festive atmosphere. I really can't explain it: I suppose part of it was that he had no malice at all, and no arrogance at all.

Tom richly deserved the Pulitzer Prize which he won. But it is ironic that he got the award not for exposing reaction (as he did all his life), but for his equally fair and determined crusade against the political use of WPA relief funds in Kentucky in behalf of the New Deal Democrats, in the 1938 midterm election. Tom was right in his exposé, and it represented a splendid bit of reporting though it made some of the "liberals" mad at the time. But it is a chance which the progressive reported must take. Stay on your own side of the fence and things will tend to remain quiet and you probably won't get many prizes. But stray out briefly and attack fellow liberals and you run the risk of being tagged with a Pulitzer.

Like every old-time newsman I have a metal file cabinet of clippings by my desk. How often when I turn to it I still find some first-rate clipped item from the Stokes' column. These columns remind me that Tom was one of the few who kept his balance of objectivity in the otherwise all-but-universal paeans from the press after the 1953 inauguration.

I have always felt that the American press—or a good part of it—deprived the administration for several years of something to which it was legitimately entitled, a virile opposition. Every President needs this unending, critical press scrutiny. The administration and the country loses them at their peril.

Tom's normal style in these columns was simply direct and unpretentious. He had a grim concern with many matters which other columnists found too humdrum to explore. I think he was the one who first brought to my attention the role of the regulatory agencies in Washington—the "fourth branch" of the American Government. It was something that back in 1953–55 hardly any other writer seemed interested in.

I think that more than any other man Tom was responsible for Sherman Adams' departure. In a column as early as 1955 Tom charged flatly that Adams was "directing the fight against power development." In later columns he spoke out on the drearily complicated Dixon-Yates giveaway. Sherman Adams, he charged, "meddles constantly in the business of these regulatory commissions, which is really none of his business."

In the last column I have of Tom's, November 20, 1957 (6 weeks before he stopped writing for good), he came back to this same subject and Sherman Adams. "Anybody," he declared, "who is constantly around Congress during this administration finds his tracks all over the place."

Well, that's where Tom signed off. But a man named SAM RAYBURN took notice of these and similar columns and got the House to appropriate $300,000 for the first investigation of regulatory agencies in history. The inquiry followed. You know how it unexpectedly snagged Sherman Adams. I am interested in this because in a piece I wrote last summer for the New Republic entitled, "Tom Stokes and Sherman Adams," I argued that Tom had sparked the inquiry. I added sadly, "I suppose a posthumous prize is out of the question."

Well, I seem to be wrong.

Lethargy in the Face of Madness

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in Canada's national weekly of business, investment, and public affairs, known as the Financial Post. It is an editorial which calls the attention of both Russia and the United States to the course of action which both countries are following in connection with preparation for a possible nuclear war. It is not particularly commendatory of either country, and I think with just cause, so I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LETHARGY IN THE FACE OF MADNESS

The absolute folly, the utter madness, of nuclear warfare has been presented for the first time in all its full, calm, terrifying detail.

It is the most appalling story of death and destruction ever imagined.

Its possibility is invited by the unhappy lethargy of the public and by the attitudes of the military strategists who, it appears, don't want their big war plans interfered with.

A subcommittee of the U.S. Atomic Energy Committee heard that a limited attack on the United States—and by consequence on Canada—would mean death for some 50 million people, ghastly injury for another 20 million, destruction for all cities of any size; fire storms that would require nature 1,000 years to recover from; defective people for 30 generations.

Despite this appalling report, more headlines at the time of its publication were

devoted to the doings of union racketeers and movie actresses.

The fact that any one person can do so little in the face of international imponderables and horrendous weapons, helps account for public lethargy.

But the disinterest shown by some military people about the fate of our population and the country itself is a stark reminder that violence is their business. The generals and admirals are reluctant to speak out clearly, say reports from the United States, about the effects of nuclear warfare in case it would arouse public opinion against the present nature of U.S. defense policy.

If the military are reluctant to look at the realities of nuclear war, the U.S. administration appears no more concerned with reappraisal. Apparently to calm any public unrest over what could happen here, Neil H. McElroy, U.S. Secretary of Defense, stated a day or so ago that both the United States and the U.S.S.R. are behind schedule in perfecting a combat-ready, intercontinental ballistic missile.

But Mr. McElroy, what's important is not when an effective nuclear war could be fought, it's what is involved in one.

If anything more were needed to show why war is no longer a practicable or tolerable way of settling international disputes, this is it.

Discouraging as it may be when dealing with a foe such as Russia, the United States as a leader of the West has simply got to develop more patience and skill in its attempts to negotiate diplomatically with the Communist world.

It is no longer possible for the United States to remain happily indifferent to the arts and skills of diplomacy. Our peoples cannot afford the mistakes the present course breeds.

Dr. Charles H. Miner of Wilkes-Barre, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Wilkes-Barre Record and Wilkes-Barre Times-Leader of Monday, July 13, 1959, and news story from the Wilkes-Barre Record of July 13 upon the passing of Dr. Charles H. Miner, distinguished doctor of medicine and humanitarian.

[From the Wilkes-Barre Record, July 13, 1959]

DR. CHARLES H. MINER

Professionally, Dr. Charles H. Miner, who passed away yesterday at the age of 91, had a distinguished career going back to the Spanish-American War. It was one of continuing recognition for one achievement after another. He gave a wealth of service to his State and his community.

As a pioneer in the fight against tuberculosis, he was outstanding for the high degree of success he experienced. It brought him into prominence and established him as an enduring authority in that field. Wyoming Valley Tuberculosis Society came into being 53 years ago because of his efforts. For a long term he served as its president and at retirement was named president emeritus.

Numerous other honors related to his profession—the outstanding part he took in the battle against tuberculosis and his outstanding role as a citizen came to him. He could have been mayor of the city by appointment had he chosen. After he had served as the first secretary of the board of health, he was elected president and subsequently president emeritus.

In the list of the distinctions that came to him was his appointment by Governor Pinchot as State secretary of health, a post he filled for 4 years earnestly and capably.

To list all his connections would require a long enumeration.

An unusual measure of eloquence would be required to surpass the tribute that was paid to Dr. Miner by a colleague in 1957 when the March issue of the Luzerne County Medical Society Bulletin bore the title "Dr. Charles H. Miner Number." The colleague, after saying that Dr. Miner's first thought had been for others, added: "In all matters Dr. Miner has displayed a genuine concern for his fellow man, and in the many difficult decisions of his public service I have never found him other than patient, kindly, unassuming, and thoroughly unselfish. Truly he is a gentleman."

The foregoing accords with the thought that Dr. Miner was a humanitarian. His labors were a blessing to untold thousands while he lived and, because of the progress he made in dealing with a disease now robbed of much of its dread, will continue to be a blessing to untold numbers in the years to come.

[From the Wilkes-Barre Times-Leader, July 13, 1959]

DR. CHARLES H. MINER

When a man lives to be 91 and has served his country, his State, his community, and humanity so long and faithfully, when he has been honored by his profession and the public as a physician, humanitarian, and citizen so frequently as Dr. Charles Howard Miner has been, death, of necessity, must come as an anticlimax, although it be accompanied by pangs of sorrow for kin and intimates.

Dr. Miner lived a full and complete life. He had run his race and he had won. For him, there were no new worlds to conquer, no tasks left undone, no distinctions to be conferred, for his career had been rich in achievement and he had received recognition, reserved for few of his neighbors or fellow Pennsylvanians. Under the circumstances, he had only to look forward to the eternal reward that awaits those who have kept faith on earth.

It must be a comforting thought to loved ones to know that a husband and father had attained such eminence in life that death might be faced with calm resignation and with no regrets. It has been the privilege of few to have hewn so closely to the line of perfection in unselfish service with attendant rewards.

Member of a distinguished family, Dr. Miner was not content to rest on the laurels of his forebears or to lead a cidcumscribed life, dividing his time between his profession and social activities. This he might have done without any qualms of conscience.

Dr. Miner, who was made of sterner stuff, had higher aspirations. An outstanding practitioner, he took on the greatest challenge of his day—tuberculosis—and while he did not live to see it completely eradicated, he had the satisfaction of noting amazing progress in this field, thanks to his own contribution as a dedicated man of science.

As State secretary of health, medical inspector for Luzerne County, and one of the principal architects of the Kirby Health Center, to mention just a few of his activities outside of the field of tuberculosis, Dr. Miner gave unsparingly of his time and talents to the welfare of the public.

It is impossible to measure by the usual yardstick such a life. About the only thing left to a grateful community is to thank a kind providence for bringing into the world this man who combined greatness and humility and, above all, to single out Wilkes-Barre for the distinction of being his birthplace.

[From the Wilkes-Barre Record, July 13, 1959]

DR. CHARLES MINER DIES AT AGE 91—STATE HOSPITAL AT HAMBURG IS NAMED FOR HEALTH LEADER

Dr. Charles H. Miner, 91, of 264 South Franklin Street, former secretary of health for Pennsylvania, top leader in the fight against tuberculosis in the State, and civic leader in Wilkes-Barre, died at his home yesterday morning at 9:40.

Surviving besides his wife are a son, Attorney Charles H. Miner, Jr., Kingston, member of the law firm of James, McLean, Silverblatt, & Miner; daughter, Miss Stella M. S. Miner, at home; granddaughters, Amy B. and Margaret Lea Miner; nieces and nephew, Mrs. Edward W. Bixby, Mrs. Neil Chrisman, and Robert C. Miner, all of Wilkes-Barre; and Mrs. Marcus Morton and Mrs. Jesse Whitten.

Funeral will be held Tuesday morning at 11:30 from St. Stephen's Episcopal Church, South Franklin Street, with Rev. Thomas C. Davis, associate rector, officiating. Interment will be private in Hollenback Cemetery. There will be no viewing. Arrangements by Homer E. Graham.

Dr. Miner was instrumental in founding Wyoming Valley Tuberculosis Society 53 years ago, and served as its president from that time until 1948, when he retired and was named president emeritus. On the occasion of his retirement, he was honored at a luncheon at the annual meeting of the organization.

Summing up Dr. Miner's valuable contribution in alleviating some of the ills of suffering humanity, Miss Mary H. McKernan, executive secretary of the society, in submitting her report declared, "Through the interest and untiring efforts of such men as Dr. Miner, the diagnosis of tuberculosis is not the thing of horror it was to the family and patient 40 years ago, for if made in its incipiency today, thousands by proper care and treatment are cured and live normal and useful lives."

In recognition of Dr. Miner's long and active career in the health field and leadership in the fight against tuberculosis, Hamburg Tuberculosis Sanitorium, Berks County, was renamed the Charles H. Miner State Hospital in 1956.

In 1933, Dr. Miner declined an honor which many men strive to gain. At a conference of the five judges of Luzerne County Dr. Miner was unanimously chosen for the appointment of mayor of Wilkes-Barre to succeed the late Daniel L. Hart. Dr. Miner declined the honor in a letter to President Judge W. S. McLean.

As 13th president of the Pennsylvania Tuberculsis and Health Association, Dr. Miner was among six former presidents to receive testimonials on April 21, 1955, at the 63rd annual meeting of the association in Pittsburgh. He was cited for his work in combatting tuberculosis.

Dr. Miner and Dr. John J. Shaw, State secretary of health, were presented with scrolls in recognition of their achievements in the field of public health at the 16th annual dinner meeting of Pennsylvania Public Health Association on May 28, 1941.

Dr. Miner helped the late Fred M. Kirby in the planning to establish Angeline Elizabeth Memorial Health Center on North Franklin

Street in memory of Mr. Kirby's mother. With Mr. Kirby he visited various cities where similar institutions were functioning and helped draft plans for the type of building desired in this city.

Dr. Miner became first secretary of board of the health center and was elected president of the board in 1943. When he retired as active head of the board he was named president emeritus, first man to receive the designation since the center was founded.

Dr. Miner was born in Wilkes-Barre July 5, 1868, the son of Charles Abbott Miner and Eliza Ross Atherton. He was graduated from Wilkes-Barre Academy, received his bachelor of science degree from Princeton in 1890 and his doctor of medicine degree from University of Pennsylvania in 1893. For 18 months he was interne in the Presbyterian and Children's Hospitals in Philadelphia.

In 1895 Dr. Miner went to Europe and studied medicine at Heidelberg and Vienna. Returning to Wilkes-Barre in 1896, he has since been a practicing physician.

The system of tuberculosis clinics which have been of untold value to the thousands of residents in every community of the State was outlined by Dr. Miner in 1907 for the late commissioner of health, Dr. Samuel G. Dixon.

In 1906 a committee of local men formed the Wyoming Valley Society for the Prevention and Treatment of Tuberculosis and established the State's first clinic in a small building on South Main Street, Wilkes-Barre.

The clinic met with such success that in 1907 the late Dr. Dixon adopted the plan for establishment in every county of the State and selected Dr. Miner to outline plans and establish these clinics. The local headquarters were taken over by the State and became known as State Clinic No. 1. In 1907, Dr. Miner, through his activities at the local clinic, was appointed State medical director for Luzerne County and retained this position until 1923 when he was appointed State secretary of health.

During the influenza epidemic of the late 1918 and early 1919, Dr. Miner had charge of hospitals in Luzerne and Columbia Counties. Among these hospitals were the armory emergency and emergency institutions at Hazleton, Glen Lyon, Plains, Wanamie, Exeter, and Columbia County institutions.

In January 1923 when Governor Pinchot first assumed office. Dr. Miner was named State secretary of health. In announcing the appointment, Governor Pinchot said he felt the State was fortunate in obtaining Dr. Miner. Dr. Miner served as State secretary of health until January 1927, when Gov. John S. Fisher reappointed him as Luzerne County medical director.

During the Spanish-American War, Dr. Miner served as assistant surgeon in the 9th Regiment, Pennsylvania Volunteers. He entered the United States Volunteer service on May 5, 1898, and was mustered out with the 9th Regiment on October 29, 1898. While at Chickamauga he was attached to the 3d Division Ambulance Corps and later to the division hospital. After the mustering out of the regiment, Major Mears, acting division surgeon, offered Dr. Miner a position of surgeon major of the 3d Regiment, Volunteers, but owing to his professional duties, he was unable to accept the position. The regiment served in Cuba for some time. At the reorganization of the regiment Dr. Miner was reappointed an assistant surgeon by the then Col. C. B. Dougherty.

On June 1, 1904, Dr. Miner and Grace Lea Shoemaker were married.

Dr. Miner also was cited May 26, 1943, by Luzerne County Medical Society, of which he was past president, in honor of his having practiced medicine 50 years. Pennsylvania Tuberculosis and Health Society paid him tribute at its annual meeting in April 1952 for his outstanding work and a ward at White Haven Sanitarium was named in his honor. He also received an award from the Pennsylvania Public Health Association on October 22, 1948.

Dr. Miner was a member of St. Stephen's Episcopal Church and senior warden for many years. Also a member of Westmoreland Club. He was on the consultation staff of Mercy Hospital and on the visiting staff of General Hospital and at one time was attending physician at White Haven Sanitarium.

He was a member of the Military Order of Foreign Wars; a corresponding member of the College of Physicians of Philadelphia; and a member of American Public Health Association, National Tuberculosis Society, American, State and county medical societies and American College of Physicians.

He also was a member of the American and Pennsylvania Heart Associations; American Clinical and Climatological Association; and Pennsylvania Tuberculosis and Health Society, of which he served as a member of the board of directors and executive committee and as president in 1917.

The late Gen. Asher Miner, famed soldier, who was wounded while leading the 109th Field Artillery Regiment during World War I, was a brother of Dr. Miner.

Dr. Miner was not only one of the most prominent physicians in Pennsylvania but was a decendant of a number of men prominent in the early days of Wyoming Valley, including Asher Miner, who moved to Wilkes-Barre from Norwich, Conn., in 1799; Gen. William Ross, his great grandfather, Robert Miner, his grandfather, and Charles Abbott Miner, his father.

The Interstate Commerce Income Tax Cases—Is There a Case for Action by Congress?

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. SALTONSTALL. Mr. President, I rise to call the attention of the Senate, to the finest summary I have seen on the perplexing problem of State taxation of interstate commerce.

This is a matter of compelling interest to the Senate and to the country. Our Small Business Committee has completed a report on it, and our Judiciary and Finance Committees are now at work on it.

I call the attention of the Senate to an address by John Dane, Jr., former tax commissioner in Massachusetts, to the 27th annual meeting of the National Association of Tax Administrators in Buffalo, N.Y., on July 10, 1959.

Mr. Dane speaks from experience as the tax commissioner in the State of New Hampshire, and from a fund of knowledge accumulated as an able tax attorney.

The information contained in his address will be of value to all Senators who wish a clear and complete analysis of this problem, so I ask unanimous consent that excerpts from the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE INTERSTATE COMMERCE INCOME TAX CASES—IS THERE A CASE FOR ACTION BY CONGRESS?

(Remarks by John Dane, Jr., before 27th annual meeting of National Association of Tax Administrators, Buffalo, N.Y., July 10, 1959)

Regardless of whether the recent Supreme Court decisions in the Stockham Valves and Fittings and Northwestern States Portland Cement cases represent the blazing of new judicial trails, as the minority of the Court felt, or whether they are merely a reiteration of previously well-established principles, as was stated by the majority, small- and medium-sized businesses now find themselves faced with new and pressing problems. Basically these problems arise from the fact that such concerns will be required to file tax returns in many more States than heretofore; and everyone knows that the more States there are in which you are required to file a return, the more likely it is that lack of uniformity in State apportionment and allocation formulas will work substantial injustices.

The Pandora's box of uncertainties which has been opened by these decisions must be closed soon if serious damage is not to be done. As it is, corporate treasures are receiving tax bills from States which had previously been nothing more than names on salesmen's expense accounts. Auditors are burning the midnight oil in an effort to decide on the form of their certificates and to arrive at a proper answer to the question of what reserves should be made for previously unsuspected State tax liabilities. Bankers are worried as to whether tax liabilities for prior years are going to render meaningless the balance sheets they had relied on in making loans.

Fortunately for all concerned, the Senate Select Committee on Small Business moved swiftly into the field, holding hearings in Washington on April 8, and in Boston on May 1. As a result of the testimony offered at these hearings, the committee has published a comprehensive and well-reasoned report and a number of bills have been placed in the legislative hopper.* * *

HISTORY OF STATE TAXATION OF CORPORATE INCOME

Two very important issues arise when a State seeks to tax a corporation which has been incorporated in another State. First, has the State jurisdiction to tax the particular corporation; and second, assuming that it has jurisdiction to tax, how do you determine what proportion of the corporation's income is subject to tax.

When corporate income taxes were originally imposed by the States—the first significant one being in Wisconsin in 1911—the tax was justified on the basis of the benefits which the corporation was presumed to receive from the taxing State.

Such benefits consist of the various protective and economic services which the State furnishes to the corporation and which assist it in operating and earning an income. The amount of the State-furnished benefits was supposed to be measured in terms of the income which the corporation earned in the State.

Two corollaries flowed logically from this benefit theory.

First, jurisdiction to tax existed only in the case of corporations which operated property or maintained permanent business establishments in the taxing State.

Second, a tax could properly be imposed only with respect to that portion of the corporation's income which was reasonably

attributable to its productive activities in the taxing State.

As can readily be seen, these original concepts of jurisdiction and allocation were strongly oriented in favor of the States where manufacturing activity took place or where stocks of goods and branch offices with authority to accept orders were located. States in which the sole corporate activity was confined to solicitation of orders by traveling salesmen or drummers had no jurisdiction to tax.

There were some earlier attempts to deviate from this pattern, but it was not until World War II that the voice of the market States, as distinguished from the producing States, began to be heard in earnest. Generally speaking, no States attempted to collect income taxes from companies engaged solely in sales activities until the early 1940's. California was the first State to construe its corporate income tax to apply to sales activities, its lead being followed by Georgia, Louisiana, Minnesota, Oregon, and Mississippi.

Paralleling this trend to extend tax jurisdiction to reach corporations which enter a State solely for the purpose of soliciting orders and have no manufacturing facilities, stock of goods, or permanent establishment within the State, attempts were made by market States to allocate to themselves a greater proportion of corporate income in cases where admittedly there was jurisdiction to tax. The earlier practice was to attribute a sale to a State only if it was accepted at an office in the State or if the goods were shipped from a warehouse in the State, thus adhering to the theory that the State where the firm had property or a permanent establishment of some kind supplied more benefits and therefore had a greater claim on the firm's tax dollar. More recently States have sought to allocate sales to themselves where solicitation has been made or where goods were shipped to purchasers within their borders.

DIFFERENTIAL EFFECT ON SMALL BUSINESS

It seems quite clear that the impact of the new Supreme Court decisions will fall most heavily upon medium and small businesses by making it more difficult for them to compete with countrywide concerns which are already paying taxes in all or almost all 50 States. For such concerns the new extension of State tax jurisdiction will mean little if any increase in overhead expense. But take the case of a typical small business which has, for example, its manufacturing plant in one of the Middle Atlantic States. Salesmen from the main office cover the Atlantic seaboard. It also has a warehouse and sales office in St. Louis to cover the Midwest.

Under the former theory of jurisdiction to impose an income tax, only its home State and Missouri, where the warehouse and sales office were located, could have imposed taxes on this company.

Now it would appear that this concern may be liable to taxation in every State which its salesmen enter to solicit orders even though such salesmen may not live or have an office in the taxing State.

This is no fanciful case. Out of 139 replies received in a recent National Association of Manufacturers questionnaire, 65 companies paid income taxes in 5 States or less. Yet out of this same sample, 102 companies had salesmen who traveled with some degree of regularity in 21 or more States. For 65 reporting companies with gross annual sales under $25 million, only 21 paid income taxes in more than 5 States. Forty-one companies paid taxes in one State or less. Yet of these same companies, 37 had salesmen who traveled regularly in more than 21 States.

ADMINISTRATIVE IMPLICATIONS OF RECENT DECISIONS

The pyramiding of the overhead expenses of taxpayers arising from an increase in the number of States in which returns must be filed is paralleled by a comparable increase in the administrative costs of the States. Auditing a $10 return is often as complicated as auditing a $500 return. It takes up just as much filing space. Just as many accounting entries must be made in order properly to cashier the tax payment.

But even more important is the problem of enforcement. So long as liability for taxation is confined to companies having manufacturing facilities, warehouses or sales offices in a State, efficient and effective enforcement is possible at reasonable cost. However, the mere identification of out-of-State firms which do business in the State only through traveling salesmen is a tremendously time-consuming task, nor is identification the end of the problem. It is one thing for a State tax official to know that a particular out-of-State firm has been sending salesmen into his State. It is quite another to secure a tax return from such a firm, check the correctness of its preparation and after all that has been done, enforce the payment of the tax against an absent and perhaps recalcitrant taxpayer.

To make matters worse, in many cases the tax liability of an out-of-State firm may well be less than the cost of collection. This will leave the State tax administrator faced with an unhappy choice—should he try for complete coverage of all taxpayers even if some of them do not pay their way, or should he confine his collection activities to just those larger taxpayers where the game is worth the candle, and wink at widespread tax avoidance on the part of smaller firms?

Recent reports from a number of States indicate that many State tax administrators are moving into this area with great caution. New York has taken the position that it does not wish to discourage foreign corporations from entering the local market and has made the announcement that it will make no attempt at present to impose its tax on corporations with no regular place of business in the State. Arkansas and New Mexico will continue to enforce their preexisting rules. In the former, liability attaches to corporations which engage in organized sales activity and own tangible property within the State. In the latter, solicitation of orders by nonresident salaried representatives which are filled outside the State will not result in tax liability even in the case of a foreign corporation authorized to do business.

EFFECT OF DECISION ON FEDERAL REVENUE

If any substantial number of States follow the footsteps of Georgia and Minnesota, and with the blessings of the Supreme Court already secured, tax out-of-State firms which merely solicit sales within their borders, the economic implications for the economy of the entire country may be both very substantial and very unfortunate. This country has outpaced even such highly developed industrial areas as Western Europe because it has presented a single market. Business firms have been able to spread their operations widely with a minimum of governmental interference.

If mere solicitation of orders in a State is now going to subject a firm to that State's tax requirements, the small businessman will think twice before extending his operations into areas where profit potentialities, even leaving out the danger of additional tax liabilities, may be conjectural at best. This will invariably tend to leave the market to larger firms whose activities are already widespread and which can better absorb the overhead expense both of securing the best tax advice and of keeping adequate tax accounting records segregated on a State-by-State basis.

It should not be assumed that this additional overhead expense of keeping accounting records, preparing tax returns, and securing legal advice is a concern solely of the particular businesses involved. All these nonoperating expenses, all these costs of complying with diverse State requirements and nonuniform apportionment formulas, represent deductions in the computation of net income subject to Federal tax. Thus 52 percent of the burden—the amount of the Federal tax on corporate income—is borne, not by the individual firms involved but by the Federal Treasury—which is another way of saying that it is borne by the general body of taxpayers.

POSSIBLE METHODS OF PREVENTING DISCRIMINATIONS AGAINST SMALL- AND MEDIUM-SIZED INTERSTATE BUSINESS RESULTING FROM RECENT SUPREME COURT DECISIONS

Small- and medium-sized businesses operating across State lines should pay their fair share of the overall State tax burden. On the other hand, they should not be saddled with discriminatory tax and compliance costs in comparison with businesses operating in only one State. However, the new Supreme Court decisions open up two possible areas where such discrimination may develop. First, due to the divergent apportionment formulas which are to be found in the various State tax statutes, any interstate business may be forced to pay a tax on more than 100 percent of its income. Second, even though a particular interstate business is not taxed on more than 100 percent of its income, it may be required to file returns in such a large number of States, in some of which the tax due is less than the cost of preparing the return, that its cost of complying with the various State tax laws is vastly greater than the corresponding costs of a firm doing business in but a single State.

Several solutions to these two possibilities of discrimination against interstate businesses suggest themselves. The solution that has had the most publicity over the years is the proposal that all the States adopt by statute a uniform allocation and apportionment formula. The enactment of a uniform formula would remove one of the possible sources of discrimination against interstate business in that it would eliminate the risk that a corporation would be taxable on more than 100 percent of its income. It would not, however, in any way reduce the risk of discrimination arising from inordinately high compliance costs. On the contrary, if it required the computation of the sales fraction on a state of destination basis, it would guarantee that interstate business would be required to file in the maximum possible number of States.

To these theoretical objections to a uniform apportionment formula as a solution to the problem of discrimination against interstate business is to be added a basic practical objection. Tax practitioners and administrators have been debating a uniform apportionment statute for years, but there would seem to be little more chance of the adoption of such a statute now than there was 25 years ago. The type of formula that would be acceptable to the manufacturing States is unacceptable to the market States and vice versa.

It would seem, therefore, that if a solution is to be found, it must be at the Federal level. At this point, the objection may well be raised that Congress has no power to regulate State taxation of income from interstate commerce. However, a reading of the conclusions reached by the Small Business Committee on this issue, as set out in its report (2), will satisfy all but the most doubting of Thomases.

The second possible solution is the one suggested in Mr. Justice Frankfurter's dissenting opinion in the Stockham Valves and Northwestern States Portland Cement cases, namely that Congress enter the field by enacting a statute which would permit the various States to tax income from inter-

state commerce on condition that they adopt a congressionally devised uniform apportionment formula. This solution seems little better than the first. If the various State legislatures cannot get together on an apportionment formula, what reason is there to believe that their elected representatives in the Congress, representing as they do various conflicting points of view, would have any more success?

There is, however, one solution which has the dual advantage of providing very substantial relief to interstate business with not inconsiderable potentialities of congressional approval. This solution would follow the pattern already adopted by the Congress in enacting a corporation tax statute for the District of Columbia and would prohibit a State from taxing the income of a person doing solely interstate commerce within its borders where such person does not have or maintain an office, warehouse, or other place of business in the taxing State, and has no officer, agent or representative having an office or other place of business in such State. "Agent" or "representative," for these purposes, would not include an independent broker engaged in regularly soliciting orders in the State for sellers and who holds himself out as such.

S. 2281, filed by Senator SALTONSTALL on June 25 and H.R. 8019 filed by Representative CONTE on the same day impose these limitations on State taxing power. They also provide further that States may not, after the enactment of the bill, assess or collect any income tax, or make any levy with respect to such a tax, if the imposition of such a tax would have been prohibited under the bill because the requisite minimum activities were absent.

Senator SPARKMAN, for himself and other members of the Small Business Committee, has filed Senate Joint Resolution 113, which contains a somewhat similar minimum activity limitation but restricted to taxable years ending after December 31, 1958, and beginning before January 1, 1961. This bill also provides for the creation of a five-man commission, to study the question of State taxation of income from interstate commerce for the purpose of enabling the commission to recommend legislation "providing for the establishment of uniform standards which the States will be required to observe in imposing income taxes upon businesses engaged in interstate commerce."

A large number of other bills have been filed adopting the minimum activity approach, and the House Judiciary Committee has appointed a special subcommittee under the chairmanship of Representative WILLIS, or Arkansas, to study the problems of State taxation of income derived solely from interstate commerce.

While the minimum activities type of Federal statute would not, in and of itself, prevent a corporation from being taxed on more than 100 percent of its income, it would restrict jurisdiction to tax to those States where the corporation had some sort of permanent establishment. With taxing jurisdiction so restricted, the risks of taxation on more than 100 percent of income would be greatly reduced. Such a statute would also go a long way toward solving the compliance problem for small- and medium-sized businesses which have permanent establishments in only a relatively few States but send salesmen into a majority, if not all of the 50.

The final and by no means the least persuasive argument in favor of such legislation is that it would not put the Congress in the position of overruling the recent decisions of the Supreme Court. If such a statute had been in force during the taxable years involved, the right of Georgia to tax Stockham Valves and of Minnesota to tax Northwestern States Portland Cement would in no way have been affected.

The crying need at the moment would seem to be to bring the greatest possible measure of certainty into this area. So long as every corporation selling outside of its own State is in doubt as to its tax liabilities, a serious restraint is being imposed on the development of the Amercan economy. Corporate management, being confused as to its tax obligations, will in many cases resist all new tax claims until the smoke has settled. Tax administrators, quite understandably, will, on their part, be engaged in staking out the widest possible claims for themselves. All that this can add up to is greatly increased administrative costs, both direct and indirect, for everyone concerned.

Few people will contend that the minimum activities approach represents the only solution to the problem in the long run. It may quite possibly offer too great an opportunity for artificial sales procedures designed primarily to reduce tax liability. On the other hand, it is, in the judgment of many who have given it very considerable thought, the best solution that has been offered to date. If adopted, it will provide a period of certainty during which the issue can be studied, both in and out of Congress, from all angles. It may well be that the States will get together on a uniform allocation and apportionment formula which will effectively reconcile the various conflicting interests or that such a formula will be devised by the Congress. But until this time comes, it seems essential that the management of industry devote its full energies to building up a stronger and more vigorous economy and that tax administrators direct their unimpeded efforts to the collection of taxes unquestionably due. Neither group can fulfill their allotted function in the present atmosphere of doubt and uncertainty.

Address by Brig. Gen. William W. Stickney

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a splendid address delivered to the International Convention of the Sertoma Club at Memphis, Tenn., on June 24, last, by Brig. Gen. William W. Stickney, U.S. Marine Corps Reserve, Deputy Director, Marine Corps Reserve.

The address follows:

ADDRESS BY BRIG. GEN. WILLIAM W. STICKNEY, U.S. MARINE CORPS RESERVE, DEPUTY DIRECTOR, MARINE CORPS RESERVE, DELIVERED TO THE INTERNATIONAL CONVENTION OF THE SERTOMA CLUB AT PEABODY HOTEL, MEMPHIS, TENN.

I have been looking forward with great pleasure to address this outstanding organization. Your contracted name "Service to Mankind," is somewhat akin to the Marine Corps "Semper Fidelis"—"Always Faithful", and your youth employment service "Yes", is a "can do" objective just as the Marine Corps is a "can do" outfit. So it appears that your club and the Marine Corps have much in common. We build men—you build citizens. You teach the American way of life—the Marine Corps has fought and won hundreds of battles during the last 184 years to protect and defend that way of life, and, we will always be ready and faithful to that cause.

My inspector-instructor in Memphis, Capt. Ray Hicks, in writing about your club and what I should talk about today, ended his somewhat lengthy letter with this statement, "It's a big job to make a half hour address on the Marine Corps Reserve, National defense, service to youth, service to mankind, and patriotism. However, these are the subjects in which Sertomans are interested."

This is my challenge, which I accept in the hope that when I am finished, I will have stayed within my time limitations and yet covered all phases of your interest. I will not speak of the Marine Corps Reserve alone, but rather the whole "ball of wax"—all Reserve components—your Reserve and mine.

We too often think in terms of our own service alone. We sometimes feel that our own particular service is the best, or the only service to be considered. We sometimes speak of our particular service to the detriment of other services. This may be all well and good for competitive purposes or loyalty to one's particular service, but we must all remember that the hand is no stronger than the strength of all its fingers. Likewise, our Reserve is no stronger than the strength of each service. Insofar as we do harm to any finger of the strong hand of the Reserve, we destroy its strength to that extent. It is vital to the future of this Nation that we have a strong and virile Reserve in all components, a well-balanced force in readiness.

As you well know, many hours, days, weeks, and months of devoted effort have been expended during the past few years by many outstanding citizens, military and otherwise, in a concerted effort to find ways and means of improving our Reserve components so that they in turn may better serve the Nation. In this effort many committees, boards, surveys, and reevaluation symposia have been convened, desolved, and reconvened. What has been the cumulative result of all this monumental effort?

To be sure, gains have been made. Some improvements have been notable. Some rights have been established, and, many privileges have been sought. Frustration has been rampant.

In my opinion, never have so many eminent citizens and outstanding military leaders worked so diligently to obtain so little. Why?

Today, I would like to discuss with you a few basic concepts. A lawyer would call it "horn book law"; a military man would call it "an estimate of the situation"; a Navy man would call it "rocks and shoals"; a marine would call it "customs and traditions of the service."

Generally speaking, the resultant of all of our efforts has been the 1955 amendments to the Reserve Forces Act of 1952. Whether you agree with those amendments is irrelevant. The fate of that act may be academic, at least it is debatable.

Regardless of that, and whatever the results may be, we do know that in a democracy such as ours, the Regular forces can only be a shield, can only man the outer ramparts, can only ward off the initial thrust. By this, I mean no offense to our Regular forces—within them we have many great leaders and thousands of valiant hearts. Nevertheless it is the very nature of our form of government and economic structure to maintain a relatively small protective shield and to create and build a large Reserve to fight and win our wars. This is, and always will be, our tradition.

I believe it to be manifest that this Nation cannot survive without a strong, virile, and flexible Reserve. I also believe that it is the duty, not only of the Reserves themselves, but of every citizen as well, in and out of uniform, to build that Reserve and to give

it every nourishment necessary to its health. There are those who have said we have failed, but they say not why. If this be so, idle criticism is not what we need—nor are bodies and weapons our only requirements. What we need first and foremost is good old American pride and patriotism. And, what is more, we know that pride and patriotism cannot be subsidized, it cannot be bought and paid for in the marketplace. Dollars will help, but we cannot build a Reserve on drill pay alone nor lip service at a bargain. Let us look at the record of events during the past decade and see where we find ourselves today. Let us face our problems, good or bad, fairly and forthrightly.

First, let us look at our needs and requirements.

Never has the need for real preparedness, real thinking, and self analysis been so urgent. Now, as never before real and rapid preparedness is of the first priority. This Nation must organize its manpower and its production so that it can transfer easily and quickly from a peacetime economy to a war production effort, take any emergency in its stride, and ride out the storm. If this is done, and done now, it will gain for us the initial advantage of any struggle that may be in the offing.

In addition, we must make a very serious study of what future wars will mean and how we will fight them. It is of little use to superimpose new weapons on World War II organizations, and then try to work out the tactical changes involved—we have tried this before and know it will not work.

Any suggestion that the introduction of atomic and thermonuclear weapons is not going to affect the organization of our forces and the tactics of warfare is nonsense. We must examine our organizations and reevaluate our equipment, in order to keep pace with constant changes required in this atomic age.

This reevaluation is also required in our Reserve components and our present system of procuring and training our Reserve forces. The old method has proven itself to be out of date.

To successfully fight any war, we need the following essential requirements.

First, we must have outstanding regular peacetime forces, up to strength and ready at all times to act as our shield without any mobilization procedure.

These forces must be trained and equipped in the highest degree. They must be mobile, hardhitting, offensive troops with an esprit de corps and very highly disciplined. I say "very highly disciplined" advisedly. Somehow in our effort to be equitable we have lost track of the highly important subject of discipline. We just cannot wage a successful war without instinctively disciplined troops. These are the troops and the commanders who must stand firm in the face of the horrors and the terrors of the opening clashes of an atomic war. They will stand firm only if they are highly trained and highly disciplined.

Secondly, we need reserve forces, well organized, capable of being mobilized in echelons in depth, each echelon receiving sufficient training in time of peace to insure that it is ready in fact, and fit to fight offensively or defensively as and when needed.

Thirdly, these forces, regular and reserve, must be backed by a sound logistic and movement organization which must exist in peacetime to the degree necessary to insure success in the opening days of war.

Lastly, we must have a sound civil defense organization in each State, territory, and large metropolitan area.

For these reasons, I strongly contend that it is our solemn duty to do everything humanly possible to help affirmatively in the building of a strong, flexible and sturdy reserve with the will to fight anywhere, and everywhere that need may arise.

These things being true, how do we best obtain the desired results? First, it is my considered opinion that what we need most is a strong and forthright educational program for our citizens, as to the present position of this great Nation; that it is the greatest and strongest Nation in the world and that as such it is incumbent upon us to lead the free nations in our struggle for peace and the preservation of all freedom loving peoples. This preservation of freedom will largely depend upon our efforts in this direction. In our success may well depend the success of the world, and government as we understand it. In our failure may well depend the failure of world democracy. These are not idle words but fundamental truths for which our forefathers have fought and given their life blood to preserve. So let it be known that these ideals and our very existence are in peril. To maintain them, we need the full loyalty and wholehearted support of every American citizen. If America is worth living for, it's worth fighting, if not dying for as well. I cannot express too strongly the great need of new and powerful concepts in the thinking of the American people if this Nation is to survive. The concept is plain and the need is great.

There is rampant in the world today a sinister force of unbelievers—a gigantic force backed and sponsored by a nation whose rulers live in constant fear of the truth—in constant fear that the Russian people will learn the truth about the world without or that foreigners will learn the truth about their world within. A nation whose rulers constantly seek security only in patient but deadly struggle for the total destruction of rival power—never in compacts and compromises with it. With this constant fear of the truth—with this clinging dogma that the outside world is evil and that their inside world shall never be exposed to the clarifying rays of truth and justice—the implications are self-evident. With such a government, whose rulers dare not be guided by the everlasting truth, we will have an uneasy Rusian nationalism in which the conceptions of offense and defense are inextricably confused—and—armed and equipped with the apparatus of international communism they become more dangerous and more insidious than could ever be imagined by the ordinary man.

We have here before us a political force which appears to be committed to the belief that with the United States there can be no permanent modus vivendi—that it is desirable and necessary that the internal harmony of our society be disrupted, our traditional way of life be destroyed, and that the international authority of our State be broken, if Soviet power is to be secure. This political force has complete power of disposition over the energies of one of the world's greatest peoples and the resources of the world's richest national territory. Finally, it is seemingly inaccessible to considerations of reality and truth in its basic reactions. For it, the vast fund of objective fact and truth about human society and history is not, as with us, the measure against which outlook is constantly being tested and reformed, but a great grab bag from which individual items are selected arbitrarily and tendentiously to bolster an outlook already preconceived. The problem of how to cope with this force is undoubtedly the greatest task our diplomacy has ever faced and probably the greatest it will ever have to face. But cope with it we must. And to do this, I sincerely believe that we must see to it that our people are educated to the realities and truths of the Russian situation. I cannot overemphasize the importance of this great truth. I am convinced that there would be far less hysterical anti-Sovietism in our country today if the realities of this situation were better understood by our people. There is nothing as dangerous or as terrifying as the unknown. We must instill in all our people the truth, courage, and self-confidence necessary for the greatest posible improvement in the health and vigor of our own society, and, we must put before the peoples of the world a much more positive and constructive picture of the sort of world we would like to see than we have put forward in the past.

Ancient Carthage, with its luxury standard of living, refused to make minimum sacrifices to support Hannibal and did not survive. Cato's relentless chant "Carthage must be destroyed" did not awaken the indolent Africans from their preoccupation of life, liberty and the pursit of happiness. They did not believe that Cato, like Khrushchev, meant what he threatened. Similarly, Rome itself, entertained with bread, wine, and circuses—and, arrogant in its splendor, did not survive the onslaught of the Vandals and Visigoths. The technical skill that built her roads and aqueducts, the "know-how" of her administrators, the glory of her law—none of these assets saved an effete and overcivilized Rome.

The gross national product of Rome did not protect her. The visigoths had no gross national product—only weapons and the will for power. These dismal comments on Carthage and Rome could be repeated for other proud civilizations. Many times in the past, nations with high standards of living have been pushed to the grave by nations with low standards of dying. There is no reason to suppose that history, or providence, will accord any special dispensation to America.

We must admit, as a government and as a people, that we are locked in a struggle with a conspiratorial elite who seem to have perverted every form of human activity to the cause of conflict. This struggle continues today just as surely as it did on the afternoon of December 6, 1941. Even though we didn't know it, the carriers of the imperial Japanese Navy were converging on Hawaii. The bombs had been loaded, the pilots briefed, the mission assigned, the die cast for our people by war lords on the far side of the earth. We learned then that war starts—not at the moment of the surprise attack—but when the enemy completes his final plans and commits his resources to conflict.

Permit me to read to you a small portion of a paper read before the American geographical and statistical society by Admiral Perry in the year 1856, 103 years ago. I quote, "it seems to me that the people of America will, in some form or other, extend their dominion and their power, until they shall have * * * placed the Saxon race upon the eastern shores of Asia. And I think too that eastward and southward will her great rival in future aggrandizement (Russia) stretch forth her power to the coasts of China and Siam: and thus the Saxon and the Cossack will meet * * * will it be in friendship? I fear not! The antagonistic exponents of freedom and absolutism must thus meet at last, and then will be fought the mighty battle on which the world will look with breathless interest, for on its issue will depend the freedom or the slavery of the world. * * * I think I see in the distance the giants that are growing up for that fierce and final encounter; in the progress of events that battle must sooner or later be fought."

As sure as this prophecy has proven itself to date, there now stands on our frontier an Asiatic conqueror. Owing to science, the Atlantic Ocean is no wider than the Dela-

ware. Owing to technology, the Pacific is no broader than Lake Michigan, and, the wastelands of the North can be bridged in a few hours flight. And don't think for one moment that we will have time to organize the militia as we did at Lexington and Concord or the Federal Reserve as we did in World War I and World War II. We will be lucky if we have time to get our loved ones into air raid shelters.

Now, with this in mind, let us look squarely at the facts, particularly at the facts of our weakness—from them we may gain strength.

Never have we, as a people, talked so much about equity and privileges and so little about responsibilities, obligations and duties. In fact, the words "equity" and "privilege" have to many become synonymous. Let us remember that the building up in peacetime of a strong national character is of supreme importance.

This Nation has never accustomed itself to a professional military force. Indeed, we boast of the fact as if it were a cornerstone of democracy.

We still like to think about arousing a military force after the danger is upon us, and, about sending the boys back home even before the danger is over—as we did in World War II.

Our fetish for springing to arms in an emergency has prevented us from clearly thinking out our national defense problem, and, if the springing has each time proved costly, in life and treasure, we have been thus far willing to pay the price. It has seemed preferable to a large standing force.

Now the new weapons of war have eliminated our choice in the matter. We will barely have time to spring to our air raid shelters in this age of atomic destruction.

Whether we like it or not, security under arms is the order of the day, and as our leaders have told us, may continue for decades or even a century.

It is high time we became more mature about the needs and requirements of our Military Establishment. It is also high time that we started to think about our Reserve as a quasi-professional force instead of a quasi-amateur force. A force which must have the full support of business and industry if it is to succeed.

An adequate and flexible Reserve cannot spring up over night. It requires professional attitude, aptitude, organization, equipment, and training—much training. The history of German military success against the French in World War II clearly reveals the overwhelming superiority of the quasi-professional force when arrayed against the quasi-amateur force. Germany did not conquer France with superiority of manpower, in numbers. Germany conquered by virtue of the superior capability of its military force, even when outnumbered.

We Americans take pride in having the best of everything, but we have not demonstrated our pride in achieving, and maintaining the world's best Military Establishment or, the world's best trained Reserve.

The test is not in wartime, when patriotism runs high, when our people actually shake with patriotism. The real test is before us today, when we are called upon to support a large professional military force and, an even larger quasi-professional military reserve, all within our peacetime social structure.

Our support has been shabby, at best; as a nation we have not let our military people feel, Reserve or otherwise, that their efforts are appreciated. We go through the motions, but true respect is lacking. We look down upon the military service as a career, and upon the military reservist as a quasi-professional military man.

We cannot expect men of the necessary caliber to enter the military or its Reserve on a voluntary basis until their neighbors, all of us, look upon the bearing of arms as an honorable occupation, with the prestige which it deserves. We cannot expect to retain men of the required caliber in the military services unless the bearing of arms becomes, in fact, an honorable profession.

We must get away from the trend of thinking that Reserve units are quasi-amateur and insist that they are, and must be quasi-professional units. We must depart from the public conception of weekend warriors, Thursday night soldiers and citizen marines. We must go forward and prove, beyond doubt, that these men are expending their time, energy, and devotion to become quasi-professional men in an honorable and respected profession.

It must be made crystal clear, as it is in fact, that all major wars and struggles are Reserve wars and struggles and that the Reserves have done their part to quell past wars, contained the flame in Korea, and will do so elsewhere. The public must know that they train at home and in the field and are ever ready for immediate employment should the flame of greed or hate touch off a general conflagation.

If this be done, then, the community will see the error of its ways and will be compelled to honor and respect such efforts.

If this be done, then, it is merely basic economics to realize that the best military capability can be procured for the least money by a Reserve military establishment which, at least, has a backbone of professional character. It can be shown that the best way and the cheapest way to defend our country is with a professional force and a quasi-professional military Reserve. This, of course, goes against the present public concept. It runs headlong into the old theory that each must do his bit and, in the end, must do it whether he likes it or not, and, whether or not he can be made into a capable military man. If the Armed Forces Reserve were actually attractive, if there were some competition to get into it, this situation would not prevail.

A respectable military force, be it Regular or Reserve, can be obtained only if it is believed that the military worker is worthy of his hire.

The one way to get men without regard for their market worth is to draft them, and they will leave military employment at the first opportunity. The one way to keep them in military service is to give them a package which adds up to reasonable incentive and reasonable security. The package may not parallel civilian life in monetary gain, but the total should compare with civilian experience. The package may consist of direct pay, fringe benefits, and security for the long pull. It must include the respect, honor and prestige of the civilian community.

As a Nation, we will be in the military business for a long time to come. In the tradition of America, we deserve the best military force in the world, with the complexity of new weapons, we can no longer get the best with a quasi-amateur force, especially short-term enlistees nor with a quasi-amateur Reserve attitude. And in the long run, a highly professional force with a quasi-professional military Reserve is the most economical of all security forces, and an asset to business and industry rather than a deficit. Business and industry must realize that it has a great equity in our Reserve structure. It must also be remembered that the members of our Reserve are of, and from, business and industry and that their very membership is for the purpose of protecting that equity and all that it represents.

Civilian understanding and support of the military man is an essential ingredient of our military posture. Such support is, in the last analysis, our finest military asset—part and parcel of our national security.

Clean Corn Will Pay Dividends

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. MARTIN. Mr. President, a booklet entitled "Clean Corn Will Pay Dividends" recently has been published by the Government Printing Office. It is an excellent factual presentation of the benefits which will derive to farmers from keeping stored corn clean, and free from rodents and insects. It was prepared by three governmental agencies working together—the Food and Drug Administration of the Department of Health, Education, and Welfare; the Department of Agriculture, and the Bureau of Sports Fisheries and Wildlife of the Department of the Interior. Also cooperating in preparation of the pamphlet was the Corn Industries Research Foundation, Inc., a private organization.

Because of the worth of this publication to farmers and to all consumers of corn, I ask unanimous consent that its text be printed in the Appendix of the RECORD.

There being no objection, the text of the booklet was ordered to be printed in the RECORD, as follows:

THE UNSEEN CATASTROPHE

A million-dollar fire wipes out a grain elevator in your area and the story is sure to make the headlines.

Almost unnoticed, however, is damage to grain and other farm property which, in outright dollar losses, is hundreds of times greater. This damage—so huge that it is a national catastrophe—is taking place every day, but is usually unseen and gradual. A little here and there, but it adds up to a loss so great that it demands urgent action by all of us.

Pests destroy or spoil hundreds of millions of dollars' worth of stored grain each year.

Increasing in severity

Despite effective work in the past and current efforts to keep pests under control, these losses continue, and may increase, due to the bumper crops of recent years and the need for storing grain over longer periods.

Right now there is more corn in farm storage than ever in history. Much of it is stored in cribs of open-type construction or in temporary structures which increase the chances of damage.

Attacks by insects, rats, mice, and birds may seem to cause insignificant loss on your farm or in your elevator. However, the small individual losses total up to an enormous yearly waste.

A COOPERATIVE PROGRAM

Safeguarding the food supply

Signs of pest damage mean something far more than money loss. They are firsthand evidence of contamination of the grains which are a big part of the Nation's food supply.

The Federal Food, Drug, and Cosmetic Act requires that foods shipped in interstate commerce be wholesome and clean, and handled at all times under sanitary conditions to prevent contamination.

Due to the law's broad coverage, enforcement is a continuing, evolving process. Enforcement with regard to foods derived from grains began with the inspection of process-

ing plants. As sanitation improved at the manufacturing level, enforcement attention could be given to grain storage conditions, and to the sanitary quality of the grain itself. Inspection of wheat elevators was begun in 1952.

Your help needed

Through cooperation, the wheat phase of the Grain Sanitation Program is proving effective. You can do much, by your efforts and cooperation, to make the corn sanitation program succeed.

Since our pure food law applies to grains and to food products prepared from them, food corn comes within its scope just as wheat does. Each producer and seller of corn destined for food use has a real obligation to consumers to keep corn clean. The same holds true, of course, for those who later handle and process corn.

BENEFITS FROM CORN SANITATION

Worth the effort

Corn stored under sanitary conditions will pay dividends in at least three ways:

(1) Higher returns if you are a farmer, because quality holds up and waste is reduced.

(2) Less trouble, less risk, and less loss to handlers.

(3) Better food for consumers, since clean grain meets high standards required by our pure food laws.

Money in the bank

Experts in pest control contend that rats, mice, birds, and insects destroy nearly 10 percent of the entire crop of grains. Even if your vermin protection is better than average, assume the amount lost to pests on your farm is 3 percent. Say you store 8,000 bushels of corn in structures that do not keep the thieves out. That would mean 240 bushels, or around $260, lost.

You can carry on a year-round poisoning program to control rodents for an average cost of about $10 a year for bait and bait stations. For another $10 you can spray storage areas for insects. The grain itself may have to be sprayed or fumigated when held for long periods.

To pay for your labor, you would be left $240 of the $260 it might have cost you to feed the pests, as good as an extra $240 in the bank.

Rodents cost you money

If you have rats and mice on your farm they are probably costing you much more than you realize; it could very easily amount to several hundred dollars a year. Here's why:

The rat population is estimated to average 25 per farm in Corn Belt States. During 1 year, a single rat eats $2 worth of food, grain or feed—which means $50 out the window in straight destruction from eating. In addition these 25 rats contaminate 10 times as much—$500 worth—as they actually eat. In just 1 year, according to a leading authority, a single rat will shed about a million hairs, void 10,000 droppings, and a gallon of urine, and harbor as much as 10,000 lice.

Never conclude that you have only a few rats just because you seldom see one. According to studies of rat populations and breeding rates, if you see a few rats now and then at night, you may have a hundred or more on your premises. Seeing them every night and a few occasionally by day means you are probably boarding many more.

In addition to their destruction of grain, rats damage buildings by gnawing and undermining. They are blood-lust killers of chicks. They cause fires. So many different kinds of damage can be charged to rats that it is good business sense to stop feeding them.

Protect livestock health

Rodents spread disease. Germs are transmitted by their bites, their excreta, and the bites of the fleas and lice rats and mice carry. When disease breaks out among cattle, hogs, or poultry, rodents almost invariably are found in the corn and their filth in the feed.

Contagious abortion, distemper, mastitis, paratyphoid, swine erysipelas, atrophic rhinitis, and trchinosis are among diseases that have been traced to rats. Leptospirosis, which affects the kidneys of hogs and is often fatal to young pigs, may be transmitted through feeding corn contaminated by rat urine.

The menact of animal disease is another strong reason why it pays to keep corn clean.

Corn as a food source

A substantial amount of corn which is marketed is processed into human food. The average farmer or elevator operator cannot be certain where or how his corn will eventually be used. There is always the possibility that some part of the corn you sell or handle will be processed for food—perhaps as a form of food for your own table.

As an important part of the effort to protect the cleanliness of foods that people eat, you are urged to keep your corn clean and take what steps you can to market clean corn. An increasing number of grain farmers are finding that it pays to establish a reputation for delivering clean grain.

WHAT YOU CAN DO

On the farm

Rodentproof corn-storage buildings. A modest investment in hardware cloth, metal stripping, and metal door flashing will soon pay for itself in money saved.

Don't give food and shelter to rodents and birds. Clean up junk, trash, rags, and all else that affords hiding and nesting places.

Kill rats and mice systematically by poisoning, trapping, or gassing. The use of permanent, enclosed bait stations—well supplied with suitable poison baits—is one of the best ways to get rid of rodents. Be careful to protect stored grains from contamination with rodent poisons.

If you store shelled corn, examine the surface of the grain frequently for signs of rodent or bird droppings. When contamination is found, carefully shovel off the top twelve inches and more if necessary, before marketing it. Surface contamination should likewise be removed before turning the grain or adding grain to the corn already in the bin.

Also inspect your grain regularly for insect infestation, and fumigate or apply a protective treatment where necessary.

Consult your county agents, State extension services, local ASC officers, or area officials of the Branch of Predator and Rodent Control, Bureau of Sport Fisheries and Wildlife, for detailed information on rodent control. Write for printed matter—see list at end of this bulletin.

Use care in marketing corn. Where rats and mice have had free range over the ears in a crib, that corn is not satisfactory as a potential source of human food.

At the elevator

Keep your elevator free from rodents, birds, and insects, and clean out refuse and hiding places where these pests may live and multiply.

Inspect grain regularly for insect infestation. Fumigate whenever necessary.

Make one man responsible for sanitation. Authorize him to do a thorough job, including a continuous poison-bait program inside and outdoors.

Don't take chances on contamination spreading from infested grain to your bins of quality grain.

Where possible, it is desirable for the elevator operator to segregate the worst grain he receives, keeping it in a separate bin until he has a carload and then directing such a car into feed channels rather than shipping it indiscriminately into commerce.

An elevator operator who enjoys a reputation for clean grain on the market will think twice before putting contaminated grain of any kind through his facilities, even as stock feed.

CURB INSECT PESTS

Insects cost you money

Sanitary storing of shelled corn, in farm granaries and county elevators, requires as persistent a war against insects as you wage on rodents. Insect pests reduce the weight of grain. Their activity causes heating and excess moisture, resulting in caking and spoilage. Insect excreta and body remains contaminate grain.

If unchecked the numbers and destructiveness of insects increase during the journey of grain from farms to terminal elevators and processors. Insects breed and multiply in stored grain.

How to control insects

Follow good agricultural practices.

Provide storage that will permit protecting corn from insects.

Clean up and destroy waste grains, trash, and other insect harbors, to prevent migration to other grains.

Spray the cleaned bin thoroughly with a residual spray to prevent carryover of insect infestation.

Use protective treatments on grain when recommended.

Examine grain regularly for live insects, or other forms of insect attack. Weevils or moths are sure signs of trouble. They lay their eggs in and on the kernels and the larvae of some kinds bore in and live inside the kernels.

Fumigate if you find weevils or moths, or their exit holes in the kernels.

Use insecticides according to directions on the labels, and protect grains from residues of nonpermitted chemicals.

IN SUMMARY

Clean corn—corn protected from pest contamination, stored safely, and handled under sanitary conditions—means:

(1) Cleaner food for consumers;

(2) Less risk of loss to handlers;

(3) Less waste, hence more profit, to the farmer.

The law can and will be brought into use, as necessary, to safeguard the high standards of cleanliness for human food. However, voluntary compliance with the law is in the best tradition of our system of government.

Keep informed on the clean corn program. See your county extension agent, county ASC officer, or official of the Branch of Predator and Rodent Control, Bureau of Sport Fisheries and Wildlife, in your area. These officials will supply the latest information on the control of rodents and insect pests.

The best and most economical answer to corn contamination is to prevent contamination at the source.

Act now. Corn is food. Do what you can to keep corn clean.

Hungary, Tibet, and the Caribbean

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. FLOOD. Mr. Speaker, in a number of addresses to the House on the current crisis in the Caribbean, I have em-

phasized the security of that strategic area as an imperative necessity for the peace and safety of the Western Hemisphere and urged the recognition of the Monroe Doctrine as covering the infiltration and subversion of American governments.

The importance of the Caribbean regions to the United States and free nations of the Western World is analagous to that of Hungary and Tibet to the Communist empire, and should be so recognized.

This comparison is ably summarized in an article in the July 18, 1959, issue of National Review by Mr. James Burnham, one of the editors of that well-known journal of fact and opinion.

In order that this informative article may be permanently recorded in the annals of the Congress, I include it as part of these remarks:

HUNGARY, TIBET, AND THE CARIBBEAN

(By James Burnham)

In our policy toward the Communist enterprises there is a basic unbalance that must in the long run, if it is not corrected, prove fatal. It may be illustrated, once more, by contrasting the Communist relation to current events in the Caribbean with our relation to the late crises in Tibet and Hungary.

The Caribbean lies inside the boundaries of "our world"—the free world, as we usually call it. For the United States, main base of the free world, the Caribbean is a region of prime import—our "strategic threshhold." Any sort of trouble in the Caribbean is bad trouble for us.

Hungary and Tibet lie inside "their world"—within the Communist empire, or "camp of peace and socialism," as they usually call it. For Russia, main base of the Communist world, Hungary is a region of prime import. It guards a major pass between east and west, and is a fulcrum point on the north-south axis. Any trouble in Hungary is bad trouble for Moscow. For Communist China, Tibet is not quite so immediately crucial; but Tibet is a strategic key to the uneasy southwestern and western Chinese provinces, and the advance base for expansion in the Pakistan-India-Burma directions.

COMMUNIST INTERVENTION

Now it would not be accurate to say that the Communists caused the current troubles in the Caribbean. The trouble potential was there, with or without the presence of Communists. But what the Soviet agents and local Communists have done and are doing is to maximize that trouble potential, to exacerbate conflicts beyond solution, to guide the turmoil into those channels that do greatest injury to U.S. strategic and economic interests; and meanwhile to enlarge their own forces while planting them in positions of decisive social power.

Moscow long ago made its preparations for these Caribbean days. The first agents founded the Latin American parties in the 1920's. At the end of the Spanish civil war, thousands of militants trained and hardened under MVD control in Spain were dispatched to South and Central America, to become the core of the activist cadres in all Latin America.

Though Fidel Castro is probably not a Communist, Communists trained his guerrillas, taught him Mao Tsetung's tactical doctrine, formulated his slogans and his socio-economic program. While he was in the Sierra Maestre, a large portion of his arms and money came, by one or another staging, from Czech and Soviet sources, and much of the remainder from Communists or those duped by Communists in the United States. Communist pressure has determined the anti-Yankee, anticapitalist, self-destroying course of the Castro revolution.

With the Cuban lid blown off, the Communist cadres provoke and stiffen the bands of exiles, adventurers, idealists and bandits that harass Panama, Nicaragua, Guatemala, the Dominican Republic, Haiti and the land, sea and air of the entire basin.

The Communists process the political energy of the Caribbean events to their ends. In Africa, Asia, and Europe as well as the Americas, the Castro revolution is turned into a magic political bludgeon with which to batter the economic, political, and moral foundations of the West.

WESTERN NONINTERVENTION

The contrast between these operations and the Western behavior toward the Hungarian and Tibetan revolts is too complete and too obvious to need detailed statement. We did just next to nothing. We had made no preparations, and had no share in the preliminaries. We did not intervene, directly or indirectly, in midcrisis. For Hungary the Western leaders made a few platonic speeches; for Tibet, not even that.

How are we to explain this total contrast?

We do nothing because we are afraid to risk nuclear war. But that cuts both ways. They do not hesitate to take the risk—if it really is a risk—and they get away with it. Why should we suppose that the result would be any different if we were intervening in their sphere?

It is impossible to operate inside a totalitarian boundary? That excuse is shamefaced nonsense. There would have been no insuperable difficulties in getting arms, medicines, radios, money to the Hungarian and Tibetan freedom fighters. Air drops and smuggling are arts highly developed in our day. We could have offered asylum to defecting Soviet soldiers. And much that we could do to exploit their troubles does not require direct physical intervention. We too could use the U.N. as forum. We too could make diplomacy and trade into effective political and economic weapons. We could make our voice heard by all of the enemy's subjects. Instead we bow to the enemy's hands off. We grant him his privileged sanctuary.

In their excellent recent book, "Protracted Conflict," the associates of the Foreign Policy Research Institute summarize the peculiar rules of this strange game and the inevitable result if they are not changed:

"We are not 'containing' the Communists: they are containing us—behind a constantly shrinking perimeter of free world defenses. Behind the Iron Curtain, the Communist 'peace zone' is closed to our 'interference'; the free world is the 'war zone' in which the Communists can, with impunity, bring all of their implements of conflict to bear.

"In this 'war zone' we hold, if we are lucky, the ground which the Communists have not yet captured—or we give way. * * * The Communists, even were they much less adroit than they have proved to be, cannot help but win."

In relation to the present Caribbean crisis, we seem to be carrying the hands-off rule a half-world further. We forbear even that use of our power that is required to sweep the drunks—and the rats—off our own doorstep.

Why Hospitals Exploit Labor

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Nation:

WHY HOSPITALS EXPLOIT LABOR

(By George Kirstein)

On the surface, the issues in New York's 46-day hospital strike which ended last week were simple. The predominantly Puerto Rican and Negro nonprofessional workers were doing battle in the only way they could to improve their admittedly miserable standards of pay. Opposing them, in the public's mind, were the wealthy and socially prominent trustees who guided the policies of the embattled institutions. The strike was a skirmish in class warfare, the very poor arrayed against the very rich. Citizens chose sides in accordance with their own socio-economic orientation; there was a convenient hero and a clear villain, and which was which depended upon one's point of view. No one, of course, dreamed of suggesting that the real villains were the helpless patients, bedridden inside the hospitals. Yet in sober fact it is the patient who has been exploiting—albeit unwittingly and by force of circumstance—the hospital workers and the hospital treasuries alike.

For the truth is that the hospitals are not receiving sufficient fees for the services they are giving. As a result, they are operating at staggering deficits; and the one controllable item of cost that can be kept at minimal levels is wages. It was not the trustees who profited from the sweatshop conditions under which the exploited workers toiled; it was the patients—and the taxpayers. Nearly every patient—semiprivate or ward—lying uncomfortably on his sickbed was being subsidized by the underpaid workers, as well as by the philanthropies (including the trustees') which maintained the hospital.

And the most curious paradox of this whole paradoxical situation was that the semiprivate patients who were insured by Blue Cross against hospital costs were virtuously convinced that they were no burden to anyone; indeed, many felt that if anybody had the right to complain, it was they themselves—about the high cost of Blue Cross.

To see how this anomalous situation arose, we must look back in time. Originally, the voluntary hospitals were built for the poor by men of great wealth. The rich were taken care of at home; they had their babies, and recovered or died from their illnesses, in their own darkened bedrooms. But the poor, almost as a punishment, went to hospitals where, because of inadequate care, the fatality rates were shocking. No one who could afford to pay for doctors and nurses would allow himself to be incarcerated in the pest houses that were the 19th century hospital. Most of the nonprofessional work in those early institutions was done by volunteers—Lady Bountifuls who devoted themselves to easing the suffering of the poor. As medical science advanced, the hospitals became more efficient centers where therapeutic equipment was centralized and recovery rates improved. The volunteer workers gave way, in

part, to the paid employee; and the municipality established the practice of augmenting private charity by compensating hospitals for indigent ward patients.

Today this compensation is not nearly enough. New York City pays $20 per day for each ward patient; the cost of ward care in one typical hospital is pennies under $30 per day. (In the city's own hospitals, such as Bellevue, the per diem upkeep of a patient is $28.) And these voluntary-hospital costs, it should be emphasized, are based on wage rates to nonprofessional help which everyone admits are inadequate.

Moreover, doctors who supervise ward cases receive no compensation; as members of the visiting staff, they contribute their valuable time. And the interns and residents who carry out the doctors' orders in the wards as part of their educational program are paid so little that their paychecks amount to little more than a recurrent monthly insult. In the average New York hospital, interns receive a stipend of around $50 per month in addition to room and board, and residents receive twice that amount. These men already have their M.D. degrees and the great majority are married and have children. Is it any wonder that, upon hanging out their shingles after their formal training is over, they feel that society owes them a great debt which they are tempted to recover by demanding high fees?

Turning now from the indigent patients whose care must be subsidized by the municipality or charity, let us consider the patients who can afford to pay for their own care. Historically, as hospitals improved to the point where they had become centers for treating the sick rather than merely pest houses, people who could afford to pay requested accommodations. They were given curtained-off sections of the wards, which were termed "semipublic" accommodations. These, of course, were the forerunners of the semiprivate rooms with which we are familiar today, and to which all who are insured under a Blue Cross plan are entitled.

Blue Cross was instituted in 1935 as a nonprofit plan under which people could arrange for an insurance company to pay their hospital bills. It has always been Blue Cross' objective to compensate the hospitals in full, and for the first 10 years, the objective was fulfilled. But in recent years, costs in some instances have advanced faster than Blue Cross payments. Thus, in some New York hospitals, even Blue Cross patients have caused deficits which philanthropy has had to meet. And it must not be forgotten that Blue Cross payments to hospitals, based as they are on actual costs, are predicated on substandard wages which are standard for unskilled help in most voluntary hospitals. If all labor exploitation were to cease, Blue Cross would have to pay at least double its current rates to hospitals, which means premium payments would also be doubled.

What factors have forced hospital expenses to such staggering levels as compared to a decade or two ago, when the Blue Cross system worked fairly well? Obviously, there is the purely hotel cost of running a hospital: bed, board and recreational facilities. Even New York's Waldorf-Astoria charges only about $14 a day for a bed, and perhaps another $10 would cover food. Why must the payment for a ward patient, who isn't exactly occupying a Waldorf room or eating Waldorf food, be nearly $30 a day? The problem here is that modern science has outpaced our socio-economic thinking. Only a few years ago, a patient with a certain heart ailment might be admitted to a hospital (if the disease were discovered in time) and there, within a few days, he would die. Not much could be done for him except, perhaps to ease his pain—a relatively inexpensive procedure. Today the same patient, after an 8-hour operation involving the use of an operating room, a recovery room, X-ray and other diagnostic devices, as well as a team of doctors and nurses, will spend a month or two in a hospital. He will not only live; he will recover completely. Similarly, a baby may have a tumor removed from the brain which would have been fatal a few years ago; he may be months in the hospital, with around-the-clock nursing, special foods and all kinds of expensive care.

True, other types of cases require briefer hospitalization periods than formerly, but even here the savings are less than one would imagine. The rule of thumb on hospital expenses is that one-third goes for nurses' salaries, one-third for other labor, and one-third for supplies (including food). Nurses' salaries have risen sharply in the last few years as a nursing shortage developed (their pay is still too low, in my opinion, to attract a sufficient number of recruits to this indispensable profession). But the costs that have really skyrocketed are supply costs. Science discovers a new drug—penicillin, for example. When first introduced, it is extremely expensive for many reasons; mass production has not yet been established, for one. Yet, if a doctor believes the drug will cure a patient, he rightly orders its use without regard to expense. And new and effective drugs come into use with unprecedented rapidity.

Another financial drain on a hospital is the outpatient department. In the cancer, heart, and other clinics which these hospitals offer to ambulatory cases, thousands of medical services are performed annually. Patients who can afford to pay do so, of course. But the patients are treated regardless of whether they can pay or not, and neither Blue Cross nor the city compensates the hospitals for these vital services.

The table gives at a glance the financial picture of one of New York's great voluntary hospitals. Not all hospitals have such a pressing problem; some, however, are in an even more desperate plight.

Let us turn now to the organizational structure of the voluntary hospital which bears the responsibility of coping with the institution's almost insoluble financial problems.

Historically, the committee of rich men who financed the individual hospital deficits became the institution's governing body, or board of trustees. But as deficits mounted to their present level of approximately $2,000 per bed per year, the burden became too great for any small body of men. Community fund-raising along sectarian lines replaced or augmented the trustees' donations.

Although funds for the voluntary hospitals are now raised in this manner, the archaic trustee structure persists. True, hospital trustees seek no material gain for themselves; indeed, they contribute generoulsy of their own time and money. But generally speaking they bring a point of view to bear on the economic problems of health administration which is limited in scope and preconditioned by upper-class orientation. Moreover, they are self-selecting, self-perpetuating bodies which represent no numerically significant section of the community they are serving. Trustees represent wealth and power, not people. No labor leaders, no representatives of the municipality or other segment of the community sit among them. Hospital boards are undemocratic in principle, unrepresentative in practice, and are apt to be unimaginative and retrogressive in the results they achieve. Dramatic confirmation of this can be found in the antedeluvian position the trustees took vis-a-vis the hospital workers' demands for union recognition during the recent 46-day New York strike.

The foregoing analysis of the economic problems which create the dilemma of the voluntary hospitals suggests at least some solutions.

1. The costs of patient care in hospitals should be met by public moneys—Federal, State, and municipal. To those who object to Government expenditures in this field, it should be pointed out that the Federal Government already contributes heavily to hospital costs through income tax deductions for charitable donations. The present-day philanthropist deducts his hospital donations from income, and it is a rare donor who gives more than the 30 percent of income permitted as a tax deduction. State tax laws, too, encourage donations; and as for municipalities, they have been in the hospital business for years.

As has already been demonstrated, hospital care should cost even more than it does today. In order to give each patient the utmost benefits of modern science, while at the same time terminating the current exploitation of many segments of the hospital staff, more money is needed. A society that is unprepared to spend money for the improvement of its own health deserves the fate indolence brings. I believe that our society would enthusiastically support a solution to its health problem—a far worthier objective than the armament race, upon which we are spending more and more billions each year.

2. Philanthropy, which is rewarding both to the donor and to the beneficiary, need not and should not be eliminated, although its purpose and direction should be newly defined. Philanthropic moneys should no longer be spent to offset ever-mounting deficits; rather, they should be devoted to the exploration of new methods of hospital administration, to research in the endless struggle against disease, and to other activities which go beyond the day-to-day administration of the hospital. The philanthropist would still receive his reward in the knowledge that he is helping to improve the whole health complex of society. Indeed, he would be much better off; no longer would he have to give more and more—not to see his hospital grow, but merely to save it from collapse. The endless race to stay in the same place would end, and the philanthropist could resume his classic role of financing the push on to new frontiers.

3. The governing bodies of the voluntary hospitals should be reconstituted along broader lines in order to cope with modern problems. The new boards might well include some of the present personnel who, by virtue of community leadership, or of special qualifications in the area of medical economics, still have a great contribution to make. But the boards should also include chosen representatives of organized labor as well as trained sociologists, economists, and scholars in other disciplines bearing on public-health administration. The possession of wealth should cease being the criterion for membership. Representatives of the Federal, State, and municipal governments should also sit, but should not constitute a majority. With such a governing body to formulate policy, professional administrators would no longer need to devote their efforts to shoring up an obsolete economic structure, but could concentrate on creating a new structure better suited to society's needs.

4. Finally, by intelligent replanning of hospital facilities, more efficiency could easily be introduced. Hospitals which cost over $30,000 per bed to construct and $30 per bed daily to operate should not be occupied by patients well on their way to recovery, or by aged people who are victims of chronic diseases. Each voluntary hospital should have attached to it a modern nursing home for convalescents, for which the medical supervision would be furnished by the hospital staff. In addition, each major hospital should have a special unit for the care of the aging sick and chronically ill, whose needs—in terms of hospital facilities—are

much less than those of an acutely ill patient being prepared for, or just recovering from, a major operation. Here again the hospital would furnish the necessary medical supervision.

As part of the care for the aged, there should be a home-care program for bedridden patients who have no immediate need for expensive hospital equipment. A visiting team of doctor, nurse, and social worker could supervise the medical care of these patients while their own relatives furnish the love and affection which means so much as life nears its end.

If hospitals were underwriten by tax funds, there would be no further need for the distinction between public (municipally operated) hospitals for indigents and voluntary hospitals serving the same kind of patient. All cases could be taken care of in the modern hospital complex I have described. In such a medical center, teaching and research would blossom, and doctors would be able to teach their students every aspect of medical science in one location. Indeed, eventually the logical place for medical schools would be approximate to these great medical centers.

That any such development will not happen immediately is obvious. But this is the direction in which we must go if we are to solve the complex problems of patient care in the fast-changing world of ever-expanding scientific knowledge.

Income and expenses; 650-bed voluntary hospital

Type of bed	Income (daily)	Costs (daily)	Profit or loss per patient (daily)	Number of beds (average)	Annual profit or loss
Private	Patient pays $40	$32	$8	20	$58,400
Semiprivate	Blue Cross pays $30	32	−2	330	−240,900
Ward	City pays $20	30	−10	300	−1,095,000
Outpatient department					[1] −280,000
Total annual deficit					1,557,500

[1] This hospital treats an average of 40,000 outpatients annually at a cost of $9 per visit. Average payment by the outpatient is $2 per visit, netting a $7 loss to the hospital.

Woman To Behold

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature story from the Wilkes-Barre Sunday Independent of July 12, 1959, written by the Society Editor, Libby Brennan, in which she interestingly sets forth some of the highlights in the fine career of Miss Esther Tinsley, Administrator of the Pittston (Pa.) hospital.

[From the Wilkes-Barre Sunday Independent, July 12, 1959]

ESTHER TINSLEY, R.N., IS A WOMAN TO BEHOLD—FINE CAREER IS UNEQUALED IN PROFESSION

(By Libby Brennan)

On a crisp clear October day in 1913, a young nurse recently graduated from the University of Pennsylvania School of Nursing walked into a small wooden frame building known as the Pittston Hospital.

It was really her first job and she had been selected to head the hospital as administrator, a position which Miss Esther Josephine Tinsley, daughter of the late Albert and Rosina Tinsley, of Wilkes-Barre, has held for 46 years.

From the very first moment that Miss Tinsley entered the hospital she gave her heart, mind, and body to it. It is a rare instance in the Book of Life that one person can actually see what her life's work has meant to a community. For Esther Tinsley, the wonderful privilege surrounds her every moment.

Her decision to go to the small hospital with its limited resources came after she decided against heading the Nesbitt School of Nursing, a position which she had held for a few weeks.

In the small wooden structure located on a knoll with its panoramic view of the Susquehanna Valley, she had found her challenge—a challenge that she has met with dignity and grace.

MANY THINGS TO DO

When she first started, there were many things to be done. First, she dreamed of having a modern brick structure, sparkling clean, modern as possible—a place where the ill could find relief.

"I never dared permit myself to think of a nursing school with all the equipment necessary to train young women; that would be asking too much from the fates," she said.

But strangely enough this amazing woman with her tremendous willpower and brilliant mind lived to see all her dreams come true.

It was a miracle, but a miracle that was realized through endless hours of unselfish sacrifice.

Excitement has peppered Esther Tinsley's life from the beginning. She became a heroine in the Laurel Line wreck which took place 30 years ago.

WAS IN TRAIN WRECK

"I was on the train that became sandwiched in between two others; I was on my way to a picnic," the grey-haired stately woman recalled.

"I remember the terrific crash and I know I was stunned and the man next to me was dead.

"Somehow, I escaped the wreckage and in my capacity as a nurse I helped out as best I could.

"One thing I do remember was having everyone I met give me spirits of ammonia—it is funny I didn't succumb from too much of that," she laughed.

It was not so simple as she described it. Records proved that she labored tirelessly with the injured.

Another instance that Miss Tinsley remembers well is the disastrous 1918 flu epidemic. "We went out in horse-drawn buggies to minister to the sick. Many families were wiped out and those who were able to be moved were sent to the hospital.

FOUND TWO DEAD

"I remember one instance when we found a family with the two older members dead. We not only had to remove the other members to the hospital, but we had to go out and find people to milk the cows, gather the crops and care for the farm," she recalled.

The flu finally reached the nurse who worked hour after hour ministering to others. "How I survived I will never know, but I did," she said.

Last year saw Esther Tinsley manning her staff to care for the men involved in the Knox Mine disaster. The teamwork under her charge was something to behold.

"I just did my job; a job that I am paid to do," she quietly explained.

If one asked the men involved, their answers would be that Miss Tinsley "did everything possible above and beyond the call of duty."

WORKS ALL HOLIDAYS

In the almost half-century that she has been associated with the Pittston Hospital, this wonderful woman has never been out of the hospital on one holiday, Christmas included.

"That is the time that patients need more cheering up than ever," she explained.

Once a year, Esther Tinsley takes a vacation from the hospital where she works and lives. She has covered all of the United States with the exception of Texas and Louisiana and has even been to Alaska.

Under Miss Tinsley's charge, Pittston Hospital is the only one in the area that is in the black. She make use of every item; she knows intimately every member of the staff and every student nurse.

Her day begins about 6:15 a.m. when the reports are brought to her. She knows the condition of every patient and even though she is an administrator, she still holds on to her teaching habits.

She works 7 days a week, an untold number of hours each day.

HELPS OTHER CAUSES

Besides her hospital work, she is a board member of the Visiting Nurses Association, the Pittston Family Welfare Agency, the Red Cross and the Business and Professional Women's Club.

She attends conferences that she feels will help her with her work.

With it all, she has a wonderful sense of humor and has commanded the greatest respect not only of those in her immediate circle but from all over Pennsylvania.

"When I look out of my window and see the hospital as it stands today, it is the most wonderful experience one could know," she said quietly.

Little does she realize that the Pittston Hospital is what it is because of a certain lovely, wonderful person—Miss Esther Tinsley.

Section 315 of the Communications Act

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a North Dakota television broadcaster requesting the outright repeal of section 315 of the Communications Act. The abuses which have been piling up under section 315 demand the immediate attention of this Congress:

The Honorable QUENTIN BURDICK,
House of Representatives,
Washington, D.C.

DEAR QUENTIN: I will surely appreciate it if you will give favorable consideration to the necessary legislation that is required to repeal section 315 of the Communications Act. This will result in giving radio and television stations a greater liberty in scheduling special broadcasts of our Senators and Congressmen, whether it be during a campaign or any other time or occasion that presents itself.

The Supreme Court decision is not the solution to the broadcasters' problem. Only the repeal of section 315 of the communications law is the solution.

Sincerely yours,

JOHN W. BOLER,
President,
North Dakota Broadcasting Co., Inc.

The Highway Fund Ultimatum—Gasoline Tax Increase

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, July 22, 1959, the Ways and Means Committee of the House of Representatives will commence public hearings on the subject of the highway trust fund and the problems incident to the financing of the Federal highway program. Efforts to solve the highway financing problem through an increase of 1½ cents in the Federal gasoline tax, as recommended by the President earlier this year, have attracted the concern of many people on both sides of this issue. In recent days, editorials have appeared in the newspapers of Alabama in opposition to any Federal gasoline tax increase at this time.

Under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD an editorial which appeared in the Tuscaloosa (Ala.) News on June 26, 1959. This editorial is earnestly commended to the Members of the House of Representatives for their careful study.

The editorial follows:

THE HIGHWAY FUND ULTIMATUM

Congress, which has not gone along with President Eisenhower's proposals too readily this session, is not likely to look with favor on the ultimatum that has been handed down from the White House on financing the interstate highway program.

President Eisenhower has again asked Congress to raise the Federal gasoline tax by 1½ cents per gallon to produce sufficient revenue to keep the road program on a pay-as-you-go basis. The President said if the additional revenue is not forthcoming, and quickly, it will be necessary to cut off Federal allocations for the road program in 36 States within a year.

In 10 States the Federal funds would run out within 3 months.

"We are on the verge of a stalemate in the orderly development of our vital interstate road network. This is a critical situation * * * and one which should give great concern to every motorist," the President told Congress.

We agree. Every motorist should be vitally concerned about the progress of construction and the financing of the Interstate Highway System. Each motorist is contributing regularly to this program through the special taxes that were levied to finance it.

But we are not convinced—and Congress seems to be of the same opinion—that an increase in the Federal gas tax is absolutely necessary at this time to keep the program moving ahead. It is agreed generally that the pay-as-you-go system is to be preferred for this huge construction effort. But there is no agreement that all funds which should be going to the highway trust fund now are being received or that the General Treasury should not reimburse the fund for some of the work that was done before the special taxes began coming in. The highway fund inherited a $1.9 billion carryover at the outset which previously had been placed in road funds from the General Treasury. Reimbursement of that amount would go a long way toward solving the present financial pinch.

A short-range solution to the current problem should be found. Why short range? Because in 1961 Congress will receive two reports on the interstate program. One will be a new estimate of the cost and the other will be a cost allocation study which is intended to cover the equitable distribution of taxes among highway users and the benefits which accrue to other beneficiaries.

Action on increasing taxes at this time can, at best, be only a stopgap measure until the 1961 reports are made. Efforts to plug any leaks in the present highway user tax allocations and for reimbursement of the $1.9 billion the trust fund inherited when the Government quit making annual payments from the Treasury for road projects now seem the more logical, and palatable to the public, course.

Loans, Not Gifts: A Logical Foreign Policy Step

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. GEORGE. Mr. Speaker, notwithstanding the fact that the mutual security bill, which passed the House, placed more emphasis on loans than had prior measures, it is my firm conviction that if our prestige abroad is to be maintained and the honor of foreign countries is to be preserved, more of our foreign aid should be advanced through the loan program.

We are told that in areas where America has given substantial aid, little additional is received from the Communists and the latter get the credit. For example: A hospital could be erected and equipped with American dollars, then the Communists provide the window shades and the entire project becomes one supplied by the enemy of our philosophy of government.

Often I wonder, Mr. Speaker, if it would not be wise for America to withdraw completely from the foreign-aid picture as it now exists, thereby leaving the field to Communist Russia. If this were done, Russia would have to spread her resources so thin that she could accomplish little in any one country. Our aid could then be given upon application by the various countries, and they would most certainly be cognizant of the source of that assistance. Our personnel abroad could be considerably reduced by all forms of foreign aid being given through one division of the State Department, most of which should be on a long-term loan basis. No military aid should be granted unless approved by both the Department of Defense and the State Department.

In the Kansas City Star of Tuesday, June 16, Mr. Speaker, an editorial appeared which I am convinced expresses the viewpoint of the great majority of Americans, and in order that each Member may have an opportunity to read it, I include it in my remarks:

LOANS, NOT GIFTS: A LOGICAL FOREIGN POLICY STEP

To suggest that the United States should eventually halt all outright foreign aid gifts does not imply that this country intends to duck its future international responsibilities. The Senate Foreign Relations Committee had good reason for asking the President to provide a cutoff date for grants. The committee simply seeks a reasonable transition from gifts to repayable loans that would be more effective.

Indeed, as C. Douglas Dillon pointed out last week, aid to the underdeveloped countries will have to continue for many years to come. The Communist economic challenge is by no means a mere overnight matter. India, for example, will be a cold war battleground for decades. To vacate the field would in a sense be surrender to the Reds.

But it is not contrary to the principles which have motivated mutual security to expect the underdeveloped nations, in time, to get their economic houses in order. In their initial years many of them obviously have been unable to provide a sound credit basis.

In addition, it seems very likely that many of the American dollars have been wasted by the receiving governments. A continuation of the giveaway system is not likely to provide the incentive for the development of both national self-respect and national efficiency. Loans, with a definite payoff date and a reasonable rate of interest, would supply the incentive. A man who leaves the dole for a paying job becomes a better citizen. The same, we believe, applies to the nations who abandon their dependence on charity for sound credit assistance.

It is quite obvious that the giveaway program has become increasingly unpalatable to American taxpayers. In its early years a full-scale lending program would still be a drain on the Treasury. But as repayments were made, the burden would gradually be eased. The public resentment stirred by the tax load of mutual security could be expected to diminish.

Gasoline Tax—Public Not Receptive

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, July 22, 1959, the Ways and

Means Committee of the House of Representatives will commence public hearings on the subject of the highway trust fund and the problems incident to the financing of the Federal highway program. Efforts to solve the highway financing problem through an increase of 1½ cents in the Federal gasoline tax, as recommended by the President earlier this year, have attracted the concern of many people on both sides of this issue. In recent days, editorials have appeared in the newspapers of Alabama in opposition to any Federal gasoline tax increase at this time.

Under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD an editorial which appeared in the Mobile (Ala.) Press on June 27, 1959. This editorial is earnestly commended to the Members of the House of Representatives for their careful study.

The editorial follows:

GASOLINE TAX

A warning from President Eisenhower that the national roadbuilding program is in a critical, $4 billion jam, apparently had little effect on the U.S. Senate.

The Senate not only rejected the President's proposed 1½ cents per gallon Federal tax hike for gasoline, but also passed the $3 billion corporation and excise tax extension bill after refusing to use it as the vehicle to solve the highway program crisis.

A majority of the Senators apparently have been listening to some of the people back home.

The proposed 1½ cents a gallon increase in gasoline tax was anything but popular with the motorist despite the promise of a superhighway system.

Many citizens of the United States are still not convinced that the roadbuilding program on the scale projected by Mr. Eisenhower's administration is wise.

And when it came to putting another 1½-cents Federal tax on a commodity that already bore a 3-cent Federal tax in addition to State and local taxes, there were concerted mutterings back home which apparently reached the senatorial level.

When the administration takes some concrete steps to curb inflation and curtail Federal waste, then the public will be in a more receptive mood toward projects such as the Federal highway program.

Welcome by Brig. Gen. A. C. Welling, Engineer Commissioner, District of Columbia, to National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. FOLEY. Mr. Speaker, the growing importance of the Potomac River to the expanding Metropolitan Washington area is more and more becoming generally recognized. Recently, Brig. Gen. A. C. Welling, Engineer Commissioner of the District of Columbia, addressed the National Rivers and Harbors Congress in Washington. Because General Welling's remarks underscore the importance of the Potomac River, now and in the future, I am privileged to insert them in the Appendix of the CONGRESSIONAL RECORD:

WELCOME BY BRIG. GEN. A. C. WELLING, ENGINEER COMMISSIONER, DISTRICT OF COLUMBIA, TO NATIONAL RIVERS AND HARBORS CONGRESS, MAYFLOWER HOTEL, WASHINGTON, D.C., MAY 14, 1959

On behalf of the Board of Commissioners, I am delighted to welcome to the District of Columbia you members of this all important congress.

This is your National Capital and we hope you enjoy it to the full extent of its beauty and historic charm.

In mentioning the city's beauty and charm, we should think of the No. 1 physical asset of this entire metropolitan region, the Potomac River.

The Potomac is also an old love of mine. I was interested and involved in it for years before I became Engineer Commissioner. I shall remain interested and involved in the Potomac even after the completion of my tour in the District government.

Historically the Potomac, in the Capital region, has been a boundary between Maryland and Virginia and between Virginia and the District of Columbia. It was our great divide, a chasm that alienated, isolated, and separated us.

But those days are gone.

Today the Potomac is playing a new role in the affairs of the National Capital region. For my colleagues in Maryland, in Virginia, and in the District of Columbia, the Washington metropolitan reach of the Potomac River is no longer the great divide. On the contrary, it has become the most powerful unifying force in the area. Its waters and our determination to improve their quality and our determination to sustain their quantity have taken on the aspects of a cementing substance binding us, one to another.

We local officials, working with the Corps of Engineers, have arrived at a harmonious determination to get on with the job of protecting and improving the flow of Potomac River waters—a harmonious determination to get on with the job.

We have learned that basically the Potomac is not a boundary and not a divide. Rather, it is a source of water, a thing of beauty and a heaven provided playing field.

More than that, we realize that the indispensable purpose of the Potomac has to do with the consumptive uses of water.

We realize that the quantity of water is sufficient to meet all our needs if the supply is adequately handled and properly cared for.

The active group of local officials having to do with the Washington metropolitan reach of the river is a Committee on Water Supply and Pollution Abatement. It consists of official representatives from those cities and counties bordering on the Potomac—that is, from Alexandria, from the District, and from Montgomery, Prince Georges, Fairfax, and Arlington Counties. It includes representatives from the Washington Suburban Sanitary Commission and the Washington aqueduct.

In essence, for our region, the committee serves as a sort of watchdog on the Potomac.

What have we been able to accomplish during the past year?

We have had adopted as an item of regional policy the prohibition against discharging effluent from sewage treatment plants into that part of the Potomac River between our water supply intake at Little Falls and the mouth of the Monocacy River, some 25 miles upstream.

Congress at our request has passed legislation permitting the District to arrange for the transfer of Virginia sewage across the Potomac and downstream to the District's sewage disposal plant for treatment. For years we have had such an arrangement with the adjoining Maryland jurisdiction. By way of implementing the congressional authorization in regard to Virginia, the District, and Fairfax County have executed a financial agreement for the immediate handling of certain sewage from that county through the District treatment facilities.

Working closely with the joint congressional committee studying Washington metropolitan problems, we have arranged for the establishment of a regional sanitary board which would coordinate the planning, construction and operation of regional sanitary engineer works. The board is being established and staff work has already started on the first planning item, the development of a regional sewer plan, mainly involving the construction of interceptors along both banks of the Potomac River above the city.

We have energetically and constantly—and I hope successfully—sought funds from the Congress so that the Corps of Engineers can complete its currently assigned comprehensive study of the Potomac River basin. Our main interest was that the corps should develop a water supply plan. Unless such a plan be developed and brought into being during the next 15 years, the region is going to be without adequate water supply during period of low river flow.

We are in the business of putting finishing touches on water quality objectives for the metropolitan reach of the Potomac. Our committee will take its final action at its June meeting and thereafter looks forward to acceptance of its proposals by the entire region.

We are seeing this very month the operation of new secondary sewage treatment facilities within the District of Columbia. The new plant will reduce by 80 percent the amount of pollution load being contributed by the District of Columbia and the adjacent portions of Montgomery and Prince Georges Counties in Maryland. The total metropolitan loading on the Potomac will then be comfortably within the river's capacity for assimilation. The resulting organic demand of metropolitan wastes then exerted on the river will be less than those experienced in 1920, and 1920 was almost 40 years ago.

We Potomac River people of this region believe that we are making real strides in the development of the basin and we wanted you, our guests, to know about it.

We hope that we have more progress to report when you return here next year.

Elimination of Charge to Civil Service Retirement Fund of Salary Costs for Certain Reemployed Annuitants

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. WALLHAUSER. Mr. Speaker, today I have introduced legislation to improve the situation with respect to the effect of the civil service retirement fund in certain cases where civil service retirement annuitants are reemployed in the executive branch. My bill also makes certain other revisions in the retirement law relating to reemployed service by certain annuitants.

Section 13 of the Civil Service Retirement Act prescribes general rules relating to the payment of retirement annuities in the cases of annuitants who are reemployed in the Federal Government after retirement. In the case of a retired Member of Congress who is reemployed after retirement, the annuity is discontinued during the period of reemployment and then resumed in the same amount after separation from the reemployment position. This provision is directed to the usual situation wherein a retired Member is appointed to a regular, full time Federal position or is reelected to Congress or another Federal elective office.

Several instances have come to light in which this provision has had an effect contrary to its intent. These instances involve requests from the Chief Executive or department or agency heads that retired Members of Congress accept positions on boards or commissions to serve on an intermittent basis, either without compensation or with compensation only for the comparatively few days each year on which services actually are rendered. In such cases, under the existing Retirement Act, the Member will lose his retirement annuity, even though there may be no compensation at all, or only an occasional day's pay, in the reemployment position.

My bill provides that in such cases the annuity of the Member shall continue during the period of reemployment without any increase based on the reemployment service and that there shall be deducted from any compensation payable in the reemployment position an amount equal to the annuity paid to the Member for the reemployment service, with the amount so deducted being paid into the Treasury to the credit of the civil service retirement fund.

This provision is necessary to prevent loss of the reemployed Member's earned retirement annuity, and, at the same time, insure that the full amount of any compensation paid to him for his reemployment service will be charged as a payroll cost of the department or agency involved and will not come out of the civil service retirement fund.

Another provision of my bill in effect authorizes the crediting, for civil service retirement purposes, of full-time service rendered by a retired Member in an appointive position with the Federal Government where he is subject to the Retirement Act. Any Member who performs such service after retirement will have his Member annuity discontinued during his reemployment service and may elect, upon separation from the reemployment service, to have his Member annuity recomputed to include credit for the reemployment service rendered after the original annuity was granted.

The foregoing provisions of my bill apply to any Member appointed by the President of the United States to a position which requires confirmation by the Senate.

The bill also makes necessary conforming amendments in section 9(c) of the Civil Service Retirement Act—relating to computation of annuities—in order to carry out the full purpose of the provision for crediting service rendered by a retired Member in an appointive position in which he is subject to the Retirement Act, as pointed out above.

Alabama Motorists Association Opposes Gasoline Tax Increase

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, July 22, 1959, the Ways and Means Committee of the House of Representatives will commence public hearings on the subject of the highway trust fund and the problems incident to the financing of the Federal highway program. Efforts to solve the highway financing problem through an increase of 1½ cents in the Federal gasoline tax, as recommended by the President earlier this year, have attracted the concern of many people on both sides of this issue. A few days ago, Mr. Bancroft Timmons, secretary-manager, Alabama Motorists Association, gave his comments in opposition to an increase in the Federal gasoline tax at this time. Mr. Timmons' statement was covered in a news article which appeared in the June 28, 1959, issue of the Tri-Cities Daily, Sheffield, Tuscumbia, Ala. With the thought that Mr. Timmons' remarks would be of interest to the Members of the House of Representatives, I am pleased to insert this newspaper article in the CONGRESSIONAL RECORD under leave heretofore granted:

CRITICIZES IKE—MOTORIST LEADER BOOSTS ROAD BUILDING PROGRAM

MONTGOMERY.—Interstate highway program construction need not come to a screaming halt, Bancroft Timmons, secretary-manager, Alabama Motorists Association, said Saturday in answer to President Eisenhower's urgent call for a 1½-cent gasoline tax increase. This would be an increase from the present 3 cents to 4½ cents.

In Alabama total gasoline taxes would range from 11½ cents to 14½ cents per gallon with the increase, Timmons reported.

"We must not let ourselves or Members of Congress be stampeded into accepting a 50-percent gas tax boost just because someone pushes the panic button," Timmons declared.

"This whole interstate highway program, as was pointed out by AAA at the time, was conceived in an atmosphere of haste that was bound to create problems. The time has come for cool thinking and not more gasoline taxes. Since when did a crisis-inspired tax increase help anyone?" he asked.

President Eisenhower told Congress Wednesday that it must enact a 1½-cent increase or see the Interstate Highway program come to a halt in some States, including Alabama, for lack of adequate funds. The program presently is on a pay-as-you-go basis which forbids deficit spending.

In a resounding vote Thursday night, the Senate rejected a tax increase and also refused to earmark more automotive taxes to alleviate the highway program deficit. The public should understand that $1.15 billion a year in U.S. automotive taxes are being diverted to the general fund, Timmons said.

"The problem really is twofold. First, we are told, more money is needed very shortly to meet obligations so that the program can keep moving. We suggest that Congress should definitely earmark enough automotive taxes to meet this immediate need; perhaps, on a temporary basis. Tax income is expected to equal need in later years of the program.

"Secondly, Congress should calmly reappraise the whole Interstate Highway program. Building, now on a 13-year basis, should be stretched out to fit income. After all, $2.1 billion a year already is dedicated to the highway program. Of this, $1.6 billion comes from the U.S. gasoline tax. These are fantastic sums, especially considering that States and local governments collect added billions from their gasoline taxes."

Bringing it closer to home, Timmons said Alabamians have more than the ordinary stake in the problem, because gasoline taxes in this State are already among the Nation's highest. Besides the 3-cent Federal tax, Alabama levies a 7-cent tax and more than 200 cities and counties add 1- to 2-cent gas taxes. Alabama gasoline taxes presently range from 10 to 13 cents per gallon.

"If the Federal gas tax is increased 1½ cents, it means $14 million more a year will be siphoned from Alabama. Add this to $28 million collected during 1958 in Alabama from the 3-cent U.S. tax. It means some $42 million will drop into Federal coffers from just the gasoline tax, not to mention other automotive taxes," Timmons pointed out.

"It is the feeling of my motorists association that we should not pay any more taxes for this interstate highway program. Let's keep interstate highway building in proper perspective. Washington officials heading other programs are screaming for our money, too," he concluded.

DAV Services in Arkansas

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. ALFORD. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Arkansas citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Arkansas, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

DAV SETUP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially

benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701, 18th Street N.W., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C.

They there have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

DAV SERVICES IN ARKANSAS

The DAV maintains two national service officers in Arkansas as follows: William S. Hoshal and George N. Richardson with their office being located at the VA regional office, 555 Building, 211 Broadway, Little Rock. The DAV department commander this year is Mr. Reeder Dildy, route 5, Nashville, and Mr. Hoshal serves as department adjutant. The national second junior vice commander is Mr. Billie Rocky Dunn, Box 694, Conway, and the alternate national executive committeeman for the 14th district is Mr. Hosea Gipson, 1304 Walnut Street, Jonesboro.

There are three Veterans' Administration hospitals in Arkansas in which the DAV has a Veterans' Administration voluntary service representative as follows: Mr. Forrest B. Nail, Route 3, Fayetteville, is located at the 254-bed GM hospital at Fayetteville; Mr. Marshall Crabtree, 1616 West 14th Street, Little Rock, is located at both the 591-bed GM hospital at Little Rock and the 2,062-bed NP and GM hospital at North Little Rock.

During the last fiscal year, the VA paid out $70,955,000 for its veteran program in Arkansas, including $19,619,876 disability compensation to its 21,827 service-disabled veterans. These Federal expenditures in Arkansas furnish substantial purchasing power in all communities. Only about 8 percent are members of the 29 DAV chapters in Arkansas.

This 8 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Arkansas veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted, estimated	48,862
Claim Folders reviewed	40,719
Appearances before Rating boards	3,119
Compensation increases obtained	2,752
Service connections obtained	711
Nonservice pensions	828
Death benefits obtained	64
Total monetary benefits obtained	$1,068,558.07

These above figures do not include the accomplishments of other National Service Officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Arkansas veterans, their dependents, and their survivors.

SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible.

A VA Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About one-tenth of 1 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Arkansas with a consequent loss of about $296,400 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Arkansas to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

COSTS OF DAV SERVICES

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary

benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project is thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 1,859 of whom, during the last 8 years, were Arkansas residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members, and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of $1,000 with the DAV Service Foundation to which it recently added another $100. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equavilent to about $4 per DAV member—an excellent objective for all other States. Benefactors from 26 States have, up to this time, become enrolled on the memorial honor role.

Inasmuch as only the interest earning from special donations will be available for appropriation to the DAV for its use in maintaining its national service officer program in the State of residence of each such benefactor, this is an excellent objective also for Arkansas. Each such special benefactor is enrolled on a permanent memorial honor roll which, up dated, is then included in the annual report of the DAV and of its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such free rehabilitation service can help to make it possible for the DAV to continue this excellent rehabilitation service for other distressed disabled veterans and their dependents in Arkansas by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington 4, D.C. Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902 or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Youths Give a Helping Hand

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. SCHENCK. Mr. Speaker, under permission to extend my remarks I wish to include in the RECORD an article by Mary Ellen Wolfe in the July 8 edition of the Dayton (Ohio) Journal Herald. The article is typical of the encouragement shown by the Journal Herald to worthwhile community projects. The fact that it features our teenagers in their volunteer work at the Dayton Veterans' Administration Center is particularly noteworthy, and I wish to commend these young people and Mr. Ray Q. Bumgarner, manager of the Veterans' Administration Center:

YOUTHS GIVE A HELPING HAND
(By Mary Ellen Wolfe)

Teenagers are taking over at Dayton Veterans' Administration Center. And the vets love it.

A junior volunteer program is gaining momentum here and across the Nation as young helpers roll up their sleeves or don pinafores to perform tasks like these:

1. Push wheelchairs for hospital patients unable to do it themselves.

2. Work in central service to prepare medical and surgical supplies for use on the wards.

3. Feed men four times their age and too helpless to lift a knife or fork.

Now that the new theater-recreation building is open, the teenagers are taking on other assignments—as ushers in the theater and pinsetters for the veterans bowling.

None get paid—except in smiles from appreciative veterans.

Donald Deis of 613 St. Paul Avenue, a Wilbur Wright High School senior, and John Becker, a Centerville High School senior, already are veteran volunteer pinsetters.

They have been spending three afternoons a week that way since vacation started.

Why, when they could be earning money for themselves the same way?

Becker shrugs and says, "It's fun, and I like to do anything I can to help them out."

Yesterday was X-ray day at the VA for Don and John and a group of their friends who plan to devote part of their vacations to volunteer work.

"All junior volunteers are given chest X-rays for their protection and ours," said C. L. Nordstrom, chief of special services for the Dayton center.

Those signing up for service yesterday included volunteers recruited by Junior Red Cross and Camp Fire Girls and members of Phi Epsilon fraternity, a boys' philanthropic group formed by Fairview and Colonel White high school students.

Jay Meiselman, of 230 Hornwood Drive, president of the fraternity, reported 12 to 15 members are going to spend the summer helping the veterans.

On weekends four junior volunteers feed selected patients in ward 1 in Brown Hospital. These are patients too helpless to do it themselves.

Three others wheel wheelchair patients each Sunday from Brown Hospital to chapel services in the auditorium and assist chaplains with preparations for the services.

For Saturday afternoon picture shows three other junior volunteers usher and help handicapped veterans find places in the auditorium.

"The program is growing and expanding, but we are doing it rather slowly. It's new to us," Nordstrom says. "We feel junior volunteers have to be appropriately placed and given more orientation, more instruction and individual attention."

He reports patients accept the junior volunteers enthusiastically.

"They bring something youth has which adults can't bring. They really add new spirit," says Nordstrom.

Ray Q. Bumgarner, station manager, added that it is planned to make the junior volunteer program here a year-round one rather than a summertime replacement program as the project originally started out nationally.

Lana Schumacher, of 5316 Markey Road, a senior at Julienne, helps at Wright-Patterson Air Force Base and at the VAC. She has folded bandages, prepared supplies, served food at a picnic for veterans and now is scheduled to usher.

Lana says, "It makes us feel good to be helping someone else. The veterans seem to appreciate it, too."

The Growing Threat to Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. GEORGE. Mr. Speaker, because the reciprocal trade program has accomplished so much in cementing our

friendship with other nations, despite the fact that some of our foreign aid has tended to destroy some of these friendships, I wish to include as part of my remarks an editorial which appeared in the Kansas City Times—morning Kansas City Star—of Monday, May 18, 1959:

THE GROWING THREAT TO RECIPROCAL TRADE

The opponents of reciprocal trade were pretty well hushed up by the renewal of the Trade Act last year. Now they seem to have found their voices again.

They form an articulate minority pressure group that has found some sincere reinforcement among American manufacturers who are having trouble with foreign competition. As usual, most believers in a liberal trade policy are sitting out the debate. We hope they don't wait until it is too late.

The present Reciprocal Trade Act runs for 3 more years and it is unlikely that even a Congress susceptible to the blandishments of the protectionism could do an abrupt about-face. But little omens of the day are disturbing. Recently, for example, the U.S. Chamber of Commerce retreated a step from its traditional liberal trade policy. The protectionists were at work during the annual meeting in Washington.

A casual observer might get the impression that the United States is, in fact, being fleeced every time it entered the world market prices. Nothing could be further from the truth. Since 1953, imports have increased at a faster rate than exports. That was to be expected as the other trading nations of the free world got on their industrial feet. But exports have shown a greater dollar increase. Last year exports totaled $9.4 billion compared with imports of $3.9 billion. That strikes us as a pretty good business arrangement.

Trade is a two-way street, and there is the great weakness of the argument for high tariffs. Other nations must have dollars to buy American goods. A retreat behind higher tariffs and rigid quotas would certainly cut down their sales in this country. The chain reaction would reduce our sales abroad and hurt American business. From the foreign policy point of view, it would certainly weaken U.S. world leadership.

Foreign competition, in the atmosphere of postwar recovery, has been inevitable. But the recovery of the free world is vital to American interests. Obviously some industries are hurt by imports, and their problems cannot be ignored. The reciprocal trade law, through the escape clause, provides the channels for reasonable relief. Thus recently a Presidential proclamation reduced the wool import quota 700,000 pounds.

Of course, the escape clause could be abused and the principle of reciprocity destroyed. That has not happened so far. But, apparently, the ground is being prepared for a full-scale assault on the trade law when it expires again in 1962. Those who believe that reciprocal trade best serves the interests of the Nation had better begin to fight back.

Platform Adopted at Young Republican National Convention, Denver, Colo., June 17–21, 1959

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DERWINSKI. Mr. Speaker, the Young Republican National Convention which was held in Denver, Colo., June 17-21, was marked by a great display of vigor and enthusiasm and a rededication to high moral principles in political thinking by the Young Republican delegates assembled there from all sections of the country.

As an active Young Republican, I wish to pay tribute to the sincerity and strength of convictions of these dedicated young men and women. I, therefore, place in the RECORD as a statement worthy of serious attention and thought the platform adopted at this recent Young Republican National Convention:

PLATFORM ADOPTED AT YOUNG REPUBLICAN NATIONAL CONVENTION, DENVER, COLO., JUNE 17–21, 1959

PREAMBLE

We believe that the United States of America is a great and prosperous Nation because its citizens are given the maximum opportunity to develop themselves spiritually, intellectually and materially.

As young people we are determined to play an active role in the formation of policies that will insure the advancement of these great American traditions as a force for progress through individual freedom.

We believe that our Nation has, in this era of atomic and nuclear advancement, the greatest opportunities for growth and expansion in its history. To fully realize this great potential for the future, present governmental actions must be based on the concept of individual freedom allowing our free enterprise system to operate with the minimum of interference from government.

As young people concerned with the future of our economy we believe that as a Nation, we must live within our means. We commend the Republican administration for defense of the sound American dollar despite the persistent actions of the Democrat Congress to undermine this vital program.

In the field of health, welfare, and education we believe in the concept of local governmental assumption of responsibility wherever practical.

We firmly believe that the long range interest of labor and management in our society is identical.

We further believe that mature management and mature labor are capable of reconciling their differences without interference of government.

We believe that the business climate created by the present Republican administration has encouraged and supported business growth and expansion, permitting each individual to create for himself and his family a solid basis for financial security and spiritual development.

We believe in a continuing and determined fight against the powers of atheistic communism and the freeing of the enslaved Nations behind the Iron Curtain.

We recognize that accelerated demands for water and power by both urban and agricultural areas must be met. We believe that government should encourage private interests to fulfill these needs wherever possible. We vigorously support the Republican administration's efforts to give private industry the basic responsibility in this field.

As Young Republicans we pledge ourselves to working for a total governmental climate which will enable our Nation to enjoy continued progress in all areas.

Sound Republican principles of government will provide the best means to achieve these goals.

AGRICULTURE

Mechanization and technological developments have advanced American agriculture to a point of efficiency and per capita production never before attained by man. This agricultural revolution, just as the industrial revolution which preceded it, has brought into being many altogether new and different problems. Perhaps the greatest of these problems, both in its effect on national economy and difficulty of satisfactory solution, is, and has, in turn, been aggravated by other national problems such as inflation and the decreasing value of the American dollar, which has adversely effected the export of our agricultural products.

In the past, the solution of these problems besetting the agricultural segment of our economy has been sought through increased governmental control and regulation coupled with subsidies.

Recognizing that our agricultural industry must remain strong, we are constantly seeking the best means to that end. Just as the Romans 2,000 years ago learned, we have found governmental controls have not satisfactorily solved our problems.

Therefore we recommend the following policies as a means of keeping our agricultural economy free and strong:

1. Adequate farm credit available to help the independent farmers obtain and utilize the advantages of our industrial progress.

2. The reduction and elimination of governmental subsidies to inefficiencies in agriculture, and the subsequent reduction of rigid governmental controls thereon.

3. The encouragement of free and independent farmers who can combat rising production costs with greater per capita productivity, lower unit cost, and greater individual income.

4. The encouragement of agricultural production geared to the domestic and export market rather than to the false market created by governmental control purchases.

BUSINESS

We are proud of the economic principles underlying our system of democratic capitalism, within the framework of which our Nation has traditionally derived its greatness and its strength from the vitality of free enterprise. We further believe that the economic and political freedom of the individual in our society can best be guaranteed and the dynamic growth of our Nation can best be maintained if more and more citizens are encouraged to become individual capitalists themselves; i.e., owners of the private means of creating wealth, by buying an interest or share in our country's business enterprises, farms, and financial institutions.

We applaud the success of the present Republican administration in halting the 20-year growth of the Socialist octopus of Federal interference and urge the continued orderly withdrawal of the Federal Government from involvement in areas of our Nation's productive economy which are more naturally and properly the province of private enterprise.

We favor an economic climate which encourages the growth and prosperity by both large and small business with the greatest possible freedom from governmental regulation—for both large and small business play vital roles in maintaining our economic health—but in the largest public interest we recognize the threat to true free enterprise from a system of unbridled monopoly and we feel it is essential to continue the sound vigorous and impartial execution of our national antitrust statutes.

Finally and specifically, we recognize the pressing need for the Republican-instituted Small Business Administration and commend its operations to date; but we also believe, ideally, that we should encourage additional sources of independent private venture capital, and urge that the requirements for loans made by such private agencies to new and small businesses should be liberalized to the utmost degree consistent with the principles of sound fiscal management.

FISCAL POLICY

We enthusiastically support the Republican demand for a sound American dollar.

Inflation is the cruelest thief of all, it has been fostered by the free-spending Democrat administrations and Congresses of the recent past and wage raises, fostered by union power, unrelated to increases in productivity. Under these short-sighted policies, elderly and retired persons and others living on fixed incomes who have no great pressure groups to support them, have had their small incomes and savings cut, often below the subsistence level. We believe our Nation must live within its means, the only road to sound growth is through savings.

We believe that to foster, in the framework of a free choice economy, high employment, stability of the economy, and to eradicate the corrosion of inflation the following policies are essential:

1. All Government expenditures must meet the test of a true contribution either to national security or national economic progress—not to special interests.

2. A budget surplus—this traditional Republican policy to be accomplished by drastic curtailment of Democrat pump-priming spending sprees, and further adoption of the substantive provisions of the Hoover Commission report, and decentralizing ideals of the Federal-State Action Committee. This necessary in order to accomplish the following policies:

3. Gradual reduction, rather than raising of the national debt in these prosperous times. We must pay for Federal expenditures out of tax revenues.

4. A general reduction of the present onerous level of taxation, and the according to everyone the privilege of building up a tax free savings reserve as proposed by Republicans in current legislation before Congress.

5. We must improve our tax system to provide more incentives for economic progress to make it fairer and widen acceptance by taxpayers. We, therefore believe in a thoroughgoing reform of the entire individual and corporate taxation system especially in the following areas: (1) We believe that dividend credit should be raised; (2) these provisions, promulgated by the discredited New Deal, of our graduated income tax, which are only punitive and makes it hard for individuals to accumulate enough capital to start new businesses and create new jobs and provide little revenue.

6. Democrats have tried to make the Federal Reserve a political plum, and force it to foster the equivalent of printing press money; we deplore this policy and favor a strict credit policy by an independent Federal Reserve, mindful of the classical restraints of free interest rate trends and gold movements. This is most needful for the furthurence of international trade as inflation pushes up our prices and make it difficult for us to compete with the rest of the world.

FOREIGN POLICY

Recognizing that the challenge of the future will be the leadership of the United States in world affairs, we the young people of our country accept that challenge and propose:

1. That economic and military aid to our allies, properly administered, be continued.

2. That we make the peoples of the world aware of, and actively promote our principles of democracy, freedom, and the dignity of each individual human being; we also encourage the continuation of the educational student exchange program with non-communist countries.

3. That all Americans recognize the importance of world trade and material development to the United States and the free world through international economic cooperation, and

a. gradual and mutual lowering of trade barriers.

b. long term loans to other nations or a sound economic basis rather than direct aid where possible.

c. encouraging expanded private capital investment in other nations of the world.

4. That we lead the cause of a free world through the support of the United Nations, NATO, regional pacts, and other means of international cooperation.

5. We morally condemn the rape of Tibet and Hungary and the Communist colonial tyranny over other free people of the world.

6. That we espouse the policies formulated by John Foster Dulles to maintain and build our strength against the most serious threat to man and civilization—International communism—to condemn and prevent aggression wherever it may occur, and to infuse in our international relations the benefits of personal contact with leaders of other nations and the necessity of standards of international morality.

We advocate the maintenance of our firm stand against Communist aggression by refusing to recognize the private governments of Red China and East Germany; by continuing to oppose the admission of Red China and East Germany to the United Nations.

HEALTH, EDUCATION, AND WELFARE

Health statistics reflect the remarkably high level of health of the American people. In order to further improve the general health of our people voluntary health insurance of many different kinds have been made available through competitive enterprise that is cushioning the shock of the cost of illness to the majority of our people.

To maintain these advances and promote continuing progress we pledge our support to the healing professions in their enterprising efforts to promote better health for all Americans.

We support the free-enterprise system in health because of its ability to achieve its objectives. We oppose all efforts to impose Government control over the medical profession and other healing arts through compulsory health insurance or other proposals that seek that end—and commend the efforts of voluntary health insurance groups together with the medical profession in finding adequate methods of providing care for our aged population and lower income families without Federal intervention and control.

We endorse Federal financial support of research in health as long as such funds can be used with maximum efficiency when private financing is not available. We therefore urge continued cooperation in the program of research fellowships, grants and information pooling and dissemination among the National Institutes of Health and the public and private health institutions and foundations.

We support continued progress in vocational training.

We believe that basic protection against loss of income should be provided by private means and that the old-age and survivors program should be a supplementary source.

We commend the Republican administration for taking the initiative in the promoting of a broader study of the problems of aging and encouraging the interchange of information on the subject to private agencies so that they can better serve their local communities.

We reaffirm our faith in the American tradition to insure freedom of education by removing our schools and colleges as far as possible from politics and relying upon control by the Federal Government.

Mindful of the inevitable connection between subsidization and control, we are opposed to Federal financial aid for general public education and school construction.

CIVIL RIGHTS

The Young Republican National Federation reaffirms its historic position in the fundamental truth that all men are created equal before the law without regard to race, creed, or national origin.

We encourage all loyal Americans to manifest a continuing interest publicly and privately in sound programs designed to protect the civil rights of all persons.

Recognizing the inherent worth and dignity of each individual, Young Republicans realize that this Nation will reach its total strength only when there is an opportunity for each individual to employ his talents to the full extent of his ability free from discrimination and prejudice.

The young Republicans are aware that conformity to recently developed concepts of equal protection of the laws will require major social, economic, and cultural adjustments in some situations. In this regard, the Young Republicans commit themselves to the all important task of providing community leadership to assure the necessary conformity.

We favor a program of positive policies in civil rights.

LABOR

The Republican Party is for the working men and women of America. We are determined that these people shall prosper and share in the fruits of our free enterprise economy.

The Republican Party seeks to achieve:

1. A high level of employment and low unemployment.

2. Better job opportunities for all, and reduction of the causes of unemployment.

3. Higher living standards based upon increased productivity.

4. Better balances between labor and management in the area of free collective bargaining, with only the minimum of Government intervention that is needed to protect the public interest and prevent the abuse of power.

5. Scrupulous protection of the rights and freedom of individual union members.

We propose the following measures to check existing abuses by labor unions:

1. The prohibition of the secondary boycott, refusal to handle goods, and other means by which pressure is brought on labor or business organizations not involved in a labor dispute.

2. The prohibition of unjustified organization, or "blackmail" picketing.

3. The assurance that union elections will be conducted by secret ballot in a truly free and fair manner.

4. The full disclosure of union finances for the benefit of dues-paying members.

5. A thorough investigation of the feasible application of antitrust laws to the big, industrywide union organizations.

6. Rigid enforcement of the ban on political contributions by labor unions.

7. Protection of union members from involuntary political assessment by their officers.

We believe that the active cooperation of labor, management, and Government is essential to the full realization of America's fabulous potential. We must demonstrate that the long-range interests of these three groups are the same, and we must strive to arrive at the point where labor and business recognize their mutual needs to work harmoniously together to build a stronger, more prosperous Nation.

INTERIOR AFFAIRS

We recognize the need for the continuation and expansion of production, transmission, and distribution of power to the people of the United States for their benefit and economic progress:

1. The production, transmission, and distribution of power, including the commercial

production of electric power from atomic materials, should be primarily a function of private enterprise either cooperative or noncooperative. The entry of the Federal Government into the power business should be restricted to those instances where adequate development absolutely cannot be obtained from private enterprise.

2. Present public power projects should not be expanded but restricted in their present scope. We believe that public power projects should be gradually returned to private enterprise wherever feasible.

3. We believe that private enterprise is capable of providing for our basic needs. The Government should do for the people only those things which are beyond the resources and capabilities of private enterprise to perform.

We recognize the future of our Nation depends vitally on how well we develop and conserve our natural resources.

1. We favor the maximum participation of individuals, local agencies, and local government in the development of water projects. Federal participation in water development projects should only be in cooperation with State and local interests.

2. The Federal Government should refrain from encroaching upon the individual State's jurisdictions of water rights, mineral rights, and conservation, due to the fact that these matters are inherently the responsibility of the States and local government.

SUPREME COURT

We endorse the time-honored American principle of the separation of governmental powers—executive, judicial, and legislative. With regard to the continuing controversy over the Supreme Court of the United States, we urge that this key principle be observed by all branches of our National Government.

We do not believe that other branches of the Government should try to place the Court in a subordinate role, or alter its status in our tripartite system because certain decisions of the Court proved unpopular.

But by the same token we do not believe that the Court should usurp the functions rightfully belonging to other branches of our Government. We realize that the Court is but one of many subdivisions in our constitutional structure, and that the effect of its decisions may legitimately be open to criticism and legislative alteration.

NATIONAL DEFENSE

I. We actively support the President's militant stand against Communist tyranny, and his efforts to improve our missile defense and retaliatory power with greater efficiency, to be obtained through concentrating efforts into fewer, more capable channels with greater economies and better results; rather than the gargantuan program of indiscriminate spending as proposed by the current Democrat leadership. We urge that the administration move to speed up and complete the implementation of the Defense Reorganization Act of 1958 in order to effect economies to strengthen our entire defense effort. We also favor the President's strategy which further allows for an adequate standing conventional Military Establishment to be a safeguard against so-called brush wars.

II. We recommend that the country reward in a tangible manner those veterans who have made unusual sacrifices in the armed services of this country.

III. We favor an aggressive assault on all forms of subversion, both from criminal acts and ideological warfare, to be carried on by the Un-American Activities Committee, the FBI, and arms of both State and Federal Governments. This to be effectuated by comprehensive legislation which will enable the judiciary to enforce vigorously the clearly stated will of the people with regard to the course for individual rights and due process of law.

An Observant Survey of the Status of Military Forces in East Germany by NBC Berlin Correspondent John Rich

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. STRATTON. Mr. Speaker, the question of the status of the Communist puppet government in East Germany is one that has recently figured prominently in the news, as the Geneva deliberations over the future of Berlin continue. Also important in these considerations is the military status of this country, and the potential threat which their armed forces might represent to our safety in Western Europe in the event that the Soviet government should decide to employ them. In that connection, I was very much interested in a report on some of the military developments that have taken place in this Soviet-dominated zone of Germany which appeared in the Reporter magazine for June 11. The author of this article, Mr. John Rich, is presently the NBC correspondent in Berlin and has had a distinguished record which qualifies him to be a keen observer of these matters. I had the pleasure of serving in the Navy during the war with Mr. Rich and I know of his experience not only in Europe but in the Far East. Under leave to extend my remarks, I include his article, and commend it to the consideration of my colleagues:

II—THE RELUCTANT WARRIORS

(By John Rich)

BERLIN.—During the recent international trade fair in Leipzig, when East Germany suspended for a few days many of its police-state regulations, a unit of the Volksarmee, celebrating the third anniversary of its founding—or rather its "coming out"—held open house at its barracks. Families wandered about, soldiers on their best behavior tried to be helpful, and shouting children climbed over trucks and jeeps and squinted through the barrels of the big Soviet-made guns lined up on the parade ground. This was a field-artillery regiment.

A bright-faced Oberleutnant who cordially offered to show me around explained that all the heavy equipment was Russian-made. "We don't manufacture arms in the German Democratic Republic," he confided proudly. He was correct as far as heavy arms are concerned, but East Germany now does turn out some small arms and small-caliber ammunition.

East Germany doesn't get the very latest in Soviet equipment, but its weapons are not all merely castoffs either. Tank crews now drive T-54 medium tanks and Stalin heavies, as well as the more plentiful T-34's. In addition to the big field guns I saw, East German troops have a modern Soviet twin-barreled 57 millimeter antiaircraft gun and a new auxiliary-propelled 85 millimeter field gun. As far as is known in the West they have no rockets or nuclear weapons, and the chances of the Soviets' ever giving the Volksarmee nuclear weapons appear slight, although its troops undergo field training simulating conditions of nuclear warfare.

My guide explained proudly that his is a strictly volunteer army, in contrast to that of West Germany, which depends on the draft. Morale is high, he said, because of good relations between officers and enlisted men. He showed me in pantomime how he himself puts in a month every year serving as a soldier, mopping floors and lugging trash. "Even our generals do it," he added.

Although the Volksarmee doesn't depend on outright conscription, it has equally effective pressures to meet recruiting needs. Higher education is denied a youth until he can show that he has put in his time either in the army or in production. Young men are constantly under tremendous pressures from all sides. The Freie Deutsche Jugend, the East German counterpart of the Komsomol, offers up its regular quota of volunteers, as do most plants and factories. Half of the refugees fleeing to West Germany are under 25, and one of the main reasons they leave is to escape service in the Volksarmee.

NEW DISGUISES FOR OLD

The building of the East German army really started at Stalingrad with the surrender of Field Marshal von Paulus. Officers from this group of prisoners of war formed the nucleus of the so-called barracks police, set up in 1948 by order of the Soviet occupying forces. The barracks police was a crude camouflage for rearmament, begun long before rearming was undertaken in West Germany.

By 1952 the barracks police numbered 110,000, the strength of the present East German army. There are many theories why the size hasn't been increased in the past 7 years. One plausible explanation is that the Soviets just don't trust it and don't want to too large. There is also the expense of equipping it. But whatever the reason, the end result is that by keeping its size static the army can be purged of undesirable elements and maintained as a tough, hard-hitting corps. It is estimated that it now has enough well-trained officers to double its present size. Only in 1956 did this oversize East German police force shed its disguise and emerge publicly as an army.

Soviet supervision has been close. At one time the Russian "Sovietniks" are said to have even worn East German uniforms. But now there is a report that Russian advisers have been withdrawn from the lower levels, an indication of the army's progress. Many of the influential German officers in the Volksarmee have lived long periods in Russia and some even have Soviet citizenship. At Leipzig I asked if there weren't any old Nazis in the army. After pressing my point I got an admission that there were a few, "just a tiny fraction, and anyway those we have reformed."

East German soldiers are being treated with more respect by the Soviets these days. There were times when Russian officers refused to shake hands with their counterparts. That has changed. The two armies now have a program for exchange of folk dancers and other cultural attractions, and they conduct some joint exercise. Last year the East Germans maneuvered with the four-hundred-thousand-man Soviet garrison force on the division level. They also conducted joint operations with the Poles and Czechs.

The Volksarmee helmet is entirely new. I've heard it described variously as German-Russian and as a cross between the Swiss and Czech helmets. The uniform and other personal equipment, however, are strictly old German. While researching this article I was sorting through some pictures with a former German Wehrmacht officer who is now in West Berlin specializing in information about the East. "Look at those packs," he said, pointing to a picture of East German soldiers outfitted with canteen, mess kit, and poncho. "That," he said, too nostalgically I thought, "is the very same pack with which we conquered France."

The Volksarmee has, or had, seven divisions, two of them tank divisions and the others motorized rifle divisions. Western intelligence sources believe one rifle division has been broken up and cannibalized to build the others up to strength. Like their Russian counterparts, the divisions are self-contained units with high speed and heavy firepower, carrying with them their armor, supply, intelligence, and artillery units. The greatest shortcoming seems to be in transportation and supply. The army also has its women's auxiliary corps, which fills jobs in intelligence, medicine, administration, and meteorology.

Western experts have described Communist Party supervision over the East German Army as "almost perfect." Party boss Walter Ulbricht seems to be doing a better job in this respect than Stalin did. The party controls education completely and promotions of officers must have party sanction.

Willi Stoph, East German Defense Minister, is a member of the central committee, which directs the army and assigns political officers to it. But in the same way that the central committee of the party itself has its own party organization, so in the army there are unit party cells operating independently of the political officers assigned from above. There is a third type of party contact. In towns and cities where army units are stationed, civilians from the local parties contact the army, join in social life, conduct propaganda work, and generally keep an eye on things.

Backing up the regular army, and considered equally reliable, is the border police. This force comprises some 40,000 men equipped with tanks and antitank guns. They can be counted on as equal to a couple of extra divisions in case of trouble. Like Volksarmee recruits, they take the military oath.

Most of the border police are stationed along the West German border, but there's a special unit whose title is "Ring Around Berlin." Its job is to guard the 150 miles of barbed-wire barricade around Berlin, East and West. East Germans going to their capital of East Berlin must also be screened carefully because once there they can easily slip into West Berlin as defectors.

Going down the line in military effectiveness, next come the alert police, stationed mainly in state and county seats to protect strategic utilities. There are about 20,000 of them. Then there are the 8,000 railway police, who have their own antiaircraft guns.

Following the 1953 uprising, the Kampfgruppe were organized. These are factory workers who train as a paramilitary group. They have small arms, which are kept locked up in their plants except for training and on ceremonial occasions. At first the Kampfgruppe wore plain overalls with red armbands, but now they're blossoming forth in military-looking gray uniforms. They train on weekends, and Ulbricht plans eventually to get 10 to 15 percent of plant membership in the groups. Many discharged soldiers enter the Kampfgruppe.

Refugees coming through West Berlin say that hundred-man Kampfgruppe units are being trained as parachutists north of Berlin at what is purportedly a glider school. According to the refugees, factory foremen and the technical intelligentsia, are being trained much as the Soviets developed their own partisans.

The East German Navy and Air Force are much smaller than the Army. The air force has from 8,000 to 10,000 men and about a hundred tactical planes, including Mig 15's and and 17's. The Soviets themselves handle the air defense of East Germany, and its radar stations are tied in directly with the Russian warning system.

WILL IT FIGHT?

The East German Army is the elite of this extensive military system. The decisive question is: Will the army fight?

Undoubtedly the Soviets would like to know the answer to that question as much as the West would. It relates directly to whether they will ever be able to pull their own troops out, leaving the Volksarmee to defend the country and especially to put down any internal uprising.

Much depends on the circumstances of how trouble breaks out, who the oponent it, and how the battle is going. At Leipzig I asked East German soldiers whether, if West Germany gets nuclear arms, they will want them too. The answer came back: "No, we wouldn't. We wouldn't want to use them against other Germans." As of today East German soldiers would evidently find it difficult to open fire on their brothers in the West, or in the East. But they are under constant pressure to overcome this hesitation.

In this respect, time seems to favor the Communist cause. For one thing, the longer German reunification is postponed, the more chance East German government leaders have of developing a popular feeling and support for their regime. If West Berlin can be eliminated and East Germany cut off completely from the West, then their programs will be all the more effective, especially if Germans in the Soviet zone lose hope and become indifferent.

If the Soviets and the East German Communist leaders can convince the troops that there's no future for them in the West, if they can develop in them a collective pride and persuade them that their new goals are valid, then East Germany will have a very effective little army.

Gasoline Tax—Wrong Answer

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, July 22, 1959, the Ways and Means Committee of the House of Representatives will commence public hearings on the subject of the highway trust fund and the problems incident to the financing of the Federal highway program. Efforts to solve the highway financing problem through an increase of 1½ cents in the Federal gasoline tax, as recommended by the President earlier this year, have attracted the concern of many people on both sides of this issue. In recent days editorials have appeared in the newspapers of Alabama in opposition to any Federal gasoline-tax increase at this time.

Under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD an editorial which appeared in the Hartford (Ala.) News on June 25, 1959. This editorial is earnestly commended to the Members of the House of Representatives for their careful study.

The editorial follows:

WRONG ANSWER

Gasoline is certainly an absolute necessity in this mechanical age. About 90 percent of all gas sold goes into motor vehicles traveling the highways. And this essential commodity carries a tax far higher than that levied on even extreme luxuries.

Last year we consumed just under 60 billion gallons of gas. The excise taxes levied on it by the Federal, State, and local governments are estimated at $4⅔ billion. On the average, each gallon is taxed 9 cents—6 cents by the State and 3 cents by the Federal Government. This is the equivalent of slightly more than 42 percent of the retail price.

That is bad enough. But current programs, if they go through, will make matters much worse. For instance, a bill now in Congress would increase the Federal tax by exactly 50 percent, boosting it from 3 cents to 4½ cents.

The reason behind this proposal is that the fund which finances the multi-billion-dollar Federal highway program is in the red. But it need not be. A large share of the highway-user taxes the Government collects are diverted from highway purposes into the general funds. If all of those taxes were allocated to highways, there'd be sufficient money to meet the commitments.

If Congress doesn't want to make that allocation, it should stretch out the highway program over a longer period of time so that tax revenues at existing rates can carry the load. Further upping of an already excessive tax on a necessity of modern life certainly isn't the right answer.

"Rosy" Story on Braceros Blurs Real Situation

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. ROOSEVELT. Mr. Speaker, I would like to draw the attention of this House to a feature article that was distributed to the Nation's newspapers by the Associated Press, and which was widely published in the issues of Sunday, July 5, 1959.

This article deals with the braceros, who, as you know, are Mexican farm laborers, brought into this country under contract to work on our farms, especially during the harvest season.

Many of my distinguished colleagues in this House share my concern for the wages, working conditions, housing, and health standards of farm labor in our country, especially the laborers who are hired for seasonal work on the large farms—the so-called factories in the field. The braceros are an important part of that work force, with some 400,000 of them being brought into the country for seasonal work each year.

No informed person can deny the fact that many of the braceros, and many of our native migrant workers, live and toil under conditions that are an affront to human dignity and a disgrace in a free, democratic society. This fact has been recognized by the Secretary of Labor, by church leaders, by organized labor, by many responsible farmers, and by everyone else who has taken the trouble to in-

vestigate. The evidence is overwhelming and indisputable.

And yet, Mr. Speaker, in the Associated Press article to which I have referred, quite a different picture is drawn.

To be sure, the article recognizes that charges have been made against the wages and working conditions of braceros. But it then does its best to show that the charges are groundless.

According to this article, the braceros are simple children of nature, delighted to discover the modern miracles of railroad trains and indoor plumbing—and rich beyond their fondest dreams of avarice on wages that begin at 50 cents an hour.

I might insert parenthetically, Mr. Speaker, that indoor plumbing is not by any means a universal "miracle" in migrant labor camps.

What this Associated Press article says, in effect, is this:

The braceros are better off than they were in Mexico. They are happy with their wages. They don't know any better. Why spoil them with money they wouldn't know how to spend and comforts they have never enjoyed?

I am sure this sort of argument is familiar to you, Mr. Speaker, and to all the Members of this House who are old enough to remember the depression of the thirties and the beginnings of the New Deal.

I remember the testimony of those who opposed the Federal minimum wage, who opposed social security legislation, who opposed the right of workers to organize and bargain collectively.

I remember the southern textile manufacturers, for example, who argued—and apparently they were serious about it—that wages of 25 cents and 30 cents an hour would simply lead their workers into temptation, and that this much money, coupled with a 40-hour week, would corrupt them into sloth, drunkenness and riotous living.

We as a people have long ago rejected that philosophy; and I am sure the Members of this House reject it today, with respect to farm workers—including the braceros—as well as industrial workers.

We do not accept the notion that a man is a pig because he has been forced to live in a sty. But that is what this whole concept of the "simple children of nature," presented by the Associated Press article, would have us believe.

The fact that such a concept has been given serious presentation by one of our greatest national news networks is, to me, a sad documentary on the blunting of our national conscience and the decay of our capacity for moral indignation.

The bracero system has been properly called a "none too subtle substitute for slavery." I am not suggesting that we do away with the use of Mexican labor; but I do say that farm laborers, domestic or imported, are entitled to fair, decent, civilized treatment as human beings.

I think the RECORD should show that the Associated Press has done a disservice to this objective—and on Independence Day weekend, at that. I would suggest to the Associated Press that it make amends by a full and impartial story, not on a model or idealized migrant labor camp such as the one it describes in this article, but on the plight of migrant workers as a whole.

Meanwhile, I hope the other matters which are now preoccupying the Education and Labor Committee can be disposed of in time for hearings, during this session, on the bills I have introduced to deal with the farm labor problem.

Mr. Speaker, I submit for the RECORD, the AP story which has prompted me to make the foregoing comments:

SEND MONEY HOME—BRACEROS HAPPY WITH U.S. JOBS

EDINBURG, TEX.—People point their finger at Adolfo Duran Gomez and say, "You're a slave."

Others say, "You're poorly housed, underprivileged."

And a third group angrily charges, "You're taking jobs from U.S. workers."

Adolfo Duran Gomez grins a little and shrugs the powerful shoulders under his cotton shirt.

You can't convince him he's a slave, not at 30 U.S. dollars a week.

Privileges? He has discovered indoor plumbing. That to Adolfo is a mark of privilege he never had before.

Taking jobs from U.S. workers? He knows that few citizens north of the border want the jobs he gets.

In the labor camp here, Adolfo tells how it was in his village of Aquitzio, southwest of Mexico City, where he faced the hard facts of survival for his wife, his son, and himself.

He worked in the fields when he could find a job. The pay ranged from 45 to 85 cents a day. It was hardly a living.

But back to Aquitzio from the north came other villagers. They told of a country where Gomez could earn as much in an hour as he earned all day in Mexico.

Gomez is an unsophisticated countryman. He can't read or write. He believes he's 26, though he isn't certain. But wages like $30 a week he understands.

He and his wife scrimped for a little grubstake. Then he boarded a bus for Mexico City.

In Mexico City he saw that marvelous invention, a railroad train. He also viewed for the first time that accomplishment of science, indoor plumbing. He paid for a train ride to Monterrey, where he received a permit to work and transportation to a labor processing center nearer the border.

For months now he has worked in Texas fields and even as far up as Arkansas. In the slack season he makes $30 a week. When he isn't working, he receives a subsistence allowance. In cotton picking time he easily can make $60 a week.

"Someday I will have enough money to buy my own home," he says. "I send all my money home."

Gomez is known throughout the United States as a bracero. And it doesn't worry the countryman a bit that he and 400,000 like him are extremely controversial figures. He just likes to work and send money home.

Adolfo is legal. His opposite, the wetback—called that because he sneaked across the Rio Grande to work—is a vanishing breed.

At one time an estimated million wetbacks bid against each other for jobs in the United States.

Adolfo doesn't bid against anyone. He is protected by minimum wages. These range from 50 cents to $1.10 an hour.

Adolfo's employer must provide proper shelter. He has hospital and accident insurance.

Last year, Adolfo and braceros like him sent home $30 million. That gives a big boost to Mexico's economy.

Farmers contract for braceros through their own labor association. They tell the association how many workers they need, pay a head fee of $12 per worker, and the association handles the redtape. If a farmer contracts for workers already within the United States, the fee is only $6.

When Adolfo isn't working, he remains at the labor camp at Hidalgo, Tex., near here. He has a bunk, locker, and cooking facilities. A commissary gives him credit.

Labor organizations and some church groups argue that the bracero is mistreated. He should have more pay and better working conditions, they say. Occasionally labor groups have charged that Adolfo and those like him take jobs away from U.S. citizens. Some protest that the housing offered the bracero is inadequate.

"By what standards?" asks Joe Davis, who farms and operates an Edinburg cotton gin.

"The housing furnished braceros is far better than the housing of workers in several classes of industry, not just the farmer," Davis claims.

The Reverend James L. Vizzard, representing the National Catholic Rural Life Conference, told a congressional committee last year the bracero program is "a none too subtle substitute for slavery."

At the same hearing, the Very Reverend Monsignor George S. Higgins of the National Catholic Welfare Conference said a leading Catholic moral theologian, he did not name, concluded that Catholic farmers are obliged in conscience to refuse to take part in the program.

Davis denies farmers abuse braceros. A member of a citizens group advising the Labor Department on braceros, Davis told the committee:

"I have seen these men all but break down and cry when their contract is up and they have to leave. A man who has been abused wouldn't do that.

"As for wages, he gets the prevailing wage for his work, the same as the domestic laborer."

The farmer-ginner said most farmers would prefer domestic farm help but that "it is just not available when needed." Farmers say U.S. workers don't like the "stoop" jobs, like picking cotton and gathering vegetables.

Braceros interviewed in this area say they are happy with U.S. employers' treatment. But they express a preference for California and northern States jobs, because wages there are better.

Importation of workers began during World War II. Regulations were few and the small border patrol could do little more than keep out the criminal element.

In 1950, the immigration service cracked down on wetbacks. By 1954 the campaign was in full cry.

During 1954, authorities sent 1,022,267 wetbacks across the border to Mexico.

In 1958, only 22,856 wetbacks were deported.

Incomparably the Best Book

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, much praise has been given Earl Mazo for his new study of the Vice

President, which is considered one of the best books on Mr. NIXON ever written. Mr. Max Freedman, the well-known Washington correspondent of the Manchester Guardian, for instance, declares that Mr. Mazo has written incomparably the best book on Mr. NIXON. In his review of Earl Mazo's book, Mr. Freedman says that—

Mr. Mazo, a distinguished reporter, has not tried to emulate the arts of the missionary. He is not seeking to convert anyone. But in this book, published by Harper's, he has set down the facts with courage and honor, separated myth from reality, and given us a portrait of the actual man. * * * It is an admirable achievement.

Mr. Mazo is a personal friend of mine of many years standing, and I am happy to see him receiving the recognition at last which he so richly deserves. Mr. Freedman is quite right; Earl Mazo has, indeed, set down the facts with courage and honor, and anyone who knows this brilliant writer would expect nothing less.

I am pleased to include here the review of Mr. Mazo's book by Max Freedman from the June 25, 1959, issue of the Manchester Guardian.

[From the Manchester Guardian Weekly, June 25, 1959]

(By Max Freedman)

A NEW STUDY OF MR. NIXON

WASHINGTON, June 23.—Mr. Earl Mazo is a brave man. He has written a biography of Vice President NIXON without once suggesting that he is a devil or a saint. The result is easy to predict. For the next few months his mail will quiver with abusive letters, friends will ask him if he really meant what he wrote, and his more sensitive colleagues will allow the whole episode to rest in a chivalrous silence. Most people look at Mr. NIXON not with their eyes but with their prejudices. The usual comment moves between the extremes of generous praise and calculated abuse. Balanced judgment is regarded as a kind of inexcusable neutrality in a conflict between right and wrong.

Mr. Mazo, the national political correspondent for the New York Herald Tribune knew all about these hazards before he began his task. He was resolved to write an honest, penetrating, measured study of one of the most memorable political careers of our time. This certainly is no campaign biography written to glorify its hero as a leader without blemish or fault. Nor is it the ultimate account, based upon the private papers of Mr. NIXON and expressing the final verdict on his story. Mr. Mazo has admitted the faults and pointed to many of the mistakes. But out of a knowledge of Mr. NIXON's career that surpasses the work of all previous biographers or critics who have touched this controversial theme, he has written incomparably the best book on Mr. NIXON and crowded it with insights invaluable to the understanding of today's political debate.

The figure that emerges from Mr. Mazo's analysis must be treated with respect by anyone who values the arts of leadership. Curiously enough, the final estimate is not very different from the private assessment of the most important Democrats in Washington. They may think they could defeat him next year in the presidential race. But they have no illusions about Mr. NIXON's robust and resourceful campaign if he should be their opponent. Mr. NIXON often wonders if the Democrats are wise in saying that Governor Rockefeller would be harder to beat. Suppose the Republicans come to believe them. What happens then? The Democrats might find themselves opposed by the new star of the Republican party instead of by the battle-stained veteran. This would be a strange sequel to the "hate NIXON" campaign.

Except for an occasional frigid episode, relations between Mr. NIXON and Mr. Rockefeller have been cordial and generous. The book is sprinkled with tributes to the Vice President from Mr. Rockefeller. On foreign policy the two men have the same outlook and philosophy. They are not divided by the differences which separated Senator Taft from Mr. Eisenhower. Nor does Mr. NIXON conceive it to be his duty to speak for one political group or one economic philosophy in the Republican Party. He sees himself as a unifying force in his party, eager to organize its fighting faith for every national campaign. This loyalty to the party's cause is known and respected by Republicans in all parts of the country. It helps to explain his popularity with the men who control the Republican organization. Mr. NIXON believes that the Republican candidate for President in 1960, no matter who he may be, will have to run on the record of the Eisenhower administration. That partly explains the zeal, sometimes the excessive zeal, with which he threw himself into election campaigns. The rest of the explanation can be found in the amazing and unprecedented fact that he had to do most of this campaigning by himself. Never in American history has any Vice President carried so vast and so controversial a burden.

In 1950 Mr. NIXON entered the Senate by defeating Mrs. Helen Gahagan Douglas by a majority of 680,000 votes in California. It was a dirty campaign—dirty on both sides. Mr. Mazo shows in a masterly political analysis that Mrs. Douglas's supporters started many of the rough and shameful practices which later were developed with dexterous ruthlessness by Mr. NIXON. This section of the biography will bring a sense of justice to an impartial minority; but Mr. Mazo had better brace himself for an avalanche of protests from California.

In pitiless detail Mr. Mazo exposes the blunders of Mr. Harold Stassen's campaign in 1956 to remove Mr. NIXON from the vice-presidential nomination. This tale has never been told with such exact and punishing accuracy. Every mistake made by Mr. Stassen is recorded with icy precision, down to the last incredible demand that the Republican National Convention postpone its nominations for the Vice-Presidency for 24 hours to give his faltering campaign another chance. Perhaps the most valuable new material in the whole book is contained in the chapters describing Mr. NIXON'S ordeal in his most recent trip to Latin America. Mr. Mazo produces unanswerable evidence to prove that Mr. NIXON was the victim of a Communist campaign of violence and intimidation. It must be added that several of the governments were shamefully negligent or cravenly neutral in the face of this Communist conspiracy. It is impossible to deny, when confronted with Mr. Mazo's impressive evidence that Mr. NIXON was in alarming danger of assassination. Knowing these risks, Mr. NIXON might have shown greater restraint in arranging the details of his tour. That remains an open question. What is beyond all dispute is the mixture of courage and composure displayed by Mr. NIXON during every phase of this tragic experience.

Mr. Mazo, a distinguished reporter, has not tried to emulate the arts of the missionary. He is not seeking to convert anyone. But in this book, published by Harpers, he has set down the facts with courage and honor, separated myth from reality, and given us a portrait of the actual man instead of feverish glimpses of a hobgoblin. It is an admirable achievement.

Georgia's Thigpen Stirs Students

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. FORRESTER. Mr. Speaker, a few weeks ago a young but outstanding Georgian, Dr. Corbett H. Thigpen, addressed an overflow audience of medical students attending the annual convention of the Student American Medical Association.

This address so moved the audience and Dr. Walter C. Alvarez, emeritus consultant, Mayo Clinic, that Dr. Alvarez wrote a column thereon, reading as follows:

DR. ALVAREZ SAYS: GEORGIA'S THIGPEN STIRS STUDENTS

(By Dr. Walter C. Alvarez)

One of the most moving experiences of my medical career came to me a few weeks ago as I sat in a huge, jam-packed audience made up of medical students from all over the United States. They were attending the annual convention of the Student American Medical Association.

As one of their guests, I listened to a brief talk from the heart of a remarkably fine psychiatrist—Dr. Corbett Thigpen, the Georgian who recently wrote up the case of the Georgia woman whose problem he described in "The Three Faces of Eve." He is a handsome, fortyish, sensitive-looking man with fine eyes and a very moving voice.

Time and again, during his talk, when he would say that perhaps many of the ideas of modern psychiatry are just theories for which no one can adduce any scientific proof, the audience—much stirred—applauded. At those moments, I wished all dynamically inclined psychiatrists could have been present just to sense the relief that seemed to come over these students when told that, if they were reluctant to swallow a lot of weird theories, they were perfectly justified.

They registered their approval only as people do when, at last, they hear an authority say something that they have long felt to be true and much in need of being said. The students chuckled with delight when they heard Dr. Thigpen say that he had never heard his patients complaining of "penis envy" or "castration fear"; two ideas which are foundation stones of modern "dynamic psychiatry."

As Dr. Thigpen emphasized, he was not attacking anyone; all he wanted was to find ways in which to cure his patients. After years of experience, he knows—to his sorrow—that modern psychiatry does not give all the answers; in fact, in many cases of mental aberration, even good psychotherapy does not help.

Dr. Thigpen told me that he and his eminent chief, Dr. Hervey Cleckley, had started in practice with analytic indoctrination, but later had turned away from it. In their practice, they have come to behave like any good scientific physician does who will use any form of treatment that he finds useful—psychotherapy, rest, tranquilizers, brain stimulators, electroshocks, or hypnosis.

Dr. Thigpen was sorry to have to admit what all of us physicians know: That, for the last 30 years or more, under the dominating influence of theories of early sex trauma, psychiatry has largely stagnated, so that there has been little advance in it.

Many psychiatrists have cultivated the habit of writing in such an almost-unintelligible jargon that few people can guess what

they are trying to say. In doing this, they have fooled themselves—and some of their readers—into thinking they know something. As Dr. Thipgen, Dr. Freyhan, and others have pointed out, much of psychiatry has changed from a science into a religion with Freud as its prophet. Whenever one of Freud's old friends came to differ with him, he was promptly excommunicated, and after that his name was never mentioned, and his papers were never quoted. This, of course, is not science. In science, one may differ strongly with a man, and yet love him as a friend, revere him as a teacher, and continue to quote from his work.

As Dr. Thigpen went on to say to the students, what he prays for is that psychiatry may soon come out of the doldrums to become again a field for scientific research. Perhaps the changeover is now being effected by the brain physiologists, pharmacologists, surgeons, and geneticists who are getting interested in the problems of mental disease. We will hope so.

Naturally, there is little hope of changing the mental processes of the older psychiatrists, they are too firmly set in their ways, and so our hope must be in the young men of the present generation. If they will accept only ideas for which there is scientific proof, we will get somewhere. Movingly, Dr. Thigpen told of the similar frank talk which he gave at a recent meeting of a great psychiatric association. There, also, he pleaded for scientific honesty.

When, after the talk, a physician came to the podium and asked, "Would you have us give up our practice and starve?" Dr. Thigpen said, "I have no desire to rob anybody of his livelihood, but I feel that if patients are paying us for our services they deserve to receive scientific knowledge—not beliefs."

At the close of his talk in Chicago the students were so moved that they stood up and applauded for several minutes. I will never forget that experience so long as I live. It is a wonderful thing to hear an able and honest man confessing—from the heart—that there is something terribly wrong with the work of the group with which he has long been associated. It takes tremendous courage and dedication to do such a thing.

Mr. Speaker, Dr. Thigpen and his partner, Dr. Hervey Cleckley, down at Augusta, Ga., are performing miracles in the psychiatric field. There is no psychiatrist more eminently qualified to challenge certain accepted theories in mental ills than is Dr. Thigpen. Dr. Thigpen has the ability and the knowledge to inspire young students to go on and up in the field of mental health and to discover truths that could not be discovered in a stagnant field. I sincerely believe that this courageous speech by Dr. Thigpen will be the means of releasing men's minds from fiction and false conceptions, so that they might work impartially, as scientists should, to discover that which is right.

Hosmer Has Program

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. HIESTAND. Mr. Speaker, my bill, H.R. 4273, to eliminate farm price supports, still languishes in the Agriculture Committee. Sooner or later we're going to have to face up to this most acute problem. The question is when are we going to get nerve enough to do it?

L.A.C. of the Long Beach Independent put the matter most effectively in his column of July 9, 1959, headed "HOSMER Has Program," which I am happy to submit for the RECORD.

L.A.C. SAYS: HOSMER HAS PROGRAM

It is doubtful that Congressman HOSMER would get many votes from the Midwest farm States because of his approach to the farm subsidy program. But it is as realistic a program as any that has been offered to overcome the farm mess to which he refers. It should be of interest to all consumers and in the long run it would probably save farmers from becoming vassals of big government.

HOSMER's plan is simple: He would stop all subsidies. Now, hold a fire sale to get rid of the $9 billion in surpluses, costing $1 billion a year to store—then use the proceeds to relocate small farmers put out of business, to reduce national debt and to start tax reduction. He says unless action like this is taken soon subsidies will cost another $5.4 billion this year, and hit taxpayers twice—once for the direct cost in taxes and again for higher food and clothing costs.

This may seem a drastic and even radical approach to the problem. But could anything be more radical than the continued payments to farmers which encourage them to raise more crops which are already in such surplus that enough of some crops are now in storage to take care of our needs for from 1 to 2 years? The new crops soon to be harvested will produce even greater surpluses.

Before us is a long list of wheat, corn, and cotton growers who have received from $40,000 to a million a year each for growing more of their crops than the market could absorb. The total cost of the crazy program is a fifth of the total personal income taxes paid to the Federal Government each year. The surpluses being built up can only mean at some point they must be destroyed—or they will be dumped on the market as HOSMER has suggested. He is taking a realistic view of a situation which it is evident must be solved by some such method.

It takes clear thinking and courage to suggest such a program. There is little hope it will be adopted this year—or in the next election year. But unless some Congressmen and Senators have the courage to speak out with some such plans—radical as they may seem—there is little hope of solving the problem. We are rapidly approaching a time when farmers will be placed on a virtual dole. Until it is solved, as HOSMER points out, the taxpayers will be paying a fifth of their income taxes for subsidies plus higher prices for the food and clothing they buy.—L.A.C.

In Memory of Madison

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. KASTENMEIER. Mr. Speaker, several weeks ago the suggestion was made that a memorial be erected in honor of James Madison, the fourth President, father of the Constitution, and author of the Bill of Rights.

Mr. Irving Brant, in an article appearing in the Washington Post and Times Herald, urged that the 24 discarded columns from the East Front of the Capitol we used for the memorial.

The Washington Post and Times Herald and the Madison (Wis.) Capital Times immediately seconded the suggestion. Now a third distinguished newspaper, the St. Louis (Mo.) Post-Dispatch, in its issue of July 9, 1959, has added its voice to the demand for a suitable memorial for our fourth President.

The Post-Dispatch editorial follows:

IN MEMORY OF MADISON

Irving Brant, former St. Louis editor now engaged in historical and biographical writing in Washington, makes an excellent suggestion. It is that a memorial be established in the National Capital to James Madison, fourth President, father of the Constitution, and chief architect of the Bill of Rights. But Mr. Brant, five of whose volumes in his definitive Madison series have appeared, is not content with a generality. He has a practical suggestion for the memorial. This is that the discarded 24 columns from the East Front of the Capital in Washington be set up elsewhere in the parkways of the Capital City so as to harmonize with existing memorials to Presidents Washington, Jefferson, and Lincoln. The Washington Post has begun a campaign to put Mr. Brant's suggestion into effect. We are glad to be among the seconders. As the biographer of the brilliantly creative statesman so well puts it: "We should erect a memorial to Madison not because he needs it but because we do."

Auto Makers Lag in Pollution Battle

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. HOLIFIELD. Mr. Speaker under leave to extend my remarks, I should like to insert in the RECORD an article from the New York Times of June 28 by Gladwin Hill, concerning the failure of the automobile industry to assume its fair share of the task of preventing air pollution.

As a member of a Government Operations Subcommittee, I participated actively in a 1957 study of the Federal Air Pollution Research and Technical Assistance Program. Our study included hearings in Los Angeles at which the subcommittee took testimony from some of the country's leading authorities in the field of air-pollution control. The evidence presented to the subcommittee clearly indicated, as have many other studies, that motor vehicle exhaust fumes are the greatest single source of air pollution. The subcommittee also placed in its record a series of correspondence between Kenneth Hahn, a member of the Los Angeles County Board of Supervisors, and various automobile manufacturing companies dating from 1953 to 1957 which graphically illustrates the

failure of these companies to shoulder their proper responsibility for helping to control air pollution caused by their products.

Mr. Speaker, the automobile manufacturing companies spend many millions of dollars annually for unwanted style changes and unneeded horsepower. I suggest it is high time they begin using some of this presently misdirected effort to help control air pollution from exhaust fumes.

SMOG FOES ACCUSE AUTO MAKERS OF LAGGING IN POLLUTION BATTLE

(By Gladwin Hill)

LOS ANGELES, June 27.—The automobile industry was roundly censored by opponents of air pollution this week for assertedly dragging its feet in efforts to lessen smog.

The criticism was voiced at the 52d annual meeting of the Air-Pollution Control Association, senior technical organization in the field. Its membership extends from Canada to Mexico.

About 1,000 engineers and administrators attended the 5-day convention. Dr. Leonard Greenburg, of New York, was named president of the association for the next year. He is commissioner of the city's department of air pollution control.

The Automobile Manufacturers Association and the industry generally were accused of reneging on pledges of thoroughgoing efforts to reduce exhaust fumes, a major source of air pollution in big cities. The industry was also accused of showing bad faith by refusing to participate in the convention.

The leading critics were Smith Griswold, director of the Los Angeles County Air Pollution Control District, and Warren Dorn, a member of the county board of supervisors.

RECENT ASSURANCES CITED

Mr. Griswold said that only a few months ago auto industry representatives had assured local officials and the public that they were trying to expedite development of exhaust controls, but needed more basic knowledge, yet shortly afterward, he continued, the industry withdrew from participation in the convention, a major forum for pollution information, "claiming they did not care to come to Los Angeles where they were criticized unfairly."

"They have been making excuses ever since 1956," he continued. "In February they promised a device within a year. Since then they have sent us exactly two units of one device—a catalytic afterburner. In tests so far this device has failed to measure up to the claimed levels of efficiency. The only devices which do appear to show promise are those developed by independent companies."

Mr. Dorn said:

"It seems that this vast industry, which has an annual income of some $20 billion, does not want the people of this area to know how little it has accomplished toward solving its part of the smog problem."

Mr. Dorn then cited the outlay by local industry of between $70 and $100 million for fume suppressing equipment, the taxpayers' outlay of $17 million in 12 years and a current annual budget for smog abatement of $4 million. Compared to these figures, he said, the auto industry's expenditure is unduly small.

"I submit to you," he said, "that with the people of Los Angeles County spending $1 billion a year on motor vehicles, the industry's expenditure of only one-tenth of 1 percent of that—only $1 million a year—could hardly be construed as the crash program demanded by the people of this county as well as the people of nearly every other metropolitan area of this vast country."

OCAW: Democracy in Action

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. KING of Utah. Mr. Speaker, much has been said concerning the lack of freedom existing in our present day labor movement. The impression the public has received is that all labor organizations are undemocratic by their very nature.

Mr. Harry Seligson, professor of industrial relations at the University of Denver, has made a study of the internal administrative and managerial practices of the labor unions. He has found a striking example of an international union that enjoys the full benefit of a democratic internal organization. This union, the Oil, Chemical, and Atomic Workers International, AFL–CIO—OCAW—with a membership of 200,000, is a forceful example which rebuts the presumption that a spirit of internal freedom is lost in our present day American labor movement. I am confident that the great majority of our labor unions enjoy this freedom, and only the minority are plagued with corruption.

Under unanimous consent, I submit to the RECORD this study of Prof. Harry Seligson entitled "Democracy in Action."

OCAW: DEMOCRACY IN ACTION

(By Harry Seligson)

For several years the McClellan committee has been investigating unions. In addition to disclosing corruption and racketeering in some, it has also brought to light evidence of serious denial of rights of union members by their unions.

The investigation has stirred up considerable interest in these questions: When is a union considered to be democratic in its internal practices? How are the rights of its members protected?

This article is an account of how one union, the Oil, Chemical, and Atomic Workers International, AFL–CIO (OCAW), practices democracy. Formed in 1955—as a result of a merger between the Oil Workers International Union, and the Gas, Coke, and Chemical Workers Union—it claims a membership of about 200,000. Its headquarters are in Denver.

To the OCAW, democracy in a union means only one thing: the organization is fully and completely under the control of the members. This Constitution of the union provides this control in the form of checks and balances on the power of the officers, by granting a high degree of autonomy to the locals, by guaranteeing rights of the members, and by the Convention. The description which follows is from two sources: the constitution of the OCAW; and transcripts of the Convention of the old Oil Workers Union, 1918–1955, and of the OCAW, 1955–1958.

THE CONVENTION

The OCAW holds a convention every year. The members have defeated by wide margins proposals to extend this to once every 2 years. To date, the members have been unwilling to permit more than 1 year to elapse without reviewing the administration of the union by their officers.

The delegates to the convention are elected by the members of each local. Even the convention committees are elected by the members.

The rules under which the convention operates are proposed and adopted by the delegates.

Proposals for changing the constitution may be made by individual members, officers, locals, or district councils. These are referred to the constitution committee. The constitution obligates this committee to report to the convention every proposed amendment, either concurring with it or recommending rejections. In this way the convention has the opportunity to debate each proposal.

These conventions are definitely not rubber stamp bodies. On more than one occasion the transcripts show how the delegates have either rejected completely or modified substantially the recommendations of their administrative officers.

The delegates oppose vigorously requests by the administration of additional finances. With great care they review and examine the annual accounting of the secretary-treasurer and the audit by recognized certified public accountants. The frequently held conventions permit the rank and file, through their delegates, to act in the nature of a finance committee. There is no way possible for the officers to appropriate and expend moneys without the approval of the convention.

Officers are elected at the convention for 1-year terms. For many years the old Oil Workers International Union nominated its officers at the convention, but elected them by a membershipwide referendum. Each year a vocal minority at the convention seeks to revive this practice; it considers the referendum an important facet of democracy.

Although the same group of officers have been reelected repeatedly, it is not because opposition is throttled. Members with leadership qualities have many opportunities to make those known: in their locals and district councils, on companywide and subindustry councils, on the bargaining policy committee or the rank-and-file executive board, or as delegates to the annual convention where almost unlimited debate is the rule. In the case of the OCAW, reelection is an expression of the respect and confidence the members have in the leadership and integrity of the officers they return to office year after year.

The transcripts give a picture of conventions that are vigorous, vocal, articulate—even turbulent.

THE ADMINISTRATION

As the chief administrative officer, the president of an international union, has considerable power. Improperly used, abuses can result. The OCAW provides its president with sufficient power to execute union policy, but surrounds him with checks and balances.

(a) A 16-man executive board, elected annually from the members, meets every 3 months. (The officers sit on the board but may not vote.) It reviews all financial dealings of the administration, the president's decisions on policy, his appointments of regional district directors; hears appeals of staff members discharged by him, appeals from union members disciplined by their local or the international, appeals from locals over whom the president has placed an administrator; and, in general, keeps a close watch on the operations of the international office. The minutes of the sessions of the executive board are sent to each local.

(b) The president appoints the international representatives who service the locals in the field in organizing, bargaining, arbitrating. The president also has the power to remove them. However, they may appeal his decision to the executive board and, as a last resort, they may take their grievance

to arbitration. Until this arbitration procedure was adopted, the aggrieved staff member could appeal to the convention. In several instances, the convention ordered the discharged representative to be reinstated.

It should also be noted that the staff of the international office is represented by a union; the president is obligated to bargain with it on terms and conditions of employment.

(c) His appointment of trustees and administrators over locals is subject to appeal. In the 1958 convention, one local challenged vehemently the president's action in appointing an administrator over it. After lengthy and extensive hearings, the executive board sustained the president. The convention concurred.

(d) His opportunities to develop a political machine are practically nonexistent:

(1) He has no patronage to offer. International representatives appointed by him may not be removed without just cause.

(2) His appointments of district directors are subject to approval by the executive board.

(3) He cannot create a topheavy bureaucracy; the members vigorously resist any request for an increase in the per capita tax.

(4) His duties provide him with little spare time to make the rounds of the locals to build a following.

(5) He has no funds which are available for his unlimited and unrestricted use; every penny must be accounted for to the convention.

(6) His decisions, conduct, accomplishments, or lack of them are reviewed annually by the convention.

(e) At conventions he cannot prevent resolutions or proposed amendments to the constitution from being reported out to the delegates. He may speak for or against them but, as a general rule, is granted no more time than is given the average delegate.

(f) He must stand for office annually.

(g) He, as well as the other officers, may be suspended by the executive board for dishonesty, malfeasance, or maladministration. He may be recalled by a referendum vote of the members.

(h) His salary is relatively modest—$15,000 a year—with a limited expense allowance which must be accounted for. This, in a union in which the annual earnings of a highly skilled member of the OCAW may run as high as $7,500.

THE LOCALS

Locals exercise a high degree of autonomy.

No collective bargaining agreement can be made effective without the vote of the members. No strike can be called without the approval of the membership. Only the members of the local can vote for the delegates to the annual convention.

Locals need not be unduly concerned about having an administrator placed over them arbitrarily, or having their charters revoked without cause. Counting the period in which the old Oil Workers International was in existence, only about 10 locals were placed under an administrator between the years 1946 to 1958. Generally, administrators were appointed when there was clear indication of election fraud, mismanagement of funds by officers of the local, refusal to abide by the constitution of the international, or failure to pay the per capita tax. The trusteeships averaged no longer than 2 or 3 months in duration.

Charters of locals have been revoked or canceled only where the local has gone out of business, where its membership has dropped to a point below that required by the constitution, or where economy and efficiency dictated the merger of several locals.

THE MEMBERS

Important to a union member are the rights he has when his local or international charges him with violation of the union's constitution. The protections furnished the member by the OCAW are quite adequate.

(a) Charges against a member must be made in writing.

(b) An investigating committee examines the evidence at a hearing at which the accused may be present. He is given every opportunity to be heard and to present evidence in his defense. He may be represented by counsel if he so desires.

(c) The investigating committee reports its findings to the members of the local. A two-thirds majority vote of the membership is necessary to convict.

(d) If acquitted, the local may vote to reimburse the accused for expenses he incurred in his defense.

(e) If convicted, he may appeal to the executive board and, as a last resort, to the convention.

The number of members suspended or expelled by locals is unknown. However, few appeals have been made to the conventions. Of three known appeals in a 40-year period, one was by a member expelled because of membership in the Communist Party. Both the executive board and convention sustained the local.

Equally important to an accused is the speed of the judicial process. Quarterly executive board meetings and annual conventions insure speedy appeal procedures.

SUMMARY

In sum, the OCAW practices democracy in a number of ways: Annual convention, unlimited debate, elected convention committees; critical review and examination by the convention of activities of the administration; financial accountability of officers; annual election of officers; a rank and file executive board to review administrators' actions; district councils; autonomy of locals; due process provided the member in case of disciplinary action; adequate safeguards to prevent the creation of a vested political machine or the throttling of opposition.

These rights and protections guaranteed OCAW members are more extensive than any proposed by legislation now pending in Congress. Nor are they "paper" rights embedded in the union constitution and disregarded. "Worker control" is not a fiction; 40 years of annual convention proceedings tell the story of zealously guarded rights constantly reaffirmed and enforced.

Straining a Friendship

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. WAINWRIGHT. Mr. Speaker, there is a problem today in the realm of our foreign affairs which has not received sufficient attention in this country. The Philippines were once our territory and are now our ally in the Far East. An article by a worthy and distinguished columnist has appeared in the July 8 edition of the New York Journal American, which speaks for itself. I include the article which follows:

[From the New York Journal American, July 8, 1959]

STRAINING A FRIENDSHIP

(By Bob Considine)

Our relations are worsening with the Philippines, the only democracy and only Christian country in the Asiatic world, and the most loyal of our allies in World War II. If permitted to deteriorate much more, we will have lost not only a bulwark but, more importantly, a trusting friend in a part of the world now in the throes of a vast reaction against the Caucasian and his notions.

The little brown brother is browned off at us. He is hurt. For four centuries under the Spanish and for half a century under us he lived off the fulfilled pledges and promises of the Great White Father. Now, prodded by a sense of independence, a hunger for what he considers just compensation, and the militant nationalistic voice of Senator Claro Recto, the most articulate of the anti-American voices, the Filipino is asking questions which the U.S. Congress seems in no mood to answer.

He feels that we owe him about $800 million and that it isn't accurate for us to complain that we've helped the islands with a couple of billions since independence. Double bookkeeping rears its head, he feels. But more than money is involved. There's a question of sovereignty and pride. The constitution we provided for the Philippine nation requires its Government to give Americans in the islands full and equal rights with Philippine citizens.

Foreign Minister Felix Berto Serrano and U.S. Ambassador Chip Bohlen are engaged in these delicate questions: Is an American soldier on or off duty when he commits a crime in the Philippines? How can a Filipino sue an offending American who has returned to the States? Why does the United States find it easier to pack its bad ones home rather than let them face Philippine justice? The Serrano-Bohlen talks have not always been cordial.

The fiscal rap against the United States boils down to this, earnest and worried Filipino friends tell me:

When General MacArthur made good his historic pledge to return, he approved Executive Order 22, signed by President Quezon, guaranteeing Filipino servicemen pay equal to that of American troops and officers. Secretary of War Stimson asked MacArthur to try to rescind the order. The General refused. Then Washington wouldn't back up MacArthur's revered "chop," or imprimatur, and the battered Philippine Government had to shell out about $350 million to make good the promise of the Great White Father. It wants it back because MacArthur signed as supreme commander of its forces.

Years earlier, a special broadcast by President Roosevelt to the beleaguered Filipino Freedom Fighters had said, "Everything will be restored, down to the lowest nipa hut." It was a rallying cry which succeeded in strengthening the resolve of the Philippine people to resist the Japanese invader.

In time, Congress authorized sums covering 75 percent of the value of property destroyed in battles between Japanese and Filipino guerillas, in U.S. air raids against Japanese-held strong points in the islands, and finally in United States and Filipino battles against Japanese positions. But prices had risen, and the appropriated money covered only 52.5 percent of the placement cost. There followed a promise to make up the difference, and many Filipinos borrowed money to rebuild against the day when Washington would come through. Washington didn't.

Before the war, we exempted the Philippines from processing taxes on the sugar

they sent to us. Since then we've been collecting such taxes, even though, by treaty, we said we'd never.

The Philippines hope to expand industrially, rid themselves of the cross of an economy anchored to the whims of sugar and copra. The Import-Export Bank, with the job of seeing that would-be debtors present only punctureproof applications and pay up as soon as possible, has turned down a steel mill deal which an American company wanted to put into the Philippines. The West Germans and the Japanese—of all people—now offer more liberal terms.

The Russians, naturally, are interested in the Philippines, too. So far they haven't gotten to first base. But they are very patient.

Government by Veto

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. MEADER. Mr. Speaker, the controversy which has arisen between Paul Butler, chairman of the Democratic National Committee, and leftwing members of the Democratic Party on the one hand, and the Democratic leadership of the House and the Senate on the other, is of vital concern to all citizens because it bears upon the direction of national legislative policies.

Mr. Butler et al. would seem to want to write a political record by passing so-called liberal legislation and confronting the President with the responsibility of killing the legislation because of its excesses even though the administration favors some action in the field though it may be lesser in amount or different in its provisions. The majority leadership of the Congress, however, seems to take the position that some legislative progress is more important than simply writing a political record and has sought to shape legislation so as to be veto proof.

Mr. Speaker, this subject has been discussed in a very thoughtful way in an editorial appearing in the Jackson (Mich.) Citizen Patriot of July 11, 1959, entitled "Government by Veto," which I incorporate at this point in my remarks.

GOVERNMENT BY VETO

The American form of government, with its checks and balances, and the two-party political system has produced some strange situations through the years.

One which may be unique has developed in what is becoming generally known as government by veto.

The right to reject legislation has been used by all Presidents to get what they want. But the present situation, in which the President is using his veto power to hew straight down a fixed policy line and leaders of the opposing party, with its topheavy majority in Congress, frankly admit they don't have the votes to override, is, we believe, unprecedented.

It is largely the product of a peculiar political development which finds a popular Republican President faced with a Congress in which the majority of the Members wear a Democratic label.

The President, in the political vernacular, is a "lame duck." But, contrary to the popular myth, he is asserting powerful leadership and is using his veto pen, as he said in a recent press conference, to "get legislation passed which will benefit the United States and keep us solvent at the same time."

The Democrats in Congress are led by men who are practical politicians and experienced lawmakers. They know there is no point in bucking a stone wall. They compromise, when necessary, to get important legislation past the President and invite vetoes, for the record, when they believe it is politically advantageous.

By so doing, however, the Democratic leadership is incurring the wrath of the more liberal elements of the party—who also condemn the President.

All of which leads to another facet of the American political system which accounts for the existence of the current "government by veto."

What the liberals do not care to recognize is the true complexion of the legislative branch of the Government which, in turn, reflects the views of the people.

Despite the heavy Democratic majorities in both Houses of Congress, the legislative branch of the Government still is predominantly "middle-of-the-road," or even mildly conservative, rather than representing the views of the extremely vocal northern "liberal" wing of the party. And that is nothing new.

To put it another way, government now is by veto and coalition with the moderates and the conservatives of both parties making up the majority which acts in concert on most issues.

This condition accounts for the fact that President Eisenhower never has had a veto overridden and why the practical Democrats admit they cannot muster the votes to upset him.

It is the true nature of Congress, as gaged by the general leanings of individual members rather than the party labels they wear, which gives President Eisenhower his victories and reduces the cries of the liberals to the complaints of a minority.

Professor Raps Supreme Court

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. FORRESTER. Mr. Speaker, the Washington Evening Star, July 13, 1959, edition, carried an AP story headlined from Milwaukee, telling of the severe criticisms of Prof. Fred E. Inbau of Northwestern University regarding decisions of the U.S. Supreme Court, the article reading as follows:

PROFESSOR RAPS SUPREME COURT

MILWAUKEE, July 13.—A Northwestern University law professor asserted today the Supreme Court of the United States has imposed "artificial, impractical, and unnecessary restrictions" on questioning of suspected criminals by police.

Addressing the opening session of the National Sheriffs Association, Prof. Fred E. Inbau said that in attempting to protect the public interest, the High Court has been "instead protecting the criminals."

Law enforcement officers, he said, cannot protect society while complying with all the requirements of the Supreme Court. "The Court is turning guilty people loose in order to discipline the police," he said.

Mr. Speaker, I have personally known Professor Inbau since 1937 when it was my good fortune to take a special course on scientific crime detection at Northwestern University sponsored by Professor Inbau. Professor Inbau is perhaps the leading authority in the field of criminal law and the law of evidence. Professor Inbau had the rare privilege of being associated with Dr. Wigmore, that outstanding authority on the law of evidence and who was undoubtedly the leading authority of his day.

Professor Inbau has as rich a background and as much experience in the fields of criminal law and the law of evidence as any man in the United States, and certainly his opinions are entitled to great weight. Further, any fairminded person is bound to realize that Professor Inbau made these criticisms solely for the reason that he felt compelled to speak up against Supreme Court decisions which are contrary to the law and which are against the public interest and heavily in favor of the criminal. The Congress of the United States can well consider the opinions of Professor Inbau.

Address by Herb Plambeck

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I hereby include an address delivered by Herb Plambeck, WHO radio farm director, over that radio station on Friday, June 26, 1959, on the subject of subsidies.

Mr. Speaker, I know Herb Plambeck. I know that when he speaks he speaks with sincerity and with purpose. In reading this address every Member of the Congress will be impressed with the reasoning, the sincerity and the logic of Mr. Plambeck's presentation. I feel that this is a masterpiece of simplicity in telling a story which needs to be told everywhere in America.

(By Herb Plambeck—WHO radio farm director)

Good morning, friends. This is the last time you will hear me on these morning Farm Highlights. Because according to present plans, this is my final program with you at this hour, I'd like to make it one to remember.

My topic this morning is easily the toughest of the many from which I might have chosen. Before we deal with it, let me say I leave this broadcast hour with much reluctance. You listeners have been exceedingly kind. Our sponsor has been more considerate. The station has been eminently patient. However, a realinement of some programs here, physical limitations, working hours, along with economics are factors in this change, in which WHO, the sponsor and I are all agreed. Moreover, the change will give my able, and young, associates—my boys—a golden opportunity * * * and one I am sure our listeners will appreciate.

Ordinarily, on a concluding broadcast of 12 or 15 years standing, the temptation is to reminisce. You can be sure the temptation applies this morning. Similarly, I would love to have stressed some favorite projects—soil and water conservation, work of good neighbors, June Dairy Month, 4–H and FFA programs, and a camp for Iowa's crippled children. All of these things would be enjoyable and easy to report compared to what I feel impelled to discuss—a question every American seems to be asking and every farmer must face.

I speak, of course, of the subsidy question—and I speak as an individual. In other words, I am absolving station WHO and our sponsors of any blame. Whatever the consequences, this matter must be dealt with. We are fast reaching the point where the misunderstanding between farm and city people will seriously injure both—and both groups have much to lose.

This topic is not new. You have heard references to it time and again on this and other WHO programs and in many other ways. The impact of it, however, is rapidly becoming greater and more dangerous. This was indelibly impressed on many of us the past few weeks when Life magazine, the Reader's Digest and other widely read publications have gone allout headlining what they describe as "the incredible farm scandal"—implying, in effect, that every rural resident is a parasite and a thief. It came forcibly to my attention at national meetings in the south and east last week. When I walked into a New York hotel, I was quickly advised that NBC wanted someone from the farm side to deal with this penetrating question. It was not an easy assignment. Since then there have been many more hours spent on this matter, talking it over with farmers, long distance calls, studying, researching bulletins, and reading letters from listeners.

Two things must be said before I go further. One is that I am not so conceited or misled as to feel I can, in a few minutes time, answer all the questions posed by those keenly intelligent writers, broadcasters, and other accusers, who have tremendously powerful forces on their side. Yet, I feel emphatically that even a few feeble voices, such as yours and mine, must be raised or else we are, in effect pleading guilty.

Secondly, for the record, I do not personally want, nor have I ever accepted, farm or other subsidies. In my own small farm operation, I accept no Government aids directly. Yet, I readily admit indirectly I have been affected, and so have you my friends, perhaps in more ways than you realize. And the time may come, if marketplace values drop still further, where some form of Government help will be necessary to save even those of us who are not now accepting any.

Most of us concerned with this program are interested in the family farm. To lose it could mean disaster, not only to farming as we know it but equally so to many segments of our great and thriving American economy as well.

Subsidies are one part of big government. Anyone who has seen total big government in action, as I have in Russia and Siberia, is gravely fearful of it. We pray this will never happen here. Yet there is no denying price supports and other Government aids have become an integral part of our economy here in this bastion of freedom. However, the big publications, numerous broadcasters, some chamber of commerce leaders, many key Government officials, some farm spokesmen, and others seem determined to make the American public believe subsidies go only to agriculture. This we bitterly resent. They would have America and the world believe farmers alone accept Government help. Nothing could be further from the truth. Nothing could be more unfair. Let me state a few facts, as I have them, and as I believe them to be true.

First, subsidies, to which Life magazine and a lot of the rest of us take strong dislike, are not limited to farm price support payments. Tariffs, as enacted by our first Congress back in 1789 to protect and promote business, are subsidies * * * designed to help protect American business. Special postal rates for magazines are subsidies * * * and this Nation's publishing industry has attained at least a part of its wealth and stature because magazine publishers seem quite willing to accept this subsidy. Cost plus is a subsidy; and when war materials were needed, no one in his right mind would have stopped the wheels to provide our troops with what they had to have. Depletion allowances on oil and mining industry taxes are gigantic subsidies, but we never hear about this. As I tried to point out in the broadcast from New York, farm people resent being singled out, of being accused of being alone in taking Government handouts. Rarely do we hear about the part Government plays in other facets of our economy.

I don't recall Life, in its scathing denunciation of agriculture, saying much about the $9 million or more it has received in a single year in the way of the postal rates subsidy. Nor does Reader's Digest say much about the $5 million it has accepted. Seldom is something written about the $38 million in annual subsidies estimated for just 14 or our major magazines, to say nothing of the hundreds of others.

I am not saying this is wrong. I like to read America's fine magazines as well as anyone else. I am glad millions of Americans can afford them. I know about the value of advertising, and how magazines and newspaper pages, along with radio and TV messages, help Mr. and Mrs. America to a higher standard of living. I recognize the educational value of all the publications. I write for some fine newspapers, myself. Certainly I do not want to change all this.

But, speaking as an individual, it seems to me that if the magazines are going to condemn agriculture, as criminals, for accepting Government help, then the publishers who condemn us ought to have the decency to admit to the same crime.

Similarly, the businessman who condemns farm price supports is not in the best position to do so. Business reconversion payments, which is still another subsidy, over the past 20 years or so, have totaled $43 billion or more. The oil people and mining people alone have gotten $23 billion.

Railroad presidents, airlines officials, families accepting housing or other help, military leaders, politicians, laborers, person after person who points to farm price supports as being shameful has every right to do so, provided he or she is equally willing to point the same finger at himself or herself for having not only similarly accepted Government help, but for having accepted 10 times as much in total as that which has gone to agriculture. The figures I have quoted are not mine. I have taken them from a U.S. Government bulletin, entitled "Government Subsidy Historical Review," printed in 1958.

I know two wrongs do not make a right, and that this sounds like the pot calling the kettle black; but I feel people who live in glass houses, even if they are on Times Square, have no right to criticize agriculture and to make whipping boys out of farm people, when they themselves are also accepting Government help, provided by you and me—the taxpayer.

There is much more to be said. I haven't even touched on some other unfair accusations, such as charging school lunch programs, foreign aid programs and much else against agriculture, when it really should be charged, at least in part, to the Health, Education, and Welfare Department, the State Department, etc.

And there's been no time to mention the subsidy to the American consumer, by way of cheap food agriculture is providing on the marketplace. Capper's Farmer estimated this to be $70 billion. No housewife seems to want to change that * * * even if Government subsidies have helped guarantee the overabundance and the staggering surpluses that make America the best and most economically fed nation on earth.

Nor have I touched on the endless ramifications of a prosperous agriculture and what it means to feed manufacturers, food processors, machinery and automakers, business, labor unions, and to the retailer, wholesaler, truckdriver, store clerk, butchers, bakers, candlestick makers, and the millions of others who benefit from a farming populace that has money to spend.

For me to quote the benefits all America gets from a prosperous, subsidized agriculture might give the impression I favor subsidies. As emphasized before, I personally dislike Government help. Like most everyone else, I treasure the freedom that has made America great. In no way do I favor trading liberty for subsidy. But let's be fair about it. If it's wrong for agriculture to have accepted $5 to $10 billion in subsidies over the past 25 years, isn't it equally wrong for the rest of the economy to have taken $50 billion or more in that same period?

As for you, and everyone else in America, you must make your own decision. It is not my place or purpose to condone or condemn Government aid, but as one U.S. citizen, identified with an industry I believe to be basic, namely, agriculture, I ask by all that's fair and right and decent that our accusers tell the whole truth * * * a truth that might hurt because the fact is, of all the Government help that has been accepted the last 25 years, agriculture has received only a small part of the total. Let's tell the whole story * * * fully and honestly, in the tradition that has made America—your land and mine—so great and so wonderful.

Sneaky Inflation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, the Philadelphia Bulletin on July 4, 1959, published an editorial which I think is a very good exposition of the rate ceiling problem. It follows:

SNEAKY INFLATION

Nobody is for inflation so long as it's called by its right name.

But let it be called expansion of the economy. Or hold down the interest rates. Or no bonus for bankers. Then it's a different story.

A great many people will enthusiastically back any of these appeals, happily unaware that they are helping to bring about the very thing they dread.

This, as Joseph A. Livingston, financial editor of the Bulletin, has repeatedly pointed out, is the grave danger lying at the heart of the battle of the interest rate now being waged in Congress. Flying the banner, "Keep Interest Low," the inflationists are in a strategic position to make political hay by embarrassing the administration, and at the same time set the Nation on the path of an inflation from which there would be no turning back.

The cold fact is that the Treasury faces a crisis. It can't sell long-term bonds to ordinary savers or investors at the interest rates now fixed by law.

Why? Because industry, States and municipalities are all competing for the available funds at higher interest rates.

Secretary of the Treasury Anderson has asked Congress to let him meet the competion by offering an interest rate at which the Treasury can sell its bonds. The more responsible Democratic leaders have renounced the opportunity to embarrass the administration, and have offered a compromise (which was accepted) to give the President the onus of raising rates. But even this is opposed by those who want inflation under the name of expanding the economy.

They would keep the present ceiling on interest rates, knowing that this would eventually compel a resort to the watering of the currency through the unloading of U.S. securities directly onto the Federal Reserve banks.

This is inflation—and if it is permitted to come about the ordinary citizen, unacquainted with the machinery of finance, will never know what hit him.

High Taxes and Government Spending

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a letter sent to me anonymously from a citizen of my State of Michigan. I am bringing it to the attention of the House in order that the writer's views may be available to Members of this body:

DEAR MR. BENTLEY: I am addressing you in this manner because I feel you are one of the few men in Washington who really have the interest of Michigan, our country as a whole, and last, but not least, the interest of the middle-class, poorly paid, middle-aged, common American citizen at heart. For sometime now you have sent questionnaires to our home and generally my son will reply to them. We have conducted a private poll among many, many acquaintances, neighbors, and friends, and, as a rule, the feeling is one of complete futility. For the average low-income person it is the endless struggle to pay the tax collectors, both city, State, and National. You struggle all your life to get a little humble home, and then you can hardly keep it and your head above water trying to pay—the word which is becoming one of the most hated in the American or English language—"taxes."

I challenge anyone to pick up a daily paper and not find some article in it relating the incident of some absurd spending in Washington, "Senate buildings, carpeting, drapes, air conditioning," to make it more luxurious for those who are supposed to be public servants and representatives of the American citizen. These items mentioned above are but pennies in comparison to the millions and billions spent foolishly abroad, all over the world, to enrich and nourish the grafters there so that they will have more vitality and strength to stab us in the back at the first opportune moment.

It seems that if our public officials, both city, State, and those in Washington sent there by the different groups of people back home because they solicited the job and promised to work for the interest of their fellow men, were truly honest, the vast majority would have to confess that their first interest and thoughts were how best they could feather their own nests, with feathers not rightfully theirs; and, as we have just noticed in Lansing, if they cannot agree any place on anything, there is one question they resolve unanimously, that they should have an immediate increase in their salaries, and this continues forever.

What is going to happen in a few years in a few more years, when the few that are now still struggling to be honest, pay for homes, taxes, exhorbitant medical fees, realize it is just no use, where is the tax money coming from? I personally know many who have been compelled to drop all kinds of insurance, hospital, life, etc., because they could not buy food, clothing and keep a roof over their head, if they retained the items mentioned above. So they live in fear of becoming ill and requiring hospitalization, and if they need to seek medical assistance they delay doing so because of the exhorbitant costs. But those right in the same city that have come in from the South in the last few years will in some manner get into homes and then proceed to get our welfare assistance for themselves, and will also bring in a string of relatives from the South and immediately they proceed to get assistance for them. It is a known and most deplorable fact that many women have as many illegitimates as possible, thereby increasing their monthly income for aid to children. Why is this allowed to go on from year to year? Detroit and many other big cities and yes the smaller ones too, tolerated this thing for 30 or 40 years. But if a person who has been paying taxes for 50 years, needed help, it is a different story.

I am enclosing an article clipped from a daily paper in Michigan, the author of which I have known for many years, and he is an honest and respected person. It relates I think what many honest Americans know. The largest benefactors of subsidies are millionaire groups in the agricultural area.

I think the greatest and most beneficial act you could perform in Washington would be to inform your colleagues just how disgruntled and unhappy the vast American people of integrity are, with their greedy political and many times stupid public servants. Public servants in name only. This last winter articles appearing in our daily papers proved just how quickly these men elected to public office proceed to employ all their relatives, rent their front porches, garages and attics to the U.S. Government. Put their student sons on the payrolls at salaries that many intelligent, middle-aged people, could only dream of receiving, after years of training in a chosen field. If those elected to public office in Washington don't soon turn the tide, I am afraid that before another decade passes, the glorious America that was, will become what history has told us about many other countries that were rotten and corrupt to the core. Those of ambition and integrity would like to seek a haven somewhere away from the welfare chiselers, such as our friend that took asylum in Australia, an example of a hard-working true American.

Many years ago a handful of brave people in a new country, besought with hardship and trials had the courage to rebel against powerful oppressors and tax collectors and their British war lords were finally routed. Where are our Washingtons, Jeffersons, and Franklins today? Because I feel you must be somewhere a descendant of some of them I am writing you today. Maybe you can influence your Washington associates to wake up before it is too late, and rescue the sinking ship of true American democracy. You might mention to them that one of the most unjust acts ever enforced on the American people is our present "robbing income tax." It is too bad also that a man like T. Coleman Andrews, a former Internal Revenue man could not have been elected into some office where he could do the American people some good. At the time he was running supposedly for President, in our little town we stood in line and tried to vote for him, but found out that we couldn't for some reason or other.

I have never written to a public official before, because I felt it was just wasted time. However, I believe (I hope I am right) that you may be one that is really working for the interest of the common, middle-aged, overburdened American mother and father.

A DISGUSTED MICHIGAN TAXPAYER
(One of many millions).

WANT ECONOMY

EDITOR THE NEWS: Our country is spending itself bankrupt. Inflation is pauperizing millions of people with fixed incomes and pensions.

The rest of the world is looking questioningly at the soundness of the dollar and our international credit. Our national fiscal policies are unsound and bid fair to get worse.

Great segments of our business, agricultural and cooperative enterprises are being supported by subsidies or tax exemptions. The necessary taxes to support this program are paid by the rest of us.

The outstanding and most flagrant example of this socialistic program is the agricultural subsidy, which costs over $7 billion per year.

Every employed person in the country pays over $120 per year in taxes to pay for it, plus higher prices for the agricultural prowork each month. A total of 6,000 dealers and 240,000 employees are looking for work. That too, is bad, but it is part of the chance you take in this business. In addition, 500,000 employees in automotive production are out of work.

We do not want subsidies and we do want to pay our share of taxes for every necessary governmental expense, including defense, no matter how costly, but we do not want to pay for subsidizing farmers, oil people and tax free co-ops and many others, and especially we do object to do-gooding projects all over the world and at home run by wastrel bureaucrats.

We want our Government to economize; stop spending money like it was going out of style and live within our national income, just like we as individuals must do. If necessary, for a year, in order to get solvent, we should be willing to pay higher taxes.

President Rebuffs Spenders

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "President Rebuffs Spenders," which appeared in the Rockford (Ill.) Register-Republic of July 9, 1959:

PRESIDENT REBUFFS SPENDERS

President Eisenhower repulsed a major budget-busting effort of the Democratic spenders in Congress by vetoing an omnibus housing bill which would have put the public housing program into high gear and opened wider the floodgates of inflation. In his veto action, the President demonstrated

clearly that the Democratic-controlled Congress will have to fit its spending proposals more closely to the administration pattern if it wants to get them through the White House.

The strongly worded veto message President Eisenhower sent to Congress amounted to a summary of his economic goals—restraint in spending to avoid inflationary budget deficits, reliance on private capital wherever possible, and putting Government interest payments in line with what it has to pay currently on money it borrows. He called upon Congress to write a less costly measure, along the lines of his recommendations last January.

The President said spending authorizations provided for in the bill totaled $2.2 billion as against his budget recommendation of $810 million. Sponsors of the catchall bill said it would cost $1.3 billion, but Republican estimates of eventual cost ran to more than $5 billion.

Provisions of the measure attacked by the President in his veto message were an outlay of $900 million over 2 years for urban renewal; authorization of 190,000 new public housing units, while 100,000 units previously authorized remain unconstructed; and direct Federal loans for housing for the aged when this need might be met by Federal insurance or private capital.

Most controversial feature of the measure is the public housing construction program. President Eisenhower asked for no new public housing, contending there is no need for further low-rent housing. The President's stand on public housing cannot be effectively challenged. The Government should be moving entirely out of the housing field.

The President proposed a 6-year urban renewal program costing a total of $1.4 billion.

The Democratic measure would have meant more Government debt, more inflation, and more socialism. Housing starts, without a Federal program, are expected to set new records this year.

It is unlikely that the spenders will be able to override the veto. There is no justification for pump priming.

The Trinity River Project

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. UTT. Mr. Speaker, we are hearing, in great numbers, from our constituents who want extravagant spending stopped and who are concerned about inflation. Expenditures are inflationary when the funds are not in the Treasury, necessitating borrowing by the Government or the issuance of more money. Unfortunately, the big spending faction does not appear too concerned as to the source of the money or the state of the budget.

With the yearly interest alone on the national debt now up to $8.5 billion, seeking every means of cutting Federal expenditures should be paramount in our minds. On July 24, hearings will be commenced by the House Interior Subcommittee on Irrigation and Reclamation concerning the joint development of the authorized Trinity River project in California. This project presents a splendid opportunity for us to save right now $60 million in Federal expenditures, for the private utility would build the power facilities itself, and at its own expense. As the Petaluma Argus Courier editorialized recently—

The Eisenhower administration long has taken the sensible attitude that it is foolish to spend taxpayers' money on such projects when private industry can do the job and do it at an actual profit for the Government. Under the partnership plan the taxpayers would be the beneficiaries by many millions of dollars in costs saved and taxes and fees paid by the utility.

This editorial then asks provocatively whether "Congressmen really think that many of their constituents would vote—if they had the opportunity—to pay higher taxes for the privilege of building with public funds a facility that private enterprise is willing and able to pay for?"

I submit, Mr. Speaker, that the answer to the above question is an unqualified "No." And, as pointed out by the Mojave Desert News—California—this is "a measure that would have the Federal Government an immediate $60 million in construction costs, would channel $175 million into the Central Valley project, and would provide $145 million in Federal, State, and local taxes, over a 50-year period. If the public ownership zealots persist in their opposition now, they must do so with their true socialistic faces bared to the taxpaying public. It is to be hoped—and ardently—that Congress at last will be guided by the taxpayer's welfare and get things moving on the Trinity."

As above related, we have here the chance to cut out at once $60 million in expenditures, and to put into the Treasury, via falling-water payments and Federal taxes, about $258 million. This sum will inure to the benefit of every taxpayer in the Nation. We simply cannot afford to pass up this offer as contained in the pending Trinity River project bills.

The U.S. Economy and International Relations

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. MEADER. Mr. Speaker, for a long time I have believed that both our Federal Government and the American business community have failed to use as effectively as possible our most potent weapon in the cold war to combat the totalitarian political and economic movement, namely, the demonstration of the superiority of our free enterprise economic system and our political system of freedom and individual dignity.

Effective advocacy and actual demonstration of the advantages of our free economic and political system through the investment of private capital in economic undertakings in friendly foreign countries is the means in my judgment whereby we can best promote economic and political stability in friendly foreign countries, enabling them to resist Communist military aggression and subversive infiltration.

I have repeatedly expressed these views and suggested methods whereby this valuable weapon in the cold war could be used more effectively.

Mr. Speaker, I was privileged to attend a luncheon held June 30, 1959, by the International Economic Policy Association, an organization designed to mobilize the potential of the American business community in promoting the free enterprise system through the investment of private capital overseas.

I was very much impressed by the clarity and cogency of the remarks made by the president of the International Economic Policy Association, Dr. N. R. Danielian, and I believe they merit the consideration of not only the Members of Congress and the American business community, but also the American people generally. For that reason, I incorporate Dr. Danielian's speech at this point in the RECORD.

OPENING REMARKS BY DR. N. R. DANIELIAN, PRESIDENT, INTERNATIONAL ECONOMIC POLICY ASSOCIATION, NATIONAL CONFERENCE ON THE U.S. ECONOMY AND INTERNATIONAL RELATIONS, JUNE 30, 1959, WASHINGTON, D.C.

The first national conference on the U.S. Economy and International Relations is hereby declared open. As president of the International Economic Policy Association, it is my pleasure to welcome you to this conference, which I hope will be the first in a series, to explore realistically and practically the problems confronting the United States and its allies in their struggle for survival as free and independent nations in a world of turmoil and conflict.

The International Economic Policy Association was organized 2 years ago by a group of citizens interested in the economic phases of our international policy in the conviction and hope that military deterrence will succeed in preventing total war and total destruction, and that the peaceful means of spiritual, intellectual and economic persuasion will determine the direction of political and economic society.

From the vantage point of probable coexistence, the struggle in the world resolves itself into a choice of institutions to achieve economic progress with political independence and, as a long-range aspiration, individual freedom.

In the stream of history, our form of civilization, based upon the ownership of private property, the protection of individual rights, and the selection of the Government by franchise, is a comparatively recent phenomenon. In contrast, absolutism has existed for centuries in one form or another, whether it is called the divine right of kings or the dictatorship of the proletariat. This system of ours is not only new, but it is also a minority position in the world, minority in terms of the geographical areas it covers as well as the number of people who live under it.

This system is under attack everywhere. The worldwide struggle in fact is a conflict between institutions—those of private property and personal freedom on the one side, and State ownership of the means of production and State control and discipline of people and their destinies, on the other.

All of you here have been conscious of this struggle and in one way or another have been involved, both here and abroad, in some aspect of this worldwide conflict. This conflict has military, economic and political aspects. The interrelationships of the various programs is not always clear as they are most complex. They include the national

budget, domestic tax rates, depreciation policies, price levels, the military aspects of mutual security, the economic aspect of Government aid, the private investment programs, the tax treatment of private investments abroad, the necessary guarantees to achieve confidence, the policies of other countries for the most effective utilization of both Government and private resources, the threat of dumping as a political weapon.

It is the purpose of this conference to explore these interrelationships and to clarify, if possible, not as a common position, but merely as an educational objective, the specific and coordinated action that needs to be taken in order to achieve the overall objective.

Having studied these problems over the past several years, the officers and directors of the association have adopted a number of specific program objectives. I shall merely touch upon a number of these to indicate the direction in which we propose to act.

We favor the mutual security program, with the proviso, however, that greater emphasis be placed upon the use and encouragement of private contracting, private consulting, private manufacturing enterprises, both here and abroad. We recommend the channelization of more of our lending resources through private institutions so that private ownership of property will become more widely spread.

We favor the extension of foreign investment guaranties to cover civil strife, rebellion, and insurrection.

We favor tax incentives to private enterprise to encourage them to undertake greater risks and be prepared to take a larger share in the worldwide quest for economic development.

We favor the use of local currencies under Public Law 480 for educational purposes as well as for encouragement of private ownership and private enterprise abroad through appropriate financial institutions.

We favor the employment of private organizations in the utilization of U.S. agricultural surpluses abroad over and above the existing commercial markets, including the use of private organizations in the expansion of handling, storage, and distribution facilities.

Each one of these programs requires translation into specific action. This is the area in which we hope to make a distinctive contribution.

Partial solution will not meet the present-day challenge. It is not enough, though desirable, to have tax incentives without guaranties against the uncertainties of military and political upheaval. It is not enough to have such guaranties if at any time host-country governments, with our help, may invest public funds in competitive government plants. It is not even enough to encourage private investment in one country and then use tax money to develop competitive government-owned plants in another, to earn foreign exchange by exports, and then destroy the chances of success of private investment in competing markets.

We hope, therefore, that those interested in tax incentives will also concern themselves with guaranties, with mutual security programs and their administration, with the agricultural disposal program and the use made of the local funds received therefrom, with the educational programs which are necessary to develop a new generation of entrepreneurs abroad, who in the long run, as leaders in their countries, will write the rules of business conduct.

It is easy to fail to see the forest for the trees. It is our hope that we shall keep the forest in view while we tend to the trees; and that you will join us in this effort—for the stakes are high—perhaps the very survival of our form of society.

SPEECH OF DR. N. R. DANIELIAN AT THE LUNCHEON IN HONOR OF THE CHIEFS OF DIPLOMATIC MISSIONS

It is perhaps unnecessary for me to emphasize to this knowledgeable and sophisticated audience that the economic problems of the Western World are interdependent and they are, in large part, also affected by the fiscal, the monetary, and economic policies and programs of the United States and other allied nations. In solving the current problems, it is the difficult obligation of informed opinion and the duty of governmental leaders to confront these problems realistically. As your program indicates, we have attempted to touch upon the main segments of these problems; namely, the fiscal position and the limitations of the U.S. budget, the aims and objectives of developmental programs, the methods of utilizing governmental resources to advance these projects, and ways and means of utilizing the large reservoir of private capital and know-how in the pursuit of economic progress.

Perhaps just as important as the availability of resources is the definition of end objectives in the programs now under discussion. It is true, that all nations, regardless of form of government, desire, and each in its own way, strives for economic progress. To achieve this progress, there must be encouragement to capital formation, which is the process of saving a part of the gross national product of each country for reinvestment in productive equipment.

Assuming a condition of coexistence in the world and assuming also that all nations desire to encourage this process of capital formation and economic progress, then the principal issue in the world becomes the means whereby this is achieved. Here the world confronts a choice.

On the one hand, there are the proposals that this can best be achieved through State enterprise with complete discipline and subjugation of people to the programs of the State, which becomes the sole employer from farm to factory. On the other hand, there are those who believe, deeply and sincerely, that the process of economic progress and capital formation can best be attained under conditions of private ownership of property and by unleashing the creative initiative of people in the pursuit of their own happiness through their own labors.

This is a society of private ownership, which carries with it a series of free choices—freedom of choice in one's education; freedom of choice in one's employment; freedom of choice in where he lives or travels; freedom of choice in how he spends his earnings, in what he buys in the marketplace; freedom of choice in what he believes and worships; freedom of speech and assembly; and as a consequence of this freedom, the right to choose his Government by franchise.

There are these two choices before the world, and many countries are in the process of selecting one or the other or a compromise between the two.

We would not be true to our traditions and our beliefs if we did not attempt to demonstrate and actively pursue policies and programs which we believe not only promise economic progress, but, in the long run, more closely respond to the intellectual and spiritual needs of the human race, for in addition to economic progress and security, the system we believe in will also contribute to the intellectual and spiritual freedom to which every man aspires after his physical needs are met.

Power Facilities on California's Trinity River

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. UTT. Mr. Speaker, the House Interior Subcommittee on Irrigation and Reclamation has scheduled hearings for next week on the joint development proposal to build privately the power facilities on California's Trinity River. I recently noticed a well-written editorial in the San Bernardino (Calif.) Daily Sun on this subject. Among the views expressed indicating constructive thought from the taxpayers' standpoint were, "None of that power—or any other public power—is apt to be brought to San Bernardino County. Therefore the taxpayers of this county are among the many millions in the United States who are tired of putting up the money to subsidize users of electric power in a few favorite localities."

The article notes that, "The Pacific Gas & Electric Co. has offered the Federal Government $4½ million a year for the falling water rights on the Trinity project. It would build the $60 million power facilities; it would pay the ordinary and normal Federal, State, and local taxes that a Government-owned project would not pay. This kind of money and savings are needed to help finance the California water plan that is to start with the Feather River project."

The editor concludes with the statement:

Representatives of sections which have no public power and probably never will, vote for huge Government subsidies that provide cheaper power in competitive regions. This is still a country of free enterprise. If regions want more power, let them encourage investors to develop it, just like all the rest of the country has done. If they want to vote their own bonds to go into the power business, let them proceed to do so. But it is high time the taxpayers who are to get no benefit from the development of such power tell their representatives in Congress to halt subsidies financed by all the people.

In opposing the construction of the Trinity powerplants by the Federal Government, the Los Angeles Times editorialized:

Considering that the Trinity River project would cost the Federal Government an estimated $225 million, without the P. G. & E. building the power installations, it would seem the Federal taxpayers—and the people of California are heavy Federal taxpayers—should be spared the additional cost.

After mentioning that:

The proposed contract will require the assent of Congress and no doubt will be fought by the fanatics of so-called public power development.

The Times sums up with:

The figures submitted by the Secretary, and the use of plain commonsense, would seem to indicate that private development is best for the interests of everybody.

In commenting on the pending Trinity joint development legislation, the Santa Rosa (Calif.) Press Democrat has reiterated that, "Particularly at a time when Uncle Sam is spending more than he takes in and urgently needs funds for everything from national defense to water development in California, the proposal makes sense." The editor points out that, "The proposed legislation provides a method to start installing generators now. And it also provides that Uncle Sam can take over the works anytime it gives 2-year notice that it wants to do so. This fair compromise probably will not satisfy the professional political semi-socialists nor the powerful Sacramento industrial area which will get power below what it costs the taxpayers if Trinity power is developed as a Federal enterprise. We doubt if it satisfies P.G. & E. either, since the compromise involves making a $60 million investment that the Government can end at any time. But the utility company has enough faith in the common sense of the arrangement to accept it. Here's hoping as much sense is shown by a majority of the Congress."

I believe, Mr. Speaker, that the above quotations from Northern and Southern California newspapers indicate and represent the views of the great majority of the citizenry of the State. I am confident that the majority of the Nation's taxpayers would welcome and endorse the bills providing for Trinity joint development, as have irrigation districts, farmer groups, labor and business, for instead of subsidizing someone else, they would very much prefer to see $320 million enter the Treasury, not depart.

Falling In Step

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues an editorial which appeared in the New York Times on July 7, 1959:

FALLING IN STEP

The change in sentiment on the part of the Democratic leadership in this, the 1st session of the 86th Congress, rates high among the more striking political phenomena in Washington in recent years.

An important key section of the new Democratic Congress with its overwhelming majority in the legislative branch of the Government came to Washington in January determined to identify the Democratic Party as a party of free spending. In December the President had reached the conclusion that the time had come when it had become imperative to reverse the trend of spending, which, in terms of total outpayments to the public, had reached the staggering total in fiscal 1959 of $94 billion.

For a brief moment the opposition was inclined to dismiss the President's proposal as merely an attempt to find a spectacular and desperate issue. By the time Mr. Eisenhower had completed his blueprint for a balanced budget for 1960 and embodied it in the budget message public sentiment had begun to fall in behind him. Developments tending to give increasing momentum to this included: the early figures on the 1959 budget as it began to take shape, indicating a deficit exceeding that of 1953, when the post-Korean rearmament program reached its crest; the continued rise in the speculative markets and the long drain on American gold stocks which had proceeded without interruption since February 1948. Perhaps the most serious single blow to the philosophy of spending was the fiasco that marked the majority report of the Joint Congressional Committee on the Economic Report, made public in March of this year. Not only was this majority heavily one-sided but it had unusual prestige attached to it by virtue of the fact that the chairman was Senator PAUL DOUGLAS, of Illinois, highly regarded as an authority on economics on both sides of the Chamber.

Rightly or wrongly, the impression became widespread that this important congressional committee had permitted political considerations to enter into what should have been a purely economic study. At the very time the committee's report was being released official public statistics were demonstrating that economic recovery had reached a degree of momentum at which it was not only highly undesirable to continue pump-priming but that such a policy could have fatal effects in invigorating inflation.

Back to Reality

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Back to Reality," which appeared in the Rockford (Ill.) Morning Star of July 10, 1959:

BACK TO REALITY

Somebody asked President Eisenhower at his press conference if he was not fearful that his use of the veto power would result in a negative public image of the Presidency. The President answered rapier-quick:

"I'm not thinking so much of public images as I am of the public good."

In his assertion, there was reproof for that hackneyed image figure of speech. The President is tired of the image business—seeing through a glass darkly—and bids the country get down to reality.

And the biggest reality is the public good.

Emphatically, the President spoke for the public good when he vetoed the housing bill. It is a catchall piece of legislation, loaded to the guards with inflationary items, calling on the taxpayers to ante up $1,375 million or go into the red by that much.

Mr. Eisenhower lashed it unmercifully in his veto message; it is "extravagant, unnecessary, excessive, inflationary, discriminatory, and unfair." Its supporters have no good answer to any single one of those accusing adjectives.

Particularly, the President struck at the urban renewal—that's a fancy name for slum clearance—provisions of the bill. The sum called for is $900 million for a biennium. This is essentially a big city sugar plum; yet the whole economy picks up the check.

He also hit at the provision for 190,000 new public housing units. In the face of the fact that this bracket of Federal activity should be liquidated, and that the public housers already have authorization for 100,000 units still unconstructed, the bill asked for additional hundreds of millions to carry out public housing which nobody seriously wants.

The President sharply attacked another phase of the housing bill—direct Federal loans for housing for the aged. He said he felt private capital and possibly Federal insurance loans should pioneer in this field. A number of church organizations and fraternal societies are exploring the possibility of such housing, but are running into opposition from the elderly themselves. They don't want to be consigned to colony housing.

The veto message said flatly that terms of this inflationary bill would be an obstacle to constructive progress toward better housing for Americans. Instead of stimulating private investments, it would drive private credit from areas where it is urgently needed.

The question now is whether Congress will accept or override a strong and righteous veto; whether it thinks it ought to cram this unwanted legislation down the taxpayers' throats to maintain its legislative prestige, or whether it, too, will discard the image business and look to the public good.

The Role of Industry in International Economic Development

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. MEADER. Mr. Speaker, I desire to call the attention of my colleagues to the International Economic Policy Association, recently organized, designed to mobilize American industry to play an important role in the combat between free nations and the totalitarian Communist bloc through the investment of private capital in friendly, foreign countries.

I was privileged to attend a luncheon held in June 30, 1959, during the National Conference on the U.S. Economy and International Relations held under the auspicies of the International Economic Policy Association. I was impressed with the principal address delivered at that luncheon by Mr. John J. Powers, Jr., president and chairman of the board of Pfizer International, entitled "The Role of Industry in International Economic Development." I want to call the attention of the House to a passage of Mr. Powers' address quoting from the Mutual Security Act, Public Law 85–141, signed August 14, 1957, concerning the declaration of purposes of the Development Loan Fund as follows:

The Congress accordingly reaffirms that it is the policy of the United States, and declares it to be the purpose of this title, to strengthen friendly foreign countries by encouraging the development of their economies through a competitive free enterprise system; to minimize or eliminate barriers to

the flow of private investment capital and international trade; to facilitate the creation of a climate favorable to the investment of private capital; and to assist, on a basis of self-help and mutual cooperation, the efforts of free peoples to develop their economic resources and to increase their productive capabilities.

Mr. Speaker, the quotation was of special interest to me because it is the text of an amendment I offered to the mutual security bill on July 19, 1957, which was unanimously adopted by the House of Representatives after receiving the approval of both the majority and minority managers of the bill. The proceedings are to be found on pages 12210–12211 of the CONGRESSIONAL RECORD of July 19, 1957.

Mr. Powers' remarks deserve the consideration of my colleagues in the House as well as the American business community, and I therefore incorporate his address at this point of my remarks.

THE ROLE OF INDUSTRY IN INTERNATIONAL ECONOMIC DEVELOPMENT

(By John J. Powers, Jr., president and chairman of the board, Pfizer International)

Much has been said of the need for greater utilization of private industry in cooperation with Government aid programs to further international economic development. Yet, too often, it seems to me we are moving in the opposite direction. One of the reasons may well be that we have not paused long enough to consider and make clear, even to ourselves, certain fundamental principles. Today, I should like to present one viewpoint about those principles.

First of all, I should make clear that when I speak of Government economic aid I do not include military aid, which is a subject of its own.

For perspective, I think it should be noted that the total of postwar economic aid of this type has not even begun to match the total of investment by private industrialists and private bankers since the end of World War II. In other words, the private sector is still by far the largest source of capital. Nevertheless, few would dispute that postwar economic aid has been an important factor in the reconstruction and vast expansion of the prewar industrial world. And I think it fitting to note that the American taxpayer performed one of the great enlightened jobs of history in helping put his European and Japanese competitors back into the marketplace.

Postwar industrial reconstruction is now behind us, but there is a great new industrial revolution stirring across the world in the so-called newly developing countries, and this has created a new focus of attention with respect to direct, nonmilitary Government aid—the need for it and the meaning of it. This revolution is particularly significant because many of the countries in which it is taking place are the so-called neutralist or undetermined countries in the great ideological conflict between the Communist bloc and the free world. Indeed, it is this which adds that touch of tension that so often tends to distort sober judgment and makes it particularly necessary to stop and examine our basic reasons for providing economic aid to these countries.

Let us recall that America was the first underdelevoped country of modern times to receive foreign aid on a massive scale, in all forms, and over a long period of time. French loans to the struggling colonies, British investments in our mines and railroads, Swedish, Dutch, and Spanish contributions of men and money—the governments and private investors of many lands helped build this country, and did so, incidentally, without destroying our newly won independence.

However, it is not primarily historical precedent but the compelling circumstances of the present which make international economic aid programs a vital necessity. Of these circumstances, the one that throws the longest shadow is the tremendous difference in standards of living throughout the world, the extremes of poverty and misery in many lands of Asia, the Middle East, Africa and in parts of our own hemisphere. It is true that this gap in human living conditions and opportunities has long existed, but in our century, as increasing numbers of men become free, they have—in the clear, clean atmosphere of liberty—seen better than ever before, and finally fully comprehended, their unequal position in relation to the peoples of other countries. It is this realization of inequality which makes of it an unbearable burden, and we of the West, who first made equality the primary standard of democracy, can scarcely fail to understand and sympathize with the deep compulsion now moving these peoples.

Therefore, I firmly believe that America—and all other countries in a position to do so—should join hands in a long-term international economic aid program having as its objective the ultimate closing of the gap in world standards of living, recognizing, however, that it must take generations to complete the task. We should do this not simply from a sense of charity, commendable as is that great virtue, but as a matter of self-interest—for along this path lies the one sure way to peace and order in the world. We must impose only one condition—that in accomplishing this objective we do not lose the very concepts of freedom which now impel us toward it.

The closing of the human gap is, I suggest, the proper basic motive for any broad economic aid program of the future. Aid should not be based on a contest between ourselves and the Communist bloc—some kind of electioneering campaign to see who can pass out the most favors to win the most votes in the newly developing countries. I believe that the motive for action is of fundamental importance—and if this kind of ward-politics viewpoint should ever become the real motive of any country or group of countries—every instinct within me tells me that they are doomed to failure. The great goals of the nations receiving our help assure that their leaders will have too high a sense of values to be swayed by a handout, and indeed that they will resent any but a business like approach, based on mutual interest and respect.

This sense of mutual interest and respect must be the atmosphere in which we all view international development objectives. But I want to emphasize the need for a completely practical approach to this vision of the future, and I mean practical on the part of all concerned. Those countries in which the need for economic aid is greatest did not participate in the first industrial revolution. Most of them have been colonies of greater powers. They have been principally suppliers of raw materials, quite often depending on only one or two commodities. Their histories are in the main a long struggle of attempting to maintain a reasonable foreign exchange balance in the face of their need to import so many of the things they must have. They see greater self-sufficiency as the sure road to security and the maintenance of their independence, and for this reason there has sprung up in these countries a tremendous desire for rapid industrialization. The factory for them has become a symbol of prosperity and security. Industrialization has taken on a sense of tremendous urgency, indeed the dimensions of a national emergency, and the emergency has seemed to justify taking any path toward the accomplishment of the objective.

Under these circumstances of haste and emergency, theses nations are all too frequently building and operating state-owned factories, engaging in state trading, and actually discouraging the private investor, in some strange belief that government can do the job of industrialization better and quicker than private industry. True, they have every right to determine their own course of action, but in the light of the colossal achievements of private industry in the free world, we cannot even begin to comprehend such a direction on their part. Perhaps this is one reason why there is increasing discontent with foreign aid on the part of the American taxpayer.

Here are the realities of the situation as I see it. The resources of these countries are extremely limited. No matter how much aid they receive, it could not possibly be sufficient to do more than start them on the road toward their ultimate goals. From a practical point of view, there is so much to be done that priorities must be established and objectives accomplished gradually, over a considerable period of time. Government resources are insufficient to finance all necessary public works projects, much less to construct factories which can be built and operated by private enterprise. The countries which try to do both spread their resources desperately thin and add to already overwhelming financial burdens. Would it not be infinitely more practical for them to encourage private investment—from within the country or without as may be desirable or necessary. Seek out the people who have already demonstrated their ability to build the great industries of the world and bring them to your countries. Recognize the problems of investing in a newly developing country and through your laws and regulations give those investors the opportunity, indeed, the desire, to build as they have done elsewhere.

What is it that often hinders the use of this obvious approach—the fear of economic imperialism? How can this be taken seriously today? What does it mean? How would a government lose control of a country in this day and age by permitting a series of foreign investments made completely at the discretion of, and under regulations established by, that very government? Furthermore, once the factory is built, even though accomplished with foreign money, know-how, and equipment, it becomes a part of its new country—the money has been spent, the know-how transmitted to local employees, the machinery secured permanently in place.

The seemingly shortsighted view of some of these countries is, however, not what really astounds me but rather that the policies of the American Government have all too often failed to encourage these nations in the direction of private enterprise. Indeed, the open-end, nonspecific government-to-government grants of past and current American aid programs, it seems to me, are a direct encouragement toward the building of industry in the public sector and often, I am sure unknowingly, abet programs sponsored by the Communist bloc.

Do we not reach the height of absurdity in the Western democracies if we continue to pour out economic aid for the purpose of socializing the productive units of a country? These countries are forming their patterns of government right now and, for the American or other Western taxpayers, who believes deeply in the idea of free enterprise, to push them along the path of state control of industry by providing funds for the purpose is indeed incredible. This is particularly so because the basic conflict in ideology which is represented by selecting state ownership and control of industry rather than free enterprise is the very issue in the conflict between the free and the totalitarian worlds, in which our lives are completely absorbed.

Fortunately I am not alone in this point of view. Indeed, I should like to quote from

Public Law 85-141 of August 14, 1957, amending the Mutual Security Act of 1954 relative to the Development Loan Fund. It says in its declaration of purpose: "• • • the Congress accordingly reaffirms that it is the policy of the United States, and declares it to be the purpose of this title, to strengthen friendly foreign countries by encouraging the development of their economies through a competitive free enterprise system; to minimize or eliminate barriers to the flow of private investment capital and international trade; to facilitate the creation of a climate favorable to the investment of private capital; and to assist, on a basis of self-help and mutual cooperation, the efforts of free peoples to develop their economic resources and to increase their productive capabilities."

If this is the intent of Congress, I submit that Government economic aid should be sharply directed into well-defined basic areas such as public works, power, and communications—namely, projects so vast in scope and so public in nature as to be inappropriate, in the newly developing countries, for the private businessman. I believe equally that the production of capital and consumer goods and services should be an obligation and responsibility of private enterprise. I believe that a country should look first to its own private business community, then call upon capital and technology from abroad to make up such deficiencies as exist at home. And if profits or royalties are sent abroad, this is a small price to pay for the contribution which the foreign entrepreneur leaves behind.

Let me make clear, then, where I stand on my own Government's aid program. I am for Government economic aid when it helps a country build harbors to bring in goods or ship them abroad, highways to move them by, dams to provide electric power and irrigation. I am against economic aid when it is used in whole or in part to build a government-owned textile mill, a chemical plant, a cement factory. I am for economic aid necessary to build schools in which to educate the young and in which to train the scientists and technicians who will help the country's growth and development, just as I am for economic aid to build clinics and hospitals in which to care for the maimed and the sick. I am against economic aid when it is employed to finance state institutions which buy and sell and trade in competition with the private trader. I am for economic aid which helps a businessman, whatever his nationality, build a factory and in so doing contribute to the economic growth of a country and to its political stability. I am against economic aid which would tend to make men creatures of the state.

The agencies for providing economic aid, either to a government or to private parties, exist in the United States and other countries today and these agencies should continue to be employed for the time being. But I earnestly recommend that the U.S. Development Loan Fund be used primarily for loans to private industry, which is the primary purpose for which it was created. However, in order to lay at rest the fear of industrial economic imperialism, and to make economic aid the truly joint effort it now should be, I believe that the Development Loan Fund type of assistance to private industry should eventually be channeled through international organizations. I mention as possible examples the International Development Association and the Inter-American Development Bank recently proposed by the U.S. Government.

The aspirations of the newly developing nations of the earth are, I believe, relatively simple—political independence and economic progress. It is my profound conviction that the road toward those objectives is the road of private enterprise, human equality, and individual freedom. These concepts were expressed—in words more eloquent than any I can muster—183 years ago: "• • • We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed."

I submit that this could be not just the American Declaration of Independence, but a philosophy for the political and economic self-fulfillment of all men, in all lands.

More Monkey Business

EXTENSION OF REMARKS
OF

HON. JOHN E. MOSS
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. MOSS. Mr. Speaker, the absurdities of the Pentagon's information policies were discussed at great length in the House of Representatives last April when I reported the on-again-off-again secrecy about the use of monkeys in research. The disclosure that a military secrecy stamp had been slapped on monkey research information—only to be lifted when the Pentagon wanted to issue a back-patting press release—drew a violent attack from the Pentagon's recently-resigned General Counsel, Mr. Robert A. Dechert.

The Pentagon's top legal adviser, who is a Philadelphia lawyer in every sense of the phrase, even went so far as to charge that disclosure of the fact that the United States uses monkeys in research would give aid and comfort to the Communists. Obviously, he thought that such disclosure would aid a potential enemy unless the information was released by the Pentagon's publicity experts.

Last May we were treated to another sample of monkey business at the Pentagon. On May 17, 1959, a reporter for the Louisville Courier-Journal asked scientists at the Fort Knox Army Medical Research Laboratory for information about the laboratory's use of monkeys in space research. He expected no trouble, for 2 months earlier he had written a long story about the research monkeys. But under the Pentagon's policy of selective secrecy, he was told that information about the monkeys suddenly had become a military secret.

The reason for the selective secrecy became apparent 2 weeks later when two monkeys were shot into space to the accompaniment of press releases, a special press conference and all the other paraphernalia of the press-agent's trade. Monkeys, it seems, are a military secret unless they can be used for the Pentagon's self-serving publicity purposes.

The House Government Information Subcommittee asked the Defense Department to explain its latest on-again-off-again secrecy gambit. In a vituperative reply, the Department's recently resigned General Counsel again denied that the Pentagon was monkeying around with research information. He pointed out that a classified memorandum from the Pentagon's No. 1 publicity man, Murray Snyder, advised only "careful handling" of monkey research information. But the legal expert admitted that the memorandum carried the military security stamp "Confidential" in big, red letters. This is most certainly careful handling, for the President's own Executive order directs that "Confidential" shall be stamped only on defense information which, if disclosed, "could be prejudicial to the defense interests of the Nation."

It now appears that the "Confidential" stamp was being used not to protect the "defense interests of the Nation" but to guard the interests of top administration policymakers who dare not let the American people know how they arrive at policy decisions. Mr. Snyder's classified memorandum transmitted State Department documents also classified "Confidential," and those State Department documents apparently warned of an adverse reaction against the United States in India where there is a cult of monkey worshippers. Such a reaction, the State Department documents apparently said, could be exploited against the United States by the Communists.

The absurdity of this policy is laid bare by the report of an American newspaperman recently returned from the Uzbek Socialist Soviet Republic. Using none of the facilities of the administration's farflung and expensive intelligence network, Mr. Robert Hotz discovered that monkeys are being transported from India to Russia, 8 tons to a planeload. He also discovered that the monkeys were used for research in Russia just as in the United States.

Thus there is no propaganda advantage to be gained by a Russian charge that the United States is using monkeys for research, for Russia is doing exactly the same thing. It is inconceivable that our cloak-and-dagger experts in the State and Defense Departments are unaware of the planeloads of research monkeys shipped to Russia.

The answer is obvious. Military security stamps are used in this case—and in many other instances—to cover up information until the administration press agents can squeeze out of it every possible drop of publicity for their own particular cause.

I commend to every Member of the House Mr. Robert Hotz' well-written exposé of the silly secrecy in the Pentagon, printed in the July 13, 1959 issue of Aviation Week:

MORE MONKEY BUSINESS

For the past few months there has been considerable furor between the Pentagon and the Congress on just how secret the use of Indian rhesus monkeys in space and medical research should be and just how prejudicial to the Nation's welfare disclosure of this information might be. If this all sounds ridiculous, it is because it really is.

But this monkey business is worth exploring in some detail because it is symptomatic of how peacetime censorship and Government thought control are being practiced by some Pentagon officials. It also affords a rare look into the alleged reasoning process

behind many of their more ludicrous decisions.

The current monkey business started with a complaint to Congress by the Dayton Daily News that the Pentagon was withholding information on the use of monkeys in space experimentation on the ground of military security. Representative JOHN MOSS, Democrat of California, whose House Government Information Subcommittee has done such a valiant job of exposing the official withholders of public information, investigated the Dayton paper's complaint. This simple inquiry produced an indignant explosion from the Defense Department's general counsel, Robert Dechert, whose letter of reply accused the Moss committee of everything from aiding the Communist cause to stealing Pentagon secrets.

Among other things, Mr. Dechert wrote the following gem about the monkey business:

"It is our belief that your committee's action in this matter not only has served to discourage respect for the security system but also the only real beneficiaries can be the Communist propagandists who want to stir up trouble between us and other nations."

Mr. Dechert also said the basic correspondence on this Defense Department policy must remain "confidential" and even the name of "another government agency involved" (State Department) was classified. Mr. Dechert was also joined in these loud wails of "security breach" and "offering aid and comfort to the enemy" by Murray Snyder, assistant secretary of defense for public affairs, who stoutly defended this viewpoint before the Aviation Writers Association convention in Washington last May.

Now what lies behind all of this Defense-State Department hush-hush that the American people can't be told for fear of undermining our defense posture and foreign policy? It is simply that these rhesus monkeys are imported by the planeload from India for use in important space and medical research and that in India, a land of many religions, there are some groups that would be offended by this use of an animal they hold in high regard. The State-Defense Department theory was that any disclosure of this fact would arouse Indians against the United States and endanger our relations with India.

The theory also was apparently held (we will never know because the documents on this subject are still confidential) that the Communists would use this fact as propaganda to create a rift between the United States and India. This hysteria reached such a peak that when the time came to fire two monkeys into space in an Army Jupiter missile a frantic search was made for true-blue native U.S.-born monkeys for the task to avoid any offense to Indian monkey worshippers. A Kansas-born rhesus was finally used.

All of this Defense-State Department hypothesis implies that this country must be doing something the Soviet Union is not. Otherwise how could the Russians turn this policy to our disadvantage? Is this hypothesis true?

For the answer I suggest that Mr. Dechert, since he is leaving the Defense Department and now should have ample time, Mr. Snyder and the State Department officials who collaborated with him on this policy take up a vigil on the airport steps at Tashkent, the capital of the Uzbek Soviet Socialist Republic and the gateway of international air traffic between the Soviet Union and India. If they watch long enough they will see twin-jet TU-104 transports roar up to the servicing ramp and disgorge only a few Russians in long white coats. But these white-coated Russians will not be the only passengers in the jet fuselage that normally seats 70 human passengers. Inside are 8 tons of rhesus monkeys being flown from India to Moscow for use in all types of medical research including the space program.

Surely this must be a tightly held military secret protected by a Soviet security screen, but we decided to try to check the facts with Aeroflot, which has a monopoly on the monkey hauls between Delhi and Moscow.

"Certainly we carry monkeys out of India," the Aeroflot officials told us. "It is very profitable business. We charge the Soviet Government 11,000 rubles a flying hour to charter a TU-104 with an 8-ton money load from Delhi-Moscow.

"There is a doctor and four attendants with each load of monkeys."

We checked the story with medical men in Moscow. "Certainly we use Indian monkeys in research," they reported. Some of the institutes in the Moscow area use 15 to 20 monkeys a day in their activities. One British correspondent, with whom we talked, had recently been chased to Tashkent by his London office to investigate a report that an Abominable Snowman had strayed from the Pamir peaks and was terrorizing Uzbekistan. Investigating on the spot, the British reporter found the animal actually involved had shrunk to a rhesus monkey that had escaped the vigilance of his keepers while a Tu-104 was parked at Tashkent airport. He viewed the remains of the rhesus that had been treed and shot by an Uzbek tribesman.

This research on the rhesus in the U.S.S.R. raises some interesting questions about the still highly classified Defense-State Department monkey business that we hope Mr. Moss will refer to the Pentagon.

If the Soviet Union is importing monkeys from India for the same research purposes as the United States, how can this fact possibly be used by Communist propagandists, as Mr. Dechert so clearly suggests?

Do the Pentagon and the State Department know the Soviets are engaged in importing rhesus monkeys from India by the 8-ton Tu-104 load? If so, is this information "classified" and does it require withholding from the American people?

If State-Defense don't know, how can they formulate "defense" policy without even the elementary facts of the situation involved at their command?

If they do know, why are they using this situation as an excuse to withhold information from the American public on the grounds that this is information "the publication of which could be prejudicial to the defense interests of the Nation"?

Clearly, the suggestion of Mr. Moss that Mr. Dechert "do a little more homework and jump to fewer conclusions" is in order. And perhaps this whole ludicrous business of official monkey business can be useful in exposing the activities of a group of poorly informed bureaucrats who are trying to do the American people's thinking for them.

A Law Above Politics

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I wish to call to the attention of my colleagues an editorial which appeared in the Evening Star of Washington, D.C., on July 11, 1959:

A LAW ABOVE POLITICS

When the Treasury Department announced this week that it would pay a near-record 4.728 percent interest rate on a $2 billion issue of 1 year, or short-term, bills it was not setting the highest rate in 38 years for the benefit of the Nation's bankers. Instead, it was borrowing money at the lowest price it could find—by competitive bidding in a free market that is governed by the nonpolitical law of supply and demand. There is no rule in this market which says that the owners of money—hundreds of thousands of investors and lenders represented through the banking system—must lend their money to the Treasury Department at any Government-fixed return, high or low. Only in a totalitarian state, where there is no free economy, can there be such a rule.

And even though investment in U.S. Government securities is the safest in the world, its attractiveness still is affected by the rate of return, compared with that available through other investment of money. Along with its tax income, the Government needs a continuing large supply of borrowed money—obtainable only in competition with other borrowers such as State and local governments, private business, mortgage programs, and the like. In this competition, the Government already has found a dangerously declining investor interest in its bonds—obligations running more than 5 years with a 4.25-percent rate ceiling and the smaller denomination savings bonds with a 3.26 maximum rate. As a consequence, the Treasury has been forced more and more into the short-term markets where there is no statutory rate ceiling. Excessive reliance on the short-term market is inflationary and hazardous in the massive refinancing operations needed to manage a $285 billion public debt.

The House Ways and Means Committee has voted now, in partial compliance with an administration recommendation, to give the President authority for a 2-year period to set aside the outdated long-term rate ceilings when found necessary in the national interest. This is an issue which has been made into a political football by administration critics. Nevertheless, it clearly is in the national interest for the Treasury to have greater flexibility in its debt management, and greater access to long-term money would help provide it. Congress should promptly approve the recommendations of the House committee.

Contracting Out—A Device for Reducing Federal Employment and Lowering Employment Standards Without Reducing Federal Costs

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mrs. SULLIVAN. Mr. Speaker, on February 3 of this year I submitted at page A770 of the CONGRESSIONAL RECORD a mass of material on an incident at the Army Support Center in St. Louis involving the dismissal of a group of custodial employees on the pretext that their work could be done more economically under contract to a private firm. I was primarily concerned, of course, over the individuals affected by the dismissals, but my purpose in bringing it before the Congress was to point up a spreading policy throughout the Gov-

ernment of displacing career Federal employees in all kinds of employment by contracting out their work to private firms. The worst aspect of the practice, in addition to the unfairness to career employees, is that in many if not most instances the Government does not in fact save any money under these contracts.

Today, I retold the story of the incident at the Army Support Center in testimony before the Manpower Utilization Subcommittee of the House Committee on Post Office and Civil Service, and in the course of my testimony brought up to date the case of the custodial contract at St. Louis, including the information from the General Accounting Office that the savings originally claimed by the Army were ridiculously overstated.

Mr. Speaker, I am very grateful to our colleague, Judge DAVIS, chairman of the Manpower Utilization Subcommittee, for the help he provided me earlier this year in my fight for the reinstatement of the group of custodians let go at the Army Support Center, and for his sympathetic understanding of the dangers to an effective civil service system inherent in the spreading contracting-out practice.

And I again thank Judge DAVIS, Mr. Speaker, for the opportunity he provided me this morning to appear as the opening witness of the subcommittee's hearings into the manpower policies of the General Services Administration, including the policy in connection with contracting out work normally done by civil service employees.

Because of the number of Members of Congress who have expressed interest in the problem which I discussed in my testimony this morning, I am now submitting for inclusion in the CONGRESSIONAL RECORD, by unanimous consent, the statement which I delivered before the Davis subcommittee, as follows:

CONTRACTING-OUT—A DEVICE FOR REDUCING FEDERAL EMPLOYMENT AND LOWERING EMPLOYMENT STANDARDS WITHOUT REDUCING FEDERAL COSTS

(Testimony By Congresswoman LEONOR K. SULLIVAN, St. Louis, before Manpower Utilization Subcommittee, House Committee on Post Office and Civil Service, July 15, 1959)

Chairman DAVIS and members of the subcommittee, I appreciate very much the opportunity to appear at the opening of your hearings on manpower utilization and the contracting-out device, and to tell you of a situation which occurred in St. Louis which I think sums up in rather shocking fashion the reasons why the present administration's employment policies need a critical review—and cry for correction. I congratulate you, Judge Davis, and the subcommittee for becoming interested in this problem, and I am hopeful that out of your hearings, we will get the kind of legislation—or action—we need to prevent similar occurrences in the future.

Incidentally, I want to say that when this matter first came to my attention around the start of this session of Congress, I went to Judge Davis and found him, and the staff, extremely helpful and deeply sympathetic.

I am going to ask that the material I placed in the CONGRESSIONAL RECORD on February 3 along with some later letters and other correspondence which I shall supply subseqently, be made part of my testimony today, if that is satisfactory.

ARMY CLAIMS SUBSTANTIAL SAVINGS

Now, Mr. Chairman, here is the kind of situation I hope you will pursue and in the future prevent:

Last December 17 laborers in an Army installation in St. Louis were notified they were being separated because their work was to be farmed out on a contract basis. All of the evidence clearly indicated to me that the contract would cost the Government far more than the wages of these 17 men. I asked the General Accounting Office to investigate that aspect of it, and I asked the Army for details.

I was assured by the Army that everything had been done in a perfectly proper manner, that the Government would save a great deal of money—a great deal—that the Budget Bureau directives called for this kind of policy, and that the 17 men would be helped to find other work. That was the Army's story in a nutshell, and what was not actually false about it was at least inaccurate.

Let me take these points in order:

USE OF INAPPLICABLE YARDSTICK

First, would the Government save money by contracting out the custodial work done by these 17 employees at St. Louis? In a letter to Chairman GEORGE MAHON of the Defense Appropriations Subcommittee on February 4—the day after I aired this matter in the CONGRESSIONAL RECORD—the Director of Army Budget sent word for word a letter which another general had previously sent to me defending the contract in this case and asserting there would be a substantial reduction in direct costs. But in the letter which went to Congressman MAHON, there was an additional paragraph—not included in the version which I had received—giving actual figures. It claimed a saving to the Federal Government of $77,000, based on an estimated cost of 36½ cents a square foot, if the Government did the work, and 24.7 cents if the private contractor did it. These figures were, to me, incredible—unbelievable—and with good reason. The General Accounting Office has now provided that good reason. It said the figures were not only inaccurate but were, in part, based on admittedly inappropriate comparisons. In other words, the Army was basing the square-foot estimates for Government conduct of the work on an inapplicable yardstick—and knew it. It was translating into terms of 31 Federal custodial employees a cleaning job which the General Accounting Office said would actually be performed by only 21 employees. Now this is just plain statistical falsification. I don't know who did it, who lied, but the poor general who signed the letter to Congressman MAHON was handed false information. That is shocking instance No. 1 about this whole thing.

SAVINGS OF $94,000 SHRINK TO $28,000 AND LESS

After the General Accounting Office got the details on which the estimated savings were based, and after it went over them critically, it found that the maximum saving possible by farming out the work of these 17 custodial employees was not $94,000 as originally claimed by the Army or even $77,000 as later claimed, but less than $28,000. This was true, the GAO said, even though the contractor was cleaning for $53,613 the same area presumably, as the Army would have to pay $92,164 to clean with its own employees.

For, as it turned out, the contractor doing the work for $53,613 is not expected to do the annual housecleaning tasks normally performed by the regular employees—cleaning walls, partitions, fixtures, etc. The contract does not include those. It includes only regular cursory cleaning—a flick of a dust rag, emptying waste baskets, cleaning the floors, etc. If the annual housecleaning tasks were added to the contract, it would cost another $14,322—I will supply all of these figures for the record, Mr. Chairman, but in any event the alleged or apparent savings of more than $40,000 as between Government direct costs in doing the work and the contract cost had now shrunk down to less than $28,000.

ARMY FORGETS TO PROVIDE FOR SECURITY

But in looking into it further, the General Accounting Office discovered that the Army, in letting out a contract to clean a defense installation, had made absolutely no provision for assuring the security of the areas cleaned by catch-as-catch-can, hourly work part-time employees of an outside contractor. The civil service employees who were displaced were, of course, subject to security clearance. The contractor hired part-time workers for $1 or $1.12 or $1.25 an hour—people who had other daytime jobs and put in an extra 4 hours at night for additional income.

So the payoff is this: The Army would conceivably save a maximum of $27,000 or $28,000 through this contract, except that the cost of security measures was not taken into consideration. Furthermore, no consideration was given to reclassifying the Army employees into janitors; instead of laborers. These things might almost offset any savings obtained through this contract according to the GAO. Perhaps the Army may actually save a very few dollars in the end. But the lives of 17 career employees, many of them veterans, some of them 10-point disabled veterans, were completely disrupted—and for what?

Now, in addition to the fact that the savings claimed by the Army originally have evaporated into thin air on critical analysis by the General Accounting Office, what about the rest of the Army's assurances—that the men involved would be helped to find other work?

MEN DISPLACED SUFFER ECONOMIC DISTRESS

As of early this year when I first inquired about their prospects, I was informed that perhaps three would be placed in other jobs. I heard periodically from these men, and they reported to me on the hopelessness of getting other work through the Army. Three apparently were placed. Two gave up and went on retirement. One was fired for unauthorized absence; apparently things got too much for him, and he tried to drown his sorrow one night.

The rest were getting nowhere. I wrote letters in their behalf, I did everything I could, I raised cain because, frankly, I did not feel the contract was proper. Finally, 5 of the remaining 11 were referred to other Federal jobs and 6 were called back to work after a month's unemployment.

They were hardly back on the job, however, when they began writing to me that they were being made to regret having asked me for help. They were not assigned to their old jobs. They were put on a kind of standby basis, as extra helpers, and then a month or so later notified they were again being separated. At this point, another gave up and retired. One was sent to another installation to work, but was turned down as being too old. They write me heartbreaking letters about temporary jobs or no jobs. It is terrible what has happened to the families of these men. And why? For what?

CONTRACTING-OUT TO "SHORE-UP" AND PROVIDE "VIABLE" ECONOMY

I was informed that contracting out Federal jobs of this nature fits in with the Eisenhower administration's policy of turning as much as possible of Federal work over to private enterprise, as a means of shoring up the economy of the country—in behalf, as the Budget Director wrote me, of a viable economy.

Some of the Army brass put it differently: they said that a farming out of this kind of work would help to solve the general funding situation of the Defense Department, meaning, perhaps, that firing 17 janitors in St. Louis would make a big dent in balancing the $40 billion Defense budget. It would be nice to think that the firing of the 17 men would play a key role in balancing the Federal budget, but the facts do not bear it out, and meanwhile the budgets of these families were turned upside down.

CONTRACTS PROVIDE WAY OF HIDING COSTS

It is obvious what happened here. The orders came through to cut civilian personnel. The idea of cutting personnel is to save money. But instead of looking around for ways to achieve savings in personal services, consolidating jobs, or organizing the workload in a better way, someone came up with the idea of knocking out 17 jobs by reaching out to the lowest paid employees, firing a whole block of custodial workers and contracting out their work. The roster would show 17 fewer jobs. True, costs would not go down—but maintenance costs on a contract basis can be disguised very easily, and there would be the appearance of personnel savings. That is at the bottom of all of this extensive contracting-out activity—particularly in the Defense Department, but elsewhere too.

Now I hate to take so much of the time of this subcommittee to discuss in such detail what might appear to be a trivial incident involving a handful of men. But I retell the story here because I think it is the sort of thing you are anxious to uncover, and expose and correct—not just for 17 janitors in St. Louis, but for many of the thousands upon thousands of Government employees all over the country now being subjected to a similar kind of pushing around.

WAGE LEVELS THREATENED

This device of contracting out work which should be and which normally is performed by Government employees—by career employees under civil service—can lead to a breakdown of wage levels for those at the lower income levels, particularly. With enough unemployment—and we still have lots of it—a contractor can pick up part-time "moonlighter" workers to work for the legal minimum, thus displacing career employees whose wage standards Congress has decreed must be decent and fair—not merely the minimum which can be imposed under the Fair Labor Standards Act. The whole concept of civil service is attacked and threatened by this kind of policy. The men displaced in St. Louis wrote me they were offered work by the contractor to clean for $1 an hour, or $1.12 an hour, 4 hours a night, the same areas they had been doing before at regular pay of around $2 an hour on a full-time basis. Is this fair? Is it right?

LABOR DEPARTMENT CLAIMS LACK OF JURISDICTION

When I received that information, I contacted the Secretary of Labor to find out what standards are imposed by Federal law for employment on Government contracts of this nature. I was informed that the usual laws on wage standards on Government contracts did not apply in this kind of contract, and that the only requirement was probably the minimum wage law of $1 an hour. Here, it seems to me, is a good area to start in passing legislation to meet this problem. Is it the role of the Federal Government to help maintain and improve wage levels, or join in undercutting them? That is very much a matter of concern to this subcommittee, I know.

UNDER SECRETARY MILTON TO REVIEW FUTURE CONTRACTS

There are a few aspects of this contracting-out issue that might be noted at this point. First of all, as a result of my protests over the St. Louis incident, the Under Secretary of the Army, Mr. Hugh Milton II, a man I feel is very anxious to do the right thing, has ordered that in the future all proposed contracts of the kind entered into in St. Louis Army Support Center must be cleared with his office. If this had been done originally, I'm sure the incident would never have arisen.

CONGRESSIONAL COMMITTEES ACTIVE ON PROBLEM

Furthermore, this subcommittee has done an outstanding job in spotlighting some of the incidents which have occurred elsewhere in the Government. You are doing an excellent job. The Government Operations Committee has also found some shocking instances of contracting-out practices. The Armed Services Subcommittee under Congressman MEL PRICE is examining into Defense Department military contracts, as part of its overall look at manpower policies in defense. And the Mahon subcommittee put into the report on the Defense Department appropriation bill, clear-cut language prohibiting the contracting out of professional services except where there is absolutely no choice in the matter from a national defense standpoint. That would not, of course, cover the kind of instance I have protested here today.

DEPENDING INTEGRITY OF CIVIL SERVICE

But I think Congress has repeatedly made it clear, that we do not believe the Government can always save money or can always do a better job by farming out work to private enterprise instead of continuing it in the hands of career Federal employees. I think we have made it clear that we do not think Federal employees are all drones and nincompoops and that private enterprise is always and invariably able to do a better job of any assignment than a Federal agency.

As the Members know, I am chairman of the Subcommittee on the Panama Canal of the Committee on Merchant Marine and Fisheries. The canal is a hundred-million-a-year enterprise. It is well run—very well run. It is run in a businesslike fashion—by Federal employees. It was built by the Government directly—after attempts to have it built on a contract basis by private firms proved a dismal failure.

This is not to say the Government should run everything and do everything. But it is to say that in areas where experience has clearly showed that Government operations are efficient and effective and economical—and there are many, many such—there is no good reason, no legitimate reason, for upsetting the whole program, firing the employees, and indiscriminately farming out the work to private enterprise. This is the area you are investigating, and I want you to know that you have my wholehearted support for what you are doing. Thank you.

Labor Reform Legislation

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial which appeared in the St. Louis Post-Dispatch of Monday, July 6, 1959 entitled "On Whose Side":

ON WHOSE SIDE?

After more than 6 weeks, the House Labor Committee is still struggling with the writing of a labor reform bill. The committee is under intense union pressure. Every member of it, and of course every member of the House, must face the voters next year. Union leaders are making the most of their concentrated power, especially in city districts, to affect the results of congressional elections.

So it is not surprising that the reports from the committee speak of a steady drift toward weakening one clause after another of the Senate-passed bill. The Senate bill itself, in our opinion, does not meet the public demand for a genuine and effective reform measure which adequately corrects the abuses exposed by the McClellan investigation. To water it down still further would represent a humiliating defeat of the public interest by organized group pressure.

Inevitably, the question is now arising: Would not half a loaf be better than none? A bill which carried out some of the needed reforms might very well be preferable to no legislation at all, but individual Representatives must be judged by their individual contributions to the final result. A Congressman who votes and works for a watered-down bill instead of a truly effective and comprehensive one must be prepared to go before the voters as a candidate who placed the union lobby's interest above the public interest.

It is not difficult to tell where the public interest lies. It lies first in reasonable but effective reform of internal union organization: In public accountability for union welfare funds and other finances, in protecting the rights of union members from usurpation by union bosses, in making the leaders more directly answerable to the rank-and-file. Secondly, the public interest demands effective legislation against secondary boycotts and "blackmail" picketing.

The first general objective can be attained by adopting the Senate bill's provisions on financial accounting and its bill of rights for union members, preferably with a stronger enforcement clause. The second objective requires rewriting of the Senate measure as it applies to "hot cargo" and blackmail picketing.

The House could find no better guide to legislation on the latter points than Secretary of Labor Mitchell's proposals. Mr. Mitchell is not trying to outlaw legitimate secondary boycotts—those, for example, which are directed against a company's performing struck work—nor is he trying to outlaw legitimate picketing. His proposed amendments would strike only at the kind of boycott by which a union wages a dispute with one employer by penalizing an innocent one, and at the kind of picketing which permits "top-down organizing" aimed at intimidating the employer instead of persuading the employees.

These are the minimum standards of an adequate labor reform bill, and Congressmen will be judged by whether they fight to protect or to tear down these standards. There is no public interest in legislation designed to weaken the right of collective bargaining. There is a strong public interest in legislation to curb the excesses of unscrupulous union leaders like Jimmy Hoffa. Every Congressman should be prepared to let his constituents know whose side he is on.

Colleges Fear Housing Veto Killed Their Building Loans

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. RAINS. Mr. Speaker, I submit an article from the July 10 issue of the Washington Post, entitled "Colleges Fear Housing Veto Killed Their Building Loans," in the hope it will be read by my colleagues, and others interested in the Nation's educational institutions.

The article follows:

COLLEGES FEAR HOUSING VETO KILLED THEIR BUILDING LOANS

(By Erwin Knoll)

President Eisenhower's veto of the $1,375 million housing bill confronts the Nation's colleges with the possibility that the Federal loan program for college housing may be scuttled for the second consecutive year.

Though discussions of the omnibus housing bill have focused mainly on its mortgage insurance and urban renewal provisions, higher education has a substantial stake in the measure.

The bill vetoed by the President included $300 million for extension of the 9-year-old College Housing Loan Program. Of the total, $225 million would have been allocated to loans for construction of dormitories; $37.5 million for college dining halls and related facilities, and $37.5 million for student nurse and intern housing.

Also in the measure was $62.5 million for a new loan program—construction of college classrooms, laboratories, and other academic facilities. Thought the amount was less than they sought, higher education groups welcomed the Federal breakthrough.

President Arthur S. Adams of the American Council on Education, which has spearheaded the campaign for the college loan program, voiced "great disappointment" at the veto.

He said the program "has been remarkably useful and successful," and added:

"We can only hope that some means will be devised to take care of this pressing need."

In his veto message Tuesday, President Eisenhower referred only briefly to college loan provisions of the housing bill, complaining that the interest formula would amount to a Federal "subsidy."

"To the extent that these and other programs merely displace private financing they lead to Federal spending that is entirely unnecessary," the President said.

Since 1955 the program has permitted colleges to borrow from the Federal treasury for housing construction, repaying at the same interest rate the Government pays. The vetoed bill would have continued this. Actually, college spokesmen claim, over the long run the program has cost the Government nothing.

An administration proposal, which has not received much attention in Congress, would substitute Federal guarantees of principal and interest on non-tax-exempt bonds sold by colleges to finance construction of housing and academic facilities.

The administration would also provide some long-term debt retirement assistance for college projects "which would serve the national interest in increasing enrollment capacity or improving and expanding teaching and research in the sciences or engineering."

College spokesmen complain that the administration program would force colleges to the private lending market at substantially higher interest rates.

Since its innception in 1950, the college loan program has resulted in construction of almost $1 billion worth of dormitories. In recent years, the program has accounted for about 60 percent of new campus housing.

Last year, when the omnibus housing bill failed to pass in the House, no new funds for college loans were provided. The Housing and Home Finance Agency now has a backlog of about $150 million in approved college loan applications for which no funds are available.

College enrollments are expected to double by 1970.

Recent Tour by Soviet Deputy Premier Kozlov

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. LESINSKI. Mr. Speaker, I recognize the fact that on many occasions the executive branch of the Government will, by various means, promote some one individual for the Presidency of the United States. But I think it is disgraceful when such promotions jeopardize the security of our country and work for the benefit of our enemies.

My attention has been called to an article which recently appeared in the Detroit Times in which it was reported that during the recent tour of the United States by Soviet First Deputy Premier Kozlov, the Soviet press photographers were allowed to take pictures of everything of military and industrial intelligence value, but no action was taken to prevent them from doing so because of the effect it might have on the impending visit to the Soviet Union by Vice President Nixon.

We are warned by past experience what to expect from the Soviets, so I can see no reason why we should consider inviting or allowing to tour the United States any of the Soviet officials, regardless of whom it might be, regardless of whose political opportunities in this country might be enhanced.

The full text of the article to which I refer follows:

IS KOZLOV TOUR RED SPIES' FIELD DAY?

(By David Sentner)

CHICAGO, July 9.—The State Department yesterday suffered another headache in connection with the tour of Soviet First Deputy Premier Kozlov—industrial espionage.

The matter involved the pastime of the Soviet press photographers accompanying the Deputy Premier taking pictures of everything of military and industrial intelligence value.

Both State Department security detail and the Department's diplomatic escort officer have asked for guidance on what to do. However, the impending visit to the Soviet Union by Vice President NIXON has stymied any decision.

The practice of the intelligence agents of the Soviet Union, in their double role of news correspondents, aides, and officials, using cameras on everything that might be useful in case of war, started at the beginning of the Kozlov nationwide tour.

Taking advantage of diplomatic courtesy in photographing potential targets for Soviet bombers reached its zenith during the passage of the Kozlov motorcade from Chicago to adjacent steel plants.

With a member of the State Department security detail driving an open car containing crack photographers from the Soviet Government, every railroad center, shipping port, strategic highway crossing, and bridge, plus war material factory, was filmed.

Such favorite shots as girls in bathing suits or cheering groups were ignored by the Soviet photographers.

The worst types of hovels and slums along the line were filmed for obvious propaganda use against the United States.

Inside steel plants, similar to the previous technique used in the tour of automotive factories, the Soviet photographers had a spies' field day in photographing at close range intricate automation machinery and instrument boards.

One top steel official remarked:

"This must be a special tour arranged for Soviet industrial espionage."

Government Spending Many Billions on Stockpiles To Help Business

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. WOLF. Mr. Speaker, constantly the American press is telling the tale of the terrible handicap of having an abundance of food on hand.

Mr. Speaker, I submit the following article which appeared in the current issue of Labor, the railroad brotherhood newspaper.

This article discusses in some detail stockpiling of metals for the benefit of industry.

I ask the question, "Is food any less important to national defense than metals?"

GOVERNMENT SPENDING MANY BILLIONS ON STOCKPILES TO HELP BUSINESS

Daily papers which loudly moan about the $9 billion stockpile of surplus farm products are strangely silent about another stockpile which has cost the taxpayers, it's estimated, almost the same amount of money. This stockpile was the subject of recent House Appropriations Committee closed-door hearings, the record of which has now been made public.

The administration asked Congress for $287 million to replenish a $2.1 billion fund for purchase of "strategic" metals. Spokesmen for the administration said the additional money will be needed to pay for metals which are not needed, but must be paid for when they are delivered under unfinished contracts. Two of these contracts are for nickel.

The Government already has $97 million more of that one metal than can possibly be used, stockpile chief Franklin G. Floete testified. But Uncle Sam is committed to buy $200 million worth more from the Freeport Sulphur Co., and $45 million more from the M. A. Hanna Co.

The latter, incidentally, is headed by George M. Humphrey who, at the time this

contract was signed, was Secretary of the Treasury and generally recognized as the most powerful figure in the Eisenhower administration. The Hanna contract totaled $108 million.

Floete said that, in addition to the surplus nickel, the so-called defense stockpile now contains the following "in excess of needs": $327 million aluminum, $72 million copper, $46 million columbite, $59 million magnesium, $219 million tungsten, and $6 million cobalt. Yet that is only part of the story.

The defense stockpile also contains much more of many other materials than Uncle Sam needs. For example, Floete last week offered to sell 265 million pounds of excess coconut oil.

The defense stockpile surpluses are so enormous, Floete told the House committee, that they can't be sold without disrupting world markets. In other words, by buying and holding these metals and materials, Uncle Sam is supporting prices for their producers, not only in this country, but in other countries, too.

In addition to the defense stockpile, the Government also has another big one, built up by swapping U.S. surplus farm products for forein metals, minerals, and other raw materials. Reports say these two stockpiles contain $5 billion worth more materials than would be needed even in an all-out world war III.

Why don't the daily papers complain about this surplus stockpiling the way they do about farm surpluses? Is it because one benefits farmers, and the other enriches businessmen?

The Necessity of Discipline

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following outstanding address by our friend and colleague, the distinguished and able ROBERT W. HEMPHILL will be of interest to the Congress and the people of the country:

THE NECESSITY OF DISCIPLINE

(Remarks of Hon. ROBERT W. HEMPHILL, Member of Congress, Before the Order of Masons' Ladies Night Banquet, at Kershaw, S.C., on April 17, 1959)

Mr. Toastmaster worshipful master, distinguished guests, ladies, and gentlemen, I am always happy to be in Kershaw, and I am honored and flattered to be the speaker on your program tonight. My past association with so many of you personally, and my admiration for and appreciation of the high purposes of the Masonic order inspire my deepest gratitude and humblest feelings at the honor of being present.

In an age when there has suddenly burst upon mankind, partciularly those informed, or curious, in these United States, and certainly those who would gather in such an audience as is here assembled, the bewilderment of realization that science is now paving the way to the stars, stars which up to this time were heavenly pinpoints that we might some day hope to pass in the transition from this life to that which we call eternal, what can a man say to an audience, or what can an audience demand of a man in a position of government? The preachers of the day who, in turn, harped upon the age of peace at the end of World War II some what hopefully, the age of the atom, at the end of World War II, sometimes pretending almost a spiritual insight, the age of the hydrogen, the age of the jet just a few years ago, now talk about the age of space. Yes, the age of space, and there are many of us who wonder if we are going to have the courage, or the curiosity to make one of those dangerous trips to the moon. Then there are others of us who want to make sure that if we make some trip to the moon, that we have all the luxuries of an ocean liner, the comforts of a cocktail lounge, and the safety of our own living room.

Can we proceed another step in this semi-philosophy of what, where, how, and why? Are we brave enough to mirror our own image against the scene of events which are taking place, forgetting for just a moment the past, reckoning, surely, for the future. Have we the individual courage to ask, "Where do I fit into the picture—or do I fit into the picture at all?" The question is surely serious, and, I think it is just as serious as the question of survival. In the imagination of most men, trying to envision the horror aftermath of a hydrogen war, there is always the suspicion, if not the conviction, that, "after all, I just wonder how I am going to survive, when all these other people are going to get killed?" Am I going to become a caveman, and will my trusted .22 rifle, or the .44 I have hidden in the bed springs, mean the difference between my mastery of the situation and my annihilation?

Am I too serious? Well—you did not tell me to fill the night with jokes, to give you belly-laugh after belly-laugh—and, I am sure, you would resent my giving you any fairy tales.

Any of us who have the acumen to look around us at our brothers and sisters in nature recognize that they are governed by certain laws which they do not question, by certain necessities they accept and abide by. What student of nature, even a simple student, does not know that the fox teaches her young her cunning, at the cost of ferocious punishment if the young dare vary from the pattern? How apparent it is that the chick who fails to heed the cluck of the mother, and hasten to her, is devoured, lost, or destroyed? If you really love nature, suddenly come upon a mother bobwhite and her young, and hear her quick cry, and watch the young disappear before your very eyes; how much are you aware of the necessity of discipline among all natural creatures who accept the laws of God, which, after all, are the laws of nature, and its discipline?

Was it Spenser who said that a stern discipline pervades all nature, which is a little cruel but it may be very kind?

And was it Lew Wallace, who wrote the immortal "Ben Hur," who said it is never wise to slip the bands of discipline?

From the earliest time, we find that any religion which man has endorsed, has interwoven among its prerequisites a distinct directive of discipline. The greatest example of that is in our Christian faith. If we examine the Ten Commandments, found first in the 20th chapter of Exodus, and later repeated in the Pentateuch, we find that they are the discipline that God exacts, and expects of his chosen people. The first four are what God expects of man in his relation to God, and the last six are what God expects of man in his relation to fellow man. I challenge any philosopher to examine those rules, and eliminate any one of them as unnecessary, either to our way of life, or to our religion.

In the early days of this country, when the frontiers were fluid, the population small and scattered, and the complexities of life few in number, the Government of these United States found itself under no duty to impose upon the people a complicated set of laws as a guide for a free civilization. As our country grew, the necessity for more and more laws became apparent. I must say that most of them were good. And, if you think a minute, How necessary is law? Think for one moment what would happen if all the city ordinances of Kershaw were abandoned tonight. Who would be safe? What man would roam the streets, or allow the lady of his choice to go out to a movie without armed protection? What storekeeper would feel free to leave his store unattended?

All around us are evidences of the exacting discipline of a centralized Government. Planes that drone overhead by day and night to light at busy airports. The trains that rush through the night from city to city, and the buses and trucks which heavily crowd the lanes of U.S. Highway No. 521, are all subjected to regulations, in order that man might live with man, and competition might be a part of our way of life.

Unfortunately, our Government has enforced its discipline in every phase of life but government itself. We find too many public servants whose lust for power is so great that the impact of a conservative approach concerns them only to the extent that it would cut down their organization, and frustrate their rule. Time and again the committees of Congress have asked that saving be accomplished and economy practiced by a reduction of personnel. This, of itself, is no effort to put any person out of a job. We have provided many other methods such as attrition, absorption, merger of duties, and elimination of ineffective and nonproductive duties. We have urged consolidation instead of a job study intended to create more apparent responsibility. Despite the frightening signs of the times, the possibility of an inflation which will rob every person in this room of the real value of their retirement savings, or retirement program, the fact that the U.S. dollar is no longer the hardest dollar in the international currency, often serve only as topics of conversation over a highball. We have not, as yet, achieved the discipline so necessary to more efficient government.

There must be a reason for this.

In the Congress it has been my experience that when we talk of economy, and there are many of us, especially from the Southland, who really believe in economy, we find that everyone wants to economize, so long as the reduction affects the other fellow. I have been amazed at some of the groups which have urged spending upon us, and when we tell them that we are $280 billion out of balance, despite the hypocrisy of the lip service given to a balanced budget by our captive Chief Executive, they are unwilling to face the signs of the time. I do not know all about the waste in the military, but I do know there is waste and an overabundance of it, and many of the facts have been hidden from the American people by their own public servants, and never given the publicity they deserve.

Last year in the Congress one of my good friends stood in the well of the House of Representatives and told us about a trip he had made to a country which had just been the recipient of $200 million of your tax money. He stated that as soon as they found out he was an American, in order to travel in that country which had just taken our money, he had to have armed guards. What may be necessary to correct such a situation, I do not know, but he who eats my bread must sing my song.

Not long ago in one of the great periodicals of this country, the Readers' Digest, appeared an article entitled "The Best Hours of My Life," by a United Airlines pilot. He told the story of a long flight over the Pacific that he felt the urge to make. It was a story of bravery, and a story of courage, and a story of excitement and adventure. But above all, it was a story of discipline. The

story of a man who disciplined his mind and his body and his will to accomplish a purpose, chancing death in the process.

In January of this year on one of the great networks of this country appeared the Manion Forum, which included an interview with General Fellows, Chief of the General Headquarters Planning Section under General MacArthur in the Pacific campaign. I quote from significant wording from that broadcast:

"To win the cold war, and thereby avoid world war III, we must seize and hold the initiative. We can assume the initiative and win the cold war if we will unwrap a new and devastating weapon. This weapon is psychological warfare. Aimed unerringly at the Kremlin dictators, this new weapon would strike a decisive blow at the Kremlin's most vulnerable spot—its savage conflict with the Soviet people."

"Our problem is to convince the Soviet people that the American people are in sympathy with their dream of liberation; and that our cold war is not directed against the Soviet people but against Kremlin despotism."

Yes; we face a future, a future which, I am thankful to say, because I accept the challenge, has many mysteries, many problems, heartaches, and victories.

If we as a people are to survive; if we are to come to our senses domestically, if this currency is to regain the value, the respect that it should have as the evidence of the full faith and credit of a great people, we must discipline ourselves. The individual and the group must discipline themselves against the desire to use the Federal money, instead of the initiative of private business, or the governmental power of the State or the municipality. In our foreign dealings, once our discipline of ourselves is apparent, we will have less trouble with the world.

One of my friends on the Hill, who daily deals with problems of the subversives, told me the other day that we are losing the cold war, not because we are not fighting the cold war, but because we are not fighting communism. We are not training ourselves to think about this evil which is still among us. We are not training ourselves to do anything about it, or to be ready to do anything about it.

Upon us today is a crisis of great potential. We call it the Berlin question and we have a dateline of May 27, 1959. Somewhere in the past the undisciplined diplomats at the counsel table were outmaneuvered by the Russians. Make no mistake that Russian diplomats are disciplined, that their entire country is concentrated on the ambition to be the world power, and that they are making the sacrifices necessary to that realization. They are willing to die for their beliefs. Are you?

We read that the West is all for firmness, but that is not true. Once before the British sent a man to a summit meeting to indoctrinate a doctrine of appeasement. The results were horrible, and history has now catalogued the very word "Munich" is symbolic of a lack of firmness.

Today, in an effort to have peace without sacrifices, in a proposed world of coexistence in which the Christian nations and those of communism exist side by side, each commanding equal respect of the other, certain leaders either subscribe to a positive neutrality or a negative appeasement. A world desiring peace can ill afford such philosophy. All around us are evidences that neutrality is nonproductive.

I was amazed to read recently that England's ex-Prime Minister would stop the conquest of space to make the world a better place for humanity. He attempted to point out that it did not make any difference who got to the moon first.

I wonder if one who has been Prime Minister of England could be so naive and have such misjudgment. Who is going to stop the Russians from seeking the moon? Who is going to police the world?

Since the advent of the United Nations, Russia, with her veto power, has been able to nullify the police powers supposedly intended in the creation of that organization.

This is the world we face. I would be less than a man to tell you that the future presents no sacrifices and possesses no hardships. I would be less than honest to tell you that we can go our way without the personal discipline necessary to reflect in the national pattern a disciplined and determined people. I can say it is not a job for the Government. I do know that the picture is being written today.

How firm we are on the Berlin question may well determine whether we have peace or war. Any evidence of weakness may be fatal. If Russia were to think us unwilling to stand for freedom, Berlin could fear a blood bath such as Hungary experienced.

Again, these are the signs of the times—an era when men are looking into other men's faces for evidences of character, weakness, or discipline.

This is the challenge of today. It is not a challenge to the Government of the United States. It is a challenge to the people. And the people include you, include me. We forget when we see the massive Government funds, or the haughty bureaucrat coming into our community, that this Government is owned and supported by the little people like you and like me. Like the great French leader said, all of us who are in the positions of leadership have a peculiar feeling, if we are sensative to our responsibilities:

"There go the people, and I must follow them—because I am their leader."

Masons, Rotarians, members of the Lions Club, Kiwanians, John Does, and Mary Does, all have the responsibility, the privilege of writing the 1959, the 1960, the future pages of American strength and survival, as surely as we are met here tonight. It is a time of reckoning, a time of taking stock. We must discipline our desires, our ideas and our ambitions to those sacrifices necessary to keep this Nation great, its people free. I mean it when I say it is up to you. I can only pledge that I will do my part.

Thank you.

High Time for Action

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in Il Progresso Italo-Americano, newspaper published in New York on July 12, 1959.

The editorial follows:

HIGH TIME FOR ACTION

For more than a year and a half there has been an ever-increasing torrent of abuse and vilification directed against Americans of Italian origin, who comprise one of the most important segments of American life. A systematic campaign of defamation has been given wide circulation through slanted articles in nationwide newspaper chains and magazines, and books, which become "best-sellers" through the artful drumbeating of modern press-agentry. But the most frequent offenders are television and motion pictures through gangster portrayals on their screens, using Italian names for the evil characters or what are easily recognized as "Italian types."

One need only turn his TV dial and, lo and behold, there is one of those bloodcurdling sagas in which the unsavory villain is pictured as a hoodlum with "Italian" features.

Many years ago Il Progresso spearheaded a drive to eliminate the racial identification, in news items and stories, of elements caught in the toils of the law. That campaign was widely commended by public officials, editors, and publishers who agreed that the sins of the few should not be visited on the many; and for years no accused or convicted person was identified, in the public prints, as to race or color.

What has happened to change all this? In November of 1957 a group of Americans of Italian descent met in a small New York State village called Apalachin. Some of them had criminal records. The purpose of their meeting has never been explained. But if they were meeting for some nefarious undertaking, we not only do not condone them, but we denounce them and their ilk, for this tiny group of 60 furnished the pretext for bringing discredit and contempt on more than 12 million loyal, law-abiding, decent Americans of Italian origin who daily make their valuable contribution to the enrichment of our country in every field of human endeavor.

Since that day, sensation-seeking organs spawned the specter of a sinister international organization of criminals, presumably composed exclusively of men of Italian or Sicilian extraction, which they call the Mafia. And they have been making a Roman holiday of the terroristic activities of these men and their henchmen, attributing to them infiltration into and control of many legitimate businesses and undertakings, including labor unions. And in passing they mention Italian products and Italian communities which defer to the Mafia.

If this crime syndicate exists in fact, the conclusion is inescapable that all law-enforcement authorities: city, State, and Federal, have broken down. We cannot conceive of the disintegration of the FBI, the Treasury and Immigration Departments, and we resent this inference, as much as we deplore the insinuations against our people.

Like ourselves, many social, civic and fraternal organizations, as well as many individuals prominent in industry, in commerce, in civil service and in the judiciary, have openly decried the patently unjust association of all Americans of Italian heritage with the criminal acts of the few.

In this connection we are happy to note that two U.S. Senators: HUGH SCOTT, of Pennsylvania and KENNETH B. KEATING, of New York have taken up the cudgels against the defamation of our ethnic group and have urged a national investigation. In letters to Attorney General William P. Rogers and Secretary of the Treasury Robert B. Anderson, the two Senators ask a full report on the alleged existence of a nationwide organization of criminals; what is being done to eliminate such a conspiracy if it exists; and, if no conspiracy exists, a statement to that effect. They also ask for a statement of policy of both departments of Government to protect the civil rights of people mistakenly identified with criminal acts, and instruction to Federal agents to beware of defamatory public statements about any minority group.

The letters go even further, when they point out that "the most serious of all have been the statements issued by some law-enforcement officers and Senate investigating teams" which tend to associate all Americans of Italian lineage with the unholy delegates

of crime and vice. The letters also state: "This is as heartless as it is untrue."

We most heartily endorse the position of Senators SCOTT and KEATING. It is high time for action. We have been patient too long. We are aroused as never before and we want an end to the ill-founded, vague condemnation of a fine, loyal and industrious people who—since the discovery of America by one of their forebears—have given it their full measure of devotion.

Minnesota Polls Rate Nixon Strongest Candidate in 1960

EXTENSION OF REMARKS
OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. QUIE. Mr. Speaker, quite naturally, Minnesotans—as well as Americans in every other State of the Union—are very much interested in the presidential election of 1960.

Recently the Minneapolis Tribune's Minnesota Poll, one of the most reliable surveys of public opinion in the State, conducted a series of inquiries as to the relative strength of the men in both parties who have been prominently mentioned as candidates.

In the poll of July 5, 1959, 54 percent of the Republican voters of Minnesota selected Vice President RICHARD M. NIXON as the strongest presidential candidate for the Republican Party. According to the poll, 37 percent of the Democratic-Farmer-Labor supporters selected Senator HUBERT HUMPHREY, of Minnesota.

The report on the poll's findings, as published in the Minneapolis Tribune, is as follows:

MINNESOTA POLL

Minnesotans' ratings of possible candidates in the 1960 Presidential race fall into these patterns in a statewide survey by the Minneapolis Tribune's Minnesota poll:

A majority of Republican voters (54 percent) say Vice President RICHARD M. NIXON is the "strongest" presidential candidate the GOP could run in 1960, out of a field of eight prospects. Gov. Nelson Rockefeller, of New York is next, with 32 percent.

(Last January, in a similar survey, Republicans were almost equally divided as to whether NIXON or Rockefeller was the "best" candidate the Republicans could run in 1960. But Rockefeller led among independents in January; now NIXON heads the list in that group.)

Senator HUBERT HUMPHREY still is the top choice of Democratic-Farmer-Labor supporters for the Democratic presidential nomination. Thirty-seven percent of the DFL'ers pick HUMPHREY as the strongest of eight possible contenders. But his lead has declined since January when 49 percent named HUMPHREY the best candidate the Democrats could run for President.

Next among the current choices of the DFL rank and file are Senator JOHN KENNEDY, of Massachusetts (22 percent) and Adlai Stevenson (17 percent).

The views of voting age residents of the State are surveyed regularly by the Minnesota poll through interviews with representative cross sections of the adult population—persons living in cities and towns and on farms in all parts of the State.

In the latest study, in June, interviewers first handed each person a card listing eight men frequently mentioned as Republican prospects for the Presidency: Robert B. Anderson, U.S. Secretary of the Treasury; Henry Cabot Lodge, chief U.S. delegate to the United Nations; Neil McElroy, U.S. Secretary of Defense; James Mitchell, U.S. Secretary of Labor; Richard M. Nixon, Vice President; Nelson Rockefeller, Governor of New York; Harold E. Stassen, former Governor of Minnesota; Fred Seaton, U.S. Secretary of the Interior.

Then the interviewers asked:

"Right now, which man on the list do you think would run the strongest race for the Republicans in 1960?"

A similar question was asked in January, using the same list of names. The opinions of Republicans and independent voters in those two surveys are as follows:

Republican voters

[In percent]

	January 1959	June 1959
Nixon	41	54
Rockefeller	40	32
Lodge	7	6
Stassen	5	1
McElroy	1	1
Anderson	1	----
Mitchell	----	----
Seaton	----	----
No opinion	6	6
Total	101	100

Independent voters

[In percent]

	January 1959	June 1959
Nixon	24	42
Rockefeller	38	32
Lodge	13	9
Stassen	9	5
McElroy	1	----
Anderson	----	----
Mitchell	3	----
Seaton	2	1
No opinion	10	13
Total	100	102

In cases where a few persons name more than one man, the totals add to more than 100 percent.

The eight names included in the list of possible Democratic contenders are Hubert Humphrey, U.S. Senator from Minnesota; Lyndon Johnson, U.S. Senator from Texas; Estes Kefauver, U.S. Senator from Tennessee; John Kennedy, U.S. Senator from Massachusetts; Robert Meyner, Governor of New Jersey; Adlai Stevenson, former Governor of Illinois; Stuart Symington, U.S. Senator from Missouri; G. Mennen Williams, Governor of Michigan.

Opinions on the "strongest" candidate the Democrats could nominate for President in 1960 run as follows:

Democratic-Farmer-Labor voters

[In percent]

	January 1959	June 1959
Humphrey	49	37
Kennedy	20	22
Stevenson	14	17
Kefauver	10	9
Johnson	2	5
Williams	1	1
Symington	(1)	3
Meyner	----	----
No opinion	4	6
Total	100	100

[1] Less than 1 percent.

Independent voters

[In percent]

	January 1959	June 1959
Kennedy	27	26
Humphrey	35	17
Symington	4	12
Stevenson	6	10
Johnson	5	10
Kefauver	11	8
Williams	2	1
Meyner	2	2
No opinion	8	14
Total	100	100

Although Stevenson repeatedly has stated he has no intention of running a third time as the Democratic nominee for president, his stock among DFL'ers and independents is rising in Minnesota.

Persons who voted for Stevenson in 1956 divide as follows on the question of the strongest presidential prospect for the Democrats: Humphrey, 32 percent; Kennedy, 23 percent; Stevenson, 20 percent; others, 20 percent; undecided, 5 percent.

Mr. Speaker, a second Minnesota poll published last Sunday—July 12—shows that Vice President NIXON is preferred by more Minnesotans than any other candidate:

MINNESOTA POLL

Vice President RICHARD M. NIXON and Senator HUBERT HUMPHREY, Democrat-Farmer-Labor, of Minnesota, vie for top honors in a statewide survey on whom Minnesotans prefer for President in 1960.

Among voting-age men and women interviewed by the Minneapolis Tribune's Minnesota poll, 22 percent prefer NIXON and 21 percent prefer HUMPHREY out of a field of eight Republicans and eight Democrats.

Next are Adlai Stevenson, the Democratic candidate for President in 1952 and 1956, named by 11 percent; Senator John Kennedy, Democrat, of Massachusetts, also with 11 percent; Gov. Nelson Rockefeller, Republican, of New York, 9 percent; Senator Estes Kefauver, Democrat, of Tennessee, 5 percent.

In total, Democratic presidential prospects outscore Republicans, 52 percent to 36 percent.

A representative cross-section of men and women, aged 21 and older, was interviewed, in all parts of the State.

People were first asked to indicate which man they thought would run the strongest race for the Republicans, out of a list of eight GOP possible candidates. The question was repeated for the Democratic nomination, using a list of eight Democrats.

(As reported last Sunday, NIXON is the leading choice of Republican and independent voters on the GOP side. Democratic-Farmer-Labor voters name HUMPHREY most frequently as the strongest man the Democrats could run next year.)

After considering the two lists of candidates separately, each person was asked:

"Of all the men on both lists, Republican or Democratic, which one would you personally prefer to see elected President in 1960?"

The replies:

[In percent]

	Total	Men	Women
Nixon	22	21	23
Humphrey	21	23	19
Stevenson	11	12	10
Kennedy	11	10	12
Rockefeller	9	9	9
Kefauver	5	6	4
Others	9	10	9
No opinion	12	9	14
Total	100	100	100

Other men on the Republican list are Robert B. Anderson, U.S. Secretary of the Treasury; Henry Cabot Lodge, chief U.S. delegate to the United Nations; Neil McElroy, U.S. Secretary of Defense; James Mitchell, U.S. Secretary of Labor; Harold E. Stassen, former governor of Minnesota; Fred Seaton, U.S. Secretary of the Interior.

The Democratic list includes LYNDON JOHNSON, U.S. Senator from Texas; Robert Meyner, Governor of New Jersey; STUART SYMINGTON, U.S. Senator from Missouri; G. Mennen Williams, Governor of Michigan.

Of the Minnesotans who voted in 1956 for President Eisenhower, 41 percent favor NIXON's election next year. Among those who voted 3 years ago for Stevenson, 35 percent now favor HUMPHREY in 1960, while 23 percent pick Stevenson and 15 percent are for KENNEDY.

The leading choices of DFL backers interviewed in the survey are HUMPHREY, 39 percent; Stevenson and KENNEDY, each with 16 percent.

GOP supporters' top preferences are NIXON, 56 percent; Rockefeller, 21 percent; Lodge and Stassen, each 4 percent.

Independent voters' choices are: NIXON, 18 percent; Stevenson and KENNEDY, each 13 percent; Rockefeller, 11 percent; HUMPHREY, 10 percent.

When all of the preferences for Republicans and all of those for Democrats are grouped, the responses form these patterns:

	Preference for Democrat	Preference for Republican	Noncommittal
Total, State	52	36	12
Big city residents	63	27	10
Smaller cities	46	40	14
Town	49	39	12
Farm	47	41	12
Labor union members	77	13	10
1956 Eisenhower voters	26	65	9
1956 Stevenson voters	88	3	9

Statement of Congressman Lane in Support of Forand Bill, H.R. 4700, Before House Ways and Means Committee

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement before the House Ways and Means Committee in support of the Forand bill to amend the Social Security Act.

The statement follows:

STATEMENT OF CONGRESSMAN THOMAS J. LANE BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS IN SUPPORT OF H.R. 4700, THE FORAND BILL TO AMEND THE SOCIAL SECURITY ACT, JULY 13, 1959

Mr. Chairman and members of the committee, no one can dispute the fact that our social security program leaves much to be desired. Since 1935, we have extended the range of its coverage, and have increased its benefits on a number of occasions. As the United States, however, was one of the last of the established nations to inaugurate a system of social insurance, it was obvious that we would have to accelerate its development, in order to match the progress of other nations in this field.

There is some difference of opinion as to whether we are expanding our program fast enough. In this age of social and economic change, it is plain to see that our people regard the program in the United States as being far from adequate. The chief criticisms leveled at its deficiencies, center on the lack of insurance to cover the cost of hospital, nursing home, and surgical services for persons eligible for old-age and survivors insurance benefits.

The surprising and commendable support of group insurance to cover hospital and medical expenses, by our working population, is one of the significant developments in our society since the end of World War II. People need and want security, against the economic hazards of old age, and the physical impairments that inevitably accompany the years of deterioration.

The aged require more medical care, but under the present organization of our society, they are the ones who are unable to pay for it. Rather than appeal to charity, some of them, clinging to their human dignity, prefer to suffer in silence.

This is a deplorable situation, unworthy of the world's richest nation. We have had 25 years in which to expand the Social Security Act and to provide health insurance for the aged, but have failed to make a beginning in this respect.

Those who oppose the legislation designed to balance that "social deficit," claim that it is unnecessary due to the number of the aged who are covered by private medical and hospitalization programs. This argument is self-defeating because of its contradictions. It fails to mention the drastic curtailment in benefits after the insured reaches the age of 65, or the millions who, because this is a voluntray decision, neglect to take out such insurance.

I was impressed last year by the statement of Dr. Eveline M. Burns, who testified on behalf of the National Association of Social Workers, the professionals who have the most practical knowledge and experience in this field. She testified in part: "We endorse the proposals contained in Congressman FORAND's bill, H.R. 9467, for the payment of hospital, nursing home, and surgical expenses for individuals entitled to OASI benefits. Even if it were deemed undesirable at this time to extend this privilege to survivor beneficiaries, we believe there is an overwhelmingly strong case for doing so in the case of the retired aged. The cost of medical care to the aged is increasingly becoming our major national social problem. It is the cause of a large part of the supplementation of OASI benefits and of the rising costs of public assistance, despite the declining numbers of old-age assistance recipients. It will become increasingly important with the growth in numbers of the aged. The question the Nation faces is merely the question of the best way to meet these costs. We believe that, for the long run, the most rational method is by way of insurance; and that the most feasible method of making sure that everyone shall be insured is to utilize the machinery of compulsory premium payment through OASI."

Congressman FORAND's bill, which this year bears the identification H.R. 4700, is notable because it will not only provide insurance against the costs of hospital and surgical services, but takes cognizance of the growing need for nursing home care. With the lengthening span of human life, we shall need more of this special type of service for the aged.

Congressman FORAND's bill will finance the extra cost, with respect to employees and employers, by gradual increases for both under the Federal Insurance Contributions Act to a maximum after December 31, 1968, of 4¾ percent. This, even though it is an addition to other taxes under the FICA to finance the provisions of the Social Security Act, is a small price to pay for removing the dread specter of fear and worry from the last years of our older citizens who are in need of medical care but are unable to pay for it from their social-security checks.

As long as legislation to provide such insurance is certain to be enacted in the near future, in response to public demand and social needs, I believe that our best course is to make the beginning now so that our program will be adjusted to the increasing percentage of the aged in our population.

Eagle Rock, Calif., Girl Scout Troop No. 994

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. LIPSCOMB. Mr. Speaker, I was privileged on Monday, July 13, to have as my guests in a tour of the Capitol and a visit to the House Gallery, Girl Scout Troop 994 from Eagle Rock, located in the 24th Congressional District of California which I represent.

Troop No. 994 arrived in Washington Sunday, July 12, and after 2 days of sightseeing here, left for New York. Following 2 days in New York, the group will entrain for Montreal, Canada, where, after another day of sightseeing, the Girl Scouts will board a ship for a tour of Europe, to return home September 11.

A very interesting fact about this tour is that the money to pay for it was earned by the girls themselves. I believe that the story of this troop and its activities is interesting and inspiring. It shows what a group can accomplish for themselves and others if they put their minds and hearts to it.

Troop No. 994 was reestablished in 1954 as a troop for those interested in service and travel. Its membership now includes 43, of whom 24 are making the present tour. They have been going on various trips for the last 4 years, leading up to and preparing themselves for their main goal, the trip to Europe.

The first year the girls went on a week camping tour, learning how to build fires, cook out of doors, and handle camping equipment. During the second year, the troop went on several weekend trips, and on a 3-week camping trip to the Grand Canyon, Zion, and Bryce National Parks, and to Salt Lake City, Utah.

The third year, the girls were ready for a more ambitious trip, and toured the Southern States all the way to Miami, and went over to Cuba for 2 days. They traveled by chartered bus and cooked and camped out of doors during most of the trip.

The fourth summer was spent at home earning money for the European trip, except for 1 weekend outing. The girls got summer jobs, and later, part-time jobs during the school year to help finance the trip to Europe. This meant, of course, that they had to give up many social activities.

Other means Troop 994 used to help earn their fare was to hold paper drives, rummage sales, dinners, and doing all sorts of odd jobs. The parents of the girls helped participate in various of these activities.

All this while Troop 994 was very busy performing service activities. As part of their service duties, the girls adopted an old folks home. They would visit and take presents to guests, send cards on birthdays and holidays, give programs and caroling parties at Christmas.

Other service activities included putting on plays and serving refreshments at the children's ward at general hospital, helping patients to and from the auditorium, serve refreshments at the veterans' hospital, and helped put on children's programs at Halloween.

I would like to salute Girl Scout Troop No. 994 for their hard work and devotion to help their fellow man, and to make themselves better citizens. In their tour of Europe, they will be traveling as representatives of America. I know they will be wonderful ambassadors wherever they go.

The girls from Troop No. 994 making the trip under the leadership of Mrs. Maude N. Houtz, Mrs. Ernestine M. Zane, and Mrs. Willa McMullen, are: Misses Suzanne Arvidson, Patricia Giblin, Suzanne Haller, JoAnn Handwerker, Barbara Jo Hall, Barbara Hare, Barbara Herzig, Carleen Hines, Gale Jennings, Maureen Klein, Eva Lamm, Linda Lange, Dee Lazzaretto, Carol Sue Leech, Marjorie Meese, Margaret Mendelson, Claire Mount, Marion Page, Joyce Sheeley, Sue Tandy, Lani Wahl, Juliann West, Karon Zane, and Sharon Zane.

Fifteen other leaders and parents are also accompanying the group to Europe.

Statement of Mr. Benjamin E. Waite of Lynn, Mass., in Support of H.R. 4700, Before Ways and Means Committee

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of my constituent, Mr. Benjamin E. Waite, 48 Tudor Street, Lynn, Mass., before the House Ways and Means Committee in support of the Forand bill, H.R. 4700, to amend the Social Security Act:

STATEMENT BY BENJAMIN E. WAITE, J.P., OF LYNN, MASS., JULY 14, 1959

To the Ways and Means Committee on the Forand Bill, H.R. 4700:

I was born in England 1877, now 82. Migrated 1913 to United States on family bereavement. Six years on my town council, 1906–10; was parliamentary subagent which saw the birth and passage of England social insurance law, 1911.

I did not see England again until 1951 when I carried greetings from mayors of Massachusetts and Connecticut who were offsprings to mother towns in England. I had unique opportunity over widspread areas to judge results of 38 years under a complete social security system. I found tranquillity of mind, displaced tensions and fears which existed prior to 1911, superb health fit for any change or chance. That gave me fresh impetus for continuance of campaign. I have worked to that end from 1906 to 1958 and now 1959 so I celebrate golden wedded to social security. Until 1934 United States social security was politically absent. But in that year I got through a resolution for a national health law to be a part of a national security law at Washington conference. In 1935–36 and 1939 filed amendments in Massachusetts Legislature. In 1936 filed memorization law for Congress to enact a national health law—lost. In 1956 filed memorization for Congress to enact a national health law—Massachusetts passed. In 1936 appeared before Senate Labor and Education Committee on S. 3475; 1958 filed brief and endorsements on H.R. 9467 before Ways and Means Committee, pages 1200–1205.

I have been a designated justice of the peace, Massachusetts, 9 years. Social security has 3 prongs. We have unemployment compensation OASI, but the most important is missing—national health. Precedents exist unless the United States of America is like Raleigh (Fain would I climb but fear I to fall). Concord 184 years ago did not need a precedent or President Roosevelt in the 1930's with NRA, Blue Eagle, AAA, CCC, NIRA, FERA, and others.

The 47 most favored nations have health coverage. I give also a partial list of dates; Algeria, Albania, Argentina, 1944; Australia, Austria, 1893; Belgium, Bolivia, Czechoslovakia, 1948; Denmark, Dominican Republic, Ecuador, El Salvador, France, 1936–45; Germany, 1884, 1911, 1933; Great Britain, 1911, 1948; Greece, Hungary, 1891, 1927; Mexico, Netherlands, New Zealand, Norway, Panama, Paraguay, Peru, Poland, 1920–47; Portugal, 1919–33, Spain, 1933–43; Sweden Cradle to Grave, 1955; Switzerland, Turkey, Soviet Socialist Republics, 1911–27; Venezuela, Yugoslavia, 1922–47. Breathes there a man who will say these 47 nations are wrong and national health has deteriorated? Yet the United States of America denies its people health coverage when every sane person knows that in this fierce competitive age, industrial health is the most powerful factor in industry for the successful flow of goods. Any nation without national health law may win short races but not marathons. When Asia, Europe, Africa, Russia start full rolling the United States of America will face cut-throat competition. It has already begun. Switzerland won over General Electric for three generators that would have given 150 men a full year's work. Massachusetts indignation later caused cancellation. Therefore, at all costs, the United States of America must have a compulsory health law to survive. Seventy-five thousand released from Army as unfit in March 1959.

I was born in an era of folk medicine, 1877, in England. All around were small towns and villages. In each of these was usually a woman who knew medicinal value of herbs and roots which when brewed was found almost perfect remedies for most ills. Doctors in those days carried a small cabinet of supplies for immediate use. A Jonathan Rashleigh recently died, up to his end did just that, his cabinet contained tincture of rhubarb, genuine turkey powder, tincture of henbane, extract of taxaxaeum, powder of jalop, bottle of laudnum, ipecacuanha wine, scammony, sal volatile, brandy, blue pills, true jam powder, mercury with chalk. Doctors then were on a 24-hour day, 7 days a week, long before the phrase was invented "beyond the call of duty"; rarely submitted bill; patients paid out of meager funds. Folk medicine still persists even in the United States. In Vermont, United States, for most all ills is 2 teaspoons each of honey and vinegar and honeycomb. Gypsies, Indians, tribes still also practice. Globe, November 7, 1958, Henry Smith, age 101, states what kept him alive was a teaspoon of baking soda after each meal.

Globe 2, 1958, states Makhmud Evazov of Soviet Union, 150 age, still farms and rides horseback.

Globe 12, 1958, states there are 40,000 people over 100 years old registered at University of Kharkov.

Russia with a population of 200 million has 344,000 doctors; 70 percent are women. There are 16 doctors for every 100,000; said to be the highest ratio in the world. Could it be that lady doctors can prolong life better than males, or these men like penguins whose digestive track is free from bacteria. Russia's mortality is 7–9, United States is 9–3 per 1,000. In my four generations I have seen the passing of blood, letting leeches to stop bleeding. Surgeon operating with unclean clothes, instruments not clean, or rooms before germ infection was fully understood. Births not painless handled mostly by midwife under candle and paraffin lights.

Registered hospitals in 1957 in the United States of America were 6,848. Massachusetts is ninth with 209. In Massachusetts, medical institutions are, I believe, best in the United States of America. But in all hospitals need substantial funds despite endowments and community funds. In Beth El Hospital, 20,000 babies were born in 1950–58; 600,000 used this hospital; gave 4 million days free time. Boston City Hospital, where no means test is required, gave 35,000 free treatments in 1957. They have 1,570 beds, 600 doctors, most on salaries; also all administration staff clinic, 50 cents. Face an outlay of million for facelifting. Boston General Hospital, before admittance to a clinic a form must be filled (form enclosed), more searching than income tax; clinics, $3. Peabody City Hospital faces an outlay of $650,000 for repairs. Most hospitals inquire on entry and exit who is going to pay? If a national health insurance law is passed a greater part of free time will be abolished by payments; that in conjunction with nursing home care will reduce caseloads. Abolish small hospitals—share expensive equipment, pooling by medical faculty of all new and successful methods and make available to all practitioners. Not all hospitals are perfect. Richard Blum found four of California hospitals he examined needed complete changes in ethics and audit. In an understatement in Eleanor Roosevelt's column, hospital charges are almost prohibitive and vacancies exist in New York hospitals.

Charges in one Lynn hospital (form appended) are $17 a day; many are higher.

England has now taken in addition to hospitals 3,426 voluntary and teaching nursing homes and their endowments, 1910, 1911, 1948. Medical powers in all branches opposed came in later in full cooperation. Now England is united and has the cheapest managing cost. England and Russia pay time loss as well as medical care during sickness. Time loss is sound economy. In Russia women with jobs get full pay and 124 days' free maternity. In Russia 50,000 women have 10 or more children, belong to the Order of Motherhood. The common cold caused 50 percent of absentees. Cost United States $5 billion a year in man-hours and medicines.

U.S. News: 8 millions go in debt from heavy medical expenses. I have seen far too often a single carrier infect large numbers of workers. If pay loss existed carriers would stay home.

All doctors cannot take or care for their patients in hospitals. If Lynn is average, 1957 Lynn had 200 qualified doctors, 158 were ostracized. Hospital facilities should be available to all qualified doctors.

There are 171 veterans' hospitals, 17 domiciliaries in the United States. Each State has one or more. Twenty-three million veterans served in all wars, 22,633,000 can be potential users of these medical facilities. U.S. population 175 million, that leaves 152,367,000 not covered. If the United States can finance and manage veterans hospitals with sound defined policies, then why should not civilian veterans of labor have the same free medical protection, U.S. control, OASI and unemployment compensation. Why should health protection be the remarkable exception? I have belonged to the Blue Cross since 1946 (form appended); Blue Shield was out at 65. My payments were raise in stages $6.35, $10.25, $15.25, $22.05 a quarter. These raises got only minute benefits. Since an OASI retirement no more payments are required. Then on retirement all payments should cease whether Blue Cross or others and each retired person should have full medical health protection. In 1956 there were 221,700 doctors, only 160,387 belonged to American Medical Association; of 99,227 dentists only 86,872 belonged to Dentists Association.

It seems to be the policy of these bodies to prevent publicity unless approved. If these minorities could state by secret ballot, I feel sure numbers would vote a national health law. Doctors in main object to be on salary (since 1929 dentist salaries increased 83 percent; doctors 157 percent). So much for each patient as plan of other nations. January 1959 there were 7,000 research projects in 700 universities and private laboratories. U.S. Public Health Service, Bethesda, Md., support one-half of medical research of one-half of 6,500 employees are technicians, scientists on salaries (now even have testers). All on salaries, as well as Mayo, Ford, and other clinics. Salaries are not a bar to incentive to work at highest capacity. On the contrary, I believe these dedicated people work more serenely at their highest mental capacities. The world owes a debt to these men who in invention, prevention, curative medicine have developed methods to combat yellow fever, cholera, smallpox, cancer, typhoid, dysentery, typhus, and finding causes, preventing overcrowding, lice, mosquitoes, epidemics, are possible even now. 1947, 200 died daily in New York of smallpox, 7 million vaccinated; influenze 1928 one-half million died in the United States; 20 million affected over world from Iceland to New Zealand. Vaccine for influenza is available but not fully used, and polio shots in Detroit sent back cost and apathy of public. Some public health bodies do a great job in discovering carriers. Mary Fallon was the great carrier of diphtheria, and raw pork cause of another epidemic. October 1958, Boston, 1,600 osteopathic surgeons where Dr. Levitt warned that abuses of prepaid medicine plans of patients by doctors and hospitals may lead to Government health insurance.

Let's be frank. There are abuses by patients, doctors, and drugstores, if some towns in Massachusetts are a criterion of the Nation. Each is now alive as never before to police their organizations to prevent abuse. If and when national health law is passed, any illegal or evasive actions should be penalized in full. Clem Norton, March 14, 1959: $500 million spent on phony remedies for shortcut cases. News report: $250 million vitamins sold over counters. Doctors state $240 million wasted. Under health coverage patients would seek medical aid and not buy medications on impulse. Some doctors might aid drug buying in their newspaper columns in which they give advice to unseen inquirers. Some sell pamphlets at 25 cents; one advised a series at $7.50. Sign I saw in window of drugstore: "Come in, try pill, twill make you feel good. On the house." When I read that fine piece of literature, the hippocratic oath: One part, I will abstain from whatever is deleterious and michievous (oath appended). When druggists, doctors, osteopathic surgeons have in meetings warned their members that abuses of prepaid medicines plans may lead to national health insurance. In many towns and cities, prices, fees, drugs, have been excessive and protested, and each have promised to police their organizations. In 1947, 48 million prescriptions were filled in which wonder drugs were featured at stiff prices at a cost of $2 billion. A survey made by a reputable man showed 1,000 tablets of vitamins cost $1 to produce, sold to drugstore $5.40, to patients $8. Dexedrine, wholesale price for 1,000 tablets, $22.60 one firm; another firm $1.50. A tranquilizer drug, prices in 12 stores varied from 95 cents to $4.95 for 50 tablets. Aspirin, 12 cents to 67 cents for 100 tablets. I have known many cases of expensive prescribed drugs thrown away as harmful. But when these drugs are good for patients, are beyond reach, if for protractive use and means of most, particularly those over 65 who on August 1958 average on OASI, end of February 10, 1959, $71.62 checks. This sum must cover a month's expenditure.

News March 1959 (Jerome D. Fenton resigned from labor relations because $20,000 a year was not enough). State aid is more generous. Average monthly check $96.20, plus $6.50 day nursing home, $3.95 medical center, $11 a day chronic hospital. Doctors $3 office, $4 home. No limit on visits. Lynn limits $25 a month for drugs. Massachusetts is 4th for welfare care, 8th in wealth, 6th in spending, 9th in number of hospitals. Even Congressmen, when in session, get free medical treatment. Doctors' private patients charges are not standard in Massachusetts; $4 to $6, specialists, $10 to $15 for office visits. Doctors' home visits $5 to $6, plus drugs, transportation and other charges. Transfusion $25, X-rays $10. There are 84,166 on Massachusetts State aid. May have some shysters as are unfortunately in other parts of system of United States. But the majority are victims of the unequal distribution system. No one I affirm would want to go back to separation of family and over the hill to the poorhouse. I have seen many a husband and wife going to different workhouses and treated worse than animals. There can be no return—England has turned poor law institutions into hospitals.

In cities practice is growing for doctors grouping in office buildings, telephone answering service, immediate contact is delayed sometimes results in undue suffering weekend and nights. Doctors are not sometimes found. When appointments are made, waits of long periods sometimes occur wasting patient's time. Drew Pearson, August 30, 1958, states AMA spent $499,906 to create better public relations. Why was this necessary if doctors kept the Hipprocratic oath. There is a break in their ranks, 181,000 professional nurses favor Forand H.R. 4700 bill (News Report). William Decker, Corning Glass Co., says H.R. 4700 the best solution. Dr. Graham Beaumont, of England, visiting United States, when asked to compare British and U.S. systems said, in effect, there is no substitute for total health coverage as in England. Most large industries have some form of medical care but this is lost on severance and termination of employment. Doctors don't seem to like this form because it does not give free choice of doctors; other doctors generally feel that free choice of doctor is a fetish. I believe in free choice of doctors and hospitals.

In 1958 amendments, which increased OASI recipients 7 percent, to 12.6 million. Extra cost was 50 million. That 50 million I affirm will be spent largely on food (not vicuna coats). That should help farmers. Drew Pearson also states 6 million paid to subsidiaries, farms; billions for defense. News, March 2, 1957, Stanley Jankus fined $3,370 in 1956 for growing more than quota of crops for his own stock. That doesn't make sense. United States had given Formosa 2 to 5 million and 1 million for training and equipment of farmers; Italy 220 million, Austria 52 million, Yugoslavia 11 million. United States spends untold millions on space missiles—money is always found—while there are nearly 5 million unemployed and vast numbers in need of medical care beyond their present means. Money remains in Fort Knox, OASI pensioners 67,787 in number have left United States to live in Italy, Canada, Greece, England, Phillipines, Yugoslavia, West Germany, Ireland, Norway, Portugal, Spain, Sweden because their pensions can secure a higher standard of living. If they remain in United States they are outside looking in—before retiring they were inside looking out. Above nations have health insurance.) If instead of giving these huge amounts to other countries for economic aid these sums were used for larger pensions and complete national health coverage, United States would be the greatest of democratic nations.

"Perils of Migrants" (Coronet, September 1958)—2 million migrants roam for work in seasonal occupation; roam States of Texas, California, Pennsylvania, Maine, Georgia, and others for crops such as tomatoes, potatoes, cranberries, cotton, and others. Housed frequently in unhealthy chicken coops, barns, some without sanitation, running water, light, etc., poses a threat of carrier disease and public health authority should be given greater funds and power.

Since the trends have over successive decades gone from rural to urban, tensions and fears have grown. Man is no longer a complete unit. He is a part of a production system. Day work to piece, assembly lines, high speed machines; time studies, factories moving to other towns or States—competition to jobs, costs of sickness; time studies for minimum motions, unemployment making mortgage payments difficult. When a man gets a job he cannot put his family on payroll. In Massachusetts there are 30,000 mental patients. Suicides 10th highest in the United States. A new Branch Rescue, Inc., privately financed, is part of Boston City Hospital. They deal with 150 a month; they saved 74 definite in one month's results of tensions and fears could be largely eliminated with national health coverage and adequate pensions. Pursuit of happiness in this troubled world for those retired is blocked by sickness costs, of high charges of funerals which have to be met by relatives because of inability to make provision out of inadequate pensions. Therefore adequate pensions must be provided and relief given by passage of H.R. 4700 which provides national health insurance. Freedom of speech exists but audience is missing for those retired except those who in standing room only meet on street corners or public squares—no comfortable plush hall, even these pass away and over years fresh groups form.

Freedom of religion, yes, before retirement, but after pension cannot contribute on former level. Therefore they sometimes stay away or be ostracized for low pledges. Pursuit of progress cannot be high geared—absence of NHI without a national health law.

Before retiring, food, shelter, clothing was reasonably possible. They were inside looking out. After retiring, on an average end, February 1959, $71.62, are outside looking in and wondering how to make both ends meet with material that won't stretch even by a market expert on bargaining and cheapest of food items. March News, Boston, given a grant of $39,000 to find out

why men grow old—above the answer—larger checks and health coverage. In four generations I have seen these heroic men, famous veterans of labor, bloodied and charged by lancers under material law for the right to organize in England. United States 1934 is martial law bloodshed on two each killed in San Francisco, Minneapolis, Toledo, for the right to organize. Those were days when secrecy at start was a must or else get beaten up or lose your job. Courageous men led their meetings, heavily policed, taking conspicuous notes and on trivial words arrest speakers. Yet these men worked very long hours at starvation wages. Few pleasures and no luxuries. England gave Sam Gompers, to become father of the labor movement, United States, but their loins sprung the race that have built the standards of living that exist today beyond the dreams of prophets who lived in previous centuries. They have given their all so that future generations shall not be called upon to endure the bitter hardship and untold suffering of the past. With national health coverage there will be problems of those not qualified at start to come under but are financed by public drives 1959 are nationwide; $170 million collected in United States, cost $26 million to collect. These drives increase each year. I get 17 appeals each year. These drives should be consolidated and eventually come under national health coverage. In this ultramodern age permanent limits of standards cannot be defined.

Changes occur almost with rapidity of light. To all it should be evident that if any considerable segment of population is impoverished from heavy costs of sickness cannot buy goods through lack of funds in U.S. markets labor will suffer economic loss. Shall we be governed by past century thinkers, such as John Stuart Mills, John Waltham, Herbert Spencer? In their philosophies land could not support an expanding population or grow food adequate for its need. That extreme poverty would always be with us. That war and pestilence would kill the weak and unfit have survival of the fittest; that births should be curtailed. How wrong they were.

There is no forseeable limit to what land can produce if the United States of America is a guide. Where land is taken out of cultivation and quotas of crops fixed for each producer, yet despite this there are in the United States of America surpluses of millions—$9 million worth in U.S. warehouses. Extreme poverty is not an insoluble problem in the United States of America. United States of America population even increasing—no diminution of adequate food with proper distribution.

In the United States we want the greatest good for all the people, then we must follow the light lit by two great humanitarians in the United States, Franklin D. Roosevelt, who said to Francis Perkins, "I believe in the cradle to the grave," passage 1935, Social Security Law. Roosevelt National National Health Survey, 1935–36 and his frequent attempts to have compulsory health insurance in the United States and it is reported he with a doctor at the time of his death was drafting such a measure. Harry Truman only 5 months in office drafted plans and in subsequent years drew public attention to utmost need of national health insurance. He published in 1952 "Health Needs of Nation" in five volumes. The heat is on by four national bodies, each claims to be our best friend to stop compulsory health insurance. Insurance companies state we have the know-all and can give very low rates but in their invisible print, we shall have to make profits to pay for our $100 million buildings (as in Boston).

Some doctors say, "Under national health law you get only what you pay for. We can give you better service as private patients." They neglect to state that 47 nations who have health coverage have better health standards than existed before. If under U.S. health law they gave less than their best they would not last long. The public can't be fooled long. Druggists say, "Do it yourself if you are feeling unwell; use our drugs; you will find them in stores and markets vividly labeled just what they are and what they do and read our national publicity for other information." Nonprofit bodies racing to get under cover by adding 65'ers to Blue Shield. None admit that the President of the United States of America is head of a family of 175 million and is therefore vested with responsibility to keep his family vigorous and healthy. And the only way as 47 nations found is by a national health law. United States cannot longer stand among nations in splendid unisolation.

Allen Toynbee states the time will come when all the friends of civilization will be shared equally by all and that is practical politics. He and Vice President NIXON were on same platform in Boston recently and NIXON quoted above and said he was in accord. I shall watch our Vice President with great interest on all humanitarian measures.

"There is a tide in the affairs of man which taken at the flood leads on to fortune." The flood is here. On the crest is the long-awaited ship H.R. 4700 with a manifest and charter for a national health insurance law for the United States. Ready—aye—ready to land. Awaits Pilot FORAND with the ways and means to tie up to the 47-nation buoy.

Since writing above I have read report submitted to Ways and Means Committee, April 3, 1959, entitled "Hospital Insurance for OASI Beneficiaries" with astonishment because in that report pursuit of information did not go further than the booth on the front porch. I looked in vain for visits to Sweden, England, Russia, cradle to grave nations, whose systems are national successes, nor did this committee recommend books as helpful that are in the Congressional Library: Melchior Palyi, "Compulsory Medical and Welfare States"; J. G. Thwait's "Modern Medical Discoveries"; A. L. Barron, "Man Against Germs"; James Cook, "Remedies and Rackets"; W. Shiver, "Mid-Century Journey"; James Howard Means, "People and Goverment"; Arthur M. Schlesinger, Jr., "Coming of the New Deal"; Galbraith, "Affluent Society"; John Gunther, "Inside Russia."

There are many others ably written, judicial in character, that the Ways and Means Committee would do well to study, also in Congressional Library.

Father Blum's Views on Freedom of Choice in Education

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. REUSS. Mr. Speaker, in order that all points of view on the question of making Federal assistance available to church-supported schools may be made a part of the record, the Reverend Father Joseph F. Thorning, Ph. D., D.D., has requested that I make the following article a part of my remarks in today's CONGRESSIONAL RECORD.

Father Thorning, who many of us remember for his prayers as a visiting chaplain to this body, is the pastor of historic St. Joseph's Church in Carrollton Manor, Md.

Of him, the distinguished assistant majority leader of the Senate, the Honorable MIKE MANSFIELD, said recently:

> The Reverend Joseph F. Thorning [is] one of America's greatest experts in the field of Latin American affairs. * * * He is a man of widespread reputation throughout the Americas. He has made many contributions to better understanding between the states which comprise the hemisphere.

The article, "Freedom of Choice in Education," is the work of the Reverend Virgil C. Blum, S.J., of Milwaukee. Father Blum's article, published in two installments, first appeared in the April 26 and May 3, 1959 issues of Our Sunday Visitor. I found his article to be both thoughtful and provocative, although I personally do not share Father Blum's point of view on this question:

FREEDOM OF CHOICE IN EDUCATION

(By Rev. Virgil C. Blum, S.J.)

The greatest anomaly of a nation dedicated to the exaltation and defense of liberty is its denial of full religious freedom to citizens who believe in God-centered education.

This is America. A Nation conceived in the proposition that all men are created equal and endowed by God with rights and liberties, nonetheless refuses equality and religious liberty to children and students who desire to study the source of man's rights and liberties. Although "we are a religious people whose institutions presuppose a Supreme Being," as the Supreme Court reminded us in the Zorach case, yet, through the imposition of penalties, we deny religious freedom to citizens who pursue a fuller knowledge of this Supreme Being—a knowledge which alone can support and give meaning to the principles of democratic self-government.

At a time when America is in danger of being engulfed by a totalitarian power that denies to the conquered, as well as to its own citizens, every freedom to which man aspires, it might be expected that our Nation would make doubly secure the liberties of its own people. Totalitarianism can be resisted only by an undivided and sincere dedication to liberty. Yet, instead of reaffirming the rights and liberties of our citizens, we are ourselves adopting measures which generally characterize the absolute state. By legislative enactments we are demanding conformity in thought and belief. This is in violation of the most fundamental rights of the individual—freedom of mind and freedom of religion.

Freedom of mind and freedom of religion are of the essence of a free and open society. An open society is legally tolerant of all ideas and beliefs. In an open society there is not, nor can there be, a state-established orthodoxy in belief and opinion to which all must conform. A free and open society provides constitutional guarantees to protect the rights and liberties of the individual. In such a society a majority cannot "proscribe" those who will not conform to a philosophic or religious "orthodoxy."

When, however, society, whether by direct or indirect action, begins to "proscribe" individuals for their opinions or beliefs, it ceases to be a free and open society; it becomes a closed society based on the principle of enforced conformity to a state-established orthodoxy, a society that is intolerant of nonconformist thoughts and beliefs.

There is in America today an increasing pressure to conformity to a state-established orthodoxy. There is an increasing intolerance of diversity of opinion and belief. I

submit that this closing of the door against freedom of thought and freedom of religion is well demonstrated by the discriminatory features of the National Defense Education Act of 1958 and by virtually every education bill introduced in the 86th Congress.

• • • • •

In the National Defense Education Act of 1958, the Federal Government demands of children, students, and teachers complete conformity to State educational policy as a condition for sharing in most of the benefits of the law.

• • • • •

This requirement of conformity to State-controlled educational policy is in radical conflict with the principles and guarantees of freedom of mind and freedom of religion. This demand of conformity as a condition for sharing in educational welfare benefits, compounded with like demands on the part of the several States, places such a high penalty on a choice of education free of political control that, in effect, the choice has been for most children and students effectively eradicated. They are compelled to conform to the State-established orthodoxy of State-controlled education.

Yet the U.S. Supreme Court has repeatedly declared that parents have a constitutional right to send their children to independent schools. In the Prince case of 1944 the Court reaffirmed the fundamental doctrine of parental right in education when it asserted the principle of "the parents' authority to provide religious with secular schooling, and the child's right to receive it, as against the State's requirement of attendance at public schools."

It was in the Pierce decision of 1925 that the Court struck down an Oregon State law compelling all children to attend public schools. In a unanimous opinion it enunciated the fundamental principle that the child is "not the mere creature of the State." To prepare the child for "additional obligations," said the Court, is the "right and the high duty" of his parents. The Oregon law compelling attendance at State schools, declared the Court, "unreasonably interferes with the liberty of parents and guardians to direct the upbringing and education of children under their control."

When parents exercise this constitutional right by sending their children to independent schools, however, their children are deprived of all public educational benefits. They are cut off from all tax funds by all taxpayers for the education of all children and youth. This penalty, imposed on the exercise of a constitutional right, is an economic compulsion to conform to the State-established orthodoxy in the things of the mind and spirit.

It should be emphasized at this point that the State's obligations in education are to individual children and youth; these obligation are not to a school system or to educational institutions. Consequently, every individual child and youth has a right under the equal protection guarantee of the 5th and 14th amendments to share equally in the educational benefits provided by the taxpayer, and this without being coerced to surrender freedom of mind and freedom of religion.

Government may not condition participation in its benefits on the surrender of constitutional rights. This is a most fundamental principle of constitutional liberty. For "if the State may compel the surrender of one constitutional right as a condition of its favor," declared the U.S. Supreme Court in the Frost case, "it may, in like manner, compel the surrender of all." This would enable governments to do by indirection what they cannot do by direct action. But, said the Court, "it is inconceivable that guaranties embedded in the Constitution of the United States may thus be manipulated out of existence." Consequently, ruled the Court, a State "may not impose conditions [for sharing the benefits] which require the relinquishment of constitutional rights."

This constitutional guarantee notwithstanding, both the Federal and State Governments demand that children and students surrender freedom of mind and/or freedom of religion in the choice of school as a condition for sharing in educational benefits. Referring to this violation of liberty, Chicago University Law Prof. Wilber Katz points out that "we exact a price for the exercise of [the constitutional] liberty of parents • • • to send their children to religious schools."

Liberty at a price; this is the suppression of liberty. It deprives children and students of freedom of mind and religion in the choice of school, a right guaranteed by the first amendment. The late Dr. Bernard Iddings Bell, Episcopalian clergyman and educator, objecting to this violation of religious freedom, said that "as the American school system is now conducted, more and more conducted, there is no such thing as religious liberty in American education. There is liberty only to be unreligious."

The denial of educational benefits to children who seek a God-centered education penalizes the exercise of religion and, as such, is destructive of religious liberty. And, as Mr. Justice Black remarked in the Douds case, "freedom to think is inevitably abridged when beliefs are penalized by impositions of civil disabilities."

The denial of educational benefits to independent school children and students involves another violation of constitutional freedom. A denial of such benefits is, in effect, a coercive compulsion to conform to the philosophical and theological orientation of the state's schools. Such enforced conformity is in conflict with our two most fundamental constitutional liberties—freedom of mind and freedom of religion.

Every educational institution, or certainly its individual faculty members, is philosophically and theologically oriented. There is no such thing as philosophical and theological neutrality in the classroom. The questions "What is man?" "Where does he come from?" "What is his purpose?" "Is there a God?" cannot be avoided.

"On the fundamental religious issue," declared Sir Walter Moberly, formerly chairman of the university of grants committee of England, "the modern university intends to be, and supposes it is, neutral, but it is not. Certainly it neither inculcates nor expressly repudiates belief in God. But it does what is far more deadly than open rejection it ignores Him. • • • It is in this sense that the university today is atheistic. • • • It is a fallacy to suppose that by omitting a subject you teach nothing about it. On the contrary, you teach that it is to be omitted, and that it is therefore a matter of secondary importance. And you teach this not openly and explicitly, which would invite criticism; you simply take it for granted and thereby insinuate it silently, insidiously, and all but irresistibly."

"The ignoring of religion by the schools," points out Dr. Luther A. Weigle, former dean of the Yale Divinity School, "inevitably conveys to the children a negative suggestion. • • • It is natural for them to conclude that religion is negligible, or unimportant, or irrelevant to the main business of life."

This elimination of God from the child's most engaging activities through 12 or 16 years is of the very essence of secularism. Secularism eliminates God as a significant factor from all of man's day-to-day activities. Due to its theological orientation, secularism is in fact a negative religion. Secularism, remarked President Nathan Pusey of Harvard, has "itself become a faith and raised a hope that man can through his own efforts—without God—solve all the remaining problems which stand between him and a secular paradise on earth."

But whatever the philosophical or theological orientation of our State-controlled educational institutions or their faculties, the child and student cannot be forced to conform to it. For government to enforce conformity to any orientation—be it theistic, secularistic, or atheistic, Protestant, Catholic, or Jewish—is a most serious violation of freedom of mind and freedom of religion. Yet this is precisely what the Federal and State Governments are doing. They are enforcing conformity to the religious orientation of State-controlled schools as a condition for sharing in educational benefits.

To force a defenseless child to accept a philosophical and theological orientation of particular truths that clashes with his religious beliefs is not only a violation of his constitutional rights under the first amendment. It is a violation of his personal integrity. It is the forcible exposure to, if not a forcible impregnation with, ideas and beliefs in conflict with, if not in contradiction to, the most cherished beliefs of the child and of his parents.

When a Lutheran child who has been taught by his parents that God is the central fact of life that all his thoughts and actions must be performed with reference to God, is compelled to attend a State-controlled school which "insinuate(s) • • • silently, insidiously, and all but irresistibly" that religion is "a matter of secondary importance," as Moberly asserts, the child's freedom of conscience and his parents' right to direct and control his education are grossly violated by the State.

Democracy supposes a free people—a people who can think, and speak, and believe, and write, and assemble without Government interference. And freedom means the right to be different; the right of nonconformity. It means that government may not force its citizens to conform, whether it be in speech, in belief, or in thought. It means that government may use neither direct nor indirect means to force children and students to conform to the philosophical and theological orientation of State educational institutions. In the words of Mr. Justice Jackson, it means that government must "let men's minds alone."

When Government conditions its educational benefits on enforced conformity to State educational philosophy, however, it is not letting men's minds alone. It is intruding its secular arm into the mind of the student and demanding the right to orient truth as the condition for sharing in educational benefits. This subverts freedom and democracy. "The priceless heritage of our society," remarked Justice Jackson, "is the unrestricted constitutional right of each member to think as he will. Thought control is a copyright of totalitarianism, and we have no claim to it."

Our claim is to freedom, particularly to freedom of mind and freedom of spirit.

But how is freedom of mind and freedom of spirit to be achieved in education?

Virtually every democracy in the world achieves freedom of choice in education by supporting the school of the parents' choice. Because of constitutional, historical, and sociological conditions peculiar to America, many individuals who are dedicated to academic freedom advocate the direct-grant plan. Under this plan, government would give grants directly to parents or students to enable them to pay tuition, at least in part, in the schools of their choice.

The direct-grant plan, like virtually every social-welfare program adopted by the Federal and State Governments, subsidizes the individual person who is the recipient of the benefits of the particular welfare laws. For example, the needy aged person is the recipient of the benefits of the old-age assist-

ance program. He alone is subsidized. If he spends his Government subsidy at Macy's, Gimbles, Boston Store, or at A. & P. stores, Government does not quite obviously subsidize these stores. If he spends his subsidy at Milwaukee's Home for Aged Lutherans, Government does not quite obviously subsidize this church-related institution.

This principle of freedom of choice was also incorporated in the GI bill of rights. Veterans were not forced to attend State colleges as a condition for sharing in public educational benefits; they were free to attend the school of their choice. With subsidy in hand, they were free to attend the 474 Protestant, the 265 Catholic, the 5 Jewish institutions of higher education.

When government subsidizes the individual person, it establishes only a government-citizen relationship. It establishes no government-Gimbels or government-Harvard relationship. This has two important consequences. First, it creates no basis for government control of Gimbels or Harvard. Second, if the school attended by a government-subsidized student is church related, the church-state question cannot be raised.

It was for this latter reason that the President's Committee on Education Beyond the High School in urging support of the tax credit plan (one form of personal subsidy), said that the plan could be adopted "without raising the issue of church-state relations."

Of course, constitutional principles and guarantees are not important when politicians deal with second-class citizens. Second-class citizens are to be treated as such regardless of rights and liberties guaranteed in the Constitution. It may seem strange that politicians can thus discriminate against the parents of 5 million children without fear of political consequences. But that is because people who for one reason or another think of themselves as second-class citizens expect to be treated as such. That's why they're second-class citizens.

About 50 Congressmen have sponsored or cosponsored educational bills in the 86th Congress. Most of these bills are similar to the Murray-Metcalf bills (S. 2 and H.R. 22). They propose to penalize parents who exercise freedom of mind and/or religion in the choice of school.

The Murray-Metcalf bills provide that the Federal Government shall subsidize education in each State in amounts directly proportionate to the number of school-age children. The subsidy will be $25 the 1st year and rising to $100 in the 4th year. Thereafter, the subsidy will remain $100 for each child of school age. However, if a child's parents exercise their constitutional right in sending him to an independent school, the Murray-Metcalf bills provide that the child and his parents shall be penalized. The child will be deprived of the $100 Federal subsidy for his education. The bills provide, moreover, that the $100 allocated for the child's education is to be redistributed to children who conform to the philosophical and theological orientation of the State's schools. As a consequence, in States like Illinois, New York, and others, each public schoolchild will receive a Federal subsidy of approximately $135 to provide for better education. This is characteristic of the closed society—conformity is rewarded, nonconformity is penalized.

Of course there are redeeming features for independent schoolchildren. Their parents will have, as befits good second-class citizens, the privilege, if not the pleasure of paying higher taxes to supply an additional $5 billion yearly for this program. After paying these higher educational taxes, they will have even less money than formerly for the education of their children in the schools of their choice. But that is as it should be with second-class citizens—ever-increasing taxes with ever-decreasing welfare benefits.

* * * * *

If parents who exercise their constitutional right in sending their children to independent schools were not treated as second-class citizens, the Federal Government would, under the terms of revised Murray-Metcalf bills, make direct grants of $100 per child to these parents to enable them to pay in part tuition in the schools of their choice. In adopting this subsidy method of financing the education of the individual child, the Federal Government would only be following innumerable precedents.

We live in a democracy. A representative democracy. We have representatives in Congress who represent territorial areas. We have other representatives in a "third house" who represent private organizations or pressure groups. These organizations or groups are made up of people with a common interest who organize to protect and promote this interest. It is generally recognized today that the representatives of private organizations have a tremendous influence in shaping the policies of all three branches of Government.

* * * * *

The Protestants, Catholics, Jews, and other Americans who have an interest in independent education are not organized to protect and promote their interest. Consequently, when, for example, the Murray-Metcalf bills come before Congress for consideration, the 5 million independent schoolchildren and their parents are all but totally unrepresented democratically in the legislative process. As a result, pressure groups that are opposed to freedom of mind and freedom of religion have the Members of Congress almost completely at their mercy politically.

Since the democratic process in America demands the balancing of pressures of particular interest groups as a necessary condition for achieving the common good, those people who have a common interest but do not organize to promote it are, in effect, making it virtually impossible for Government to achieve the common good. Their refusal to participate in the democratic process through the proper representation of their interest in effect partially disfranchises them and, more serious still, surrenders to opposition pressure groups a dominant unchallenged power to influence the most basic policy-decisions of Government.

It has often been said that the price of liberty is eternal vigilance. If Protestants, Catholics, Jews, and other Americans who are interested in religious education will not organize to protect and promote freedom of choice in education they will, by default, be responsible for the fact that, as the tax burden for State-controlled education becomes increasingly heavy, an increasing proportion of American children will not have the opportunity of receiving a God-centered education. They will be responsible also, by default, for the increasing secularization of American society. Pressure groups that are aiming to bring about this complete secularization of our society are today virtually unopposed in their efforts to establish a closed society that is intolerant of freedom of mind and freedom of religion.

Freedom of choice can be achieved in America. But it can be achieved only through democratic processes. Private groups must be organized; legislators must be influenced; public opinion must be formed. If parents who are interested in academic freedom do not organize to achieve their objectives, and if they relinquish the important field of public opinion to the opponents of freedom of mind and freedom of religion, they will, because of this rejection of essential democratic processes, continue to be treated as second-class citizens. This rejection of democratic processes invites the advocates of a closed conformist society to demand, unchalleneged, that Americans conform to State-established orthodoxies in education and elsewhere as a condition for sharing in welfare benefits.

Foreign Aid Reappraisal

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. DONOHUE. Under leave to extend my remarks, I would like to include a very interesting editorial on the important subject of foreign aid which appeared in the June 13, 1959, issue of the magazine, America.

The article follows:

Neither Senators MIKE MANSFIELD, Democrat, of Montana; J. W. FULBRIGHT, Democrat, of Arkansas, nor MIKE MONRONEY, Democrat, of Oklahoma, should be classified as opponents of the concept of aid to underdeveloped nations. Yet each in his own way has expressed dissatisfaction with the manner in which our global aid program has been administered. All three would like a new approach to this much controverted arm of U.S. foreign policy.

On May 15 Senator MANSFIELD leveled his sights at that category of foreign aid known as defense support. He announced that he would move to eliminate this type of aid from the program within 3 years. This would mean a sharp curtailment in economic-aid grants to nations which have been willing to enter into anti-Communist military alinement with the United States. Such aid has been justified on the ground that it is needed by underdeveloped countries to support an armaments burden imposed by the acceptance of U.S. military aid. It is, as a March 1959 Government handbook on the mutual security program explains, aid demanded by the "need to secure a military contribution" on the part of nations which are willing to stand up and be counted in the cold war.

Senator FULBRIGHT is disturbed over the political debate which accompanies each yearly administration request for economic-aid funds. He feels that this endangers the entire program. He has therefore argued for the expansion of the U.S. Development Loan Fund to enable the Government to lend $1.5 billion per year for the next 5 years. As it is, the Government has no long-term lending authority. Each year it must beg appropriations for the next 12 months. This inevitably leads to cuts in the amount requested and makes for uncertainty in the long-range planning of the Development Loan Fund.

Arguing in similar vein, Senator MONRONEY has advocated the creation of an International Development Association to be affiliated with the International Bank for Reconstruction and Development. The IDA would be empowered to make "soft" loans to underdeveloped countries, i.e., loans on easy terms and repayable, at least in part, in the currency of the borrowing nation. The United States would be expected to contribute one-third of a $1 billion international fund.

These proposals are aimed at two glaring defects in our economic-aid program. One, the lack of long-range planning, can and

should be met by some such imaginative plan as that proposed by Senator FULBRIGHT. The other, the unfortunate interlocking of so much of our economic aid with military security, can be met only by rethinking the purpose of foreign aid.

This year the administration is seeking $835 million for so-called defense suport. This means that, independently of outright military assistance, almost 50 percent of the program is considered a mere prop for U.S. military security. To a people accustomed to consider security only in terms of the military, it is becoming increasingly difficult to sell this type of economic aid. Moreover, such aid makes for hostility among the recipient nations, whose people are understandably suspicious of our motives.

Foreign aid would fare better both at home and abroad if only it were presented more idealistically. The program needs less stress on self-interest and more emphasis on our moral responsibility toward the poorer nations. Unless a better case is made for economic aid on its own merits, it will fail to gain the widespread support of the American people. As a first step in that direction, we suggest that economic assistance be divorced from the mutual security program, and that henceforth it be enacted as separate legislation on a long-term continuing basis.

Snohomish, Wash., Homestead Centennial

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. WESTLAND. Mr. Speaker, this is the year Snohomish, a city in my district in Washington State, celebrates its first Homestead Centennial. I believe it is fitting that recognition be given to this city for its 100 years of growth and progress.

Before 1859 there was no permanent settlement in what is now Snohomish County. These were the days when small bands of Indians existed by hunting in the virgin forest that covered the region and fished the streams. The canoe was the only practical mode of transportation.

The real settlement of the county began in 1859, and its cause was the relief that a military road would be constructed between Fort Steilacoom to Fort Bellingham. A number of men at Fort Steilacoom, watchful of an opportunity to improve their financial status, conceived a plan to build a ferry and a town at the point where the road would have to cross the Snohomish River.

They sent representatives to the site with instructions to acquire and hold squatters rights to the land in the vicinity of the proposed ferry.

The military road was extended northward across the river in 1859, but the next Congress, instead of voting appropriations for its completion, decided to abolish both of the forts. This action put an end to the road building by the Federal Government. As a consequent, all but two members of the syndicate to build Snohomish City withdrew.

One of these men, E. C. Ferguson, moved to the site and established a store. A number of young men who had worked on the military road were among the first settlers. Election returns show that 17 men voted at Snohomish City on July 9, 1860.

Snohomish City developed slowly although Mr. Ferguson never gave up the project and the county seat was situated there by vote of the people in 1861. Two decades passed before the prospect of a railroad stimulated business and speculation in the town and county. The railroad anticipated in 1887 was an accomplished fact in 1888, when the first train crossed the bridge near Snohomish City at 9:30 a.m., September 15.

A year later Snohomish boasted three general merchandise stores, four groceries, four hardware stores, three drygoods, and a number of pharmacies, meat markets, hotels, livery and sale stables, and bookstores.

Although the county seat was moved to Everett, Snohomish continued to grow. Snohomish was incorporated as a third class city by an act of the Washington State Legislature in 1890, and has a mayor-council government.

Today Snohomish has an estimated population of 4,000. Its industries include sawmills, cold-storage warehouses, and dairies, and its principal products are frozen foods, dairy products, and lumber. There are two railroads now, a weekly newspaper, hotel, and numerous small businesses.

Serving the families of Snohomish are 14 churches. Schools include a senior high school, junior high school, three elementary and a primary school. It has a first-class post office, library, and three parks. And, as in the past, its young men have responded to their colors by serving with Snohomish's fine National Guard unit.

To climax the 100th year of Snohomish, civic, religious, military, service, and industrial groups have worked together to present a week-long program between July 21 and 26. Although hundreds of townspeople have put in long hours during the past 2 years to assure a successful climax, the leadership has been placed in the hands of the following:

The president of the board of directors and active general chairman is Dr. Leeon F. Aller. Members of the board are Ed Johnson, Clyde Kinch, Clarence E. Brooks, and Lois Ekloff.

Committee chairmen and special events leaders include Harry Stites, Lawrence Bickford, Ernie Pinkham, Ernie and Lila Rainwater, Lois Crocker, Gerald Bauer, Randy Dawson, Ray Danklesson, Emma Dunbar, Roy Marler, Wilbur Ellis, Irene Swoboda, Bill Heath, Harold and Flo Rothgeb, Don Freeman, Helen Beasley, Betty Vanderhyde, Cristie O'Neal, Charles F. Burt, Oscar Jurgens, Freeman Lancaster, Ruby Lancaster, Mrs. John Gale, Hal Moe, Ed Stevens, Charles Sekulich, John Childers, Clarence Boyd, Evelyn Lysons, Neil Cochran, Clayton Knittel, Crystal Cochran, Virginia Aller, Laura Smith, Dale Renberg, Herb Stuart, Bob Twichell, Violet Lambert, Ed Holm, Fred Hereth, Burdette Ferguson, Harold Illman, Eldon Harvey.

During this week that will climax the celebration, bearded gentlemen and their ladies, dressed in the manner of the city's pioneers, will promenade the sidewalks of Snohomish. There will be Indians, more friendly today than 100 years ago, historical window displays, and a carnival to add color.

The opening day, fittingly, will be Young America Day. There will be a youth parade, picnic, games, contests, junior achievement award dinner, and the centennial queen's ball.

On Ladies' Day, Wednesday, July 22, the ladies' centennial tea and style show, the centennial queen's coronation, and the premier performance of the historical pageant "From Ox Team to Jet Stream" are scheduled.

Thursday will be Agricultural and Industry Day. A parade of old and new farm equipment, judging of the centennial belles, and fireworks will be the most interesting features.

Pioneer and Indian Day is scheduled for July 24. Plans have been made for tours of historical landmarks, industries and buildings. There will be a pioneer picnic, homecoming recognition ceremony, Indian activities, barbecue, and street dancing.

Saturday, July 25, will be Neighbors Day. This is the day of the centennial parade, boat races and the centennial ball.

The Centennial Religious Dedication Day will fall on Sunday, and will be observed in all churches. There will be an all-faiths religious observance in an open-air program with music by the massed choirs of all Snohomish churches.

Mr. Speaker, those of us who know the city of Snohomish have reason to be proud of the accomplishments and foresight of the early pioneers. We rightfully feel pride in the efforts and hard work of each Snohomish citizen who daily makes the city one of the best of its size in the Nation. Much has been accomplished in the past century, I am sure even more will be accomplished during the next 100 years.

Twenty-third Strawberry Festival, Marysville, Wash.

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. WESTLAND. Mr. Speaker, Marysville, a city in my district of Washington State, is celebrating its 23d Strawberry Festival with events scheduled this week. The climax of the celebration, to which thousands of persons come each year, will be a grand parade and the Strawberry Cup races, July 18, 1959.

The festival originated in 1932 when the Marysville Commercial Club saw the need for a distinctive celebration for the

community. Because the area around Marysville produces many strawberries, eggs, and milk, the club decided to combine the three in strawberry shortcake to be served at the peak of the strawberry season to the young and old who would visit the city.

From a small, local event the celebration has grown to command top attention among communities of the State. The strawberry shortcake is not free anymore, but it is well worth the nominal charge, especially when served under the watchful eye of the Strawberry Festival queen.

I believe it is fitting to recognize this traditional festival that has been interrupted only during the years of World War II, and to recognize the efforts of the many persons who work to make the festival a success.

An Austin, Minn., Taxpayer Views the Congress

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. QUIE. Mr. Speaker, not long ago I received a letter from an Austin, Minn., constituent which is typical of many that I have received from the First District.

In order that the entire Congress might read what a number of people in the district are saying, I give you this well-written letter by Mr. George Brown:

AUSTIN, MINN., *June 30, 1959.*
The Honorable ALBERT QUIE,
House of Representatives,
Washington, D.C.

MY DEAR MR. QUIE: I am very concerned over the apparent disinterest of the present Congress in three very important subjects affecting the American taxpayer: (1) inflation; (2) farm surplus; and (3) effective labor legislation.

I am aware that a much-amended wheat bill has been passed by both the House and Senate and vetoed by the President, because it failed to realistically attempt to solve the tremendous surplus problem; I also believe something similar occurred with regard to a tobacco support measure. Basically, however, the present Congress has done nothing to assist the American taxpayer out of the huge cost of warehousing, storing, and transporting our tremendous farm surplus in this country.

Equally important to us, the taxpayer, is the shrinking dollar. Certainly one of the reasons why this dollar has more than halved itself in value since 1940 is the tremendous budget deficit you, the Congress, have allowed to add up year after year, and it appears that rather than concern ourselves about reducing our Government expenses, our object has been to increase them. The biggest slice of the budget has gone, and will continue to go, to national defense. If half the things that we read in reliable newspapers and periodicals about the tremendous waste in our national defense program through duplication, petty jealousies, favoritism, etc., are true, it would appear that this slice could be reduced considerably.

After much publicized committee hearings on racketeering in unions, we believe that the average citizen fully expected that some type of legislation would be enacted during this Congress to protect the many thousands of honest, hardworking union members. Here again little or nothing has been done. People like Hoffa continue to throw challenge after challenge at you, the legislative body of our Government, and the committees that represent us in the investigation of the various unions.

One of my favorite sayings is: "There can be no freedom without a measure of discipline." We think it is time that Congress enacted some discipline for the American people without regard to political interest; we think it is time for the Congress to face the reality of the problems that are with us and that have been with us for some time, instead of postponing them for another year, another time, in the interest of avoiding political confliction.

Yours very truly,
GEORGE BROWN.

Backstairs at the White House or You Could Call It Burning Tree

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article announced that the President has indeed been spending time in the White House in Washington. This I am sure will be a matter of great comfort to all of us who had begun to wonder whether the White House was the proper investment to the people of the United States in view of the President's many travels, vacations, golf jaunts, fishing trips, et cetera.

For the benefit of my many friends and colleagues on both sides of the aisle I insert the article which appeared in the Washington Daily News of July 9, 1959, chronicling how, although at least present physically in the White House, the President has been having a difficult time with his golf game.

I am sure all the President's many friends and critics wish him not only improvement in his golf game but also in his relations with Congress and in his occasional attention to the weighty problems of running the Government of the Nation of some 177 million souls who look to him for leadership.

The article follows:

BACKSTAIRS AT THE WHITE HOUSE—YOU COULD CALL IT BURNING TEE

(By Merriman Smith)

Even the tourists gawking through the White House fence realize that President Eisenhower is having trouble with his golf.

The trouble really may be with Congress or Nikita Khrushchev, but the Chief Executive is sore at about every club in his bag.

TEED-OFF

Last weekend at Gettysburg, the President was threatening loudly to give up driving entirely because of the deteriorating quality of his tee shots.

And last Monday afternoon, he walked outside his office at the White House to hit some practice shots up to his putting green.

Here's what the tourists could see:

The President, standing deep in his one and only sand trap, taking a mighty belt at the ball. Ball moved only a few feet, remaining securely in the grasp of the trap.

The President then grasped his club anew and instead of hitting at the ball, he pounded the head on the edge of the trap. He slammed the club down again, tossed it to the ground near his bag and stalked out of the trap.

Furthermore, if he reads this he might go to club-swinging all over again. Those who should know say the President is getting a trifle sore about reading in the newspapers how he dubbed a golf shot and then commented on the same in a tone of voice rarely heard on radio and television.

SPECIALIST

All golfers go through trying periods when they seem to do everything wrong. Most weekend hackers attract only the attention of their foursomes, but when a President gets angry or vocally self-critical on a golf course, a lot of people know it.

If it happens at Burning Tree, only the members know it. But at the Gettysburg Country Club which is a semipublic course (outsiders can play by paying a greens fee slightly higher than that charged members), the number of people aware of a Presidential outburst depends entirely on where it happens.

If Mr. Eisenhower is close to the clubhouse or near another foursome, it would be most unnatural for other players or standersby to ignore a Presidential cry of dismay over a simple iron shot that either soars over the green or poops out dismally short of it.

STEAM

The President has some good friends who wish he wouldn't get so disturbed about his golf game. But their feelings are tempered by the possibility that he's using golf to let off steam that must build up within him as he copes daily with a multitude of crises, any one of which would get the average man excited for a lifetime.

Any number of emotional factors could be responsible, but the President seems to be hurrying his golf game more than he did a year ago. He may not realize it, but from somewhat of a distance, he seems to be playing impatiently. He can't wait to hit that next shot.

Golf is a game of a thousand errors and Mr. Eisenhower seems to search for new ones when he slugs a ball into the rough. Meticulously he never blames external forces, only himself. This well could be some sort of barometer of strictly business matters.

It will be interesting to see whether his game improves after Congress goes home.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

How To Win the Economic Cold War

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 16, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address which I delivered on May 2, 1959, before the New Hampshire Council of World Affairs at Manchester, N.H., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW TO WIN THE ECONOMIC COLD WAR

(Remarks of Senator HUBERT H. HUMPHREY before the New Hampshire Council of World Affairs, Manchester, N.H., May 2, 1959)

I am honored by your invitation, and honored to speak from a platform occupied, just a year ago tomorrow, by a valiant and dedicated soldier of peace, John Foster Dulles.

I know that all of you join me in wishing Mr. Dulles well, and in wishing Godspeed to his successor, Christian Herter.

The question before you is, How best can the United States fight the economic cold war with the Soviet Union in the atomic age?

The first thing to do in any fight is recognize what you are up against.

We are up against a nation that is streaking ahead in economic growth and technology, and that is totally dedicated to spreading its influence throughout the world.

Yes, economic growth and total dedication are the two forces we face in the Soviet Union.

As to growth, America and Russia today are disturbingly reminiscent of the fable of the tortoise and the hare.

Before sputnick streaked across the heavens, we assumed that we were the biggest, the fastest growing and strongest economy in the history of mankind. And for a long time we were, and we still are, the strongest and biggest.

But we became smug and complacent. We closed our eyes to the increasing signs of growth in Soviet technology and productive capacity. The hare, we thought, would win the race, "paws down," so to speak.

But while we rested on past laurels, the tortoise plodded on, seemingly unnoticed. Then came sputnik and, later, the first manmade planet, both stamped, "Made in Russia"—dramatic proof of the vast strides in technology and economic growth that had taken place in the Soviet Union.

We were momentarily stunned. But have we yet really faced up to the hard fact that the tortoise is still advancing far faster than the hare?

How many Americans realize that the Soviet economy is growing three times as fast as our own? Economists say that the Russian economy is growing between 6 and 8 percent a year. For the past 6 years, ours has been growing at the rate of 2 percent a year.

Many take comfort in the fact that American productive capacity is still so much greater than that of the Communists and it is. But we do not always use our capacity to the fullest.

Last year, when the American steel industry was running at about half of capacity, economists tell me that the combined steel production of Red China and Russia exceeded that of the mighty United States.

Think, for a moment, of the impact this has on the rest of the world—especially those nations of Asia and Africa, worn down by centuries of poverty, who are struggling now for a place in the political economic sun.

No one needs to remind them that 40 years ago Russia was a primitive, uneducated nation virtually devoid of industry or technology.

No one needs to tell them only 10 years ago, Red China was even more backward.

Yet, in a short space of time, Russia and China together were able to outproduce the greatest industrial Nation in history in so vital a commodity as steel.

In just four decades, the Soviet Union has produced a technology that could put the first earth satellite into orbit and the first man-made planet into space.

To the brown man or the black man or the yellow man in the early stages of his own war against poverty, this story of Russian and Chinese progress has the same excitement, the same inspiration, as the rags-to-riches rise of the self-made millionaire in America.

So the first thing we must do in waging our economic cold war is to face the facts about the growing Sino-Soviet economy and about the impact it has on the rest of the world.

And we must no longer underrate the Soviet growth of the past of the Soviet goals for the future, for they have met their goals in the past and they are likely to meet them again. And their stated goal is to outproduce America by 1970.

Make no mistake about it. Mr. Khrushchev is looking ahead 10 to 20 years. He has ambitious plans.

By 1965 he aims to add 30 million tons of steel capacity; more than 100 million tons of oil production; nearly 300 billion kilowatt-hours of electricity.

But he is not just planning an expansion of capital goods. Meat production is to more than double by 1965; butter production, already almost equal to ours, is to increase by almost 400,000 tons. There are to be more shoes and clothes for the Russian people, who are hungry to improve their everyday life.

We must not be lulled into complacency by the doctrine that a centrally planned and tightly regimented economy cannot match a free economy with its profit incentives. Four years ago, the Soviet leaders departed from the orthodox doctrine of Marxism, and copied the incentive and productivity ideas from the very capitalistic system they decry.

Yes, we can expect Russia's economy to grow apace—aided by the fact that the Soviet state manages the entire economy to serve national goals. It sets priorities on the use of resources and the plowing back of capital into the most needed uses.

This expanding Soviet economy will furnish an ever stronger base for the waging of worldwide economic warfare—an economic offensive in trade, aid, and investment.

The Soviet trade offensive is farflung and powerful. Russia has trade missions in many capitals of the world, including countries that have never had any trade with the Soviet Union.

These missions are quietly negotiating commercial trade agreements.

Russia has surpluses with which to bargain. And, unlike the United States, she vigorously and willingly uses them. She is using every weapon of economic power—including dumping, barter, credits, and trade.

In the field of aid and investment in foreign lands, Russia has taken over an American idea. Where America blazed the trail with the Marshall plan and point 4, Russia is following, with great energy and with considerable success.

Russian aid mainly takes the form of long-term, low-interest loans to foster capital investment.

In the past 3 years, the Soviets have extended more than a billion and a half dollars in credits.

There are extensive Soviet projects in the United Arab Republic, and in seven Asian countries.

The Soviets are helping to build a steel mill in India, Aswan Dam, roads, and bridges in Egypt, a cement plant in Afghanistan, a sugar factory in Ceylon—all of this coming, mind you, from a country which only four decades ago could hardly have built a factory within its own borders, much less help another nation to do so.

And all of this aid is furnished with an almost fanatic zeal. Foreign aid is not just a temporary side activity for the Russians. They mean business—and they are in the game for keeps.

Let me give you an example of Soviet oversea aid and in another area. The Soviets graduate some 18,000 doctors a year. No doubt they are sorely needed in Russia. Yet 2,000 of them are earmarked for export, so to speak, to foreign lands.

The Russians profess that this aid, these technicians, are offered without political strings attached. Their offers are attractive. It is litle wonder that needy countries accept them readily, and often ignoring the political implications of such generously offered aid.

How must America answer this challenge?

Let us be quite clear about this: the Soviet challenge is a total challenge—requiring a total response.

The Soviet challenge is across the board—more than military, it is also political, cultural, and above all, economic, public, and private.

Piecemeal, off-again-on-again improvisations are not sufficient.

We must plan long-range, and we must have the determination and the endurance to carry that planning through. Behind a military shield of strength, we must move forward on each of the nonmilitary fronts; everywhere we must sieze the initiative.

Can we do it?

We can do it, and we must. We have the capacity. We have what we need to meet the Soviet challenge, but we are not using it. It is only that our leadership has so far lacked the will to do what we can and must do.

There are hard facts of life that we must face.

First of all, we must build an ever-stronger economy at home in order to do what necessity and prudence demand abroad.

Only an expanding, fully productive U.S. domestic economy can support a sufficient effort in American foreign policy.

In the past 5 years, we have allowed our economic growth to lag; we have allowed some factories and workers to be idle—and we have deprived ourselves of billions of dollars in revenues that might have been devoted to needed tasks, at home and abroad.

Our economy is still not producing or growing to capacity. Until it does, we will be hampered in our ability to help others as we should.

Secondly, we must increase the flow of trade with other countries.

Our trade with other countries is not just a matter of profit making, but one of fundamental national power and policy.

We are a wealthy Nation. With only 6 percent of the world's population, we produce 40 percent of the world's goods and services.

Yet our country is dependent on imports from all over the world. Every automobile, for example, needs 38 essential materials which are largely imported. Not a single pound of steel can be made without manganese—nine-tenths of which we get from abroad.

Our economy also depends on exports: any substantial drop in exports could damage our entire economy. But America cannot export unless other countries have dollars to buy our goods and unless we make goods that people abroad will buy.

Thus, both the free world and America itself will benefit from a high level of trade. This may require some adjustments at home, but, as Adlai Stevenson once put it, "We shall have to make the choice between relatively minor adjustments caused by increased imports, and major adjustments caused by decreased exports."

Next, we must put our agricultural abundance to good use in waging the cold war.

The agricultural abundance of the United States is not a deficit but an enormous concentration of usable wealth.

There is something wrong when a nation stores food in caves while millions of people go unfed.

I can assure you of this: If Mr. Khrushchev had our farm surpluses in Russian warehouses, he would not be at a loss to dispose of them. He would be using them to win friends for Russia.

How to dispose of these surpluses overseas without disrupting world prices and without injuring other friendly countries who need to export farm products is not an easy problem.

But I believe a way out can be found. I believe the utilization program under Public Law 480 can and should be enlarged so that our farm abundance can serve the needy overseas without hurting our closest allies, and made to serve the ends of national policy.

On-again, off-again capitalization of industrial development in the have-not areas of the world must be replaced by long-term, firm commitments by the United States.

We must launch a 5-year development loan program providing $1½ billion yearly of desperately needed capital to underdeveloped nations.

In the 19th century, England provided vast sums of capital for the development of economically backward countries—including, I might add, the United States.

Today, America, the largest source of capital, is putting far less capital into development abroad, proportionately, than Britain in the 19th century.

Senators FULBRIGHT, KENNEDY and myself have proposed that we devote a billion and a half dollars each year to this 5-year development loan program.

Consider, if you will, the fact that we spend tens of billions of dollars every year for arms and weapons—the means of destroying our fellow man. If we afford to do that, can we not afford to spend a small fraction of those sums not for destructive purposes, but to help build a better life for the peoples of Asia and Africa?

And can we not, finally, recognize that this task of helping others to help themselves is not a passing task; the problem of poverty and ignorance will not vanish next year.

Can't we face up to the fact that our efforts must be long range? Why must we go through an annual agonizing reappraisal of our entire aid program?

We must put this program on a long-range basis, so that we can plan a comprehensive and effective program, and so that others can count on us for continued help. We must avoid the waste of stop-and-go, hot-and-cold programing.

Beyond these specifics, there is an overall change in emphasis in American policy that must take place if we are to win the economic cold war.

We must stop basing our aid on fear of communism and start basing it on love of our fellow man. We must be for people, peace and progress—and not simply against the evil threat of communism.

The preamble to our foreign aid program actually states that it is our policy to continue our aid programs only as long as [the Communist] danger persists.

The main effect of such a declaration is to turn communism into a sort of natural resource for countries that seek our aid—a resource worth millions in American aid.

There is the fictitious story of the tiny nation which, devoid of any Communists, was denied any U.S. aid and went to its neighbor to borrow a few Communists—only to be told that the neighbor needed every Communist it had.

This is not the American spirit. Nor is it the Christian spirit.

I say that we must help people not just because we detest communism, but because they are God's children, and they are hungry; they need our help.

I say that we should try to help educate them because ignorance defiles man's dignity.

What America needs more than a change of program is a change of heart.

It is not enough to merely perform the ritual of foreign aid. There must be faith—a faith in the importance and rightness of our policies.

We need more than the form—we need the spirit that inspired the original Marshall plan and the point 4 program if our aid programs are to be genuinely constructive and effective.

All that America has to do is to be herself. We know what hardship is; our history is replete with it. But our people banded together in adversity; the strong aided the weak. In unity we found strength.

It is in a unity of peoples who want to prosper and be free, that we can find an enduring peace. We can forge that unity by helping others along the road that we ourselves have traveled since we became a fledgling nation, only a century and a half ago—by sharing with others our own heritage of freedom.

Address by Secretary of the Interior Fred A. Seaton

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, July 16, 1959

Mr. CURTIS. Mr. President, I ask unanimous consent that an address delivered by the very able and distinguished Secretary of the Interior, the Honorable Fred A. Seaton, before the Rivers and Harbors Congress, Washington, D.C., May 15, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF THE INTERIOR FRED A. SEATON BEFORE THE RIVERS AND HARBORS CONGRESS, WASHINGTON, D.C., MAY 15, 1959

Let me begin with a statement which I sincerely believe to be true.

Neither water drops nor kilowatts are Republican or Democrat. To make political footballs of public or Federal water and power development is the surest way to kick them to pieces.

Historically, farsighted men of both major parties have together fought a never-ending fight for more than a half century—a fight to assure orderly and comprehensive harnessing of American rivers for irrigation, flood control, power development and, more recently, for recreation and fish and wildlife benefits.

With no intention of trying to minimize the reclamation accomplishments of previous administrations, I remind you that the Eisenhower administration has written a record of reclamation progress in the past 6 years of which it can pardonably be proud. That record means better living for countless Americans through long years to come.

In the 6 fiscal years of this administration, 1954–59, the Bureau of Reclamation of the Department of the Interior has had appropriated to it, through annual appropriation acts, a total of $1,143 million.

Putting it another way, since President Eisenhower entered the White House, the Bureau, for which formalized appropriations began in 1907, has received more than $1 out of every $4 appropriated to it.

In connection with these appropriations there is one very important fact which many sincere but ill-informed people do not know, or fail to understand. Simply stated, the sums in the Reclamation budget primarily are not expenditures in the ordinary sense of the word. Actually, they are sound investments. Ninety-three cents out of every dollar expended by the Bureau for construction and operation of projects will be paid directly back into the Treasury of the United States. Also, interest is paid on the amounts allocated to provide commercial electric power and municipal and industrial water. The other 7 cents in each dollar is charged against flood control, fish and wildlife conservation, and the development of areas for recreation.

The reclamation record is clear.

Between the beginning of the program and June 30, 1958, water and power users had repaid $365 million. Gross revenues from the sale of power, now averaging more than $76

million each year, make repayment ahead of schedule. Irrigators' repayment installments due under existing contracts are 99.8 percent current.

On the $4 billion of work now under construction by the Bureau, water and power users will make similar repayments.

Now let's look at some of the specific achievements since 1953.

The Bureau has installed generating facilities with a capacity of more than 700,000 kilowatts, including, for example, the 72,000 kilowatts of capacity put in at the Flatiron plant of the Colorado-Big Thompson project, the 114,000 kilowatts at the Palisades project in Idaho, and the 162,000 kilowatts at the Folsom plant of the Central Valley project of California.

From calendar years 1953 through 1958 the Bureau's activities provided facilities to serve approximately 900,000-irrigable acres in the West. And for the past 3 years land irrigated by Federal reclamation—authorized both before and since 1953—produced crops worth more than $900 million each year—the most valuable crops in reclamation history.

Here I want to recall to your mind the fact that these lands do not contribute in any significant amount to the surpluses of the so-called six basic agricultural commodities. In the 1957 crop year Federal reclamation lands produced only 7 percent of our upland cotton, 2.3 percent of our wheat, one-half of 1 percent of our corn, four-tenths of 1 percent of our rice, no tobacco, and no peanuts.

The main impact of the Eisenhower administration's achievements in reclamation will come 5 and 10 and 30 years from now, as more and more dams and reservoirs and powerplants which it has sponsored, and the Congress has authorized, go to work for the American people.

There are 48 of these new projects, or project units authorized, with a total estimated capital investment of nearly $1½ billion.

They will have a storage capacity of nearly 42 million acre-feet and will ultimately bring full and supplemental irrigation water to nearly 832,000 acres of land. Furthermore, they will provide 201,000 acre-feet of water a year to cities and industries, and have a generating capacity of nearly 1¾ million kilowatts.

Among these projects is the $24 million Talent division of the Rogue River basin project in Oregon, with a reservoir capacity of more than 100,000 acre-feet scheduled for completion by fiscal year 1962; the Trinity River division of the Central Valley project of California, with an ultimate installed capacity of nearly 370,000 kilowatts, and 2¾ million acre-feet of storage capacity, for completion by fiscal year 1963; the Ainsworth, Lavaca Flats, Mirage Flats extension, and O'Neill units of the Missouri River basin project in Nebraska, with a total cost of $93 million; the $45 million Glendo unit of the Missouri River basin project, scheduled for completion in fiscal year 1961, which will have a reservoir capacity of more than 800,000 acre-feet. It will bring flood-control benefits to the North Platte Valley from Glendo in Wyoming to Lake McConaughey in Nebraska; and the billion-dollar upper Colorado storage project—the largest reclamation undertaking ever approved in a single piece of legislation. It is one which will provide more than 1,200,000 kilowatts of electrical generating capacity and bring water to nearly 350,000 acres of thirsty land in five States. The completion of this project will be a noble monument to this administration's foresight and to the support given by both Republicans and Democrats in the Congress. The step-by-step completion of the participating units of this tremendous undertaking will do much to round out a full century of Federal reclamation achievement.

On some of these projects and on others authorized earlier, the administration has made 37 new starts. These will involve nearly a billion dollars.

Under the administration-sponsored Small Projects Act—a new and major milestone in reclamation legislation—the Bureau is now reviewing about $200 million of applications or expressions of intent for loans of $5 million or less for the construction and rehabilitation of irrigation facilities. This program is a perfect example of the partnership or teamwork concept in action.

Moreover, the administration has recommended to the Congress for authorization Bureau of Reclamation projects totaling more than $700 million on which the Congress has not yet acted. These include the $45 million Burns Creek Dam project in Idaho, the $159 million Fryingpan-Arkansas project in Colorado, and the $483 million San Luis unit of the Central Valley project in California.

I know, of course, that there are enthusiasts who sincerely believe they are making a contribution to reclamation progress by trying to lengthen that list. It is our conviction that overextending the reclamation program—starting projects without a reasonable expectation that there will be enough money to complete them efficiently and expeditiously—can only result in costly construction stretchouts—stretchouts which are bad for the irrigator, the power user, and the taxpayer.

What we have been trying to do since 1953 is not just to put more ink on the engineers' blueprints or to build paper pyramids of bills authorizing projects for which there may be no appropriations, but rather to build real dams with real powerhouses across real rivers and thus put kilowatts on the line and water on the land. In this respect, we have had to conduct ourselves in the realization that Congress, in every session but one since 1953, has not seen fit to appropriate as much for reclamation purposes as the administration had recommended.

We must never forget that the continuing advancement of reclamation depends upon the continued understanding and support of the American people. Here, your own organization, and others vitally interested in the conservation of our water resources, can be of great help—both to keep a sensible and healthy program going and to prevent the program's being seriously burdened by overzealous kindness.

You and I will agree in our determination to continue the advancement of reclamation. In that common cause, we shall continue to rely on you, as we know we can, to see the facts as they are. That we must do if we are to maintain the progress of this program which has already brought such great good to our land.

Milwaukee Journal Commends Senator John Williams as Hard-Hitting Foe of Waste in Government

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has warmly commended the Senator from Delaware [Mr. WILLIAMS] for another splendid job he has done in exposing waste in Government.

I ask unanimous consent that this editorial entitled "Waste, Waste, Waste: What's Being Done About It?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

WASTE, WASTE, WASTE, WASTE: WHAT'S BEING DONE ABOUT IT?

At the Philadelphia Naval Shipyard experience shows that there is a need for about 40 sandalwood chairs during each 9-month supply period. The Comptroller General checked the yard recently and found a stock of 1,055 of the chairs—enough for 20 years' issue.

This was one of the examples of waste and overexpenditure cited to the Senate the other day by Senator WILLIAMS, Republican, of Delaware, that hard-hitting foe of waste in Government.

Four naval shipyards were checked by the Comptroller General. And the story was much the same everywhere. There was little or no accounting control over $40 million worth of surplus materials found in the four yards. There was constant overestimating of materials needed. Surpluses were held instead of being released. Reports of materials on hand were inadequate.

WILLIAMS told of materials ordered by the Mare Island yard at San Francisco for repair of four destroyers. Materials valued at $537,000 were earmarked for the repair work. Only $117,000 of them were used. The Comptroller General checked 2,512 items ordered for repairs on 6 submarines and found that only 622 were needed and used. One shipyard needed $4,200 worth of teakwood and ordered it twice—ending up with $14,000 worth including some that it already had had on hand.

The Comptroller General reported nearly $850 million worth of materials used by shipyards in excess of need for the fiscal years 1956–58.

Here is another shocking case of waste, and another case in which WILLIAMS is doing the country a service by making it public. What the taxpayer keeps wanting to know is: What's being done about it?

Congressman Charles O. Porter, of Oregon, an Example of the New Tempo in Politics

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. NEUBERGER. Mr. President, the belief that a Representative or Senator ought not concern himself with affairs away from home is rapidly disintegrating. The men and women of the 20th century find themselves a part of the world—not apart from it.

One of the people helping them realize why this is true is Representative CHARLES O. PORTER, of Oregon. How he is doing this is vividly summed up in an excellent and thoughtful editorial entitled "On the Run, But Not Ducking," which appeared in the July 7, 1959, edition of the Eugene (Oreg.) Register-Guard.

Congressman PORTER's hometown is Eugene. The Register-Guard is his hometown paper. It is a paper quick to commend and quick to reprimand when it thinks that is in order. As the editorial writer observes:

One of the reasons we lend him (PORTER) general support is his willingness to oppose, and to be opposed. We enjoy exchanging brainstorms and brickbats with CHARLIE PORTER.

I think the editorial intelligently explains the speed of our age and demonstrates the many areas in which an elected representative can be of service. I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON THE RUN, BUT NOT DUCKING

One of the best living demonstrations of the tempo of our age is the Fourth District's Congressman, CHARLIE PORTER. Monday, only a few moments after concluding an informal chat with him on half a dozen subjects, we found in our mail a mimeographed copy of remarks he made last Wednesday on the floor of the House. To oversimplify, and thus avoid beclouding the point of this comment, Congressman PORTER's Wednesday address had to do with the need for revision of the United Nation's Charter, as determined at a World Parliament Association conference he had attended the previous week in London.

Since leaving London, we thought, our Congressman has been back to his desk in Washington, has had time to prepare an important report on world law (and, somewhat as an aside, eyewitness notes on British use of American-made missiles). He has flown home to attend the funeral of a political colleague and friend, Dave Epps, and to visit western Lane for an on-the-scene check of proposals to create a national seashore park. On top of this, he's managed some visiting with his parents, friends and people, like us, whom he thinks should be better informed about our Government and its problems.

Despite it all, CHARLIE looked fit and rested Monday morning. Watching the time so he'd be able to drive to Portland and catch his plane back to Washington, he admitted qualms about Cuba's economic troubles, and denied that Red influence there is strong. He talked about Democratic presidential nominees, and, among other things, the outlook for pending labor-management reform legislation.

Reflecting upon his visit later, we were impressed by the man's continued, apparently inexhaustible vigor. And, by a remark he made about Fidel Castro needing opposition in Cuba.

Mr. PORTER observed that democratic government must provide means for peaceful expression of dissents to government policies. One major hazard of stifling opposition views is that of covering flaws and faults which even the best motivated policies will contain if they aren't forged in the furnace of hot and partisan debate. Cuba, our Congressman noted, does have freedom of the press—despite contrary reports—but there is yet no real opposition party, nor will there likely to be one until Castro schedules national elections and "gives 'em something to shoot at."

Congressman PORTER also used an example from Oregon politics to prove his belief that government is better when it is being hewed from two sides. And, we were mightily glad he did. Many times we agree with the Congressman; many times we don't. One of the reasons we lend him general support is his willingness to oppose, and to be opposed. We enjoy exchanging brainstorms and brickbats with CHARLIE PORTER.

Repeal of Loyalty Oath Provision of National Defense Education Act

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials commenting on the bill which Senator CLARK and I have introduced to repeal the loyalty oath provision of the National Defense Education Act. These two editorials reflect a widespread feeling that it is desirable to eliminate the requirements at once. I hope that the Senate will consider this bill in the near future.

There being no objection, the editorials were order to be printed in the RECORD, as follows:

[From the Beaumont (Tex.) Enterprise, June 26, 1959]

WOULD BE GOOD RIDDANCE

The Senate Labor Committee is to be commended for its approval of a bill to eliminate the loyalty oath requirement from the National Defense Education Act.

Especially gratifying is the fact that the vote for elimination was an impressive 12 to 2.

The measure would end the requirement that teachers and students receiving funds under the act must swear to their loyalties and attest that they have not been members of any subversive organization.

The rule is silly for the simple reason that a Communist would have no reluctance to lie under oath.

Then, too, it would make just as much sense to herd in the whole population for a loyalty oath as to require it of the civilians affected by this one act.

Senator JOHN F. KENNEDY, of Massachusetts, summed it up right when he said the oath has in no measure contributed to the national security, but it has led to serious and undesirable tensions between the Government and the academic community.

In other words, it is witch hunting that bears no promise of turning up witches.

[From the Pittsburgh (Pa.) Post-Gazette, July 2, 1959]

WHY PICK ON STUDENTS?

Pennsylvania's Senator JOSEPH S. CLARK and his young Democratic colleague from Massachusetts, Senator JOHN F. KENNEDY, deserve wide support for their legislative proposal to repeal the loyalty oath requirement in the National Defense Education Act.

Under this provision of the act, needy students seeking Federal loans with which to pursue their educations are required to sign disclaimers of subversive activities.

Several of the Nation's colleges, including three in Pennsylvania, have refused to participate in the loan program so long as this oath is required. Dr. Hugh Barton, president of Haverford College, has argued rightly that to file the disclaimer would be "tantamount to signing away one's right to freedom of thought as well as endorsing a Government action which makes the individual's opportunity for education contingent upon his personal beliefs." Senators CLARK and KENNEDY contend that the requirement is discriminatory against scholars as a class.

Arthur S. Flemming, Secretary of the Health, Education, and Welfare Department, under which the program is administered, has said that the "loyalty oath" does little or no good inasmuch as real subversives "have no scruples about signing such an affidavit and taking such an oath."

If needy students must sign a "loyalty oath," why not all the farmers who obtain Federal crop loans; why not all the myriad other beneficiaries of Federal largess? Since this requirement in the National Defense Education Act serves no purpose other than to discriminate against students, it ought to be repealed.

Money Troubles for Highway Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. WILEY. Mr. President, we recognize that, today, the national highway construction program faces serious curtailment unless Congress can find an equitable way to provide funds for financing.

We recall that the Highway Act of 1956 proposed to modernize our 41,000-mile highway system over a period of 13 to 15 years.

Now, unfortunately, money troubles threaten to retard or shut down operations. The Congress, I believe, needs to make every effort to find a fair, realistic method to provide the needed funds for this program.

Now—and in the years ahead—the country will need an improved highway system to handle the increasing volumes of traffic for pleasure and business—and possibly for defense.

If there is a broad-scope cutback, it would also have a serious impact on the economy. Currently, about one-seventh of the economy reportedly depends directly or indirectly on transportation on the Nation's highways. Stoppage of the work would mean loss of jobs, idling of roadbuilding equipment, halting of community and State development projects, and a number of other adverse effects.

As we know, the administration has recommended a 1½-cent increase in the Federal gas tax to provide the needed financing. However, there is considerable feeling that taxes on gasoline are already extremely high. Too, a careful study is needed on the impact which such an increase in Federal tax would have on State economies—which depend to a great extent upon gas taxes as a source of revenue.

Among alternative plans that have been offered are included:

First. A one-half-cent temporary gasoline tax increase coupled with a suspen-

sion of the pay-as-you-go amendment to the 1956 Highway Act and a 2-year stretchout of the construction program, now scheduled for completion in 1972.

Second. A 1-cent temporary gasoline tax increase, possibly with a suspension of the pay-as-you-go provision.

Third. Granting authority to borrow money from the Treasury; and others.

In view of this critical situation, the Ways and Means Committee has scheduled hearings on July 22, 1959, to consider this matter.

Out of this committee action, I would hope will come recommendations for an equitable way to provide necessary finances for the highway program.

Recently, I have received letters from a variety of organizations, including the Wisconsin Highway Users' Conference, Wisconsin Council of Agriculture, Wisconsin Milk and Ice Cream Product Association, and the Madison Chamber of Commerce on this financing problem.

By and large, these messages reflect opposition to increases in gas taxes.

The question thus arises: From what source can funds be derived if the construction program is to go forward?

Recognizing the significance of the road-building program to the Nation, I believe that Congress should make every effort to find such sources for this much-needed financing.

To give my colleagues the benefit of the views of these organizations—which represent a broad cross-section of interests—I ask unanimous consent to have the letters printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: The Wisconsin Council of Agriculture Cooperative, a federation of farm cooperatives representing 90 organizations and more than 80,000 farm families, is opposed to any increase in the Federal gas tax at this time. We feel that if a major part of the $1.6 billion that is diverted from the $3.6 billion Federal excise tax on gasoline were returned to the States as Federal aid for highways, it would not be necessary at this time to increase the Federal gasoline tax.

We hope you will give serious consideration to this matter and oppose the various proposals which would bring about an increased cost to farm people.

Sincerely yours,

RALPH M. COOPER,
Assistant Executive Secretary, Wisconsin Council of Agriculture Cooperative.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: The Wisconsin Milk and Ice Cream Products Association, which represents the great bulk of the independents, cooperatives, and major companies who are in the bottled milk and ice cream business in Wisconsin, would like to urge you to vote against any increase in the Federal gasoline tax rate.

Yours respectfully,

BURDETTE L. FISHER,
Executive Director, Wisconsin Milk and Ice Cream Products Association, Inc.

The Honorable ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: The 87 State organizations which make up the Wisconsin Highway Users Conference are deeply disturbed by proposals to increase the Federal gasoline tax and want you to know of their opposition to any increase.

The membership of the conference, representing a cross section of Wisconsin's citizenry, is already on record against any more gasoline taxes as indicated by their attached 1959 legislative program.

We are confident there is no popular demand for a highway program which is contingent upon a tax increase, in fact, we believe that the majority of the American people share our views. A Trendex News poll report, just released, affirms that "considerably less than half of the public wants the Federal highway program to go ahead as planned. Resistance to taxes is the major reason."

Any increase in gasoline taxes in unfair to the motorist, inflationary, and will be detrimental to our entire economy.

There is absolutely no reason to contemplate a gasoline tax increase as long as 42 percent of the special Federal automotive taxes now being collected from the American motorist is diverted to nonhighway use.

It is incredible that the motorist pays $3.6 billion in Federal automotive taxes when only $2.1 billion actually goes toward highway construction. If the remaining $1.5 billion which is now diverted for other purposes were rightfully spent for highway construction, it would not only keep the highway program on schedule, but would provide a surplus for future emergencies.

There are many factors which call for the defeat of any proposal to increase the Federal gasoline tax rate:

1. Any increase can have a serious effect on the U.S. automobile industry, and the economy as a whole. As one example, the trend toward foreign cars is growing rapidly and each foreign car purchased in America causes a loss of employment in the domestic automobile industry and the industries which supply it. A recent survey indicates that 88 percent of Americans who purchase foreign cars do so because of gasoline economy.

2. A gasoline tax increase will discourage highway travel, representing a threat to the investment of many small Wisconsin businessmen who make their living by providing services to the motoring public.

3. Reduced gasoline consumption means less gasoline tax revenue for Wisconsin and will seriously impair this State's ability to carry out the newly proposed highway program.

4. Any decrease in highway travel will have an adverse effect on States such as Wisconsin which depend heavily upon the tourist industry.

5. Present taxes on gasoline are already far out of line with any comparable product in the entire economy. Wisconsin motorists already pay a sales tax on gasoline amounting to 38 percent whereas the excise tax on the most trivial of luxury items is about one-fourth as much.

6. The trend toward foreign cars not only idles American workers but will impair the ability of the American automobile industry to underwrite present personnel costs and to carry out planned expansion.

7. Higher gasoline taxes add to the cost of nearly every consumer item. Wisconsin farmers depend upon commercial trucks to move their products to market and increased transportation costs will generally lead to higher prices.

8. The Federal interstate highway program was enacted on the claim that it was essential to the national defense, civil defense and the well-being of the economy as a whole. It is grossly unfair to compel the motorist to finance a highway system which benefits everyone, regardless of whether they own an automobile.

9. The Wisconsin motorist is already paying a total of $105 million annually in combined Federal and State gasoline taxes, $43 million in other excise taxes, $38 million in State registration fees as well as other special automotive taxes. He has no special ability to pay taxes but is an average American with average means. Over 50 percent of the cars in the United States are owned by families earning less than $5,000 a year.

Under the circumstances we have just outlined, we sincerely believe that the citizens of Wisconsin will greatly appreciate your efforts on their behalf by vigorously opposing any increase in the Federal gasoline tax rate.

Yours very truly,

LOUIS MILAN,
Chairman, Wisconsin Highway Users Conference.

JULY 3, 1959.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: It would seem to me that the current attempt to increase the Federal gasoline tax should be opposed. The present Federal tax of 3 cents per gallon, in addition to our State tax of 6 cents, makes a total of 9 cents per gallon tax. I am sure you will agree that this is a high percentage of tax on any one product.

Furthermore, I understand that about $1.6 billion of the $3.6 billion collected last year by the Federal Government in automotive excise taxes is being diverted to the general fund. I believe that this $1.6 billion should also be allocated for road construction purposes before any additional gasoline tax is voted.

Sincerely,

I. W. LACKORE,
Executive Director, Madison Chamber of Commerce, Inc.

Mayor Zeidler, of Milwaukee, Pleads With President Eisenhower for Urban Renewal

---

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. PROXMIRE. Mr. President, one of the outstanding experts in the country on urban renewal is the mayor of Milwaukee, Frank Zeidler. On July 10 Mayor Zeidler wrote President Eisenhower calling for a strong urban-renewal program. This letter puts the case for an adequate urban-renewal program so cogently that I ask unanimous consent that I ask unanimous consent that it be printed in the Appendix of the RECORD so that all Members of Congress will have an opportunity to read it.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAYOR'S OFFICE,
Milwaukee, Wis., July 10, 1959.

President DWIGHT D. EISENHOWER,
White House, Washington, D.C.

MY DEAR MR. PRESIDENT: In view of the serious problems of housing and urban renewal in the United States, permit me to

make some comments on the situation, in the hope that you will support a strong program of urban renewal.

As the older parts of American cities continue to decay, there is now only one effective solution to the problem, and that is through a program of slum prevention, slum elimination, and rehabilitation, with joint participation by Federal and city agencies sharing in planning and costs.

It has been argued that slums are local responsibilities and should be eliminated by use of State and local funds only. The cities have done their best and have strained their financial resources in many instances to match Federal grants. In our own State the cities have had a great deal of difficulty in qualifying for Federal urban-renewal funds, owing to obsolete prohibitions embodied in the constitution of the State of Wisconsin affecting municipal powers. The cities twice have had Federal urban-renewal funds withdrawn because of difficulties in State law. Moreover, the State itself is having financial problems which would deny any hopes of State grants for urban-renewal funds. Even if the State of Wisconsin had adequate funds for urban renewal, it appears to be unable, for constitutional reasons, to grant State funds to cities for this type of internal improvement. Many States have been unwilling to help their cities, even when they could, and as a result cities have turned to the Federal Government in desperation.

It has been argued that the urban-renewal program is inflationary. I cannot believe that any program which adds to values as much as the urban-renewal program does can be so considered. It provides real, actual capital assets that are productive to the Nation's wealth. Indeed, it could be argued that if the urban-renewal program is inflationary, then so are any capital improvement programs of any government, for the paving of streets, the provision of sewerage and water, the furnishing of schools and museums also add to costs. But the values thus created are the true wealth of the Nation and add to the efficiency and productive capacity of the Nation.

Urban renewal in the cities is vital for the economic and social health of the Nation. It is equally as important for our foreign policy as is foreign aid. If the people of the world whom we are trying to impress get the viewpoint that the U.S. Government cares nothing for the distress of the inhabitants of its crowded slums, no amount of such foreign aid will overcome the impression that the U.S. Government does not really have the interests of people at heart, but merely the protection of its monetary wealth. Foreign aid has been used to rebuild cities throughout the world. Some aid should be forthcoming to help rebuild U.S. cities.

I, therefore, urge you to sign the housing bill, S. 57.

Yours respectfully,

FRANK P. ZEIDLER,
Mayor.

Tribute to Ernest Bloch

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. MORSE. Mr. President, a great citizen of Oregon, the famous composer and conductor, Ernest Bloch, has passed away. He has exercised for many, many years a great influence in the cultural life of Oregon. His son, Ivan Bloch, is known to many Members of the Senate.

I ask unanimous consent that a newspaper article on the death of Ernest Bloch be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ERNEST BLOCH, COMPOSER, DIES

PORTLAND, OREG., JULY 15.—Composer and conductor Ernest Bloch, 79, died today in a hospital where he had been under treatment for cancer.

Mr. Bloch, whose works ranged from the tone poem "America" to symphonies and the opera "Macbeth," had been a resident of Agate Beach on the Oregon coast since 1940. He entered a hospital here July 7.

The composer-conductor was born in Geneva, Switzerland, July 24, 1880. He studied violin under the virtuoso, Eugene Ysaye, but gave up the idea of a concert career when he found violin practice took too much time from his composing.

But that technique he developed in studying the violin served him well in composing for strings. "Nigun" from his "Baal Shem Suite" is in the repertory of nearly every concert violinist. We won renown for his "String Quartet No. 2" and his "Quintet for Piano and Strings." His "Israel" symphony and "Schelomo" are widely admired and his sacred service and "Concerto Grosso" are frequently performed.

The Paris Opera Comique accepted "Macbeth" and presented it November 30, 1910. Early in 1916, Mr. Bloch came to America as conductor for the touring dancer, Maud Allen. That enterprise went bankrupt, and he was stranded in a strange country whose language he did not know. He nearly starved for a few months but finally was appointed teacher of composition at David Mannes School of Music in New York.

The turning point in Mr. Bloch's career came when he won the $1,000 Elizabeth Sprague Coolidge prize in an international competition in 1919. He founded the Cleveland Institute of Music in 1920 with six students and directed it until 1925 when he had more than 700 students. He became an American citizen in 1924.

For the next 5 years he was director of the San Francisco Conservatory. He wrote his epic rhapsody "America" and submitted it anonymously in the Musical America contest in 1928. It was the unanimous choice of five judges from 93 scores. He was awarded $3,000.

An endowment by a San Francisco music-lover enabled Mr. Bloch to devote 10 years to composing, and he returned to Geneva and spent the next decade in Europe. He lived in Italy, France, and Sweden before returning to the United States in 1939.

From then on he was associated with the University of California as professor of music. From 1941 on his winters were spent in Agate Beach.

Among his other notable works were Avodath Hakodesh, the first complete performance of the Jewish service, Three Jewish Poems, and Suite Symphonique.

The work, "America" which he derived from folk songs, was dedicated to Abraham Lincoln and Walt Whitman.

He was the only American to be voted into the Academy of St. Cecelia in Italy and the only composer to be awarded the New York Music Critics' Award twice.

Survivors include a son, Ivan Bloch, Portland industrial consultant; and two daughters, Mrs. Paul Smith, New York City, and Mrs. Stephen P. Dimitroff, Mill Valley, Calif.

Connecting Channels Key to Vast Interconnected Water System

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway—formally dedicated on June 26—is an accomplishment that holds great promise—as well as challenges—for the Nation.

We recognize, of course, that a waterway system—like a chain—is only as strong as its weakest link. Full utilization of the seaway in the future will depend, to a great extent, upon the deepening and improvement of the linking channels between the Great Lakes.

Currently, for example, work is underway on the connecting channels between Lake Superior and Lake Huron, Lake Huron and Lake Michigan, Lake Huron and Lake Erie. Until this is accomplished, a number of Great Lakes States, including Wisconsin, will be denied the full benefits of the seaway.

My colleagues will recall that earlier this session I urged approval of $29 million in the 1960 budget for modernization work on the connecting channels. The U.S. Corps of Engineers had indicated that they could effectively utilize this amount in order to complete work on the channels by the target date of 1962.

The public works bill, H.R. 7509, now ready for conference, contains $27 million earmarked for channel work.

Although this is about $2 million less than I had urged, I am hopeful that it will enable the Engineers to carry forward construction at a pace rapid enough to allow completion of the channels by the 1962 target date.

Early completion of the channels is essential for developing maximum traffic through the seaway with its economic rewards; also, the early attainment of capacity volumes of trade and commerce through the waterway will be a determining factor in paying off the debt of construction.

Recently, the Evening Telegram, of Superior, Wis., published a splendid article, relating to the scope, size and significance of the interlake connecting system in the overall waterway system. I ask unanimous consent to have the article entitled, "Connecting Channels Key to Vast Interconnected Waterway System," by the U.S. Army Engineer Division, North Central, Corps of Engineers, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Superior, (Wis.,) Evening Telegram, July 10, 1959]

CONNECTING CHANNELS KEY TO VAST INTERCONNECTED WATERWAY SYSTEM

(By U.S. Army Engineer Division, North Central, Corps of Engineers)

The Great Lakes connecting channels, generally referred to as the connecting channels, include the waterways between Lakes

Superior and Huron, Lakes Huron and Michigan, Lakes Huron and Erie. The St. Marys River, including the shoal approach to the head of the river, is the connecting channel between Lake Superior and Lake Huron. The Straits of Mackinac and approaches thereto comprise the connecting channel between Lake Huron and Lake Michigan. The St. Clair River, Lake St. Clair and the Detroit River, with the approaches in Lake Huron to the head of the St. Clair River and in Lake Erie to the mouth of the Detroit River, comprise the connecting channel between Lake Huron and Lake Erie.

The international boundary between Canada and the United States passes through all of the Great Lakes and their connecting channels, except Lake Michigan which is wholly within the United States.

NATURE'S CHANNELS TOO SHALLOW

Although the lakes are deep, the connecting rivers had shallow reaches in their original state and over the years it was necessary to dredge the river channels to provide adequate depths to accommodate deep-draft lake vessels. In addition, the St. Marys Falls in the St. Marys River at Sault Ste. Marie were impassable and locks were required to overcome the drop at the Falls to permit vessels to pass between Lakes Superior and Huron.

At the present time controlling depths of 25 feet in downbound channels and 21 feet in upbound channels, when the ruling lake level is at low water datum, are available between Lake Superior and the lower lakes. The deeper depths were provided in the downbound channels to accommodate deep-draft loaded ore carriers.

In addition to the channel improvements in the connecting channels, four locks (the Poe, Davis, Sabin and MacArthur) and two approach canals have been constructed in the St. Marys River at Sault Ste. Marie. One of these locks, the MacArthur lock, is equal in size to the St. Lawrence Seaway locks and can accommodate any vessel which can pass through the seaway. Congress has authorized construction of a new modern Poe lock with a depth over the lower sill of 32 feet to replace the existing Poe lock. This additional large deep-draft lock now under design is required to accommodate the large volume of deep-craft Great Lakes traffic which cannot pass through the two older locks with depths over their sills of only 23 feet.

Traffic between Lake Ontario and Lake Erie is through the Canadian Welland Canal which has locks adequate for modern deep-draft navigation and has been deepened to 27 feet as part of the 27 foot St. Lawrence Seaway from Montreal to Lake Erie. However, the connecting channels between the lakes west of Lake Erie require deepening to accommodate the increasing number of larger, faster, and more economical vessels in the Great Lakes fleet and to accommodate the deep-draft traffic through the St. Lawrence Seaway.

DEEPER CHANNELS NEEDED

Recognizing the inadequacy of the connecting channels for the newer deep-draft vessels and with the advent of the St. Lawrence Seaway which would provide a 27-foot depth channel westward only as far as Lake Erie, the U.S. Congress, upon study by the U.S. Army, Corps of Engineers, authorized deepening the connecting channels between Lake Erie and the upper three lakes to provide channels with a minimum controlling depth of 27 feet. The improvement was found to be fully justified in the interests of Great Lakes bulk cargo traffic alone, although it was recognized that the deepened channels would provide commensurate depths with those provided in the St. Lawrence Seaway.

(The U.S. portion of the St. Lawrence Seaway project was accomplished by the St. Lawrence Seaway Development Corp. with the U.S. Army, Corps of Engineers, as design and construction agents).

WORK STARTED 1957

The project for deepening the connecting channels to 27 feet was initiated in May 1957. It is primarily a large-scale underwater excavation job, embracing the removal of about 64 million cubic yards of earth and rock. It requires the mobilization and deployment of one of the largest and most varied fleets of dredging equipment ever assembled, and exceeds by far any previous undertaking of this kind during the 133-year experience of the U.S. Army Corps of Engineers on the Great Lakes.

When completed in 1964, this project will have cost approximately $146.5 million, but it is estimated that savings of almost $10 million in three commodities alone—iron, ore, stone, and grain—will be made annually in the transportation costs.

THE PROJECT

Under the direction of the U.S. Army Engineer District, Detroit, work on the multi-million dollar connecting channels project was started in May 1957 on the Amherstburg Channel of the Detroit River and Middle Neebish Channel in the St. Marys River.

All channels will be dredged to a minimum controlling depth of 27 feet. The scope of work in each area is as follows:

St. Marys River: Deepen 63 miles of channel, varying in width from 300 feet to 1,500 feet, to depths varying from 27 to 30 feet. Remove isolated shoals. Construct anchorage areas at Point Iroquois Shoal 29 feet deep and in Lake Nicolet 28 feet deep.

Straits of Mackinac: Remove shoals over an area 4,000 feet by 1,250 feet, between Mackinac Island and Round Island to a depth of 30 feet and removal of Poe Reef Shoal to a 30-foot depth.

St. Clair River: Deepen 46 miles of river channel, varying in width from 700 feet to 1,400 feet, to depths varying from 27 to 30 feet. Included in this phase of work is a cutoff channel at Southeast Bend in the St. Clair River which will be 6 miles long, 700 feet wide and 27 feet deep. It will eliminate the use of the present hazardous Southeast Bend Channel.

Lake St. Clair: Deepen 17 miles of channel, varying in width from 700 to 800 feet, to 27.5 feet.

Detroit River: Deepen 32 miles of river channels, varying in widths from 300 feet to 1,200 feet, varying in depths from 27.5 to 29 feet. Deepen channel extending 9 miles into Lake Erie from the Detroit River light to 28.5 feet over a width of 1,200 feet. Remove Pelee Island Shoal to 28.5 foot depth.

EQUIPMENT AND MEN

The project requires an array of equipment including dipper dredges, large hydraulic dredges and a sea-going hopper dredge. Each dipper dredge is attended by one or two large tugs, a derrick boat, one or two launches and from 2 to 4 large dump scows. In channels with rock bottoms, dredging must be preceded by submarine drilling and blasting operations involving special drill boats. The work force necessary to man and supervise the dredge fleet requires from 800 to 1,000 men.

WORK DIFFICULT

The dredging job is complicated by the constant stream of lake vessels—one every 15 to 20 minutes day and night during the height of the navigation season—that pass through the connecting channels during construction. This traffic is stopped or slowed down only when navigation is hazardous because of fog, storm, or accident. For example, during a navigation season, some 30,000 vessels pass through Detroit River channels. Because of this heavy traffic which cannot be stopped, the dredging work must be done in half-channel widths with normal vessel traffic proceeding at reduced speeds in work areas. Work is carried on continuously except for the winter months when ice conditions require layup of floating plant.

CALUMET-SAG CHANNEL A MISSISSIPPI RIVER LINK

Concurrently with the connecting channels project, the U.S. Army Corps of Engineers is also improving Chicago's Calumet-Sag channel to provide an adequate and modern connection between the Mississippi River and Lake Michigan via the Illinois waterway. This 327-mile long barge canal links the Great Lakes with the barge system of the Mississippi and Ohio Rivers. U.S. Army Engineers are widening the Cal-Sag from 60 feet to 225 feet with a 9-foot depth.

FURTHER STUDIES UNDERWAY

The need for improvements at harbors on the Great Lakes to accommodate the large, deep-draft vessels which will transit the deeper channels has been recognized. The U.S. Congress has directed the U.S. Army Corps of Engineers to make a study to determine the advisability of further improvements of harbors on the Great Lakes in the interest of present and prospective deep-draft commerce. In determining whether improvements can be justified at Great Lakes harbors, three major elements are studied: prospective traffic, engineering design, and economic analysis. Every improvement must be a sound investment.

A WATERWAY TO SERVE UNITED STATES AND WORLD

When the job is finished, the Great Lakes navigation system and its links with the Atlantic Ocean and the Mississippi River will provide a vast, interconnected waterway system, reaching from Montreal to Mexico (via the Gulf Intracoastal Waterway), from Pittsburgh to Sioux City and from Superior-Duluth to the ports of the world.

JOINT EFFORT

The seaway is a major achievement in the history of both Canadian and United States transportation. The St. Lawrence Seaway Authority, in conjunction with its counterpart, the St. Lawrence Seaway Development Corporation, has brought this long awaited dream to realization.

A Declaration of Interdependence

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 16, 1959

Mr. BYRD of West Virginia. Mr. President, by request, I ask unanimous consent to have printed in the Appendix of the RECORD a declaration of interdependence.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

DECLARATION OF INTERDEPENDENCE

When in the course of human events it becomes necessary for a group of Americans representing their country in devoted loyalty, determined to raise their voices in freedom's sacred independence, with eternal gratitude for the unanimous declaration of the 13 States of America in Congress, July 4, 1776 (the 183d anniversary of which we

celebrate today), a decent respect for the opinions of mankind requires that we reaffirm the standards and principles which have made us mighty and respected. We hold these truths to be self-evident that character and reputation are not the outcome of chance, but are earned through years of fidelity to principle; that the worker and his employer are partners in production: that the most of the best be theirs to share; that the people should control government instead of government controlling people; that if men do not consent, they are not free and tyranny prevails; and that all rights affecting free enterprise can be reduced to the one right as defined by Justice Brandeis, namely: "the right to be left alone."

We, therefore, the undersigned members of the Leaders Association having been invited to belong to this distinguished association by virtue of our long and honorable business record, the recognized quality of our product, and the unassailable fairness of our policy do issue on this historic national holiday our declaration of interdependence, hereby publishing and declaring our steadfast belief that labor and management, management and government, government and national welfare, national welfare and mankind's fate are interdependent in the sight of God and man. And for the support of this declaration, with a firm reliance on the protection of divine providence we pledge ourselves to fight for our principles by sincere endeavor, and shining example, in order to preserve and protect the sacred heritage handed down to us on this great day.

Tribute to Walter H. Evans, Sr.

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, July 16, 1959

Mr. MORSE. Mr. President, on July 13, a great citizen of Oregon, the Honorable Walter H. Evans, Sr., who for many years was judge of the Federal Customs Court, passed away. Mrs. Morse and I join in extending to his survivors our very deep sympathy. To his son, Walter, Jr., who for many years has been a leader of the bar of the State of Oregon, I extend my very sincere condolences.

I ask unanimous consent to have printed in the Appendix of the RECORD an article, from the July 15 press, announcing the death of Judge Evans.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 15, 1959]

W. H. EVANS, SR., 89, EX-CUSTOMS JUDGE—JURIST HERE FROM 1931 TO 1941 IS DEAD—HAD SERVED ON CIRCUIT BENCH IN OREGON

PORTLAND, OREG., July 13.—Walter H. Evans, Sr., retired judge of the U.S. Customs Court in New York, died at a hospital here early Monday. He was 89 years old.

Mr. Evans, who served on the court from 1931 to 1941, was a former assistant U.S. attorney. He had been district attorney and then circuit court judge in Multnomah County.

He was born at Elizabeth, Ind., on April 17, 1870.

MADE SOVIET-TRADE DECISION

Judge Evans wrote rulings of the U.S. Court of Customs here in a number of important cases In 1937 he was the author of the court's opinion that it was proper for the United States to discriminate commercially against the Soviet Union because the two nations are not on terms of international friendliness.

The court in that case upheld the collection of revenue duty of 10 cents a hundredweight on coal imported from the Soviet Union. Earlier, the court had ruled against the payment of duty on coal imported from Germany and Britain.

In the coal case it was also Judge Evans who wrote the original ruling, in 1933, which decided that the levy on coal imports from the two nations was "discriminatory and in violation of the most favored nation treaties * * *."

The decision was hailed then in Washington as "a distinct victory for the State Department." Secretary of State Cordell Hull had outlined his tariff policy, frequently, as being governed by the most-favored-nation system. The ruling was, in fact, a major victory for the then young administration of President Franklin D. Roosevelt, although the case had been initiated under the administration of President Herbert Hoover.

In 1935 Judge Evans concurred in an opinion of the Customs Court here, which held that Secretary of the Treasury Henry Morgenthau, Jr., had exceeded his authority when he amended regulations to restrict to 1 quart the amount of liquor a returning traveler could bring into the country duty free. The three judges of the court in that case decided that the statutory exemption of $100 on the personal effects of travelers must stand.

Judge Evans was a Hoover appointee. At his retirement in 1941 he received a personal letter from President Roosevelt, praising his devotion to duty.

An Outstanding Lady of Journalism Passes

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. ROBERTS. Mr. Speaker, on Saturday, July 11, 1959, death came to one of the South's most gracious ladies, Mrs. F. T. Raiford, who for 23 years had actively served as publisher of her newspaper, the Times-Journal of Selma, Ala.

Her passing is a great personal loss to me, as I had long admired her and counted her as a dear friend.

Her passing also took from southern journalism one of its outstanding persons, the last remaining woman editor of an Alabama daily newspaper. Since 1936, when she took over the reins left by the death of her husband, she exercised well founded control and journalistic courage in the policies of her newspaper.

As a mark of respect for Mrs. Raiford, I ask unanimous consent for inclusion in the RECORD of some of the editorials commenting on her life.

The editorials referred to follow:

[From the Selma Times-Journal]

MRS. F. T. RAIFORD

Death came kindly as she slept early Saturday morning to Mrs. F. T. Raiford, cofounder and publisher of the Selma Times-Journal, and Selma's private citizen number one passed from the scene as graciously and as unassumingly as she had lived.

Her passing marked the end of a long, brilliant and productive career, which has not been equaled for public service by any individual Selmian of our time. Modern Selma itself serves in the nature of a monument to Mrs. Raiford because there have been few public developments in the past quarter of a century which do not bear in some fashion the imprint of her influence.

While, as sole owner, the Times-Journal was her newspaper, it really has belonged to the community because its columns always were open to promotion of any worthy cause in contribution to the welfare and upbuilding of Selma.

If there was any weakness in her astuteness as a business executive, it was willingness to devote the entire resources of the Times-Journal to public service, regardless of damage to her operational costs budget.

The effects are evident on every hand and it would require a diligent and determined reporter to compile a representative record of her achievements for a city she loved with sheer devotion.

Because she always retained the reserve which often is characteristic of ladies of the old school, Mrs. Raiford evaded the spotlight of public attention unless the interests of The Times-Journal or the community demanded her appearance, and her personal contacts were limited by the necessities of a heavy work load.

In consequence, she was not as well known to many Selmians as should have been their privilege. In fact, to some she was more a legend than a personality. Perhaps it was Selma's unfortunates who knew her as well as any, because to her they came in a steady stream when in need of succor or sympathy. These they always got, for she recognized neither color nor creed when there was a worthy cause to meet.

But as concerns her associates on The Times-Journal, it was a different story.

They all knew her as a gracious lady with a great heart and an even greater capacity for understanding individual problems.

It is something of a paradox that she had a will of iron, and once she was convinced a cause was just, nothing could move her position. Coupled with a rare brand of both personal and journalistic courage, this attribute made the Times-Journal and its publisher factors with which to reckon even on a national basis.

Selmians know, of course, that they have lost a great friend and a great force for

progress, but it is going to require the perspective which only time can give for them to grasp and appreciate the full extent of their loss.

[From the Anniston Star]

A Loss to Journalism

In the death of Mrs. F. T. Raiford, who was publisher of the Selma Times-Journal for 22 years, Alabama and Southern journalism lost one of its most engaging characters.

Mrs. Raiford, who died in her sleep Saturday night, took over the reins of publication immediately after the death of her husband, to whom she had been an able assistant, and had guided the destinies of the paper ever since.

Mr. Raiford was one of the ablest newspaper writers in the State, and when he passed away she put Ed Field, formerly of Anniston, in his place. And while she managed the business end of the paper, Field maintained the editorial tradition of the paper with a style that has always been crisp and alert.

No one will miss Mrs. Raiford more than her editor, to whom she was a mother. Between the two they published a paper that has character and readability. Mrs. Raiford, a native of Selma, was widely known in newspaper circles and was greatly beloved in her hometown.

[From the Montgomery Advertiser]

Mary Raiford of the Selma Times-Journal

When F. T. Raiford, editor and publisher of the Selma Times-Journal died years ago, he died not entirely. For the passion of his devoted widow, Mary, was to carry on the Times-Journal just exactly as she believed he would have.

The key to the operation of the paper was always the creed as established by the collective acts of F. T. Raiford, of which creed the widow was the prophet. She was a woman of force and determination and there was never any question that the Times-Journal would go on.

In her endeavor, which took her into late old age, Mrs. Raiford had two essential advantages. She had, as she deserved, the respect of Selma; and she had Ed Field, a hardworking, conscientious, and highly competent editor.

Probably the next management of the Times-Journal will undertake changes; a newspaper does have to be renewed physically and otherwise. No doubt the changes will be sound. But however successful they are, they will be based on the character that Mary Raiford maintained in the paper.

Oil Depletion Allowance

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. STEED. Mr. Speaker, contained herein is an analysis recently compiled by the Independent Petroleum Association which points out some very important and interesting facts about the much-discussed oil depletion allowance. I hope these facts will help clear up a great deal of misunderstanding that has been created about this matter.

The analysis follows:

Percentage Depletion and the Price of Gasoline

Percentage depletion means lower prices for oil to the consumer. Even critics of depletion recognize this fact.

Edward S. Mason, dean at Harvard University, has stated that the effect of depletion is "to expand investment and output—thus bringing down mineral prices." Prof. Arnold C. Harberger of the University of Chicago has testified that "More oil can indeed be obtained by tax concessions * * * (but) * * * If the rest of the economy wants more oil, it should be willing to pay for it by way of a higher market price."

Elimination or reduction of depletion, therefore, would mean less oil at higher prices, as illustrated by the following figures:

A. Average U.S. price of crude oil in 1957, $3.09 per barrel.

B. Maximum amount available from 27½ percent depletion,[1] spent by oil producers to find more oil, $0.85 per barrel.

C. Loss in funds for oil exploration because of additional income tax if depletion were eliminated (52 percent tax rate on $0.85 per barrel), $0.44 per barrel.

D. Increase in price of crude oil necessary to provide $0.44 per barrel for exploration after payment of 52 percent tax, $0.92 per barrel or 2.2 cents per gallon.

An increase of 2.2 cents per gallon in the price of crude oil would necessarily mean an increase in prices paid by consumers for petroleum products. The price for all products could increase by 2.2 cents per gallon, but it is more likely that the increase would be passed along in the form of higher prices for gasoline, the principal product derived from crude oil. As it takes 2.3 gallons of crude oil to make a gallon of gasoline, an increase of 2.2 cents per gallon in the price of crude oil would mean an increase of about 5 cents per gallon in the price of gasoline at the service station.

[1] The 27½ percent applies to gross income, but because depletion is limited to 50 percent of net income, the average for the industry is no more than 23 percent. However, depletion also applies to income from natural gas which is not included in the price of crude oil used above. If all such factors were taken into consideration in a more detailed calculation, the results would be approximately the same as shown in this analysis.

Pink Painters at Moscow

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Richmond News Leader of July 8, 1959:

[From the Richmond News Leader, July 8, 1959]

Pink Painters at Moscow

We are still sore about this exhibition of American works of art at Moscow this summer, and even last night's announcement that 25 or 30 19th century paintings will be rushed abroad as an offset to 50-odd abstractions leaves us cold. This act of expediency may quiet some criticism, but it will do little to remedy a basic misconception on the part of some gullible Government officials.

The exasperating facts are now common knowledge: Of 67 American artists chosen for representation at this exhibition, 34 have records of affiliation with Communist fronts and causes. Twenty-two of these 34 have a combined total of 465 Communist connections. Three have taught at Communist Party schools. Two were former owners of the Communist magazine, New Masses. Five have publicly supported Communist candidates for public office. More than half of the 34 have contributed art material to Communist magazines. One of the group, Max Weber, has been publicly identified as a party member. Another, Jack Levine, whose caricature of an American general was referred to in the President's recent press conference (right), has a record of 21 Communist front affiliations. Philip Evergood has more than 75 Communist front connections; Ben Shahn has been affiliated with a couple of dozen Communist causes.

These are the American artists, God save the mark, whose work was chosen for this particular American exhibition.

How was the work chosen? A jury chose it. And who chose the jury? Mr. George V. Allen, Director of the U.S. Information Agency, chose the jury. How did Mr. Allen happen to pick these particular jurors? He asked art critics and others in the art world to suggest jurors to him. Did Mr. Allen consult with the State Department's own Bureau of Cultural Affairs on this exhibition? It is not known that he did. Were political considerations ever pondered at all? No, the jury made its choices on the merits of the painting and sculpture, and gave no regard to the political views of the artists.

Where is one left by that colloquy?

The jurors were Franklin C. Watkins, of the Pennsylvania Academy of Fine Arts; Lloyd Goodrich, director of the Whitney Museum of Modern Art; Henry Radford Hope, chairman of the fine arts department at Indiana University; and Theodore Roszak, sculptor and teacher at Sarah Lawrence College. It is pointless to criticize these gentlemen. They served as professional jurors, and put together this art exhibit as they would put together any other. They did what they were asked to do.

But in the whole of the State Department and in the mazes of the USIA, wasn't there one responsibile man who could understand that this show in Moscow was not just another art exhibit? Is there no one in high office in foreign affairs who comprehends the political nature of these "cultural exchanges"?

If there is any good purpose at all in such official exhibitions, it lies solely in the furthering of American interests behind the Iron Curtain. The aim presumably is to impress the people of Communist lands, and not to please the art critics of Pravda. Our Government is engaged deliberately in spreading propaganda, not in exhibiting art. And unless this is understood, nothing about the venture is understood. That Mr. Allen so obviously fails to understand this, considering his position as director of the USIA, is perhaps the most appalling aspect of all.

The jury's selection is bound to foster an impression abroad that half of all American artists are sympathetic to communism is some degree, and that a third of them are actively engaged in aiding Communist causes. This slander upon American artists and sculptors is bad enough. What is worse, from the point of view of the taxpaying public, is that public funds now have been squandered and a propa-

ganda opportunity now has been lost for want of some clear-eyed and realistic management somewhere.

How long do the top people in our Government propose to behave like empty-headed children in a world of grown men?

Will the Family Farm Fade Out of the American Scene?

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. VAN ZANDT. Mr. Speaker, Farm Editor Robert W. Boyer of the Altoona (Pa.) Mirror has written an interesting editorial entitled "Will the Family Farm Fade Out of the American Scene?" which appeared in the July 11, 1959, issue.

The editorial was written based on the observations of some of the finest and most efficient farmers in Blair County, Pa., as they ventured their opinions as to whether a way of life is imperiled in the oft-repeated statement that the family farm is doomed as one of the Nation's prized assets.

Editor Boyer has treated his subject in an able manner and against a background of down-to-earth sentiment from typical family farmers who express hope for the survival of the family-size farm, despite the encroachment of mechanized corporate farms with their absentee ownership. Summing up some of the advantages of family life on the farm, Blair County's outstanding young farmer of 1959, Dick Frederick, of Duncansville, Pa., said in part:

Showing in a dairy show, attending a good cow sale, going to a fair, a twilight meeting, civic events, and attending church are the things a farm family enjoys.

The editorial referred to follows:

[From the Altoona (Pa.) Mirror, July 11, 1959]

WILL THE FAMILY FARM FADE OUT OF THE AMERICAN SCENE?

Out among the broad, fertile valleys of Blair County, a $7 million industry is thriving. But this industry doesn't have the usual "corporate immage," with its army of employees, foremen, superintendents, managers, and presidents, for agriculture has no department heads. Almost its total personnel are families, and there is no chairman of the board, unless one looks upon father in this exalted position.

For, out there in the industry of the farms, everybody works, and even on the unpleasant task of keeping books, there are few farmers who do not occasionally at least have the help of wives or high school daughters.

And there also are few farmers who are not uneasily aware of the changing times.

They hear about it at their agricultural extension and Grange meetings, they read about it in the papers, and they learn about it the hard way when they pay out thousands of dollars for a bulk milk tank, or some new type of farm equipment.

IN THE MIDST OF CHANGE

They are in the midst of change, and, while the average farmer may be much too busy to have time to ponder the future, the plain fact remains that agriculture is right in the middle of the technological revolution, and it is no different from other segments of American life, for it cannot remain unaffected by the rapid course of scientific revelopments and the changing pattern of national life brought about by them.

But, the farmer may be affected more than anyone else—for, while progress may alter the working habits of some people, and the living habits of many others, for the farmer, it will alter both working and living habits.

And so, the questions which are arising with increasing frequency these days, and which sometimes trouble the farmer's dreams involve one of the oldest traditions of the land, "What will become of this farm in the years ahead? I've spent my life enriching and tilling its soil, developing these fields and pastures. I'm making it into a good land. Will it be my family's land 25 years from now? Will my sons keep it and develop it for their sons, or will they have to leave it and go to the cities to work and live?"

DARK THOUGHTS

These are dark thoughts for a man of the soil. For it is part of his very nature to build, to bring forth from the earth, and he likes permanency. His is not the sentimental affection of the city man for animals as pets, and vegetation as things of mere beauty.

For the farmer lives with nature. He is among the most practical of men, and he knows that while his golden wheat fields are beautiful, they cost him time, labor, and money, and in their tawny waves lies the staff of life.

And, he finds beauty in the strength and proportions of his cattle, for their basic worth is in their ability to produce food for man, and a living for him and his family, and his affection for them is for living things which he has raised up and nurtured and cared for, and for which there is a purpose in the scheme of things, a purpose which he tries to further by breeding better animals, and growing finer crops. Death, too, is part of the pattern, and he accepts that as an integral part of the life of plants and animals—and man.

THE CORPORATION FARM

And so now, he hears about "vertical integration," and the rising need for further farm mechanization, and the added cost. He learns he must produce more, and he reads that the corporation farm may replace that of traditional family farm life in another generation.

But, the farmer also may find some comfort if he examines the situation further. For all this change is not necessarily bad.

In fact, those figures thrown at him by agricultural extension speakers and others show that agriculture is among the strongest elements of American life despite the fact that the farm population is dwindling.

In 1910, 32 million Americans lived on farms, 35 percent of our population. Now we have about 21 million on farms. By 1975, it is predicted only 7.5 percent of our population will live on farms, or about 17 million.

RISE IN PRODUCTION

This shows the vast rise in farm production, and it shows too that further rise will be needed. It indicates, too, that there must be a considerable increase in living standards of all our farm families; for if production must rise further, so must income, and it follows that only the most qualified, the ablest, will be able to hold a place in agriculture.

The uninformed look at these figures showing dwindling farm populations and charge that agriculture is declining. But, to the contrary, it grows stronger, for it is expanding.

Today, for every 100 workers on farms, there are 90 others engaged in supplying farmers with goods and services, and about 100 more in processing the goods produced on the farms. And this total labor force—or agri-business force, comprises about 37 percent of our total workers.

HUMAN VALUES

But, here again, the element of human values enters the picture. Sociologists are studying the American farm, trying to determine its real importance to the American way of life, and what would be lost if the traditional family farm were to disappear in the predicted vortex resulting from a combination of agricultural technology and urban—or suburban—encroachment upon farmlands.

The family farm remains one of the most effective training schools for strong character. In Congress, and in many States, political efforts now are being directed toward methods for saving the small farm, viewed in the light of social, moral, and spiritual values as well as in the light of economic efficiency, as one State's resolution put it.

A fundamental reason for the character-building value of the farm is its requirements that all members of the family must work together on the common task of providing a livelihood. Such a life breeds initiative, and the ability to work, into children; it develops independence of thought and strength of resolution.

Will the family farm disappear in the near future? That question is regarded by many as important to the future trends in American life.

Not all farmers by any means are convinced that the family farm will go.

YOUNG FARMERS HOPEFUL

Bob Dauberman of Roaring Spring RD was a town boy who loved the life of the farm, and as a youngster, used to seek out farms where he could work. Now, after studying agriculture in college, and serving as a Blair County assistant farm agent, he has a fine farm of his own. Bob speaks and acts deliberately, and he shook his head slowly. "I don't think the family farm is on the way out. The farmer will have to produce more, that's all. I like to farm, but I dont' know that I'd want to be in farming if I had to do it the way it was done when I worked on a farm as a kid."

So, technology isn't all bad. To Bob, the family working together is one of the most valuable contributions the farm can make to American life.

And while he didn't say so, he managed to convey the idea that as long as men love the freedom of the open fields, the sight of their own cattle feeding off their own lush pastures, and the fine lines of good animals, there will be a family farm in American life.

Dick Frederick of Duncansville RD, Blair County's Outstanding Young Farmer of the current year, said, "Farming always has been a great joy to me. I was raised on a farm and saw its advantages and interests. I started farming because I always liked livestock and working with the soil. It is gratifying to see the progress you're making as the years go by. And, also I think farm life is second to none for rearing children.

"Farming is a continual reinvestment, and a farmer seldom has much cash. To make a success of farming, I feel you must be happy and satisfied to make this reinvestment, and maybe sacrifice some pleasures.

"But, I wouldn't want you to think we haven't any pleasure.

"It's different from the townman's, though. Showing in a dairy show, attending a good cow sale, going to a fair, a twilight meeting, civic events, and farm meetings, and attending church are the things a farm family enjoys."

Ultimately, technology, and agri-business may help to preserve the family farm.

Technology enables the farmer to produce more, and to meet the demands upon him, and agri-business performs many of the jobs in the city that once were a part of farm routine. Now, the farmer can specialize.

And, whether or not we have the type of life represented by the traditional family farm probably will depend, finally, upon how much we want to keep it.

And this will mean frank and enthusiastic support of that kind of wholesome living in every rural community of America.

West Virginia Is Getting Shortchanged—IX

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. HECHLER. Mr. Speaker, I should like to point out that during the Korean conflict, my home State of West Virginia ranked first—at the very top of the list in percentage of its population serving the Nation during that time.

And I should like to add that a larger number of West Virginians were killed in battle than those from any other State—based on the percentage in service.

I believe this proves conclusively that West Virginia has contributed generously to the defense of our Nation in days past. Should the need arise, I know that my great home State would do so again.

And yet West Virginia, which gave more men and lost more men on the basis of its population, ranks a dead last in Defense Department spending and installations.

For the ninth time on the floor of this House, Mr. Speaker, I should like to call attention to this shameful discrimination against the Mountain State.

Every other State—many smaller in size and in population—has a bigger share of the defense budget, bigger payrolls, more installations.

I have figures—the Defense Department's own figures—to bear out my contentions, and I am appending them to this statement to confirm West Virginia's great contribution to the Nation's armed service in the Korean conflict.

Yet our reward, seemingly, is to remain absolutely last in the modern, cold war Defense Department budget, despite our record of patriotism, valor, and duty.

I have said previously, and I now repeat, that it is a national disgrace for West Virginia to be first in war, first in peace, and last in the hearts of the Pentagon.

	Number serving in the Korean conflict as a percentage of total population	Estimated number serving in the Korean conflict [1]	Population, 1950 [2]
1. West Virginia	4.73	95,000	2,005,553
2. Maine	4.59	42,000	913,774
3. New Hampshire	4.50	24,000	533,242
4. Vermont	4.50	17,000	377,747
5. North Dakota	4.35	27,000	619,636
6. Oklahoma	4.29	96,000	2,233,351
7. Rhode Island	4.29	34,000	791,896
8. North Carolina	4.23	172,000	4,061,929
9. Alabama	4.21	129,000	3,061,743
10. Virginia	4.18	139,000	3,318,680
11. Kentucky	4.17	123,000	2,944,806
12. South Dakota	4.13	27,000	652,740
13. Nebraska	4.07	54,000	1,325,510
14. Tennessee	4.07	134,000	3,291,718
15. Utah	4.06	28,000	688,862
16. Massachusetts	4.05	190,000	4,690,514
17. Florida	3.96	110,000	2,771,305
18. Oregon	3.94	60,000	1,521,341
19. Arkansas	3.92	75,000	1,909,511
20. Idaho	3.90	23,000	588,637
21. Kansas	3.88	74,000	1,905,299
22. Connecticut	3.88	78,000	2,007,280
23. South Carolina	3.87	82,000	2,117,027
24. Arizona	3.86	29,000	749,587
25. Pennsylvania	3.85	405,000	10,498,012
26. Wisconsin	3.84	132,000	3,434,575
27. Minnesota	3.82	114,000	2,982,483
28. Iowa	3.81	100,000	2,621,073
29. Wyoming	3.78	11,000	290,529
30. Georgia	3.77	130,000	3,444,578
31. Missouri	3.76	149,000	3,954,653
32. Nevada	3.75	6,000	160,080
33. Montana	3.72	22,000	591,024
34. Texas	3.72	287,000	7,711,194

Caribbean Situation: Cuba and Guatemala

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. FLOOD. Mr. Speaker, two news stories about the Caribbean situation in the Washington (D.C.) Daily News of July 9, 1959, supply additional information about the latest developments in Cuba and Guatemala.

The two news stories follow:

[From the Washington (D.C.) Daily News, July 9, 1959]

SASTRO RISKS LOSS OF OUR AID FUNDS—U.S.-OWNED RANCHES SEIZED

HAVANA, July 9.—Premier Fidel Castro's revolutionary regime plunged ahead today with plans to swallow up two big American ranches at the risk of losing U.S. foreign aid.

Announcement that the two ranches were being taken over in Oriente Province coincided with reports that soldiers had been stationed at key buildings in Santiago, Oriente's capital, birthplace of the Castro revolution.

Although a number of alleged "counter-revolutionaries" have been arrested in Oriente recently, reports said the guards were placed on the alert against the possibility of an invasion from the Dominican Republic.

(The Dominican Republic has put its forces on an alert against the possibility of an invasion from Cuba.)

The two ranches involved in the takeover were the 20,000 acres owned by Lykes Bros., Inc., of Tampa, Fla., and 66,300 acres operated by Sumner Pingree, of Hamilton, Mass.

TAKE OVER

Cuban authorities moved onto the Pingree ranch yesterday and notified the Lykes

ranch manager they would move in there August 1.

In Washington yesterday, the Senate voted 59 to 32 to cut off aid to countries which in the future expropriate American-owned property without fair compensation. The measure was an amendment to the foreign aid bill which still must be ironed out by a joint House-Senate committee.

The extent of the Lykes and Pingree takeovers was not defined. A Lykes official in Tampa said the Government apparently intended to assume only management of the ranch without actually seizing it.

Both the Lykes and Pingree ranches have been held under Spanish royal grants dating back to the turn of the century.

FAIR COMPENSATION

Just what compensation might be involved was not clear. The government has said in the past it would issue bonds for seized land payable in 20 years at 4 percent interest.

The U.S. Government subsequently cautioned Cuba against taking land without paying fair compensation.

The Pingree and Lykes ranches were the first American-owned properties to date to be affected by Castro's massive land reform campaign. They are larger than any of the Cuban-owned farms seized so far.

The Prime Minister's brother, Raul Castro, commander of the armed forces, flew with Air Force Chief Juan Almeida to Oriente Province yesterday to inspect the area.

[From the Washington Daily News, July 9, 1959]

GALICH ELECTION IS CITED—LEFTISTS ON RISE IN GUATEMALA

(By Edward Tomlinson)

The extreme leftists apparently are on the way back to power by the ballot box in Guatemala.

In last Sunday's special elections in Guatemala City, Luis F. Galich, candidate of the left-wing Revolutionary Party, was elected mayor. Next to the presidency this is the most important elective office in Guatemala.

The Revolutionary Party not only has had the open support of the Communists, but several known Reds have been elected to Congress on the party's ticket. In fact, the organization is made up of the same elements that supported the Communist-dominated government of Jacobo Arbenz which was overthrown by popular revolution in 1954.

NO RED

Friends of Mayor-Elect Galich insist he is no Red. Yet he never has openly spurned Communist support, and his brother, Manuel, has long been one of the leading Communist agitators in Central America.

Senor Galich was the winning candidate in the regular mayorality elections of last January but his victory was canceled on a legal technicality. Sources close to the Government said the real reason was the fact that the Revolutionary Party accepted the cooperation of the Communists. Meantime, PR candidates won control of municipal councils in several other leading cities.

In last Sunday's election the Communists put up a straw candidate of their own who got a mere token vote. Observers are convinced this was a feint to deceive the gullible, and to make sure the governments would have no legal grounds for disqualifying Sr. Galich again.

JUBILANT

At any rate, the leftists are so jubilant over their latest victory they are already preparing for the 1961 national elections. They talk openly of running former President Juan Jose Arevalo for president.

Sr. Arevalo is a Marxist professor who, while chief executive, permitted the friends of Moscow to penetrate Guatemala's university and other institutions. He openly encouraged a wave of anti-Yankeeism fanned by the Reds against U.S. investments in Guatemala. Then Sr. Arevalo put Sr. Arbenz into office as his successor and thus paved the way for the Communists to dominate the nation until the successful Castillo Armas revolt.

The former president has been in exile ever since, and is now a lecturer on politics at the National University of Venezuela in Caracas.

Pensions for the Self-Employed in New Zealand

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to Dr. Frank G. Dickinson of the National Bureau of Economic Research in New York City, from Prime Minister Walter Nash, of New Zealand, with reference to the retirement plan for the self-employed now in operation in New Zealand.

PRIME MINISTER,
Wellington, New Zealand, July 2, 1959.

FRANK G. DICKINSON,
Bronxville, N.Y.

DEAR DR. DICKINSON: As promised in my letter of April 17, I am writing to give you such information as is at present available about the superannuation scheme for the self-employed.

Eligibility: The scheme is open to all self-employed persons and also to major shareholders who are not members of a superannuation scheme.

Special restrictions: (a) The minimum term is 10 years.

(b) Policies may not mature earlier than the member's 60th birthday (55th birthday in the case of a female), nor later than the anniversary following his or her 65th birthday.

(c) At the maturity of an endowment assurance or pure endowment policy at least three-quarters of the proceeds must be left to purchase an annuity with any of the life offices, although if one-quarter of the proceeds of all policies held by a member in the event is less than the purchase money required for an annuity of £52 a year, he may elect to take the amount of the purchase money in cash.

(d) Policies cannot be assigned or charged.

(e) Policies cannot be surrendered within 10 years before maturity.

Tax exemption: The maximum tax exemption which may be claimed on ordinary insurance policies and/or contributions to the National Provident Fund or a Friendly Society is £175 per annum or 15 percent of the taxpayer's assessable income whichever is the lesser.

Under the self-employed scheme, however, self-employed taxpayers may claim an additional tax exemption on the amount by which £250 exceeds the amount claimed in respect of premiums on ordinary policies and National Provident Fund or Friendly Society contributions, provided the additional premium is paid in respect of a special policy issued in terms of a trust deed which is attached to each policy issued.

General comment: (a) By the nature of the scheme as outlined above it is in the interests of many intending applicants to effect ordinary policies or national provident pensions to the full extent of the normal tax exemption before they elect to take policies under the scheme.

(b) The field for applications tends to be confined to such taxpayers who already hold or are willing to effect ordinary policies, etc., for an annual premium of £175, who are self-employed, who are less than 55 years of age and who are prepared to pay more than £175 a year in premiums.

(c) Because eligible taxpayers are usually at least approaching middle age, and because for practical purposes the maximum annual premium payable under the scheme is only £75, sums assured are modest and the corresponding annuities are too small to appeal as a worthwhile provision for retirement.

Data available: Life Offices have operated the scheme since May 1, 1958 but the National Provident Fund came in as late as March 15, 1959. Consequently, it is yet too early for comparative statistical details but it is felt that the available figures are satisfactory in view of the short time the scheme has been operating, the alternative provisions available (being social security benefits, insurance and other National Provident Fund pensions) and taking into account the availability of tax exemptions and the other factors I have mentioned.

The Government Life Insurance Office reports for a year's operation that self-employed business represents about one-third of 1 percent of the new policies and sums assured and I am led to understand that other Life Offices' experience is on similar lines. Contributors represent a cross-section of self-employed persons and it is significant that Life Offices have secured some additional ordinary new business as a result of interest initially shown in the self-employed scheme.

In the first few weeks of operation, which included the end of the tax year, the National Provident Fund accepted 95 applications and in 3 months, 104, representing 26 trades and professions. By far the greatest response has come from the medical profession whose Co-operative Assurance Society reports 500 applications, which represent 18 percent of the total number of registered medical practitioners of all ages who are resident in New Zealand.

Revenue loss: I am unable to state how the estimated revenue loss of £100,000 compares with the actual cost to the revenue. On this point you will appreciate that the first claim for the additional special exemption will arise when final tax is assessed later this year but the full impact of the scheme will not arise until final taxation for 1960 is assessed. Apart from this factor, the statistics available would not be adequate to make such a comparison.

I hope that this information will be of help to you and will give you some picture of how the scheme is shaping. I am also enclosing copies of a pamphlet issued by the National Provident Fund and the deed in use by life offices.

Kindest regards to Mrs. Dickinson and yourself.

Yours sincerely,

W. NASH.

Class of 1959, U.S. Air Force Academy

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. ASPINALL. Mr. Speaker, the State of Colorado is indeed proud to be the home of the U.S. Air Force Academy, which recently marked an historic mile-

stone with the graduation of its first class. Under leave to extend my remarks, I should like to include in the RECORD a commemorative poem written by Milford Shields, poet laureate of the State of Colorado.

CLASS OF 1959, U.S. AIR FORCE ACADEMY

The First Class of the first class of the air,
Yours is an honor excellent and rare;
Four years have winged you to a high estate;
On this dynamic day you graduate.

The eyes of many men are turned on you
Who fly our flag across the trackless blue;
You who will hold the ramparts of the sky
Command the forces of the free on high.

With planes as missiles in atomic age,
You are the keepers of our heritage;
O gallant Captains of our outer space,
We here salute you with a freeman's grace.

Distress in the Caribbean

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. FLOOD. Mr. Speaker, in an address to the House on July 7, 1959, I dealt at length with the vitally important subject, "Caribbean Sea, Panama Canal, and the Monroe Doctrine."

An informative news story in the Washington (D.C.) Daily News of July 6, 1959, by Mr. Edward Tomlinson, the distinguished Latin American correspondent of the Scripps-Howard newspapers, supplies additional documentation on the threatening situation to the south of us.

The indicated news story follows:

[From the Washington Daily News, July 6, 1959]

DISTRACTIONS IN THE CARIBBEAN—IF THE REDS DIDN'T START THE FIRES THEY'RE SURE FANNING THE FLAMES

(By Edward Tomlinson)

The Communists may not have set all the political fires now smoldering in the Caribbean. But if the whole area doesn't burst into a general conflagration it won't be their fault.

It is becoming more apparent every day that the Reds are out to subvert the forces that are attempting to right grievous wrongs in several of the countries. Our own and other key democratic governments of the hemisphere are gravely concerned.

SINCERE INTENTS

Fidel Castro may be sincere in his desire to overthrow Generalissimo Rafael Trujillo of the Dominican Republic along with the Somoza brothers of Nicaragua, so as to bring freedom and justice to the people of those two little republics.

But the Reds in Havana who night after night are permitted Cuban radio facilities to denounce "these despots" and at the same time to castigate "the imperialist Yankees who support them," are not interested solely in peace and freedom for the oppressed Dominicans and Nicaraguans.

The government of President Romulo Betancourt of Venezuela may honestly share the views of the Cuban Prime Minister and many others about the dictators. But the heads of the big Communist Party, the Communist-dominated university students and the large number of leftist and fellow traveling newspaper columnists in Caracas, who daily echo the Cuban Reds, hardly could be thinking only of political freedom for their neighbors of the Spanish Main.

WHY THE UNITED STATES?

Otherwise, why do they have to include the United States, which has never had a dictator, in the same category with the Trujillos and the Somozas?

Exiled Nicaraguan rebel spokesmen based in Costa Rica, Honduras, and other nearby countries boast they have only begun to fight. Only last week, the Cuban Government, apparently with one eye on the OAS observers who have been investigating the Central American scene, announced it had arrested more "Nicaraguan exiles" who were about to set sail on an expedition to their homeland. Leftist students and other extremist elements in Honduras continue to organize demonstrations of sympathy for their neighboring compatriots.

STIRRINGS

Reliable reports from Panama say that leftist university students on the isthmus are readying a new campaign to force President Ernesto de la Guardia out of office. The Reds as well as the followers of Fidel Castro in Cuba are calling for the head of President Francois Duvalier of Haiti, along with that of the Dominican dictator.

Meantime, diplomatic sources are convinced that General Trujillo himself is prepared to march into Haiti in the event of an all-out attack on his own country.

In fact, intelligence sources throughout the area are not only reporting these and many other activities to their respective governments, but they point out that known Communists have penetrated and in some cases are directing many of these groups.

LEADERS

Enrique Jiminez Moya, a Dominican exile, who is reported to have led the June 14 invasion of the Dominican Republic, and who General Trujillo insists has been killed, was long known for his Communist connections in Cuba and elsewhere, as well as for his bitter hatred of the United States.

Concepcion Palacios, who masterminded the Honduras-based expedition against Nicaragua, which the Honduran Army frustrated and captured 10 days ago, was a well-known member of the Communist Party in Mexico.

As one of our oldest Caribbean diplomats puts it: "Nothing would suit the Kremlin more than chaos on our doorstep. It would divert our attention from the balance of the world, which with tremendous sums of money and arms we have tried to bolster against the Red menace. It would also make the neighboring Republics easier to penetrate and take over later on."

Personal Incentive Must Be Saved

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Oregon Journal of Portland, Oreg., Saturday, June 13, 1959:

[From the Oregon Journal, June 13, 1959]

PERSONAL INCENTIVE MUST BE SAVED

James A. Farley, writing recently in Atlantic Monthly, will not end the dispute as to what the terms "liberal" and "conservative" mean, but he sheds some light on the subject.

"Ironically enough," he says, "because I have favored—and favor—every bit of progressive legislation to distribute risk, the conservatives regard me as a liberal. And because I insist that the distribution of common risk can never be a substitute for individual effort, the liberals regard me as a conservative."

While Farley may not find favor with either the doctrinaire conservatives or liberals, we suspect his position will find favor with a good many people who are more concerned with finding solutions to today's problems than they are with labels.

Farley worked closely with Franklin D. Roosevelt when details of the New Deal were being hammered out, but broke with him over the third term issue.

In 1933, he recalls that collective bargaining was a "theoretical illusion," children were working who should have been in school and a majority of those over 60 years of age were dependent upon relatives for support. He decried those conditions and still does but contends the philosophy of the program to remedy them has been twisted out of its original meaning and intent.

"More particularly," says Farley, "to build a floor over a community of quicksand is quite different from putting a ceiling over the productive and creative elements of the individual. It is one thing to put in a minimum wage level, it is quite another to put a ceiling on personal incentives, which our present hodgepodge tax system does."

There will be those who say the Farley of New Deal days has been corrupted by his years as chairman of the Coca-Cola Export Corp. and president of the Coca-Cola International Corp., but what Farley has really done is to put his finger on the dilemma faced by most modern States—how to alleviate misery and eliminate abuses which grow up under a strict laissez faire system and at the same time not destroy initiative and create government paternalism.

We have examples of the dangers in those who would use aid to dependent children as a way of making a living and in those who attempt to convert unemployment compensation to a regular part of their annual income.

"It seems to me," says Farley, "it is American to hate dependence of any kind," and he adds that it is silly to argue that crutches were invented as substitutes for legs.

Laws and strict supervision of our welfare programs can minimize abuses, but if hatred of dependence is to continue to be an American ideal, this concept will have to continue to be taught in the home and the school. Independence cannot be legislated.

Address by Ernest S. Marsh

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 16, 1959

Mr. SCHOEPPEL. Mr. President, on June 23 of this year at the Sherman Hotel in Chicago a very excellent address was given by Ernest S. Marsh, president and chief executive officer of

the Atchison, Topeka & Santa Fe Railway system before the mechanical division and electrical section of the Association of American Railroads. Because of the interest in transportation and the study which has been undertaken of this important matter, I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY ERNEST S. MARSH, PRESIDENT AND CHIEF EXECUTIVE OFFICER, ATCHISON, TOPEKA & SANTA FE RAILWAY SYSTEM, BEFORE MECHANICAL DIVISION AND ELECTRICAL SECTION, ASSOCIATION OF AMERICAN RAILROADS, JUNE 23, 1959, SHERMAN HOTEL, CHICAGO, ILL.

It is a pleasure and an honor to have this opportunity to appear before the annual meeting of the mechanical division and the electrical section of the Association of American Railroads.

I have always considered these meetings to be of immense value to the progress of the industry. When you sit down together in a spirit of friendly cooperation for the exchange of ideas and information gained from experience and concentrated study, it cannot do other than make a substantial contribution to progress in improving railroad service to the public. In the final analysis our function is rather simple. We are in the business of moving something or someone from one place to another and our every thought in daily operations and long-range planning must of necessity be directed to performing that service in the most efficient and economical way.

Your group plays a most vital part in this business because it has to do with the motive power and cars that perform the essential and basic function in railroad transportation. It might be fair to say that no railroad can be better than its equipment. That means the suitability of adequate equipment, the condition of it, and even its appearance to the traveling and shipping public.

You and your committees have done an outstanding job in producing improved performance through new mechanical and electronic developments. You deserve the applause and the appreciation of the whole industry. You deserve continuing support, and I say continuing support because the necessity for further improvements is a constant one. There are great challenges before you.

We are in a brandnew era of railroad transportation. An era that demands good clean, comfortable, and pleasant passenger service. An era that puts emphasis on fast, dependable freight service and intensified efforts to reduce costs of operation and maintenance. An era where we must recognize the inaction of Congress to give us fully adequate remedies to provide competitive equality with other forms of transportation. A keenly competitive era in which we must do more things to help ourselves, both servicewise, ratewise, and costwise. A good service and competitive rates are necessary to attract more business and a sustained high volume is needed for efficient utilization of the plant and lower costs per ton-mile. Costs for ratemaking purposes should be based upon the increased volume that could be attracted rather than upon statistics of the past without inclusion of that volume—only in this way can the public receive the benefit of the most economical form of transportation.

Yes, we are in a new era—an era of faster freight trains to try to give better and more reliable service than our competitors on the highways. We are convinced it is regaining business and certainly it is arresting further erosion of traffic we have been handling. Within the past 16 months, since March 1958, the freight train schedules between Illinois junctions and California have been reduced by 2 days westbound and 1 day eastbound. Back in 1926 there was much ado about the Santa Fe Chief being put on a 62-hour schedule from Chicago to Los Angeles—today we run freight trains faster than that. This is of interest to you because the expedited schedules call for freight equipment to be in good condition, and to avoid undesirable delays en route they call for closer attention to inspections at originating and intermediate points, particularly inspections of the running gear. Especially is that true with respect to journal boxes.

I need not tell this group that the No. 1 operating problem today continues to be the hotbox. A satisfactory solution of that problem at a reasonable cost which would promote early application to all cars is probably the greatest single challenge before you, the suppliers, and the people engaged in research. Although many experiments have been made with oil specifications, controlled clearances, journal lubricating devices, and other arrangements, the age-old problem becomes more acute and of more serious consequence to dependable operations. The facts are, however, that the figures show a worse performance in 1958, measured in car miles per hotbox, than the industry had 5 years ago. Our own figures show a poorer performance than we had 18 or 20 years ago. I relaize that faster schedules, reduced terminal time at intermediate points, and perhaps heavier loading, have not been conducive to a better record. These circumstances strongly suggest that without your untiring and commendable efforts a more troublesome comparison might exist, still it may well be a case where engineering and research on this particular subject have not kept pace with the tempo of modern transportation. So far, the roller bearing appears to be the nearest approach to elimination of hotboxes, but the roller bearing is a very expensive item—it would cost upward of $1.5 billion to change out all of the old freight cars in the country—$1.5 billion that the railroads do not have to spend. Despite the initial cost, we on the Santa Fe consider the problem of such importance that the 2,400 new freight cars in our 1959 program will be equipped with roller bearings, except for 96 cars that we purchased "off the shelf" in order to obtain quick delivery. I am sure the friction bearing problem will come in for lengthy and serious discussion in your further meetings at this session. It is of growing importance that a suitable remedy be found, and the sooner the better.

Another serious problem confronting the railroads, and the whole economy for that matter, is inflation. It seems to me that the inflationary trend is going to be with us for a long time. The constant pressure for higher costs of labor and material and more and more spending by Federal and local governments is taking us down a road that is certain to bring severe results to the Nation's economy and its people, just as it has done in other countries where inflation has run its course. The cost basis today is pricing much business out of the market and pricing our people out of jobs. There are hundreds of examples of the growing sale of foreign goods in this country. To mention one—just day before yesterday, I saw a newspaper statement that some 45,000 tons of European steel have been unloaded at Chicago in the 49 days since ocean ships began arriving here on May 4. The account said "the threat of a steel strike, of course, is a factor to be considered, but the primary reason for the influx of foreign steel is that much of it can be delivered at the port of Chicago at a cost less than it can be bought at an American mill." That is true also with reference to Japanese steel which is being sold at Chicago for less than it can be produced in mills right here at home.

It is no secret that many purchasers are going to the foreign markets. One large concern made a statement this month that the foreign production not only increases current stock but also the price is better and it helps establish supply sources less likely to be choked off by strikes. Is there any wonder we have unemployment? It has to stop somewhere.

The inflationary spiral that is so common to all industry is making it increasingly difficult for the railroads to have available funds for all desirable and needed improvements. It is probably appropriate to say that the increases on the railroads have just about followed the national pattern in other basic industries. However, it is fair to say also that this inflationary spiral hits an industry like the railroads harder where prices are not so easily nor readily adjustable, and where labor costs take up such a large proportion of operating revenues.

These pressures bear more heavily on the railroads too because of the high ratio of investment in physical plant and equipment and the necessity for carrying on a substantial capital expenditure program on a regular basis. To illustrate the long-term cumulative effect of competitive conditions and constantly rising costs of doing business, I would like to give you a comparison that seems particularly revealing. Back in 1929, our best peacetime year prior to World War II, the Santa Fe had 16.6 billion revenue freight ton-miles. In 1958 this increased to 33.2 billion. Total revenues amounted to $267 million in 1929 with a net railway operating income of $68.6 million. By 1958 the total revenues were $595 million, over two times as large as 1929, yet the net railway operating income was actually less at $63.3 million, even after including $8.5 million of a temporary nature by reason of tax amortization of certain facilities for which necessity certificates were granted.

We have had no increase in our take-home pay despite the fact that the physical volume of business doubled from 1929 to 1958 when measured in revenue ton-miles handled, and despite the further fact that the total money investment in road and equipment went from $1,094 million to $1,860 million, an increase of 68 percent.

Now, when it is considered that we need to provide modern equipment and facilities at several times the costs of the late twenties to handle an increased physical volume, the squeeze that is taking place becomes abundantly clear.

Rate increases based on merely absorbing higher operating costs, even if they are timely and adequate to do that, add nothing at all to the net income and the financial ability to make capital improvements. Depreciation accruals, based as they are on original costs, do not come anywhere near providing the money for replacements alone.

Probably the most interesting feature of the comparisons between 1929 and 1958 is that, even with the increased volume, we were able to come as close as we did to the net railway operating income of 1929, in view of the terrific increases in the costs of wages, materials and taxes. How we were able to show even this inadequate result is somewhat of a long story, but, in a few words, it stems from doing things to help ourselves.

It is reflected in a comparison showing 16,109 fewer employees in 1958 to handle approximately twice the physical volume. It is reflected in a comparison of freight gross ton-miles per train-hour—a commonly ac-

cepted index of efficiency combining both the train load and train speed—which increased 160 percent over 1929. Briefly, these are the results of a concerted program of modernization and improvement of the physical plant with the adoption of new technologies and techniques, in which the group here today has had such an important part.

Of course, productivity has increased but wage increases have far outdistanced that improvement. In the post-war period since 1946, our wages per hour paid for have increased from $1.14 to $2.49, a rise of 120 percent. One measure of productivity, that is car miles per hour paid for, has increased 65 percent. The real index—the one that affects the results—is car miles per dollar of wages paid. That has gone down 25 percent in this period.

The inflationary pressures are felt keenly in our financial ability to make capital expenditures. We are providing many expensive freight cars especially designed to take care of the particular needs of shippers, including, of course, the popular DF or damage free cars, mechanical refrigerator cars, covered hopper cars, covered gondolas, air-slide cars, and new shock control cars utilizing a sliding underframe principle.

The cost of new freight cars today is simply amazing in relation to prior periods. The cars we have in our 1959 program will come at an average price per car of $15,000. Increased effort needs to be directed to reducing substantially this initial cost through improved design, use of lighter but stronger metals and alloys, and improved techniques in car production. Increased efforts should be directed to getting greater utilization of freight cars through reduction of bad order time and through designs that will serve multiple purposes and reduce empty return mileage of special equipment.

The railroad today is vastly different from the railroad of 1929 when we had no such things as centralized traffic control, diesel locomotives, air conditioned passenger cars, radio communication, mechanized maintenance and freight handling equipment and the many other improvements in common use today. If we were still operating at the efficiency levels of 1929, or the middle forties for that matter, we would have an overall deficit of many millions of dollars.

This is mentioned to show that, as we march ahead with modernization and try to keep step with new equipment and methods, we can never consider the job fully completed, because what was modern yesterday may be obsolete tomorrow. The past has seen great changes in the railroads, but it takes a terrific amount of money to keep going ahead with the improvements needed to maintain the type of up-to-date service that will attract revenues and translate a part of those revenues into earnings.

A continued improvement program is not just a desirable thing—it is an essential element in a railroad's survival. Funds for improvements come from three sources: (1) Depreciation accruals that are allowed as a charge against earnings during the life of the various units of property; (2) earnings retained after payment of Federal income taxes; and (3) borrowing—the repayment of which must ultimately come from earnings.

Depreciation accruals are quite unrealistic. They completely disregard what should be the first essential of any business concern, that is, it should cover its full cost of merely perpetuating the business before it can be considered to have made a profit or to have a taxable income. To the extent that depreciation accruals fail to provide money for replacements to stay in business, the profits are overstated and largely taxed away. This is tantamount to a drastic and continuing capital levy. These false profits are treated and taxed as real profits, but actually they must be used as one of the costs of remaining in business. Somehow, we should be able to stop overstating taxable railroad profits and quit treating this capital consumption as taxable earnings.

We had hopes of getting some help from Congress that would have gone a long way toward remedying this undesirable situation. As a matter of fact, the Smathers bill, as it came out of the Senate Committee on Interstate and Foreign Commerce last year, contained a provision for a construction reserve which would have permitted us to set aside funds for capital improvements and deduct them from taxable income of the year, with the requirement that they be used for such improvement purposes within a 5-year period. If not so used in 5 years, the funds would then become taxable with certain penalties.

Because of the opinion that the construction reserve fund constituted a tax measure and should have originated in another committee of Congress, the provision was lost by an amendment on the Senate floor, which eliminated it from the bill without prejudice.

Such a construction reserve would enable management to plan ahead and undertake desirable improvements necessary to adequately meet transportation demands. With such a reserve I am confident the industry would do much more modernization and replacement and would do it faster.

Congress provided treatment somewhat similar to the construction reserve in the Merchant Marine Act and, of course, everyone is familiar with the substantial public expenditures being devoted to waterways, highways, and airways. Last year the Secretary of Commerce placed before Congress a 5-year, $2,783 million program aimed at modernizing the Nation's air traffic control and navigation systems.

I mention these programs only for the purpose of making a significant contrast. They represent advance appropriation of tax money for improvements relating solely to transportation. All the railroads ask is some advance treatment of their own money, also for improvements relating to transportation.

In my opinion, there is no subsidy or Government gift at all attached to the construction reserve proposal. No more than the cost of the property, less salvage, can ever be deducted through depreciation charges. The actual cost is simply deducted sooner. Depreciation, however timed, is an expense, or a cost of doing business. It represents the annual estimate of value used up by wear and tear and obsolescence of property devoted to and used in the business. It is just as much a cost of conducting a business and just as much a deductible expense as the wages paid to the crew that handles the equipment. Each dollar of depreciation, just like each dollar of wages, properly reduces the Federal income tax by 52 cents.

There is no argument at all as to the amount of the deduction or the legitimacy of it. The question relates simply to the period of time in which the taxpayer is allowed to take it. What he takes now, he cannot get later. Certainly there would be no long-term loss of tax revenue to the Government. Quite likely, there would be no immediate loss or sharp decline in tax revenue. There might even be an immediate increase in tax receipts, as conceivably the adoption of the construction reserve could so stimulate capital expenditures as to put taxable income in the hands of builders and suppliers and their employees right down to the source of raw materials to such an extent that the Federal Treasury would realize greater net tax receipts.

I said earlier the provision for a construction reserve was struck from the Smathers bill without prejudice. The question is—without prejudice to whom? We had hopes this provision would receive favorable consideration in the current Congress. Instead of something helpful, the railroad legislation that has come out of this Congress further added to the burdens of the railroads. You are all familiar with the recent amendments to the Railroad Retirement Act and the Railroad Unemployment Insurance Act, which increased payroll taxes quite substantially, far above the payroll taxes in nonrailroad industry. An increase that will in time range from $120 million to $200 million per year. We had rather anticipated some increase from this Congress, but the size of it came as quite a jolt.

There was a modified version of amendments under consideration by the House that would have been less expensive by about $60 million per year. A more rigid and costly bill was passed by the Senate in a near-record time of something like 15 minutes, and this was almost immediately adopted by the House with little debate. Then it was signed into law without comment. Thus, we find the industry that is least able to bear added tax burdens being saddled with the greatest of these. While I never want to see railroad employees treated any worse than any other workers, still I think the railroads are not so prosperous that they can be expected to pay far more than other industry for unemployment insurance, which is now extended from 26 weeks to 39 or 52 weeks, depending upon length of service. Why did we get this treatment at Washington? It boils down to the only explanation I have heard—political expediency. An interpretation of political expediency includes expected popularity at the polls in the next election. Assuming that to be accurate, then in a very broad sense the railroad industry, through this increase in payroll taxes, is making an enforced contribution of at least $60 million per annum for political purposes. Who said a corporation cannot legally contribute to such causes?

This added tax of so many millions per year takes money that the railroads could use to good advantage in strengthening their competitive position so as to hire more people. Actually, it works against the very interests of railroad employment. It is clear that Government is hopeful that industry will continue to spend large sums for expansion and improvement in the interest of sustaining employment and production. Yet, it is not nearly so clear how the railroads are presumed to continue such outlays when Government itself aspires to spend at its own discretion so large a proportion of the profits produced by taxpaying businesses.

As I said before, we are in a new era of railroad transportation. An era of great opportunity and continuing progress, much of which starts with you who are here today. All of us must be alert to new methods and new ideas. I have confidence that with fair treatment, the unbounded determination to accomplish progress in railroading will measure up to the challenges of the future.

Soviet Newspaper Assails Role USIA Plays

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, July 16, 1959

Mr. SALTONSTALL. Mr. President, I have here an article which appeared today in the New York Herald Tribune,

written by Mr. Tom Lambert of that newspaper's Moscow bureau, and headlined "Soviet Paper Assails Role USIA Plays—U.S. Agency Raked for Anti-Red Work." I ask unanimous consent that the clipping appear in the Appendix of the RECORD at the close of my remarks.

The Tribune item reports that the All-Union Society of Political and Scientific Knowledge published in the most recent issue of its monthly review International Life an article which attacked, in some length and detail, our Information Agency. The semischolarly treatment went to considerable pains to define the purpose and operations of the USIA throughout the world, emphasizing the Agency's dual role of combating communism through explaining the true nature and merits of the capitalistic system and through its vigorous promotion of American foreign policy among peoples of foreign lands.

The Soviet article pointed out that the USIA is very active throughout the world; that it presents its propaganda like real facts. It paid tribute to its audience emphasis, and even observed biliously that the Agency publicizes the peace movement of the world as a weapon of Moscow.

Mr. Lambert writes from Moscow:

An attack here on the USIA can be considered a compliment to its effectiveness, especially in the ideological field.

Such coverage in one of the Soviet's top-caliber propaganda organs, Mr. President, represents a fine—if backhanded—tribute to the work of the USIA. Indeed, considering the totalitarian personality of her cultural organizations and the outright control Russia holds over her press, the appearance of the article Mr. Lambert writes about constitutes evidence of effectiveness of the highest degree. The various programs implementing our country's overall foreign policy do not get under the Communists' skin unless they are successful.

Here is high praise indeed, Mr. President, demonstrating the fearful respect the Soviet high command has for the USIA. I call it to the attention of the Senate as proof of the fine work our overseas information program continues to do.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, July 16, 1959]

SOVIET PAPER ASSAILS ROLE USIA PLAYS—U.S. AGENCY RAKED FOR ANTI-RED WORK

(By Tom Lambert)

Moscow, July 15.—Often assailed in Congress as a boondoggle, ineffective, and expensive, the U.S. Information Agency has just come under brisk attack here for its vigorous promotion of American foreign policy and its campaigns against communism.

If some Congressmen think the USIA's efforts are fruitless, that feeling is not shared by one of the Soviet Union's highbrow propaganda organs, the All-Union Society of Political and Scientific Knowledge.

Writing in the latest issue of the society's monthly publication, International Life, A. Gromov evinces considerable unease about the USIA's work, which he sees as two-pronged:

First, to praise capitalism in the United States and "to slander socialism (communism) and the Communist Party."

Second, to "justify the aggressive foreign policy of the United States and to pose the foreign policy of the U.S.S.R. as aggressive."

NOTES ROLE IN TV

An attack here on the USIA can be considered a compliment to its effectiveness, especially in the ideological field.

Mr. Gromov noted soberly that the USIA is active in foriegn television, "supplying foreign countries with propaganda films," and in radio and publishing. He reported that the USIA is "very active in all countries of the world," and is particularly busy in Asia, Africa, and Latin America. The USIA's aim, he alleged, is to try to dominate the information mediums of other countries.

In another backhanded compliment to the USIA, Mr. Gromov said the Agency tries to consider the cultural and other features of other nations in which it disseminates information; that it tries to influence foreign trade unions, businessmen, and some political organizations, and that it attempts to present its information about the United States not as propaganda, but "like real facts."

RECALLS A NIXON TRIP

This appraisal from the Soviet Union, a veteran in propaganda, cannot but please the American USIA specialists as a tribute to their choice of audience.

Mr. Gromov told his readers that the USIA is flexible. The agency jumped into an extensive campaign to combat anti-Americanism in Latin America after Vice President NIXON's visit touched off demonstrations against him and the United States, the Soviet writer reported. Likewise, he said, the USIA began emphasizing abroad the achievements of Negroes in the United States after the Little Rock incident.

He said also that the USIA was working diligently in foreign nations accepting American missile bases to convince the people of those lands that such bases were deterrents to aggression. The Soviet Union, of course, views installation of such bases as aggressive and warlike.

SUSPICIOUS OF "VOICE"

Mr. Gromov was suspicious but not violent, about the Voice of America. He said the Voice "and all its private branches" are not averse to distorting facts, but noted "in recent times the ruling circles of the United States tried to make all the programs more objective."

There was a catch in this move, however, he declared.

The "ruling circles" now prefer that "the most provocative broadcasts be made by other stations, which are formally considered private, but are subsidized by the State budget of the United States." He apparently was referring to such institutions as Radio Free Europe, Radio Liberation and others engaged in anti-Communist information programs.

DUAL ROLE SEEN

As Mr. Gromov viewed it, the USIA has a dual offensive-defensive role in U.S. foreign policy.

Defensively, he said, the USIA's job is to retrieve American prestige in the foreign policy field.

Its "activity is in direct proportion to the decrease of influence of the United States," he asserted, "to neutralize the defeats of Washington's foreign policy." He implied that publication of the Soviet Union's 7-year plan was a defeat for American foreign policy, and reported that there had been a counter move in Washington to expand and invigorate the USIA to tell abroad more of the American story.

The USIA, he wrote, is on the offensive in Asia and Africa, pumping out millions of books in English and the local languages about the United States.

DISTORTION CHARGED

In Africa, he continued, the USIA is working "to drive out the European colonizers" and institute American "rule over the black continent."

Mr. Gromov complained also that the USIA publishes various anti-Communist tracts, that it distorts Marxist-Leninist teachings as old and outmoded, and that it gives advice on how to struggle against communism.

He grumbled that the USIA labels "the peace movement of the world as a weapon of Moscow."

Let's Get Acquainted

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. MUMMA. Mr. Speaker, on June 22, many Members of the Congress and myself attended a breakfast given by the American Seed Trade Association. It was their first effort to bring to the knowledge of the Congress that there was such an association in existence and of the few things that they had done for agriculture. One of the highlights of the meeting was the address by their past president, Mr. Charles B. Mills. It was a nice talk full of facts and several stories intermingled which made it very interesting.

I thought the Members of Congress who were not there should have the opportunity of knowing what Mr. Mills had to say and I request it be printed in the CONGRESSIONAL RECORD.

Mr. Mills' talk follows:

LET'S GET ACQUAINTED

(By Charles B. Mills)

I would hate to have you think that the seed trade is no more intelligent than the present speaker. There are only a few reasons why I was asked to occupy this spot: (1) I don't talk very long; (2) I don't give you anything weighty to create worry or retard your digestion; (3) I am from a small midwestern town where we don't claim to have the solution to the world's problems. We just help create them; (4) I represent the grass division of the industry, which is about as low down as you can get.

I am told it is never safe and certainly not popular to try to impress, though confidentially the seed trade considers itself the world's most vital industry. So naturally, I would like to make our guests realize that there is a seed industry in the United States and that it is handling the truly basic commodity, for without seed—there would be no food. Thus seed is the very source of life. This industry, therefore, is charged with the responsibility of seeing that seed is always available to take care of our ever-increasing population. If that be modesty, please make the most of it.

It was stated recently on the Garry Moore show that 35 firms control field, grain, garden, and grass seeds, so that within their hands lies the destiny of all America. In other words, if these 35 firms say you don't eat—you don't. Of course, we're all safe, because they want to eat, too. I suspect that all 35 firms are represented here this morning. In which case I want to remind them that there

are persons here, also, who can make their actions illegal, so don't become overly impressed with your authority.

We like to think that this association is not guilty of what the late Charles Kettering called grooved-in thinking. He illustrated it by saying that sometime prior to 1910 he addressed a group of electrical engineers in Detroit, and among other things informed them it would soon be possible to start an automobile without cranking it. His audience was so skeptical that one man actually arose and moved that they adjourn rather than listen to such eyewash. Mr. Kettering was also informed by leading paint manufacturers that to paint a car properly, 26 days were required and that Kettering was wasting his time trying to lower the time factor. One did admit that he might by superhuman effort lower the time by 2 hours. The ultimate today is 1 hour, thanks to a man who was never guilty of grooved-in thinking.

Like other successful American businesses, the seed industry has moved steadily ahead, benefiting from extensive research, even though in the case of agricultureal and horticultural products, it always seems very pokey.

Thanks to advances in agriculture, we are producing bigger crops with less seed on fewer acres. That's a hard record to beat. And I think it may be safely said even within a half mile of the Department of Agriculture, that our industry itself has been responsible for much of the progress and the forward thinking which has resulted in producing better strains of everything we sell.

My own interesct has been grass for beauty rather than for eating, although I am told that grass contains every element man needs to survive. So if occasionally some of you folks in public life get turned out to pasture, please keep in mind that it is not a starvation assignment.

Some of you seedsmen have heard me say that grass plays a vital part in man's life from the cradle to the grave. Actually, it does not stop there. Considering that the grave needs grass, we have one of the few businesses where people can still use our products after they are deceased.

According to George Washington, "In a free republican government, you cannot restrain the voice of the mutlitude. Every man will speak as he thinks, or more properly, without thinking, and consequently will judge of effects without attending to their cause." What I think George meant is that things can get pretty loused up before we know what's causing it. This has been known to happen even in the seed business. One of the greatest causes of grief these days is no doubt the result of taking action without having all the facts. I make that statement not only because it is true, but also because it gives me a chance to tell the following story:

A certain minister was getting concerned about the lack of knowledge of the scriptures among grade children, so he invited himself to visit the sixth grade of his local school. At the proper time he arose with great dignity and called up a promising looking boy in the first row to do likewise. "Young man," began the minister in a stern voice, "Do you know who destroyed the walls of Jericho?" The boy hesitated for a few seconds and then made the bold assertion that he had had nothing to do with the vandalism—in fact he didn't even know who the Jerichos were.

This made the minister even more certain that he was proving his point. So he conferred with the boy's teacher and told her of his concern. Miss Jones was very forthright. She let it be known that the youth was one of her prize pupils and a symbol of honesty. "If he says he had nothing to do with it," she insisted, "then I'm willing to guarantee that he didn't." Our visitor seemed to be getting nowhere so he carried the case up to the school principal. Here was a man who stood squarely behind his teachers.

"Miss Jones is one of my best," he asserted proudly. "If she is willing to accept the word of that boy that he didn't do it—then I also say he didn't."

Still convinced that he had a mission to perform, the confused minister went next to the president of the school board. Now he'd get some results. He had an interesting listener. The story was unfolded step by step and here was the board chairman's response. "The board of education is a responsible constituency. It stands back of its principals and teachers. Regardless of how those walls were damaged—if you'll submit a bill to the secretary of the board, we'll remit in full."

Perhaps I should be allowed one example within the industry. Back at the beginning of the last war, and we hope it was the last one, we received an inquiry from an Army Air Force installation in one of the New England States. It called for 5,000 or 10,000 pounds of Bermudagrass seed. I reported that we didn't handle it, but might venture the information that it just wasn't the grass for a cold climate. I'm sure my advice wasn't appreciated and no doubt some fellow seedsman filled the order. Just for curiosity, I made inquiry concerning the background of the lieutenant who signed the inquiry. It developed that he came from Louisiana and no doubt with justifiable pride, wanted to duplicate the ground cover of his home State. Unfortunately, he hadn't brought the weather with him.

Perhaps the need to know more about each other's affairs is reason enough for us to get a little closer to the place where things are likely to happen, and closer to the people who help make them happen. I have no specific case to recite and even if I knew one, I wouldn't mention it because this is a gathering devoid of worrysome situations. We would like to go away from here feeling that we know each other better and have acquired mutual respect for each others problems. Who knows, you people in Government may have almost as many of them as we do.

St. Louis Globe-Democrat Asks, "Does Congress Have the Courage?"

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. SCHERER. Mr. Speaker, with the labor bill expected to reach the floor of the House next week, I believe all Members of the House should have the opportunity to read and study an excellent article by Senator JOHN L. MCCLELLAN which appeared in last Sunday's issue of the St. Louis Globe-Democrat.

All of us know of the magnificent job done by Senator MCCLELLAN and his committee colleagues in their conduct of the 2-year investigation of improper practices in the labor-management field.

Likewise, the conclusions he has reached and the proposals he has made for corrective legislation deserve our thoughtful consideration.

Last year, on May 14 and again on August 18, I urged my colleagues in the House ot give their support to a strong and effective labor bill.

The additional evidence produced since then by Senator MCCLELLAN's committee increases the urgency of action on our part.

I am including in these remarks the Globe-Democrat article by Senator MCCLELLAN as well as a thought-provoking Globe-Democrat editorial, titled "MCCLELLAN's Vibrant Challenge," in the same issue:

[From the St. Louis Globe-Democrat, July 12, 1959]

DOES CONGRESS HAVE THE GUTS TO DO ITS DUTY?—MCCLELLAN SOUNDS CALL FOR LAW TO PROTECT PUBLIC AND WORKERS AGAINST ABUSES BY UNIONS

(By Senator JOHN L. MCCLELLAN, Chairman, the Senate Select Committee on Improper Activities in the Labor-Management Field)

If the Congress does not have the guts to do its duty and pass a strong labor bill, then this country is in a pitiful condition.

For more than 2 years, the Senate Select Investigating Committee of which I have been chairman has worked to provide the facts about improper practices in the labor-management field.

We have heard more than 1,400 witnesses under oath. We have filled 45 volumes with the printed record of public hearings.

The record is clear, and it is available to Members of Congress as well as to everyone else.

The record shows, to a shocking degree, flagrant abuses, corruption, and exploitation, including the denial of basic human rights to union members.

These evils are admitted. Their existence cannot be challenged or denied. Indeed, they are spread so fully and extensively on the public record it seems to me only a most stupid fool or irresponsible liar would attempt to deny they are prevalent in some areas.

These conditions should no longer be tolerated. The American people, in my judgment, want this present session of Congress to act and to pass effective remedial legislation.

But there are those on both sides of the issue, representing labor and management, who apparently do not want any bill passed at this session of Congress.

For a long time I had hopes—and I think the country was led to believe—that the Congress would receive at least some measure of cooperation and support from the leadership of the AFL-CIO.

Certainly we never expected any cooperation or assistance from the James Hoffa segment of organized labor. But now we find that after a Hoffa blast at the bill passed by the Senate, even the leadership of the AFL-CIO is apparently joining in an effort to defeat this legislation.

I am disappointed, and I think the country is disappointed.

To me the attitude of the honest labor leaders with respect to this legislation is disgusting.

CITIZENS SHOCKED

Instead of opposing the bill, they should be helping the Congress to amend it where necessary and strengthen it, to the end that we may drive the crooks out of organized labor and restore decent operation and administration in those union affairs where corrupt and racketeering practices now prevail.

Must the Congress throw up its hands and quit, or shall the Congress accept the challenge and, as legislators and representatives of the American people, exert the most ingenuity and talent we possess to write legislation to deal with this problem?

As I have stated on the floor of the Senate, and before the House Labor Commit-

tee, the citizens of this country have been shocked and nauseated by the disclosure of abuses which have been perpetrated upon the working people in some labor unions by the thugs who have muscled into power and who masquerade as labor leaders and as friends of working people.

The forms these impositions and abuses have taken have become familiar to all of us by countless repetitions. They include:

The capture or purchase of local unions.

The denial of democratic processes in the unions.

The denial of freedom of speech and freedom of assembly for union members.

The denial of the right to vote and to have any voice in the selection of officers.

The denial of a voice in the formulation and adoption of policies.

Brutal, physical violence, vandalism, instilled fear, and economic coercion, used to silence objectors.

The use in some instances of union funds to corrupt public officials.

The direct extortion of money from small businessmen, who are peculiarly vulnerable to racket union shakedown tactics.

The looting of union treasuries and welfare funds.

The use of trusteeships for power purposes.

Forcible top-down organization by compelling employers to violate the legal and moral rights of their employees by delivering them under contract to the unions—without the employees' knowledge in many instances, and in other cases against their will and without their consent.

The appointment of known criminals and unreformed convicts to positions of trust and authority over rank-and-file union members.

The objections is raised many times, "Well, this only applies to a small segment of labor."

LAWS NECESSARY

We pass laws against theft, burglary, and murder, not because a majority of the people are criminals, but because there is a minority element that must be curbed.

Without laws against such crimes, the criminal element would take over and dethrone law and order and decent society.

Without adequate legislation to protect honest and decent unionism and union members, there is danger that the underworld element and the racketeers will gobble up the George Meany's and the other leaders who represent the best in organized labor, rob them of their power, and finally gain a stranglehold on the economy of our country.

We do not need laws against thievery for 95 percent of the people of this country. We do not need laws for the unions that want to do right and treat their members as human beings and respect their rights.

It is that other minority percentage that is telling the AFL–CIO to go to blazes with its code of ethics, and that says, "We will run our unions to suit ourselves."

TWO FACTS EMERGE

Two main facts emerge from the long record the Senate committee has compiled:

1. Almost invariably the abuses, the compulsions, thievery, thuggery, skulduggery and sometimes skull-splitting tactics are practiced against workers.

2. The arbitrary powers over workers thus acquired by such tactics almost invariably are used—or misused—for personal aggrandizement, power, and personal enrichment.

Some of the so-called unions that resort to such acts are, in fact, more like businesses operated for private profit rather than unions for the benefit and welfare of the workers.

The profit is made and goes into the hands of individuals by the ruthless exploitation of workers and by the cynical perversion of unionism.

Thus, the only resemblance between such corrupt unions and decent legitimate unions is that both are treated alike by the law. Both kinds have the same exemptions and privileges under the law. Both have the same unrestrained tremendous powers.

Most unions use these powers with propriety, or at least with a measure of restraint, but some do not.

It is the possession of these powers and the present lack of adequate regulation of them which invite corruption and which make the union movement attractive and profitable in some instances for exploitation by the racketeers, the unscrupulous, and the corrupt.

HOW MANY VICTIMS?

No one knows how many thousands or even millions of workers are the victims of such exploitation or how many more workers may readily become victimized if effective laws are not passed to prevent it.

But mark this well: No one is immune.

The invasion of unionism by thugs and hoodlums has gone much further and is more extensive than we may think. The Senate committee has barely scratched the surface.

For every case that has been investigated, there are hundreds of complaints that the committee could not touch for lack of time and resources.

The complaints still come in to the committee offices. Some are individual cases. Others involve entire unions. We shall never be able to get around to all of them.

We do know that every worker in the country is a potential victim.

Every union man who is not protected by effective law which he can use against beatings and tortures and job loss as reprisals for assembling, for speaking up in meetings, for making inquiry about the financial affairs or other actions of his union or its governing body, is a potential victim.

BILL INADEQUATE

Every citizen of the Nation is a victim to a degree of the consequences of the spread of corruption.

The most tragic potential victim of all is the honest, decent, idealistic union.

For there is a Gresham's law of people, and the bad will drive out the good if the incentive is present for the bad to move in.

I supported the labor cleanup bill in its form as passed by the Senate.

I would do so again. I would vote for the same measure if I did not have an opportunity to vote for a stronger bill.

That bill—Senate bill 1555, which is pending along with others in the House Labor Committee—is inadequate. It does not fully meet the legislative needs.

The bill will not, as it is now written, correct all of the evil conditions and improper practices that we know exist.

It can be strengthened. It should be strengthened before it is enacted into law.

If the House of Representatives will make the necessary improvements, we can yet pass an exceptionally good labor reform bill at this session of the Congress.

PROTECTION ASKED

The Senate Select Committee has authorization from the Senate to continue its investigations until next January 31. Though there are complaints enough to keep us busy until long after that date, the committee plans to cease its activities by the end of this year.

If the Congress, with the benefit of the record already made, fails to meet its responsibilities and enact legislation which will get results, the Congress would no doubt still fail to do so even if we double the record.

At our hearings we have uncovered untold examples of such conduct as this: A union bully or goon walks up to a union member who is giving him trouble and says, "Do you love your children? You know, they have to walk 10 blocks to school. I suggest you don't be at the union meeting tomorrow night."

We have additional letters in our file begging us for protection in just such instances.

What will the Congress tell the letter writers? What protection will the Congress give them?

Can the Congress fail and neglect to act without silently acquiescing in such deeds and condoning them?

What do you think?

It should not, it must not falter or fail.

McCLELLAN'S VIBRANT CHALLENGE

Deep and righteous anger suffuses the article by Senator JOHN L. McCLELLAN written for the Globe-Democrat and appearing in this issue. The Arkansas Democrat, for almost 2½ years head of the Senate Rackets Committee, warns unless Congress has "the guts" to pass a strong labor bill at this session, the country is in a pitiful condition.

He is so right it hurts. Obviously it rowels him to the core to contemplate the political blocks and congressional fear of labor lobbies, which threaten to kill needed labor legislation, or emasculate it to a dross of patchwork drivel.

Chairman McCLELLAN has sat in these committee hearings for countless hours, listening to a parade of depravity and union prostitution unveiled before his committee. He knows the needs of labor act reform. Who better?

More than 1,400 witnesses have been hailed before this Senate inquiry. The recital of malpractice and miscreance in the record is tremendous and shocking.

Abuses bared include purchase of unions, denial of democratic processes in unions, bar on unionists' freedom of speech and ballot, brutal violence, dynamiting, vandalism and coercion, corruption of public officials, the looting of union treasuries, the appointment of known criminals to union jobs of importance and trust.

Of the array of witnesses, 310 took the fifth amendment when questioned by the Senators. They refused to tell anything "for fear their testimony might tend to incriminate them." Dave Beck tallied the record, taking the "fifth" 240 times.

This unlidding of evil operations in labor heirarchies has been holding the headlines more than 2 years. Some of the stories unfolded are unbelievable scandalous. The The committee has spent $1,500,000 on the job, interviewed 40,000 persons and established a fantastically replete record of union abuse.

Certainly the malpractices do not apply to the vast majority of labor. But as the Senator tersely observed, we don't pass laws against theft or murder for the majority of citizens.

Congress is reluctant to do anything about the situation. The 1960 election campaigns color its thinking; labor is a big integer in political opportunism.

The Senate has passed a measure, which is far from satisfactory. It does not come near the recommendations of President Eisenhower, and the McClellan bill of rights, which the Senator sought to incorporate, was torn to tatters by Senate vote.

The House still has a chance to pass a competent bill, one which will remedy the injustices of labor-management operations to great degree; cull out criminal and unscrupulous infiltration in top union echelons, give labor a democratic franchise, free union ballots, and public finances.

Speculation is that the House will, to use the Senator's bald words, not "have the guts" to adopt an effective labor act.

If it hasn't if it does not force the Senate to enact a law that adequately deals with the maze of iniquities and perversions of union

authority—one of the most sensational and valuable investigations in congressional annals will have been in dismal vain.

The Nation will have been visited with a tragic show of political cynicism.

The Saar

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. SMITH of Mississippi. Mr. Speaker, in our concern about the continuing world crisis, we often overlook many encouraging developments which indicate clearly that the world is moving toward a better understanding of the ways of achieving peace.

One of the recent examples of this is the transfer of the Saar from its autonomous status to its place as a part of the Federal Republic of Germany, in line with the vote of the people of this area in 1955.

The Saar land has for centuries been the scene of bloody battles between Germans and Frenchmen for the control of this area along the border of the two countries. In 1944 and 1945, as a member of the American 3d Army, I participated in the great destruction which was rendered over the Saar in the fighting at that time.

Today most of the wartime destruction has been repaired, and the wartime bitterness has been vastly reduced. I think history will record that one of the most farsighted achievements of the Fourth Republic was the willingness of French political leaders to work out the agreement with Chancellor Adenauer which has now reached its culmination.

As a member of the NATO Parliamentarians' Conference, I am proud of this demonstration of the mutual understanding and friendship that has developed between France and Germany.

Under unanimous consent, I include two editorial comments on the recent completion of the economic incorporation of the Saar into Germany, from British and American newspapers, the Manchester Guardian and the New York Times as reprinted as the guest editorial in the Memphis Commercial Appeal:

QUIET REUNION

Sunday night's quiet change-over in the Saar is a striking example of the mutability of political passions. At midnight, the Saar's customs border moved back to the frontier with France. Politically, it has already been part of the German Federal Republic since January 1957. More time was allowed for the economic incorporation which has now been completed well ahead of schedule. On Monday the Saarlanders began to exchange their francs for marks. Some will find their wages going up; others are worried because their social benefits, particularly family allowances, will go down after an interim period. But there has hardly been any sign of nationalist feelings, and we may therefore be tempted to ignore the remarkable change in these matters between 1935 and 1959. In 1935, the Saar offered the first example of Hitler's influence and terror spreading beyond the frontiers of his power. Reunion then was a mere foretaste of aggression to come. Today it is looked upon by Frenchmen and Germans as a token of a new relationship between their two countries and as a symbol of common allegiance to Europe. If it is true that common memory and a common ideal—rather than a common blood—make a nation, Dr. Erhard's prediction that economic and national borders will not much longer divide peoples in Western Europe may not be overoptimistic. It is also true, of course, that European integration is not an ideal shared with equal conviction by all the citizens of the two countries, nor have those who share it always the same ultimate purpose. Some Germans may hope to control a united Europe; some Frenchmen may simply hope to control the Germans. But who, in 1945, would have dared to hope that the common experience of Hitler's war would carry the two nations so far and so quickly towards mutual understanding and friendship?

THE SAAR A SYMBOL

An event of deep symbolic significance for the new Europe has just taken place in the Saar. There, on the stroke of midnight Sunday, France wrote finis to its last territorial dispute with Germany by turning over, 6 months ahead of the allotted time, complete economic as well as political control of this rich borderland. By doing so it strengthened still further the new French-German entente that is the rock on which a united Europe is being built, giving new hope to those Europeans who, in spite of a current resurgence of separate nationalisms, continue to cling to the vision of a future United States of Europe.

Like Alsace-Lorraine, the Saar has long been a bone of contention between France and Germany. By the will of its people, as well as by the fact of two German defeats, Alsace-Lorraine has returned to France. But the people of the Saar, voting in two plebiscites in 1935 and 1955, continued to cling to Germany and France accepted their verdict. It turned over political control of the territory to Germany on January 1, 1957, and has now liquidated the customs union that still bound the territory to France for a transition period of 3 years.

The return of the Saar makes West Germany the strongest industrial power in Western Europe, so prosperous that today it has more job vacancies than unemployed. Furthermore, this return of the Saar, following a voluntary exchange of border strips between Germany and Belgium, completes German reunification in the West and does so by the democratic process. What is more, it strengthens European unity and the whole North Atlantic Alliance that must depend on it. For both these reasons congratulations are due to President de Gaulle and Chancellor Adenauer for solving a difficult problem in a manner that should serve as a model for solving other intra-Western disputes.

Unlocking a New Water Supply

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I include in the RECORD the following remarks on the saline water conversion program by Dr. A. L. Miller, a former chairman of the House Committee on Interior and Insular Affairs and now Director of the Office of Saline Water. Dr. Miller's address was delivered to the National Rivers and Harbors Congress at its meeting in Washington last May 15.

UNLOCKING A NEW WATER SUPPLY

I am delighted that you saw fit to invite me to address your organization on the saline water conversion program. This program is so frequently misunderstood, I believe I can safely assume there are men in your group who may ask the question: Why should we conduct expensive research trying to develop conversion processes for additional potable water when all we have to do is properly utilize our present supplies.

First of all, I would like to point out that this is not an expensive program. Since it was initiated in 1952, total appropriations amount to just $4 million. Congress has authorized but not appropriated $10 million for five demonstration plants. The office hopes that by the fall of 1960 it will have at least two and possibly three demonstration plants ready for operation, or at least in the advanced stages of construction.

I will agree with the skeptics that there is no shortage of water. Over three-fifths of the globe is covered with water—far more than we will ever need—but most of that water is now unusable because of high dissolved salt content. I would like to point out that there are many areas—not only in the arid deserts of the world—but here in the United States as well—where drinking water, not to mention agricultural and industrial water, is in short supply, available only at an excessive price.

The law of supply and demand governs the cost of water, but it is impossible to put a value upon it—simply because it is a basic necessity of life. Without water a city or a nation would perish, mankind faces the same fate.

The President's Commission on Water Resources and the Geological Survey have projected the use of fresh water in the United States. This survey indicated that the demand for agricultural, industrial and domestic water will increase to 597 billion gallons per day in 1980, more than double our present rate of demand. Most of this increase is in the industrial category. In 1930, for all uses, we were using approximately 530 gallons per day per person. Today we are using a per capita supply for all purposes of about 1,600 gallons a day.

The population of the United States is presently about 176 million. In other 10 years it will surpass the 200-million mark. These new mouths will all need water and food to survive. They will also make great demands upon industry for new products to improve the standards of living.

There are a great many places along the shoreline that rely upon deep wells for fresh water, who today are finding that their supply of water is being made unfit for use because overpumping has permitted salt water to dilute their aquifers. The arid areas of the world can be made to grow and prosper if they are fortunate enough to obtain a supply of fresh water. This fresh water may be from yet undeveloped natural sources—if they exist, or it may be taken from the sea or surrounding brackish waters by conversion.

For the moment, accelerated development and wise use of our present natural supplies is the best answer for many areas, but there is a limit to that development. The hydrologic cycle does not change. Areas in the West still receive only 10 or 12 inches of rain a year even though their population has increased 55 percent since 1940.

Long ago, southern California had to reach hundreds of miles across deserts and mountains to the Colorado River to slake its growing thirst. Once crticized as a wasteful overdevelopment, it is now clear that within 10 years it will be inadequate to meet the growing demands of industrial and domestic users.

Through an ambitious project—still to be authorized and estimated to cost $1½ billion—the people of southern California hope to develop and transport water from the Feather River in northern California. Without discussing the pro's and con's of this venture, I think you will all agree, water from this project will be far more expensive than water now obtained from Hoover Dam. This is the point I want to make: new supplies of natural fresh water will be ever more expensive while at the same time, the cost of converting sea water to fresh will be coming down. In some areas these cost curves will cross and concerted sea water will be the least expensive of the two.

There are already some areas where this has happened.

A conversion plant on the arid island of Aruba is turning out fresh water from the sea at the rate of 3,500,000 gallons per day at a cost of $1.75 per thousand gallons.

Compare this to the situation on St. Thomas in the Virgin Islands. To meet their water requirements in 1957, they had to haul 33 million gallons of water by barge from Puerto Rico at an average cost of $6 per thousand gallons. Israel, as another example, has developed all of her natural water supplies. If this bustling litle nation is to grow and prosper they must have more water and the one remaining source is the sea.

Brewing a drink of water from the sea is easy—but still expensive. The saline water conversion program is designed to develop inexpensive conversion processes to produce potable water from the sea and brackish waters that cover the globe.

Much progress has been made in reducing cost. When the program was initiated in 1952, the actual cost for reducing sea water to potable water ranged from $4 to $5 per 1,000 gallons. We expect our demonstration plants to do the job for about $1 per 1,000 gallons. Converting brackish water, depending on the amount of dissolved salts, will cost from 30 to 60 cents per 1,000 gallons. This is well within the range and competitive with many present domestic sources of drinking water.

In the United States there are 24 of the States that touch upon the ocean. Only three of these, Delaware, Alabama, and Oregon are not represented by cities bidding for one of the three sea water conversion demonstration plants Congress has authorized the Department of the Interior to build. Our recent survey of these sites revealed that most bids were motivated by an urgent, indeed, in a few instances almost desperate, need for additional water supplies. For the same reason over 60 cities have asked to be considered for one of the two brackish water conversion plants that are authorized.

Through the ages, natural supplies of water, fluctuating in an erratic manner, have governed the rise and fall of civilizations. Some of the most creative and cooperative ventures in the annals of human advancement were applied to the development of water resources. As a part of his quest for water, man has been trying for a long time to change salt water into fresh. Probably a lot longer than most people realize.

Aristotle wrote about it. Caesar was able to obtain fresh water from the sea at Alexandria. Francis Bacon discussed the problem in some detail in 1561. Queen Elizabeth I had a standing offer of $28,000 (tax free) for anyone who could make the ocean water potable at a low cost. Thomas Jefferson conducted some successful experiments in 1791.

Since the Office of Saline Water was established it has received more than 600 suggestions for treating sea and brackish waters. The office has actually worked on 60 research and development contracts. At the present time more than 20 research activities are being carried on at universities and research groups. These contracts range from $1,000 to $245,000.

The Congress recognized the need for an economical method of producing potable water from salt and brackish waters, and in 1952, passed the first legislation on this subject. At the present time the Congress has asked that the program be accelerated and the Office of Saline Water is moving in that direction. Two of the processes to be utilized in the demonstration plants have been selected and a third is under consideration by a Process Selection Board representing science, industry, and government. A Site Selection Board composed of qualified engineers from outside government will meet the 16th, 18th, and 19th of May and it is my hope they will be able to select, at an early date, one or two sites from the more than 140 applications that have been received to date.

Congress has authorized five different demonstration plants. The law specifies that we must locate a plant on the east, west, and gulf coasts for sea water tests. Two of these plants will produce at least a million gallons of fresh water a day. Two plants are authorized for the conversion of brackish inland water. One will be located in the arid areas of the Southwest, the other in the Northern Great Plains. One of these will be designed with a capacity of at least 250,000 gallons per day.

I am convinced that there is no limit to what science can accomplish when free men and women are able to apply their scientific and technical knowledge to the problems involved. Research and education are shortening the time and increasing the span of progress. However, as research in chemistry and science marches on, the glassiness of the laboratory must sooner or later get into the factory for a try in the mass production field. The Office of Saline Water looks for scientific men and women who will convert research to reality. We are not interested in those who say ideas won't work. We have a group of dedicated men and women in the Department. In addition, the office has a group of some 75 consultants, experts in their fields, who assist in making the program work.

I am satisfied the cost of converting sea and brackish waters will be reduced. The final plant or plants may be a combination of several present methods now under consideration.

As a physician, I can recall that the cost of vitamins have been reduced from dollars to cents as production increased. Antibiotic drugs have been reduced in price by research. This will happen in the Office of Saline Water. As more plants go up, the cost of removing the salt will come down.

I have great faith in the future of America and what will be accomplished in our efforts to make saline and brackish waters fit for human use. I am convinced that a breakthrough can well occur that will help to solve our problems. The gap between the present fresh water resources and the cost of converting water from the sea is being narrowed. The program, while it may not seem important today, will be most important for the generations yet unborn.

I am hopeful that these remarks of mine will make the officers and membership of the National Rivers and Harbors Congress, as well as the general public, have a keener appreciation of the future water needs of mankind. No community can grow or prosper without water. Your group is dedicated to building up the resources of our Nation. Your work in many areas is the protection of damage done by uncontrolled forces of water. This parade of progress must march on. You can well join hands with others who are interested in a reliable supply of potable water. In many areas this will mean desalting of the sea and brackish waters.

In the search for a key to unlock a new source of water, I am reminded of the words carved in stone and placed over the Speaker's chair in the House of Representatives. They are the words of Daniel Webster: "Let us develop the resources of our land, call forth its power and build its institutions, promote all its great interest and see whether we also in our day and generation may not perform something worthy to be remembered." We are trying to do that, gentlemen, in the Office of Saline Water.

Report of Committee on Industrial Water Use, Pollution Abatement, Wildlife, and Recreation to the 46th National Convention of the National Rivers and Harbors Congress

---

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks, I wish to include the report which was made to the 46th annual national convention of the National Rivers and Harbors Congress by the permanent committee on industrial water use, pollution abatement, wildlife, and recreation.

I have been honored by being appointed as national vice president of the congress, and I enjoyed serving again as chairman of this committee, which it is agreed by all has rendered a distinct service to the people of the United States.

The committee met on May 13, 1959, and continued in session throughout the day, reaching complete agreement on its proposed report. On May 15, at the final session of the congress, the committee's report was presented by the vice chairman, Judge J. E. Sturrock, of Texas, and was unanimously agreed to by the convention.

I was again impressed by the keen interest shown by the committee members representing the many diverse geographic areas of our country, and it was obvious that there is a growing awareness throughout the country of the increasing importance of this complex problem of sound water-use and pollution-abatement policies and programs.

The report of our committee is as follows:

NATIONAL RIVERS AND HARBORS CONGRESS, 46TH NATIONAL CONVENTION, WASHINGTON, D.C., MAY 13–15, 1959

(Report of committee on industrial water use, pollution abatement, wildlife and recreation)

The committee reviewed its report adopted at the annual convention of the National Rivers and Harbors Congress held May 14, 1958, and reaffirmed the broad and constructive principles for development of adequate water supplies set forth therein, emphasizing particularly the need for constructive policies relating to conservation, municipal and domestic use, pollution abatement, flood control, irrigation, recreation, industrial use and other beneficial purposes.

The chairman presented a record of accomplishments under the provisions of Public Law 660, providing for Federal assistance to communities for the construction of waste treatment facilities. He submitted charts showing comparative expenditures for such facilities during the 5 years 1952–56 prior to the enactment of Public Law 660. Contract awards for sewage treatment works construction averaged $220 million annually during that period. In the first full year of the Federal grants program, 1957, construction expanded 58 percent over the previous annual average to reach $351 million. The second year of the program, 1958, brought an even greater increase in construction, with contract awards reaching $389 million—75 percent over the earlier 5-year average. After only 2 years of operation the program has proved a great success, resulting in construction which has cleaned up 14,000 miles of the Nation's streams for a multitude of water uses. The great bulk of this increase in construction during 1957 and 1958 came from projects receiving Federal aid. These facts point strongly to the conclusion that if it had not been for these grants, sewage treatment works construction would have remained at about the average level experienced during the 5-year period preceding the current program.

It is the sense of the committee that even the limited program permitted by Public Law 660 has been an outstanding success.

The chairman called attention to the fact, however, that expert estimates concurred in the conclusion that the essential rate of construction of such facilities over the next 8 years was of the order of $575 million annually which will be necessary to eliminate the huge backlog of construction needs and provide for plant obsolescence, replacement and population growth demands. These surveys also indicate that a doubling of present Federal funds is necessary in order to increase construction to the required level of $575 million annually.

In the light of these facts the committee deplored the attitude expressed by the Bureau of the Budget and the President that Federal participation in this program should be discontinued. It was the sense of the committee that legislation should be promptly enacted to strengthen the provisions of existing law for dealing with this urgent problem, including increased Federal financial assistance to communities and improved enforcement procedures. In this connection, the chairman called attention to the principle provisions of H.R. 3610 recently reported favorably by the Public Works Committee of the House of Representatives. These include:

(1) Grants for projects in the amount of 30 percent of the estimated reasonable cost thereof or $500,000, whichever is the smaller, with the provision that no grant of more than $250,000 shall be approved for a project in any State until all previously filed applications from that State and political subdivisions thereof for grants not exceeding $250,000 have first been approved;

(2) Municipalities to join together to build joint treatment facilities with the amount of grant allocable to each community as if it were a separate project;

(3) Reallocation of grant funds from States not using funds because of lack of projects to States having projects approved for which grants have not been made because of lack of funds;

(4) One hundred million dollars to be appropriated for purposes of construction grants for any fiscal year; and

(5) An aggregate of $1 billion to be appropriated for such purposes.

Thereupon, the following resolution was unanimously adopted:

"*Resolved*, 1. That this committee recommends the adoption of H.R. 3610 and respectfully urges that the National Rivers and Harbors Congress address a communication to each member of the Congress of the United States strongly endorsing the provisions of H.R. 3610 and recommending its immediate enactment into law. A suggested form of letter for this purpose is attached as exhibit A to this report.

"2. That this committee recommends the appropriation of $45 million for fiscal year 1960 to implement the provisions of Public Law 660.

"3. That this committee recommends an appeal to the Congress from the decision of the Bureau of the Budget and the President for reconsideration of the decision heretofore announced to include no funds in future budget estimates for Federal assistance in the construction of pollution abatement works in accordance with the principles of Public Law 660.

"4. That this committee requests each member of the National Rivers and Harbors Congress to enlist support from Members of the Congress of the United States for the actions proposed in the preceding resolutions."

The attention of the committee was directed to the long continuing problem of pollution of the Potomac River in the District of Columbia region. It was the sense of the committee that sanitation standards in the area of the Nation's Capitol should set a standard for the world and that the polluted condition of the Potomac River in the District of Columbia metropolitan area demanded immediate and constructive action by the Federal Government. The committee was gratified to learn that a satisfactory plan for dealing with this problem had been evolved as a result of an enforcement conference held under Public Law 660. The committee expressed satisfaction that as a first step improvements in the Blue Plains sewage treatment plant have been completed, but it was strongly of the opinion that the additional elements of the plan involving the construction of a system of interceptor sewers should be undertaken promptly.

Thereupon, the following resolution was unanimously adopted:

"*Resolved*, That the committee recommends to the National Rivers and Harbors Congress the adoption of a resolution in the form attached to this report as exhibit B."

Reports from Representatives of all sections of the Nation contained dramatic evidence of growing water problems. It is clear that the population of the United States will continue to grow rapidly, that the needs of industry, agriculture, and the general public for adequate supplies of water will continue to mount; that with improved means of transportation and greater leisure time, demands for recreational facilities for hunting, fishing, boating, and related forms of enjoyment will grow apace, and that the growth of industry and population will aggravate and intensify the already serious pollution abatement problem confronting the Nation. Accordingly, the committee reaffirms its conviction that all uses of water are interrelated and are of concern to the public generally, and that conservation, control and equitable disposition of our water resources are matters of profound interest to the development of the national economy and the welfare of all the people. It is evident that the water problem will become as vital to the national interest in 10 years as the missile program is today. Clearly, also the increasing pressures of various public demands for water use urgently require the long-range planning and effective coordination to assure maximum realization of the public values inherent in our precious water resources.

In view of the growing importance of water resource development, the following resolutions were unanimously adopted:

"*Resolved*. 1. That recreation should be included as definitely as any other factor in the evaluation and programing of land and water development projects.

"2. That the committee records its continued adherence to the principle that provision be made for storage and reservoir projects to increase needed low flows downstream, without reimbursement, to the extent warranted at present or during the economic life of the project where the benefits of such low flows are widespread, general and nonexclusive.

"3. That the committee recommends improved coordination among the agencies at all levels of Government for the more effective development and use of water resources; and

"4. That the committee recommends a more adequate program to ascertain, assemble, and disseminate in useful form basic data relative to surface and ground water resources.

EXHIBIT A

The National Rivers and Harbors Congress, assembled for its 46th annual convention in the City of Washington, D.C., on May 15, 1959, has considered the growing urgency of the problem of water pollution abatement.

It appears that with the rising population, rapidly increasing per capita water use and developing industrial and recreational needs for water, current levels of expenditures for pollution abatement facilities are grossly inadequate. Reliable estimates clearly demonstrate the imperative necessity for a level of expenditures for these purposes of approximately $575 million annually.

Evidence submitted to the convention compels the conclusion that only through increased Federal assistance to local communities can this national problem be solved. Accordingly, the National Rivers and Harbors Congress respectfully urges the immediate enactment into law of H.R. 3610, which it believes to be an essential step in the constructive solution of this growing national problem.

EXHIBIT B

Whereas, at the conclusion of a conference held under the enforcement provisions of the Federal Water Pollution Control Act providing for enforcement measures to abate pollution of interstate waters, the conferees unanimously agreed that the District of Columbia will provide secondary treatment (including chlorination of the effluent when necessary at its Blue Plains plant) and reduce pollution of storm water overflows by constructing a system of interceptor sewers, and that the construction of such interceptor sewers be completed at the end of calendar year 1966 and appropriate financial arrangements be made to accomplish this end;

Whereas the installation, maintenance, and operation of such remedial facilities are

necessary to control pollution of the interstate waters of the Potomac River flowing past the Nation's Capital;

Whereas the present polluted condition of the Potomac River as it flows through the District of Columbia makes the river unfit for recreational uses and constitutes a health hazard, symbolizing the seriousness of similar pollution problems throughout the Nation;

Whereas the District of Columbia is the Capital of the Nation, requiring that sanitation standards in the area should set an example for the world;

Whereas the District of Columbia needs financial assistance in order to reduce storm water overflows by 1966 and because of the national character of the city the Federal Government has an added responsibility to help finance the higher standards required of the District of Columbia: Therefore be it

Resolved, That the National Rivers and Harbors Congress urgently recommends that the Congress of the United States, the District of Columbia and the Maryland and Virginia communities concerned take immediate appropriate action to secure abatement of pollution of the Potomac River in the Washington Metropolitan Area; and be it further

Resolved, That the National Rivers and Harbors Congress recommends that the Congress of the United States enact appropriate legislation authorizing Federal financial assistance to the District of Columbia for the construction of a system of interceptor sewers to abate further pollution of the Potomac River due to storm water overflows.

PERMANENT COMMITTEE ON INDUSTRIAL WATER USE, POLLUTION ABATEMENT, WILDLIFE, AND RECREATION OF NATIONAL RIVERS AND HARBORS CONGRESS

Chairman, Representative JOHN A. BLATNIK, Chisholm, Minn.; secretary, William J. Hull, Ohio Valley Improvement Association, Washington, D.C.

Members

New England division: Walter G. White, chairman, Water Resources Board, State of New Hampshire, Concord, N.H.

North Atlantic division: George R. Shanklin, chief engineer, Division of Water Policy and Supply, State of New Jersey, Trenton, N.J.

South Atlantic division: Miles J. Smith, vice chairman, North Carolina Board of Conservation and Development, Salisbury, N.C.; Harry H. Saunders, vice president, St. Joe Paper Co., Port St. Joe, Fla.

Southwestern division: Judge J. E. Sturrock, general manager, Texas Water Conservation Association, Austin, Tex., vice chairman.

Lower Mississippi Valley division: Leonard N. White, engineer, Arkansas Geological and Conservation Commission, Little Rock, Ark.; Calvin T. Watts, assistant director, Department of Public Works, State of Louisiana, Baton Rouge, La.

North Central division: Marvin Fast, executive director, Great Lakes Commission, Ann Arbor, Mich.

Missouri River division: Milo W. Hoisveen, chief engineer, North Dakota Water Commission, Bismarck, N. Dak.

Ohio River division: Laban P. Jackson, commissioner of conservation, State of Kentucky, Frankfort, Ky.

North Pacific division: Marshall N. Dana, chairman, Commission of Public Docks, Portland, Oreg.

South Pacific division: Walter G. Schulz, division chief engineer, Division of Design and Construction, Department of Water Resources, State of California, Sacramento, Calif.

Velma Johnston Feted by Defenders of Wildlife

EXTENSION OF REMARKS
OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I would like to include a short talk made by Mrs. Velma Johnston of the Double Lazy Heart Ranch, Wadsworth, Nev., at a dinner held in her honor by the Defenders of Wildlife, which was attended by a number of representatives of several humane organizations and the entire Nevada congressional delegation.

Mrs. Johnston came to Washington to testify before the House Judiciary Committee on Wednesday, July 15, 1959, in behalf of my bill H.R. 2725, to prohibit the hunting of wild horses and burros by airplanes, trucks and other mechanized equipment. She has become nationally famous as "Wild Horse Annie," because of her love, devotion and untiring efforts to protect these animals. Her remarks follow:

Because we are here together this evening, it is obvious that we all have been exposed to, and are afflicted with, the same malady—a severe case of mustang fever. It is raging at high temperatures throughout the Nation, is highly communicable, not only by exposure to a person already having it, but also through the written word. Once having contracted it, there is no known cure.

Rather than talk at this time of the shameful abuses to which the wild ones have been subjected during the past decades, for much has been written about them, and more of the grim business will be discussed tomorrow, I would like to indulge in a luxury against which I have rigidly schooled myself since early in this fight, and that is the luxury of sentimentality. Because it is expected of a woman, I have deliberately avoided it—so that I could meet any opposition to our legislation with an objectivity and logic that has commanded respect, if not agreement.

My thanks, first, to you representatives and to the organizations which you represent, and to the lawmakers, for the know-how and the strength you have shown. Also to the many organizations throughout the country that have contributed much.

The spotlight is on us now, who are here in Washington to plead the case for the mustang, but I would like for you to meet a few of the off-stage players who have given much to help bring this about. Humaneness has no political or religious affiliations, therefore, the cast of characters is a diverse one.

The gentle nuns of the Servants of Mary, in Ladysmith, Wis., through whose efforts the dean of Wisconsin's delegation in the House, the Honorable ALVIN O'KONSKI, introduced a bill comparable to Congressman BARING'S H.R. 2725. The conservation class in their high school has made this its project. Tomorrow at the convent, prayers for our success will be doubled and redoubled.

A cowpoke in his nineties who could well remember the wild ones he'd broke and rode.

An ancient Sioux Indian Chief whose only regret is that he can't come upon those two-legged skunks of wild horse chasers with a band of Sioux warriors armed with .30–.30 rifles.

Virginia Gillas in Miami Beach, Fla., who, though thousands of miles away, has worked shoulder to shoulder with me.

Bonnie Gray, for several years world's champion cowgirl.

The blind man in New Jersey who read the story in the Braille edition of Reader's Digest. All that penetrates his dark world is the diminishing beat of the wild horse hooves, that once pounded the plains in a mighty crescendo.

The Girls Friday throughout the country, whose nimble fingers typed the story they sent to their friends.

And their bosses, who have, knowingly or unknowingly, donated paper, envelopes, and postage.

My own beloved executive, from whom I have often borrowed an hour or two between nine and five to meet a crisis, for crisis do not always occur on one's own time—and who has cheerfully picked up long distance telephone charges and other expenses along the way—whose post office box is more often than not fuller of Wild Horse Annie's mail than his own.

My husband, upon whose strength I have leaned, and who has cooked countless meals and swept the floors to give me time to do all that has had to be done.

My mother, who learned to type so she could set up a card filing system and help me in a dozen ways.

The children throughout the country—and their teachers—who have undertaken this as a class project. A letter that tugged at my heartstrings came from a man whose seventh grade class had voted to send me the balance in their treasury when the term ended in June. A check for $5 was enclosed, and the letter ended with the words, "With our admiration and our love."

Tex Gladding and Jack Murray, whose personal courage has often nipped in the bud, the plans of a would-be roundup artist.

Those nameless ones in the field, ever alert, whose observations have enabled the stopping of roundups before they start—oftentimes in a manner resembling a first-class cloak and dagger operation.

A missionary in Africa's Belgian Congo, who sent words of encouragement, for he recalled many a happy hour as a boy in Colorado, spent on the back of his fleet cowpony.

A sergeant in the Black Watch Regiment of the Scottish Highlanders—stationed in distant Cyprus during the time when international chaos could have exploded like a 4th of July firecracker. He wrote, "More power to your elbow."

Louise the journalist, and Fritts the photographer, who spent 3 days at the Double Lazy Heart Ranch, and who had come from far-off Amsterdam to get the story for the Universal News Organization's European outlets.

The horsebreeder and author in Portugal, through whose kindness I have one of the finest collections of horse books in the country—all in Portuguese.

My doctor, bless him, who has somehow managed to patch me up, and with a skillful blending of the right proportions of go pills and slow pills, has kept me on an even keel.

Only the Infinite Timekeeper for all mankind knows the number of hours that have been spent to bring us to this moment.

The wild ones have done nothing to deserve the treatment that has been handed them. The late John Trotwood Moore, southern editor and author, expresses so much of how I feel in these words:

"Out from the past, the dim bloody, shifting past, came this noble animal, the horse, side by side with man, fighting with him the battles of progress, bearing with him the burdens of the centuries. Down the long, hard road, through flint or mire, through swamp or sand, wherever there has been a footprint, there also will be seen a hoofprint. They have been one and inseparable, the aim and the object, the means and the end. And if the time shall ever come, as some boastingly declare, when the one shall breed away from the other, the puny relic of a once perfect manhood will not live long enough to trace the record of it on the tablet of time."

My Greatest Experience in the United States

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. SCHWENGEL. Mr. Speaker, my attention has been called to some remarks which were delivered at a junior achievement banquet in St. Paul on May 6, 1959, by an exchange student from New Zealand, Anne Walton-Wooller.

This is such a sound testimony for the free-enterprise system which we seek to preserve, that I want to call it to the attention of my colleagues. I ask unanimous consent that these remarks be printed in the Appendix of the RECORD.

MY GREATEST EXPERIENCE IN THE UNITED STATES

(By Anne Walton-Wooller)

"An American field service scholarship provides a year of study and experience in the United States." These were the exciting words which appeared on the award-of-scholarship form which I received at home in New Zealand just over a year ago. In April 1958, study meant what it means to me today—schools, books, homework; but, I was rather vague as to what experience in this contest would include. "Experience," says Webster's Collegiate Dictionary, "is the effect upon judgment or feelings produced by personal or direct impressions." According to this definition, I feel that belonging to Junior Achievement has been the greatest single experience I have had during my stay here in your wonderful city.

Junior Achievement has for those young people who join it many things to offer. It depends on the enthusiasm with which the individual enters the program—for as Christ said in the Bible, "As ye sow, so shall ye reap." Thus, each person gets from Junior Achievement what he puts into it. I would like to tell you what I, as a foreign exchange student have gained from being a member of this great organization.

From talking to other achievers and doing some research myself, I have discovered that it is usual to get about 10 different things from Junior Achievement; amongst these, knowledge of business, business contact, self-confidence, new friends, and plenty of fun. But, the one thing I would especially like to tell you about is not included in this list. It is understanding—understanding of your Nation's economic philosopy and how it compares with that of my own country. In New Zealand, the American system is still known as capitalism rather than free enterprise, and as a result there clings to it yet vestiges of the bad name Karl Marx gave it years ago when he predicted that under capitalism, the rich would get richer and the poor would get poorer. The United States is seen from afar off as the land of big business where the little man has little chance to succeed. We cannot be entirely blamed for this conception since we do not get much detailed information as to how the American system works.

Over the last 50 years, while the free enterprise system has expanded tremendously in this country, there has been much social legislation in New Zealand. As a result, we can today be called a welfare state; but, being a welfare state does not prevent our having capitalistic, free enterprise industries. Rather, it creates attitudes which are unhealthy if capitalism is to continue for any length of time within the socialized state. Perhaps I would give you an example of what socialism does to a nation's thinking. Soon after I arrived in St. Paul, I was surprised and delighted to find that my 13-year-old American sister, Lucy, was busy making potholders and dishcloths and selling them in the neighborhood at quite a reasonable profit. She was earning money, learning its value and at the same time exercising initiative. Could this be done in New Zealand? Yes it could. The only snag is, people would think you were penniless. It is one of the things that just isn't done. It is another case of conditioning. The Government does a certain amount for the people and they get the attitude "why should I bother to take the initiative? Let the Government do it."

What can be done to remedy this situation? When a man's initiative and natural desire to make something worthwhile of his life are destroyed, his ambition and imagination are deadened. I am convinced that if Junior Achievement could be established in New Zealand, it would have the effect of creating the right attitude towards free enterprise in the minds of the young people and with this accomplished, a less socialistic economy could be achieved. From my experience, I have found that through the JA program we teenagers (1) become more aware of the free enterprise system as something live and fascinating, (2) our interest in its operation is stimulated by membership in active companies, (3) there is fostered a more personal concern for the continued existence of this unique version of capitalism which provides Americans with the highest standard of living in the world.

On behalf of all the Achievers in the St. Paul program, and especially the other American field service students, I wish to thank sincerely you, the businessmen of the city for your support of junior achievement and the great opportunity you have given us to learn by doing.

Describing Nebraska to New Yorkers

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. CUNNINGHAM. Mr. Speaker, Nebraska is a wonderful place to live and to raise a family. As part of its series on States of this country, the Sunday News, New York City, recently carried an article about the Cornhusker State, and under leave to extend my remarks, I insert it in the RECORD at this point.

DESCRIBING NEBRASKA TO NEW YORKERS

(This is one of a series of editorials in the Sunday News, New York City, the newspaper of largest circulation in the country, 3,500,000. The magazine of the Midlands has been reprinting these editorials on nearby States.)

The first white man to enter what is now the Cornhusker State was probably the Spanish explorer Francisco Vasquez de Coronado, in 1541.

He and his 30 comrades were looking for the allegedly gold-studded kingdom of Quivira, which turned out to be nothing but a collection of poverty-stricken Indian villages near present-day Nebraska's southern border.

Though fought over by Indians, Spaniards, French, and British, the area wasn't really explored until early in the 19th century. Among those who acquainted Americans back east with its possibilities were Meriwether Lewis and William Clark, Zebulon Pike, Maj. Stephen Long, and Lt. (later Gen. and first Republican Presidential candidate) John C. Fremont.

Major Long, in the 1820's, reported that Nebraska was a "great desert, entirely unfit for agriculture." This was one of U.S. history's more notable bad guesses.

Mid-19th century Nebraska, was the site of the Oregon, Mormon and California trails, over which traveled the great covered-wagon migrations of pioneers bound for the Far West and the Pacific coast.

It was made a Territory May 30, 1854, and a State March 1, 1867.

Politically, the State is unique in one respect. Since 1937, it has had the Union's only legislature consisting of but one house, instead of the customary two.

COULDN'T BE FARMED, EH?

In population, Nebraska ranks 34th among the States—mid-1958 estimate, 1,457,000. In area—77,227 square miles—it is our 15th largest State.

Having the biggest underground water supply in the Nation, Nebraska is able to irrigate some 2 million acres. Total acreage under cultivation comes to about 22 million acres.

On this vast expense of land, Nebraska farmers in 1957 (latest figures we have) raised 222 million bushels of corn, almost 78 million bushels of winter wheat, nearly 8 million tons of hay, and a lot of oats, clover and sugar beets.

Livestock population on January 1, 1958, totaled 4,675,000 head of cattle and 2,044,000 pigs.

Mineralwise, Nebraska is a considerable producer of petroleum, cement, volcanic ash and such semi-precious stones as chalcedony, agate and jasper.

Its two most famous citizens to date were William Jennings Bryan (1860–1925), "Boy Orator of the Platte River," and three-time Democratic candidate for President; and Senator George W. Norris (1861–1944), long-time radical Republican battler for presidential primaries and direct election of Senators, and against war, the draft, and the Versailles Treaty which wound up World War I.

OMAHA—LINCOLN—THE WEST

Omaha (population around 300,000) is Nebraska's largest city, and the second largest is Lincoln, the capital.

Omaha is noted chiefly for its tremendous livestock market and meatpacking industries, as a big distribution center for wheat and corn, and for its popular Ak-Sar-Ben carnival and festival in October of each year. Omaha's Joslyn Memorial Art Museum attracts thousands of visitors annually.

In addition to being the home of the University of Nebraska, Lincoln has one of the Nation's handsomest State capitol buildings.

Boys' Town, famous haven for abandoned or neglected youngsters, is about 14 miles

west of Omaha. Founded with a borrowed $90 by the late Right Reverend Monsignor Edward J. Flanagan, Boys' Town now has more than 50 buildings on 1,500 acres.

Hunting, fishing, and vacationing are all good in Nebraska, which has numerous State parks—notably Fort Robinson, Chadron, Victoria Springs, Niobrara, Ponca, Arbor Lodge, Stolley, and Fort Kearney.

The hill and badland country in and around Crawford is virtually alive with memories of such old western characters as Buffalo Bill Cody, Luther and Frank North, Big Bat and Little Bat Batistte, and such Indian warriors as Crazy Horse, Dull Knife, American Horse, and Red Cloud.

The Pioneer Village at Minden (132 miles west of Lincoln) is a giant museum containing more than 20,000 items depicting man's progress since 1830—and sorry, but we must sign off.

Ellis Leads Co-ops Astray

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. JENSEN. Mr. Speaker, it is not a habit of mine to permit unjustified attacks on me to go unchallenged.

In this regard I feel duty bound to make reference to statement in Rural Electrification, the official monthly publication of the National Rural Electric Cooperative Association, Clyde Ellis, manager.

For years Mr. Ellis has attempted to smear me in the minds of REA members.

In Mr. Ellis' magazine I am referred to as a longtime foe of Federal projects. My record over the years in support of all worthwhile Federal projects and REA is ample refutation of this unwarranted attack. The facts are, as the record will prove, I have supported every dime appropriated by the Congress for REA during the 21 years I have had the honor to serve the people of the Seventh Iowa District.

Mr. Ellis' magazine recently publicized a few remarks made about me by Governor Loveless, of Iowa, in which the Governor referred to my speech of May 4 last—CONGRESSIONAL RECORD, page 6625—on the need to preserve our American way of life and to halt the "trend toward the Khrushchev goal of socialism and slavery for our grandchildren," as a ranting attack on TVA and said he was positive that I was not speaking for the people of Iowa. In this respect I believe I know the hearts and minds of the people of Iowa and I am sure that the majority of them prefer the American free enterprise system rather than a Socialistic welfare state where they would be but vassals of the bosses of such a government. I would be happy to furnish anyone desiring it, a copy of my May 4 speech entitled "Socialism or Freedom for America—I Took the Oath."

Recently Mr. Ellis attempted to sell down the river the rural people he is supposed to represent. In this regard I call attention of my colleagues, and the rural people of the Nation whom Clyde Ellis purports to represent, to the text of the June 29, 1959, issue of The Lowdown on Farm Affairs From Washington by Glenn Martz which is as follows:

ELLIS LEADS CO-OPS ASTRAY

Clyde T. Ellis, National Rural Electric Cooperative Association general manager, has once again stirred up a hornet's nest by attempting to exert influence on legislation not involving REA.

This time, however, he has brought down the wrath of some of REA's strongest supporters in the House of Representatives.

Ellis, once again taking the CIO–PAC line, upon which he has more and more relied for his philosophy rather than the grassroots sentiments of the rural electric co-op managers and directors, this week sent secret letters to certain Congressmen urging them to vote against H.R. 3—the States rights bill.

H.R. 3 has as its objective the curtailment of court decisions which prevent the States from enacting legislation against security risks, Communists, and acts of sedition.

This secret letter came to light in House debate on the measure when Congressman WILLIS was asked if H.R. 3 would injure the REA program.

Mr. WILLIS, in replying, stated:

"Mr. WILLIS. I want to say that Mr. Ellis, in fairness, should have sent a letter to all Members. I doubt that there has been a greater supporter of the REA program in this Congress than myself. It happens that the largest REA group in the world is from my congressional district. I attend all their yearly meetings. I do not think I have ever voted against any program involving REA that I considered fair and just over the years." (CONGRESSIONAL RECORD, House, p. 10726.)

Whereupon, Congressmen CRAMER and CHELF joined in the debate.

Here is an excerpt of their observations:

"Mr. CRAMER. I will say to the gentleman further that this bill could not possibly have anything to do with the REA and Mr. Ellis is about as wrong on that as he was on REA reorganization.

"Mr. CHELF. Exactly.

"Mr. CRAMER. And that is because it involves interstate commerce. That is the basis on which REA was established. This bill cannot have and does not have anything to do with interstate commerce, it being a constitutional provision which the bill could not possibly abrogate.

"Mr. CHELF. Amen."

SOUTHERNERS AMAZED

Some southern Members could hardy believe their ears when they heard Ellis' secret letter read on the floor. One of these was Congressman PILCHER, of Georgia, a strong supporter of REA. He immediately left the floor and sought the opinion of Walter Harrison, national president of National Rural Electric Cooperative Association. Harrison's telephone reply was then reported by Congressman PILCHER to the full House.

Here is the report as taken from the RECORD:

"Mr. PILCHER. Mr. Chairman, regarding the letter from Mr. Ellis, I have just talked to Mr. Walter Harrison, national president of the Rural Electric Cooperative Association, and he says he is 100 percent in favor of this bill." (CONGRESSIONAL RECORD, House, p. 10726.)

DORN SPEAKS OUT

Sentiment of southern Congressmen to Ellis' role was expressed by Congressman DORN, of South Carolina, when he addressed the House as follows:

"(Mr. DORN of South Carolina asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

"Mr. DORN of South Carolina. Mr. Speaker, I have not received a single letter from any of the members of the REA cooperatives in my district opposing H.R. 3. Therefore, it came as a shock to me, and all southern Congressmen today during debate when we learned of a letter written by Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, opposing H.R. 3.

"In this letter, Mr. Ellis very skillfully followed the Socialist line by intimating that the 4 million consumers of REA power in America were opposed to this great States rights bill of Judge HOWARD SMITH, of Virginia. Nothing, Mr. Speaker, could be further from the truth. Mr. Ellis is doing REA a great disservice by misrepresenting the thinking of REA members and by projecting himself into legislation and debate on this floor which in no manner affects REA or the REA cooperatives.

"Mr. Ellis, by opposing this States rights bill, is not working in the best interest of REA. By joining the CIO and the NAACP in opposing this great legislation he is only hurting REA. Last year H.R. 3 passed this House by an overwhelming majority. It passed this House again a few months ago by a comfortable majority. It is interesting to note that nearly all House Members from the REA areas voted for States rights. This fact alone would indicate that Mr. Ellis is wrong. Mr. Ellis, in my opinion, does not represent a majority of the REA consumers in opposing H.R. 3.

"Mr. Speaker, I am a consumer of REA power and I voted for H.R. 3 last year and again this year and I will continue to vote for it. Mr. Ellis does not represent me as a farmer and consumer of REA power. I believe H.R. 3 is in the best interest of rural communities, free local government, and States rights. REA has nourished and grown in areas with this States rights philosophy. This legislation was made necessary by the Steve Nelson case. Steve Nelson was a Communist convicted under the State laws of Pennsylvania. The Supreme Court of the United States turned Nelson loose on the public on the grounds that there was a Federal law against sedition and espionage. This bill, H.R. 3, is an effort on our part to change the law so that our States can continue to have laws, as well as the Federal Government, against sedition, Communist intrigue, and overthrow of our representative form of government.

"It is strange to me why anyone would project the great REA cooperatives and the membership into this debate here today. I condemn this attempt to line the REA up with the Supreme Court and the defenders of Steve Nelson.

"Mr. Speaker, H.R. 3 is the most important States rights bill in a generation. Rural people everywhere are for individual liberty and States rights. The Farm Bureau is actively supporting H.R. 3. The Grange has time and time again adopted resolutions against too much Federal control and has always favored States rights. Mr. Speaker, you will not find Communists, seditionists, or Fascists out on our farms tilling the soil. REA consumers are patriotic Americans. They believe in liberty and the Christian principles upon which the United States was founded. They have nothing in common with Steve Nelson. They do not believe in these many wild decisions of the Supreme Court. Our farmers are opposed to gangsters, crooks, and racketeers. Speaking for my fellow REA consumers all over the United States, I honestly believe they are overwhelmingly for States rights, individual liberty, and H.R. 3. I hope H.R. 3 as passed by the House will be acted on in the other body and become the law of the land." (CONGRESSIONAL RECORD, House, p. 10746.)

HIDDEN HAND

In view of developments on Capitol Hill, the interesting question being raised

amongst Democrats in Washington is—why did Ellis, a former Arkansas Congressmen, and long a stalwart of Democratic strength on Capitol Hill, turn against his former colleagues?

The answer is not easily found.

It can be found, however, in the philosophy of the group in Washington with which Ellis has, more and more, in recent years, associated himself and espoused their causes.

This group is composed of a steering committee calling itself the E.C.I.C. (Electric Consumers Information Committee). Actually the group is composed of left-wing adherents of socialization of the power industry in America.

Leading the list are such men as Leland Olds, former Chairman of the Federal Power Commission whose nomination was opposed by Senator LYNDON JOHNSON on the strength of Olds' writings in the Communist newspaper, the Daily Worker; Ben Stong, now active in the labor movement; Jerry Voorhees, former ADA Congressman from California, who was defeated by Richard Nixon; Walter Reuther, vice president, CIO–AFL; Clay Cochran, economist now working for the CIO–PAC.

All of these are in no way connected with farmers and rural electrification—yet they dictate the policies for Ellis.

It is also of interest on Capitol Hill that Ellis' letter urging votes against H.R. 3 lined up squarely with the Communist Worker which also urged defeat of H.R. 3.

The latest issue of the Worker carried a front page banner line in bold type declaring that "H.R. 3 Perils Liberties".

It is the same line taken by various left wing groups which don't want States to have the power of legislating controls over those trying to undermine the traditional principals of government on which the Nation was founded.

It is now clearly apparent that Ellis has led a fine group of rural people into the hands of a group of political and social schemers who are intent on using the good cause of rural electrification and the funds of its members to espouse and further their own left-wing legislative projects and policies.

IN RETROSPECT

Mr. Ellis' clever attempt to generate votes to defeat the States Rights bill without consulting member co-ops or letting them know he was doing it is his usual method of operation.

The National Rural Electric Cooperative Association manager has for years been going to Capitol Hill in support or opposition to legislation not even remotely connected with REA.

As in his current letter opposing H.R. 3, he invariably indicates that he is expressing the sentiments of some "4-million REA consumers".

As previously pointed out by the Lowdown, about the only part REA consumers play in National Rural Electric Cooperative Association lobby activities is to furnish the dough to finance it.

Each connected consumer of REA power is taxed all the way from a 12½ cent minimum to 18 cents through a check-off system.

Few farmers know they contribute to Mr. Ellis' cause.

However, the sum total of his dues taken each year, according to his own records, is approximately $400,000.

In addition to this other revenue flows into National Rural Electric Cooperative Association coffers from subscriptions to the organization's official magazine—a publication which also adds to the kitty through the sale of advertising.

Then there are other enterprises which add to the overall total including a complete insurance setup.

All in all, Mr. Ellis takes in a gross of a scant million dollars a year.

And, as pointed out in recent issues of the Lowdown, this money is used to put out a veritable barrage of propaganda against mythical opponents of REA and push for the expansion of public power projects to the exclusion of private enterprise.

Right now, Mr. Ellis is trying to tighten his hold on the co-ops in his groups by promoting a plan to take over the investment of their reserve cash.

It will be recalled that most of the money used to finance construction of Mr. Ellis' million-dollar, ultramodern office building in Washington was borrowed from co-op reserves at an extremely low interest rate and on a 30-year repayment plan.

National Rural Electric Cooperative Association's dues structure for operating co-op members has been increased on two occasions since 1955.

In March of that year, annual dues were set at 10 cents per connected meter (the former maximum) or one-tenth of 1 percent of gross operating revenues, whichever was greater, up to a maximum of 12½ cents per meter.

Effective February 7, 1958, the dues schedule was revised again, this time to raise the ceiling by 50 percent, to 18¾ cents per connected meter per year. The minimum dues was increased from 10 cents to 11 cents per meter.

A full year before the 1958 increase took effect, General Manager Clyde T. Ellis reported, at the organization's 1957 annual meeting, that National Rural Electric Cooperative Association's dues income had multiplied sevenfold since 1943, to a 1956 total of some $400,000.

National Rural Electric Cooperative Association's budget for the year 1958 anticipated a gross income of $957,133.06.

JOHNSON FLAYS ELLIS

Democratic Majority Leader LYNDON JOHNSON has long been aware of Mr. Ellis' use of the power and prestige of National Rural Electric Cooperative Association membership to promote alien causes.

He has not only been aware of it, but has warned National Rural Electric Cooperative Association membership against being led astray.

In a speech before a regional National Rural Electric Cooperative Association meeting in El Paso, Tex. (October 25, 1949), Mr. JOHNSON summed up Mr. Ellis' pattern of behaving this way:

"For your political life as for your business life I recommend a four-word slogan: 'Stay Out of the Red.'

"As you would not permit REA to become a mat upon which selfish interests wipe their feet, neither must you permit REA to become the lamb's skin in which the wolves of alien radicalism cloak themselves.

"The graveyard of good intentions is filled with the remains of individuals and organizations who nosed into affairs which were not their own.

"Recently in Washington a man who represents your co-ops called me to discuss the nomination of Mr. Leland Olds to the Federal Power Commission. As you may recall, I had some interest in Senate action on that appointment. During my discussion with this man, who telephoned me, I told him that on the basis of Mr. Olds' record I personally could not approve his nomination, and that the Senate would not approve it.

"I tried to point out that a clever but deceitful propaganda campaign was under way to high pressure me and high pressure the Senate into confirming Mr. Olds. The propagandists pretended that Mr. Olds was a martyr being crucified by the big power companies and the big gas companies. That was simply not true; it was the same old smokescreen behind which many men hide when they need to hide their records.

"There was no reason in the world for you or your co-ops to become involved in that fight; but 2 days after my conversation a man purporting to speak for all of you (Mr. Ellis) went on record publicly with an endorsement of the nomination.

"Shortly afterward the Senate turned down the nomination by a vote of 53 to 15.

"Because of one man's endorsement, REA co-ops were associated permanently with a discredited and disreputable propaganda campaign in which REA should not have been involved.

"I tell you sincerely you have a bigger job to do than serve as a tool of the smear artists and the propagandists who want you to fight their battles for them by smearing the Senators who are for you."

(EDITOR'S NOTE.—Leland Olds, as pointed out, is now a member of the leftwing Electric Consumers' Information Committee, a committee which plugs for socialized power, and with which Mr. Ellis works closely.)

The next interesting question posed by this recent Ellis fiasco is, How long can he last now that these southern Congressmen have found him out?

Msgr. John M. Puskar

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Monday, July 13, 1959, commenting upon the death of Rt. Rev. Msgr. John M. Puskar, J.C.L.

[From the Wilkes-Barre Times Leader, July 13, 1959]

MSGR. JOHN M. PUSKAR

The death of the Right Reverend Monsignor John M. Puskar, J.C.L., in the prime of life is a heavy loss not only to St. Joseph's Church, Nanticoke, and the Roman Catholic Diocese of Scranton, but to the community and Americans of Slovak extraction throughout the area. Like the late Msgr. John J. Federowicz, whom Monsignor Puskar succeeded as director of Catholic Charities in Nanticoke, Monsignor Puskar was an outstanding churchman, beloved by parishioners and respected by all who had the privilege of his acquaintance or friendship.

A native of Plymouth, Monsignor Puskar was at St. Joseph's, third oldest Slovak parish in the diocese, for 30 of the 37 years he was in the priesthood. A brilliant scholar, successful administrator, and dedicated pastor, he was a diocesan consultor as well as a domestic prelate, by designation of the late Pope Pius XII in 1956, in recognition of his fidelity to duty and achievements in the local field. He gave freely of his time and talents to many organizations and worthy causes.

But it was in the role of spiritual leader that this modest man of God achieved his principal distinction. The greater the honors heaped on him and the responsibilities he assumed, the more humble he seemed to become. While his name is associated with St. Joseph's at Nanticoke, St. Joseph's in Wilkes-Barre, which he built as a young priest, is also a monument to his zeal.

Apart from a tour of duty in the diocese of Pittsburgh after his ordination, his entire career has been devoted to Wilkes-Barre and Nanticoke parishes, just across the river from his hometown. He was another who found his acres of diamonds in his own backyard.

What's Wrong With the Highway Program?

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, "What's Wrong With the Highway Program?" by Frank P. Tighe, appearing in June 1959 issue of Motor Age:

WHAT'S WRONG WITH THE HIGHWAY PROGRAM?

(By Frank P. Tighe, Editor)

The Nation's $40-billion highway program is in trouble. Money trouble. Congress thought the urgently-needed new roads could be paid for by moderate new taxes on motorists, truckers, and others who use the highways. That was in 1956, when the program was written into law.

It isn't working out that way. Tax collections are falling far short of the sums needed to build today's expensive superhighways. New sources of roadbuilding dollars must be found—and quickly. Time is of the essence.

Blunt truth of the money-muddle is that the entire highway program is likely to run into a painful slowdown period if some new financing isn't forthcoming from Washington soon.

The Eisenhower administration is very sensitive about this possible breakdown in one of its proudest accomplishments—the bold new network of interstate and local roads spreading out in all 50 states. President Eisenhower and the U.S. Bureau of Public Roads are determined to do all they can to keep the construction going forward on schedule—even if it means deficit financing for a temporary period.

But borrowing to build the new roads is easier said than done. The so-called Byrd amendment (sponsored by Senator HARRY F. BYRD, Virginia Democrat) says the construction program must be kept on a pay-as-we-go basis. In order to get essential roads built during the past 2 years, the Byrd amendment has been suspended. Should it be suspended again? That's a hot issue in the Congress, and we'll be hearing much more about it in the weeks ahead.

WHAT CHOICES OPEN?

Well, what can be done and what should be done to keep the roadbuilding program in high gear? These are the choices open to us:

1. We can increase tax on gas and oil again, or we can increase taxes on persons and corporations. The White House wants the gas tax increased by 1½ cents per gallon. But most Congressmen agree that motorists and truckers are paying their share already. And it is doubtful if higher rates on income would produce much more revenue. Most are taxed to the limit now. So higher taxes this year are not likely. This leads us to the possibility of—

2. Cash advances from the U.S. Treasury or from the sale of special highway bonds. These moneys would be secured by guarantees of payment from future gas and oil tax collections. This is a possible solution to the problem that is receiving serious attention in the Congress. The other choice is—

3. Stretch out the pay-as-we-go program beyond the 1972 cut-off date. This would mean placing 100 percent of the burden of building roads on those who drive on them. It would postpone some badly needed construction. Not a desirabel plan.

WHERE AUTOMOTIVE TAX MONEY GOES

The tax money the Government collects on gas and oil is supposed to be spent entirely on roads. It isn't. Much of it is shortstoped by the Government and spent for other purposes—projects unrelated to roadbuilding. This is unfair to all who use the highways. It's unfair for two reasons: Motorists and truckers are not getting what they pay for in their gas taxes, and they are being forced to pay more than their shares of general Government expenses.

Here are the leaks:

Taxes collected in 1957, $3.7 billion.
Spent on roads, $2 billion.
Sidetracked from road funds, $1.7 million.
And again:
Taxes collected in 1958, $3.3 billion.
Spent on roads, $2 billion.
Sidetracked from road funds, $1.2 billion.
Total road money lost in these 2 years, $2.9 billion.

Anticipated loss during next 12 years, if this leak is not plugged, $14.5 billion.

Who uses our highways?

	Number registered (1957)	Mileage traveled (1957) (billions of miles)
Cars	55,900,000	528.3
Single unit trucks	10,300,000	88.9
Heavy trucks	634,000	24.3
Buses, motorcycles, etc	300,000	5.5

Source: U.S. Department of Commerce.

Our growing highway needs

	Population (millions)	Vehicle registration (millions)	Miles traveled (billions)
1939	130.8	31.0	271.0
1950	150.9	48.9	451.7
1956	167.2	65.1	622.9
1961	180.6	77.0	753.0
1966	195.3	89.1	898.6
1971	211.6	101.2	1,051.4
1976	229.7	113.6	1,200.2

Source: U.S. Department of Commerce.

Solution to the vexing highway financing headache lies in spreading the burden to all who benefit, rather than increasing the present special taxes on the small segment considered the primary highway users, more and more people believe.

All Americans, not just motorists, truckers, and bus operators, benefit from these new highways. With the present 3 cents a gallon Federal tax on top of State gas taxes averaging 6 cents, motorists today pay some 41 percent in taxes on each gallon of gas they buy. Coupled with taxes on autos, tires, grease, and oil, the driving public today is paying a heavy road toll.

But, Congress and officials generally are beginning to realize that it's not only the driving public who benefits from the new highways.

The farmer who will be able to get his produce to market faster and in better condition; landowners who will find their property values skyrocketing; industries which will be able to get and ship their goods faster and move into new labor areas; retail and service firms which will draw customers from larger areas; offices whose employees will save time and effort, and the public generally will benefit from these new highways.

These realizations, pointed out in a recent U.S. Commerce Department study, are beginning to hit home with Congress. The lawmakers are engaging in a bitter fight over how to pull the program out of trouble. President Eisenhower's proposal that the gas tax be increased by 1.5 cents is apparently dead.

Temporary borrowing through revenue bonds for 2 or 3 years is more likely to be the final outcome, and appears to be the fairest solution. It will further raise the cost somewhat because of the interest charges, but the effect will also be to relieve motorists and other highway users from sharply increased taxes, and to spread the cost to the country as a whole.

Tax collections might solve the road financing problem. No new Federal automotive excise taxes would be needed. Instead, more of the collected money would be steered into roadbuilding.

That's the way some Congressmen would find additional funds for highways. They see the Government collecting 10 percent on the sales of new cars and 8 percent on auto parts and accessories. But the money from these two taxes is not being earmarked for roadbuilding.

Revenues from the passenger cars alone have topped $1.2 billion in a single year. Putting some of this money into new highways seems a good idea to a number of Congressmen.

Tax writers in the House Ways and Means Committee are thinking of guiding about half the passenger car tax into the highway program. They are also considering claiming some of the parts and accessories tax money for roads. These moves could add another $750 million a year to the Federal share of highway funds.

Representative MICHEL, Republican of Illinois, would go all the way in marking automotive and highway-use taxes for roadbuilding. He would put all the Federal taxes—car, truck, bus, motor fuel, tire, tube, parts, accessories—into new road construction. He sponsors a bill, H.R. 4389, to carry out this plan and believes it would add another $1.5 billion a year for roads.

Congress talks of paying the States for highways accepted in the interstate highway net. The national network standards are high, and States that have built roads meeting the standards are anxious to be reimbursed.

Bills now under discussion in Washington would require payment of $4.3 billion to the States between mid-1961 and mid-1976. But the bills won't make much headway this year. Congress is more concerned with how to find funds for new roads than with payments for existing highways.

On the Inflation Front

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. LINDSAY. Mr. Speaker, the General Electric Co. has given a substantial boost to the Nation's efforts to strengthen the value of the dollar by announcing a price cut in its turbines, both large and small. Undoubtedly there are a number of reasons that prompted General Electric to take the initiative in this regard. The best commentary that I have seen was made by the New York Times in an editorial appearing in the July 16, 1959, issue of the Times which I include in the Appendix of the RECORD:

ON THE INFLATION FRONT

One of the giants of American industry has just administered some of its prices downward. The General Electric Co. has an-

nounced on successive days reductions in prices of its turbines, both large and small.

In a Nation that had become used to the "ratchet" movement of heavy-industry prices—up, steady, up again, and never down—this is to be heartily welcomed. Furthermore, the General Electric Co.'s announcements, both in what those announcements say and what they do not say, contain some hints of better days to come on the inflation front.

First, the company said the price reductions were made possible by improved manufacturing processes that have cut costs. There would be nothing unusual about this except that it has not been happening enough in the economy as a whole in the postwar period. Improved efficiency has all too often been eaten up in higher wage and other costs, with prices the same or even rising.

Second, in its announcement on the big turbines the company said it would modify the "escalator" clause in its contracts—a clause under which customers have been required to pay more than the originally agreed price if a certain index of costs rose.

The change is aimed to help sales, but it also may represent a shrewd hunch on the part of General Electric that costs in the future may be a lot more stable than in the past.

Finally, what the announcements did not say was that foreign competition is a large element in the decision, at least for the big turbines. The revival of Western Europe is producing a benefit that Americans had perhaps not foreseen—the infusion of an extra element of competition in parts of American industry that have been to some extent immune during most of the postwar period.

In a sense, we as consumers are getting our Marshall plan money back.

A Veto Sheer Folly

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. EVINS. Mr. Speaker, I have taken the floor numerous times in support of the Tennessee Valley Authority and on July 13 included in the RECORD a list of 10 reasons why the TVA self-financing bill should be approved by the President.

The Washington Post in an editorial in their July 16, 1959, edition states that in their judgment a Presidential veto of this bill—and I quote—"would be the sheerest folly."

Mr. Speaker, under leave to extend my remarks, I include this editorial in the Appendix of the RECORD:

DOUBLE VETO FOR TVA?

A Presidential veto of the Tennessee Valley Authority self-financing bill—either in the form passed by the House or as approved by the Senate—would, in our judgment, be the sheerest folly. But a veto is what Senator DIRKSEN has demanded, despite the unanimous approval of the bill by the Senate Public Works Committee and the blessing of the Treasury Department, and there are disquieting reports that the Budget Bureau, which opposes the measure, may indeed persuade the President to disapprove the bill.

This, we submit, would represent a total misreading of the facts and of the merits of the proposal which, we believe, should more than satisfy the longstanding conservative demands for a regularization of TVA's finances. The bill would put an end to Federal appropriations for new TVA generating facilities, authorizing the Authority instead to raise its own funds through bond issues which it would retire from revenues and which Congress could veto. It would provide for retirement, with interest, of most of the outstanding public investment in TVA power facilities. It would limit, for the first time, the area which TVA may serve.

But all of this apparently is not enough for Mr. DIRKSEN and the Budget Bureau. They oppose the bill, it seems, because it would not give the Budget Bureau authority to pass on TVA's financing plans before they are submitted to Congress. In other words, they want a double veto on TVA's program for paying its own way.

If TVA is, as the President once alleged, an example of "creeping socialism," the Dirksen-Budget Bureau notions of how to govern TVA amount to "galloping reaction." The Authority would, in effect, be deprived of all significant authority by the placing of such additional hobbles on its operations. A bill substantially along the lines of the Senate version ought to be enacted and approved if TVA is to continue to serve its present area effectively.

St. Lawrence Seaway Already Brings Hope and Prosperity to Wisconsin

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. FLYNN. Mr. Speaker, it is with extreme delight that I call the attention of Congress to one of the first fruits of the St. Lawrence Seaway. Little did the Members of this great body realize what the St. Lawrence Seaway would mean to the central United States when they, in their wisdom, voted for the appropriations which made the St. Lawrence Seaway possible.

Wisconsin is a Midwestern State lying almost equidistant between the Atlantic and Pacific Oceans and lying in the northern half of our continent. We have always been both an industrial and an agricultural area and the fruits of our shops as well as the produce of our farms has been forced over the years and through the generations to find its way into the markets throughout the world by means of the railroads. This means that transportation was slow; it meant handling several times; it was costly and it meant that the Midwest could never reach its full potential as a producer of both industrial products and farm products.

One of the finest and richest parts of the State of Wisconsin consists of the First District, lying between the Illinois State line on the south, and Milwaukee County on the north. On the shores of Lake Michigan between these two boundaries are two industrial cities: Racine and Kenosha. Both have fine harbor inlets and both in years past have enjoyed much commerce on the Great Lakes. The city of Kenosha, however, has a natural harbor; it has a turntable that can accommodate all but the very largest oceangoing vessels. With the advent of the St. Lawrence Seaway the city fathers of Kenosha appropriated money to purchase lakeshore and harbor property. The city also constructed port facilities and industrialists from the city of Kenosha, principally Mr. Nicholas Demos, who is the owner of the Kenosha Auto Transport Co., which transports automobiles and trucks in all of the 49 States and in Canada, and whose home office is located in Kenosha, started developing business that could be handled through the new port of Kenosha. So successful have these efforts been that the port of Kenosha in its beginning year will be visited with over 100 ships loaded with cargo from every corner of the earth.

The port has already become the capital port of the Midwest for the foreign automobile business, and most foreign made cars, which are destined for midwestern use, will enter this country and are this year entering this country through the port of Kenosha. This port will also facilitate the export of the Rambler, the Wisconsin made car manufactured by American Motors in its plants in Kenosha and Milwaukee, thus creating more jobs for the workers in Kenosha and Milwaukee, and in turn creating more business for the business community because of an expanded payroll.

A newly formed corporation in which stock has been purchased by many community minded men is building new port facilities. This corporation has recently purchased the property of the Simmons Co., which has done business in Kenosha for the past 90 years. It has developed the harbor that is second to none and the harbor, as developed, new and modern, will permit ships to unload without waiting and without the large use fee charged in many of the urban and busier centers. This harbor is so busy that every day since the opening of the lake traffic there have been boats in the harbor and frequently there are boats offshore waiting a turn to get in. This harbor activity and the business brought to this midwestern community through this port which is located in the hometown of the American Motors Co., which manufactures the Rambler, has brought a degree of prosperity to this city and to the entire surrounding area that has been hitherto unknown.

The city of Kenosha is prosperous; employment is high; it is only recently that this city was on the list of the major unemployment centers of the country. Today everyone who wants to work is working at top wages. Other companies are performing subcontracts, either for American Motors or the many other large manufacturing plants in the area, and all are participating in the shipment of goods either in or out of the Kenosha Harbor. This new harbor is destined to become one of the leading Great Lakes ports.

On July 7 Bernard Gettelman, a former State senator from Wisconsin, whom I had the pleasure of serving with when I served as a Wisconsin State senator, and who is now collector of cus-

toms for Milwaukee, Wis., served notice on Kenosha that it had been designated by the Secretary of the Treasury as the first port of entry on the Great Lakes since the advent of the St. Lawrence Seaway.

This distinction of being "first" in recognition was certainly due to the people of Kenosha, to Kenosha's mayor, the Honorable Eugene Hammond, to the harbor commission, and particularly to Nicholas Demos who has worked so hard and so long to develop this harbor into what it is today.

Their plans call for the building of a large grain elevator which will take care of much of the grain from the surrounding States of Illinois, Iowa, and of Wisconsin itself. This grain will be shipped overseas in ships that are bringing the products of Europe and South America to the Midwest. This is truly progress on the march.

First, may I say thanks to this Congress for voting for the St. Lawrence Seaway, and next may I say congratulations to the forward and progressive people of Kenosha, Wis., who have worked so hard and so diligently to bring about this important and highly successful, this elaborate port to Kenosha. Congratulations on being the first to be recognized by being designated as a port of entry by the Federal Government.

Resolutions Adopted by the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. ROGERS of Florida. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was adopted by the 46th convention of the National Rivers and Harbors Congress held in Washington, D.C., recently.

The resolutions committee, of which I had the honor and pleasure of again serving as chairman, consisted of one delegate from each State, Territory, island possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them, made many constructive suggestions, proposed numerous changes in the draft of the resolutions presented to them, and reached agreement thereon.

The convention was attended by registered delegates from 50 States, including Alaska and Hawaii, Puerto Rico, and the District of Columbia, in addition to many registered delegates, guests, visitors, representatives of the press, and so forth. Texas again sent the largest delegation, 33; New York was next, with 19; while Louisiana was third, with 18.

These delegates were from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations; and transportation interests; with memberships totaling several million.

We believe this expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of the United States concerning the matters dealt with in these resolutions:

REPORT OF THE RESOLUTIONS COMMITTEE TO THE 46TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 15, 1959

FOREWORD

The National Rivers and Harbors Congress, now in its 58th year, intends to continue its efforts toward an expanded program of water resource development. The continued economic wellbeing of our Nation depends upon such development and our membership, composed of Federal, State, and local officials has dedicated itself to it. We are determined that our efforts shall not be in vain. The stakes are too large to have it otherwise.

MAINTENANCE OF PROJECTS

This National Rivers and Harbors Congress recognizes and commends the attitude that Congress has adopted, respecting Federal waterway and flood control maintenance, by increasing appropriations therefor. This attitude is consistent with the contention of this body that if there is justification for building a waterway or a structure for flood control there is certainly justification for proper maintenance to permit their use to the fullest extent.

A large backlog of deferred maintenance has accumulated in many of the harbors and waterways of the Nation. Until this is overcome, the full potential of such projects cannot be realized.

We urge Congress to reassert and continue its policy of providing adequate maintenance funds for current maintenance, and additional funds to eliminate the backlog of deferred maintenance on those projects for which the Federal Government has assumed responsibility.

STUDY BACKLOG

In the past, the National Rivers and Harbors Congress has noted the substantial backlog of studies in the program of the U.S. Army Corps of Engineers. This backlog has been increased by the passage of the omnibus rivers and harbors and flood control bill during the last session of Congress and the new studies regularly being authorized by Congress. The orderly development of the Nation's water resources is dependent on the expenditious completion of these studies and a continuing program of new studies. Adequate appropriations and retention of highly qualified manpower are essential to complete the studies and reduce the backlog. In order to build an adequate staff of engineers and assistants to conduct these studies efficiently and improve the quality of water resource studies, it is necessary for the corps to anticipate a consistent and higher level of appropriations. It is urged that Congress increase these appropriations gradually for 2 or 3 years and not permit fluctuations to adversely affect the program.

FOREIGN PROJECTS

We urge the Nation's Congress to examine the matter of foreign projects financed directly or indirectly with funds of the United States. Such projects are not restricted by a ban on new starts, nor are they authorized after economic justification as are domestic water resource projects. We believe they should be authorized by the Congress on an individual basis and be subject to favorable cost-benefit ratios in the same manner as are domestic projects.

Domestic water resource projects cannot compete with blanket authorizations for foreign resource development as is now the case.

NO NEW STARTS

The attitude on the part of the Bureau of the Budget that there will be no new construction or planning starts of water resources projects destined to provide stability to this country is deplorable. For fiscal year 1960 we have the largest peacetime budget in our history and contrary to the needs and thinking of a large segment of our people it contains not one single new construction start. If this attitude continues the impact on the citizens of our 50 States will be terrific. It is our intention to devote our best efforts to methods of seeing that it does not continue, to the extent that we urge the Congress of the United States to enact appropriate legislation to assure a minimum of new starts each year.

ITEM VETO

We are alarmed by information in the CONGRESSIONAL RECORD of the previous Congress as to the possibility of a provision by which the President would be empowered to veto legislative provisions as well as appropriation items. Should Congress succumb to this suggestion by a former director of the Bureau of the Budget our chances of carrying forward a public works program to meet the needs of our growing population will be practically nil. By the same token we stand to lose the confidence of our friendly foreign nations and the race for resource development by the Soviet Union. We can also be alert to efforts to curtail these programs through the imposition of a ceiling on expenditures as has been tried in the past.

OMNIBUS RIVER AND HARBOR LEGISLATION

The time has again arrived when the development of our resources can be well bolstered by enacting legislation to provide authority for the many worthy projects that have been studied and reported on by the respective Federal agencies. The proponents of these projects have been patient throughout the required study process and they now expect to see them acted on by the Congress thereby enabling them to be eligible for planning funds. We urge the Congress to respect the patience thus far exhibited and authorize these worthy projects.

THE ST. LAWRENCE SEAWAY

We join with the citizens of our Nation and those of our neighbor to the north in the realization of the St. Lawrence Seaway. Its helpful impact on the heartland of our Nation and elsewhere here and in Canada is conceded. To those who have labored long and hard for this accomplishment we offer our congratulations and with pardonable pride take a small amount of credit for the part we have played.

Moreover we join with our leaders and our people in expressing pleasure in the fact that Her Majesty, Queen Elizabeth, will join our President to lend dignity to the formal opening of this important transportation artery on the 26th of June 1959.

TOLLS ON WATERWAYS

We strongly reaffirm our long standing opposition to tolls on our waterways. These public properties benefit a large segment of our people and that benefit should not be subordinated to a desire by some elements to place a price tag on the use of these lifelines. We will continue to prevent strangulation of waterways by such imposition. Returns to our Federal treasury through taxes realized make tolls needless.

LOCAL CONTRIBUTIONS

Repeated efforts to require a greater amount of local contribution on various wa-

ter resource projects indicates a trend to divorce Federal fiscal responsibility from projects which are in the national interest. These projects are a national problem and should be financed with Federal funds with local contribution commensurate only with clearly defined local benefits. Local communities, however, should not be denied protection because of their inability to contribute.

WEATHER MODIFICATION RESEARCH

This Rivers and Harbors Congress supports a greatly expanded research program in the atmospheric sciences with particular emphasis on weather modification due to its impact on future water resource development in the Nation.

Inasmuch as the National Science Foundation, created under Public Law 85-510, has this program as a portion of its responsibility, we urge the Congress of the United States to continue adequate appropriations in support of the full scale program of the foundation.

Eli Whiteley, Congressional Medal of Honor Winner

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the most recent issue of the Texas Aggie, the school journal of the A. & M. College of Texas entitled "Teacher Exemplifies Medal of Honor Awards":

TEACHER EXEMPLIFIES MEDAL OF HONOR AWARDS

The college produced six Congressional Medal of Honor winners during World War II. Two of the heroes are living and four awards were made posthumously. One of the living is a teacher at the college.

The four who gave their lives during the conflict were Lloyd H. Hughes, 1943, of Corpus Christi, who was a U.S. Air Force second lieutenant; George D. Keathley, 1937, of Olney, who was a U.S. Army staff sergeant; Turney W. Leonard, 1942, of Dallas, who was a U.S. Army first lieutenant; and Thomas W. Fowler, 1943, of Wichita Falls, who was a U.S. Army second lieutenant.

The two survivors are William G. Harrell, 1943, of Mercedes, who was a U.S. Marine Corps sergeant, and Eli L. Whiteley, 1942, of Georgetown, who was a U.S. Army first lieutenant and who currently is an instructor in the agronomy department.

HONORED IN COKE BUILDING

Portraits of the six men, with their congressional citations, are displayed on the second floor of the Richard Coke Building.

To illustrate the type of action for which the awards were made, Whiteley's Congressional Medal of Honor citation is quoted:

"1st Lt. Eli I. Whiteley, 41, 15th Infantry Regiment, for conspicuous gallantry and intrepidity at the risk of life above and beyond the call of duty."

WOUNDED SEVERELY

"Lieutenant Whiteley, while leading his platoon on December 27, 1944, in savage house-to-house fighting through the fortress town of Sigolsheim, France, attacked a building through a street swept by withering mortar and automatic weapons fire. He was hit and severely wounded in the arm and shoulder, but he charged into the house alone and killed its two defenders. Hurling smoke and fragmentation grenades before him, he rushed to the next house and stormed inside, killing 2 and capturing 11 of the enemy. He continued leading his platoon in the extremely dangerous task of clearing hostile troops from strong points along the street until he reached a building held by fanatical Nazi troops. Although suffering from painful wounds which had rendered his left arm useless, he advanced on this strongly defended house and, after blasting out a wall with bazooka fire, charged through a hail of bullets. Wedging his submachinegun under his uninjured arm, he rushed into the house through the hole torn by his rockets, killed 5 of the enemy, and forced the remaining 12 to surrender. As he emerged to continue his fearless attack, he was again hit and critically wounded. In agony and with one eye pierced by a shell fragment, he shouted for his men to follow him to the next house. He was determined to stay in the fighting and did remain at the head of his platoon until forcibly evacuated. By his disregard for personal safety, aggressiveness while suffering from severe wounds, determined leadership, and superb courage, Lieutenant Whiteley killed 9 Germans, captured 23 more, and spearheaded an attack which cracked the core of enemy resistance in a vital area."

The Nebraska Farmer Speaks Out on Food for Peace Programs

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks I include an editorial from the June 16 issue of the Nebraska Farmer. I believe it will be of interest to my colleagues, especially those from the farm States, due to the excellent reputation of the Nebraska Farmer.

FOOD FOR PEACE

There's more than meets the eye involved in a food for peace program. In such a program there can be a danger of making more enemies than friends.

And this danger involves more than offending the countries that are competing for the same agricultural export markets that we are. It also later involves the peoples who are helped temporarily by our giveaway programs.

Here's an illustration, related recently by Stanley Andrews, now executive director of a national project in agricultural communications.

The United States started a powdered-milk disposal plan in Burma, Andrews related, and it took considerable time and effort to teach Burmese children in Rangoon that the milk was actually good to drink. They just never had been used to milk. Finally they got to liking it, and the program went well. We disposed of a lot of milk surplus, the Burmese kids had a much-improved diet, the United States made some friends.

Under the surplus disposal program, the milk was available in Rangoon at 10 cents a pound.

Then came the revolting development.

We whittled our surplus down to size and cut back on our disposal program. The price of the milk in Rangoon went to $1.40 a pound.

You can guess what happened then. There wasn't any more milk for these children—not after a fourteenfold jump in the price. We had jerked the rug right out from under some people whose friendship we had obtained. We weren't their friends any longer. Their view of us was considerably dimmer than it had been before we started giving them milk.

Andrews drew the obvious conclusion. In a food for peace program, the food must be used to implement our foreign policy, not as a way to get rid of surplus—as a weapon, not a dump.

Food for Peace

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. WOLF. Mr. Speaker, consistent with my fight for a food-for-peace program and my constant working to make the American people aware that our greatest asset with which to fight the cold war, I am happy to see the Des Moines Register in an editorial on the subject make some cogent comments on this vital subject regarding the administration's attitude toward Senator HUMPHREY's food for peace plan. I am happy to place this editorial in the CONGRESSIONAL RECORD.

[From the Des Moines Register, July 13, 1959]

A BETTER FOOD FOR PEACE PLAN

In his farm message to Congress last January, President Eisenhower made a strong plea for a food for peace effort. He said he was setting steps in motion to explore with other surplus-producing countries the means of using farm products to reinforce peace. Since then, Secretary of Agriculture Benson has begun talks with Canada and other wheat exporters on this matter.

Apparently, the administration is interested (or at least Ike was) in expanding the sales of farm products for foreign currency under Public Law 480—and lending this money back to the countries involved for economic development.

This program, though it was viewed mainly as surplus removal at the start, has proved to be a valuable instrument of aid to underdeveloped countries. In the first 4 years of this program, about 61 percent of the foreign currencies received were plowed back into economic development, primarily by loans but with some grants.

While underdeveloped countries need loans of dollars and other hard currency for purchase of capital goods abroad, they also need to pay workers on development projects in local currency. Since savings are limited in a poor country and tax systems often weak, it is difficult to raise this money without inflation. When the United States lends back the money received from sale of farm products, in effect, workers are paid partly in food, instead of money.

In view of the experience under Public Law 480 and the President's statements about food for peace, we find it hard to understand the administration opposition to Senator HUBERT HUMPHREY'S proposed amendments to the law. Senator HUMPHREY also calls his plan food for peace. His proposal would put the sales for soft currency on a 5-year basis. At present the authority is for 1 year. It would also make possible wider uses of the currency, includ-

ing expenditures for educational exchange programs.

The Humphrey amendments to Public Law 480 would set up a Peace Food Administration outside the Department of Agriculture. They would instruct the Administration to seek cooperation with other countries and with United Nations agencies in making use of food for development projects. The program would be made much more flexible by authorizing donations or sales of farm products for national food reserves in other counties. The bill would permit use of foods not technically in surplus, such as pork, but which are in plentiful supply.

On the whole, the Humphrey plan would be a commendable step forward in making use of American farm abundance as part of our foreign aid program. The administration might logically find some objections to details—but if it means what it says about food for peace, it certainly should approve the broad outlines of the Humphrey plan.

Perhaps the most important needed change in Public Law 480 is extending the authority for agreements beyond 1 year. Five years, as proposed by Senator HUMPHREY, is none too long. Receiving countries can make far more effective use of the farm products if they have assurance of a certain supply over a period of years. India, for example, would then be able to count on the agreed amount of wheat for the duration of a 5-year plan.

With the farm surpluses now on hand, plus the prospects for further production increases, there is no reason under the sun why this country cannot make long-term food supply agreements. The administration ought to get behind this change. It is inexplicable to us why the administration, after all its talk about long-range foreign aid, should be opposing long-range programs in both the Development Loan Fund and the use of surplus food.

Impounding Dam on the South Branch of the Potomac River

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. MOORE. Mr. Speaker, under leave to extend my remarks in the RECORD I include a resolution which I have received from Mary Katharine Barnes, president of the West Virginia Federation of Women's Clubs, in session July 11, 1959, at Charleston, W. Va., in which this organization memoralizes the Congress to prohibit the construction of an impounding dam on the south branch of the Potomac River. I should like to call the attention of my colleagues to this resolution. It reads as follows:

RESOLUTION OF WEST VIRGINIA FEDERATION OF WOMEN'S CLUBS

Whereas the Congress of the United States has heretofore indicated that there should be formulated a comprehensive water development plan for the Potomac River Basin; and

Whereas the Congress, having appropriated public funds to complete a study and survey of said development program; and

Whereas it appearing that one such study has been completed and another thereof is now being considered; and

Whereas it further appearing that by various amendments to the said appropriation bill and through other measures to be considered by the Congress, said water development plan will inevitably take the form of a large impounding dam on the South Branch of the Potomac River; and

Whereas it appearing that the construction of said dam will flood the most valuable farm land in Hampshire County, the oldest county in the State of West Virginia; and

Whereas such dam would destroy many landmarks of historic value and otherwise cause irreparable damage far beyond any economic value to be derived therefrom: Therefore be it

Resolved, That the executive board of the West Virginia Federation of Women's Clubs does hereby memorialize the Congress of the United States and, more particularly, the representatives in Congress from the State of West Virginia to take all steps and to do all things necessary to prohibit the construction of an impounding dam on the South Branch of the Potomac River, in Hampshire, Grant, Hardy, and Mineral Counties, W. Va.; and be it further

Resolved, That a copy of these resolutions be mailed to the Honorable HARLEY O. STAGGERS, representing the Second Congressional District of West Virginia and to Senator JENNINGS RANDOLPH and Senator ROBERT BYRD.

Executive Board of the West Virginia Federation of Women's Clubs in session July 11, 1959, Charleston, W. Va.:

MARY KATHARINE BARNES,
President.

No Time for Lavender and Old Lace

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. GOODELL. Mr. Speaker, the 43d District of New York was honered on July 10, 1959, by the distinguished presence of Miss Bertha S. Adkins, Under Secretary of Health, Education and Welfare. Miss Adkins addressed the Chautauqua Woman's Club at renowned Chautauqua Institution during a week devoted to the problems of the aged. Under leave to extend my remarks, I would like to insert in the CONGRESSIONAL RECORD the text of Miss Adkins' address.

NO TIME FOR LAVENDER AND OLD LACE

(By Bertha S. Adkins, Under Secretary of Health, Education, and Welfare)

Those of you who have been coming to Chautauqua for many years and who are familiar with its history know what an important influence it has been in the field of adult education. It is doubly significant that the General Federation of Women's Clubs, which has pioneered in so many fields of women's work, should also be a part of this great institution. I am honored by being invited to open this season's important program, arranged by the federation and designed to increase a greater understanding and clearer insight into the problems of women around the world.

I have very recently attended a seminar in Bogotá, Colombia, South America, as the official U.S. representative on the Participation of Women in Public Life. It was sponsored by the Commission on Human Rights of the United Nations. This was, for me, a most interesting and rewarding experience. At a time when rapid social change is universal, nothing is more dramatic than the change in the status of women, as they are taking an active place in national and international life, exchanging information and ideas with one another, but solving their own problems. To be sure the pace varies, the problems differ in content and degree, but all women are undoubtedly working toward the same goals. Women's influence has transcended boundaries to become a global one, and many have assumed responsibilities in promoting world understanding and citizenship.

And within the confines of our own shores and borders broad knowledge of our own complex problems must be acquired as a background for effective work toward their solution. These are problems which stem from the general increase in population, mobility, automation, urban living, and the added years of life. These needs have brought into being many organizations with different purposes but each with a clear call to women to volunteer their services to help the thousands of voluntary organizations that make up our many faceted national life. It is a well known fact, says the recent national study on manpower, that the only possible reservoir of untapped manpower is woman power. This is a far cry from the popular lecturer who told his audience that the largest empty spaces in this country dwelt under the permanent waves of women.

It is by now a well established fact that women are not only here to stay but they have an important contribution to make in the preservation of our way of life and both men and women have acknowledged this.

Perhaps the real block to progress, in accepting women into full partnership, is the unwillingness of so many women themselves, as they grow older, to undertake of their own volition anything of significance. Well, we cannot live by canasta and television alone, nor have we earned the right to sit down to be entertained for the rest of our increasingly lengthened span of life.

Have you ever stopped to consider some of the reasons given by women for withdrawal from the main stream of life instead of continuing to renew and augment their contributions to society?

There are those persons whose unwillingness to think or act is a sign of selfish unconcern for any but themselves. Others are satisfied to stay in a rut and show no desire for new outlets and new interests. Some are content to sit and enjoy their prejudices and secondhand opinions, not caring to know the true facts or change their opinions. This self-satisfied complacency is a major deterrent to the development of wider horizons of interest and endeavors. As a result women settle into grooves of incapacity.

I am amused when people come up after I have spoken and say "I enjoyed your talk so much" or "I agree with everything you said." Then I say, "I hope you are going to do something about it," to which they reply in shocked amazement, "Who, me?"

As a matter of fact mature women can actually bring about a new era in which the skills and abilities which they possess can be related to our present political scene and to the progress which this country can make toward world peace.

Have we thought seriously enough about the influence which we, as women, can have upon our life and times to willingly turn our backs upon the opportunities? We women are consumers and, as such, we wield immense power through our buying. In our free market economy the buyer has the last word. This is a sobering thought and should provoke serious consideration about problems we do not often discuss or fully understand.

We are citizens and, as such, have a clear duty to work for those national, State, and local legislative policies and programs which will make our country a better, safer, happier place in which to live.

It is inevitable that in our times women are undertaking more fully the responsibili-

ties of citizenship. Responsibilities which can no longer be ignored.

Beyond our immediate neighborhoods lie the larger community, the State, the Nation, and the world as a challenge to this generation. Our obligation to be a good neighbor can best be met, both in this country and abroad, when we work together to solve the problems of humanity.

As we try to live creatively, particularly as our years increase, we should consider the special values which maturity brings to the role of older women.

I think we are able to recognize and interpret social changes. Experience and calm judgment have given women an awareness of the needs of society and have enabled us to develop the ability to adapt ourselves to changing circumstances. This is a most significant asset.

Another contribution of mature years is that of providing direction and leadership toward sound social planning. The greater our perspective the greater our insight should be into social problems. We should also have acquired the knoweldge of how to combine community and government action to solve these problems.

Perhaps the most unique contribution of all is the ability which mature women possess as mediators between groups, a role much needed in our society today. All of the accumulated wisdom and sensitivity which experience and the enrichment of years well lived can bring are utilized in this important skill. Women can be proud of this talent so much coveted and so greatly needed.

We have no time to talk about growing old or retiring from the activity about us. There is too much to be done and the world is too exciting to turn our backs upon it. Life is a great and unending experience full of new adventures if one continues to be useful and active. There is so much to see, to tell, to learn, to do. The old patterns of retirement are out of date. Modern retirement provides additional free time for new outlooks, new insights, growth, opportunities for service of unlimited variety.

There is actually no retirement age for volunteers. Maintaining a happy and useful life brings dignity to old age. By our own activity we know that we have the opportunity to change the old idea that growing old was something to dread and fear. In fact, I think we have already done much in that direction, and old age is even becoming fashionable.

About 3 years ago the Social Security Administration did a study of 62 centenarians who were receiving old age and survivors insurance benefits. Oddly enough, several of these were still working—one at age 118. Although all of these centenarians conceded that they were old, none said that he had finished living and the general impression of the interviews was that most of them had found fulfillment in their interest in living. In fact, Mrs. Pinky Gaines, aged 107, a hospital worker in Concord, N.C., had just retired and was headed for the beach. Even though she said, "I look like a fool, wearing shorts." She believed in keeping up with the times.

Many years ago Cicero made a statement which rings with truth for us today: "Not by physical force, not by bodily swiftness and agility are great things accomplished, but by deliberation, authority, and judgment; qualities of which old age is not deprived, but with which it is as a general rule even more abundantly provided."

And George Santayana added another dimension to the qualities of older people:

"Nothing is inherently or invincibly young except spirit. And spirit can enter a human being perhaps better in the quiet of old age and dwell there more undisturbed than in the turmoil of adventure. * * * Old places and old persons in their turn, when spirit dwells in them, have intrinsic vitality of which youth is incapable."

Shift of Public Opinion Against Farmer Will Not Help Agriculture

EXTENSION OF REMARKS
OF
HON. FRANK A. STUBBLEFIELD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. STUBBLEFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent editorial presentation from the Advance-Yeoman, of Wickliffe, Ky., of Friday, July 10, 1959, relating to the public opinion campaign being waged against the farm program in some of the Nation's press:

[From the Wickliffe (Ky.) Advance-Yeoman, July 10, 1959]

SHIFT OF PUBLIC OPINION AGAINST FARMER WILL NOT HELP AGRICULTURE

Combined with other worries, the farmer seems to have lost most of his friends in his struggle for survival. Public opinion is being exerted in many sections against farm subsidies and the farm program. The hue and cry against the farm program is heard throughout the Nation's press.

Many of the metropolitan papers are against the farm program and blasting it daily. This is sure to impress urban dwellers who have no understanding of the farm problem or interest in it. Recently the powerful Life magazine added their voice in a blast at the farm program and quoted statistics on large corporations and companies who were profiting by ASC cost-sharing programs to the detriment of the average citizen. They gave a powerful, convincing argument except for one sentence to the effect that the only solution to the farm program was to discontinue it and let competition drive the small farmer who used inefficient methods out of our economy.

To us, such a statement makes as little sense as telling the man with 10 children who has trouble feeding them to go around and pinch off some heads so that the rest of the children will be well-fed.

With so much criticism on help to the farmer and a presidential election coming up soon, this situation does not look good for the farmer. Tobacco support prices have really taken a beating in the press. Since Kentucky's biggest farm product is tobacco, produced on small farms in a State of small farms, this lack of sympathetic understanding in cities is sure to have weight in Congress and an adverse effect on our economy.

Where will the small farmer go when he is starved out on the farm? Where will the Nation go when the inefficient small farmer is eliminated? Will he go into manufacturing or service industries? There is no local manufacturing that can absorb these people—they will become transients hunting jobs throughout the Nation. Labor is having its own troubles. Automation has cut the union membership in every major industry * * * and decreased membership is hurting the unions. The automobile industry has been badly damaged. Foreign imports are making noticeable inroads on American production and into American export markets by offering goods produced more cheaply. We see it in automobiles, electrical goods, steel, machine tools, office equipment, and even in farm machinery. We are being priced out of the world markets and more and more U.S. firms are building factories in other parts of the world in order to compete in world trade as well as to supply U.S. demands.

Census figures show a farm population of 22½ million. No longer do they influence elections the way they used to do but that's still a lot of people. There are an estimated 10 million more whose income is dependent upon agriculture. You cannot deplete the earning power of more than 30 million people without visiting a killing depression on the remaining 130 million.

Government subsidies are not high enough to be much help to the farmer. And it is not true, as the Wall Street Journal maintains, that the farmers raise inferior products to take advantage of price supports. This may be true in a few isolated cases, but there are a few inequities in any law. It is true, however, that the smallest farmer cannot take advantage of the present farm program like the biggest farmer can. This segment of our population is the hardest to reach.

Many editors, sitting in air-conditioned offices, contemplating the fate of the small farmer, need to change places with him in the tobacco field for awhile. It would help their viewpoint to wipe a little honest sweat out of their eyes.

Don't Discourage the Retired

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mrs. DWYER. Mr. Speaker, it is a well-known fact that one of the country's most challenging responsibilities is to adjust our thinking and our public and private policies to a more realistic and understanding appreciation of the role of our retired men and women.

The number of people in our population over 65 years of age is increasing so fast that in 10 years it is estimated that 10 percent of the total population will be included in that age group; and about that same time the key age group of 20 to 65, from which almost our entire working force is drawn, will be reduced to only one-half of the overall population.

The significance of these facts from the point of view of the health and psychological welfare of our retired people has been usefully emphasized in an article appearing in the July 12, 1959, issue of This Week magazine, a Sunday supplement of the New York Herald Tribune.

Under leave to extend my remarks, I include this article in the RECORD and I commend it as well worth the attention of our colleagues.

Indirectly, Mr. Speaker, it points up another important aspect of Government policy toward the retired. This involves the discouraging effect of the Social Security Act on the decision of retired workers to obtain part-time employment, whether for psychological purposes, as the article recommends, or because of real financial need. The present annual earnings limitation of $1,200 is distinctly outmoded. As a retirement test, it is unrealistic, unwise, unfair, and discriminatory.

It is unrealistic to keep the earnings limit at $1,200 a year in complete disregard of the ravages of inflation and the

great increase in the cost of living since the limit was first established.

It is unwise to discourage retired people from doing the part-time work which medical authorities are increasingly recognizing as vital to the health and emotional welfare of our older people.

It is unfair to impose the same limits on the earnings of widowed mothers supporting minor children which are imposed on retired people with no dependents.

It is discriminatory to penalize social security beneficiaries for earning more than $1,200 a year when there are no limits on the unearned income such as savings and investments which more fortunate beneficiaries may receive without loss of benefits.

For these reasons, Mr. Speaker, I have today introduced legislation to liberalize the retirement test in these respects: First, raise from $1,200 to $3,600 the limit on annual earnings which widowed mothers of children under 18 are allowed without loss of benefits; second, raise from $1,200 to $2,400 the annual earnings limitation for all others receiving benefits; and third increase from $80 to $100 the amount of excess earnings permitted before deductions of monthly benefits are required.

The above-mentioned article follows:

[From This Week magazine, July 12, 1959]

WHY SHOULD YOU RETIRE AT 65?

(By Louis Orr, M.D., president, American Medical Association)

ORLANDO, FLA.—This year more than 500,000 men and women will retire.

For many, it will be a lifelong dream come true. For others, it will be a death warrant.

I am referring to those individuals who will be forced out of their jobs by compulsory retirement plans—plans put into effect in the belief that once an employee passes his 65th birthday he suddenly becomes an "old" man, too old to continue working.

At the outset, I want to make it clear that I am not opposed to retirement for anyone who wants to retire. I am opposed, however, to any arbitrary system which forces retirement at a given age.

There is no scientific rhyme or reason for selecting "65" as the magic number separating the productive from the nonproductive, the healthy from the unhealthy. Physicians have no convenient rule-of-thumb definition for old age. We see certain degenerative signs as men progress in years, but we also see many men 65 and over in better mental and physical health than persons 10 or 20 years younger.

There is, however, positive evidence that forced retirement can do irreparable mental and physical damage to an individual. As one recent study of the aged points out: "The change from provider to the one being provided for is the major causative factor in emotional disorders of the aged."

In America our attitude toward the aging has undoubtedly contributed to the steadily increasing number of persons 65 and over in mental hospitals. In Japan, a society which traditionally assigns positive assets and values to aging, mental illness actually decreases with age.

NOT ALL BREAD AND HONEY

There is a well-known biological axiom which states that organisms and tissues tend to die when they no longer serve a useful purpose—an axiom reinforced by hospital studies indicating that one of the major causes of premature and preventable senility is simply monotony and boredom.

My home State of Florida is widely recognized as a mecca for the retired. But I, and many other doctors, see a continual stream of patients for whom retirement has not meant a carefree life of bread and honey. Instead, it marks the beginning of a series of physical and emotional problems—severe hypertension, paranoia, stomach and kidney ailments, persistent headaches—triggered, quite often, by other than organic causes. One typical case was that of a 67-year-old accountant who had been forced into retirement 2 years earlier. Financially, retirement posed no problems; the man had a comfortable pension, savings, and owned his own home. His wife consulted the doctor initially. She was afraid, "that John might be getting slightly senile."

At first, her husband had enjoyed his leisure, the opportunity to fish, garden, read, or just relax. But for the last 8 months, nothing seemed to interest him, his ability to concentrate and his memory faltered, he had frequent headaches, was irritable. A short, joint consultation and a few phone calls sufficed for diagnosis and treatment. The cure: a part-time job in the business department of one of the many new factories in our area. John's symptoms disappeared shortly after his return to work.

But the bulk of our population over 65 is not, and—if arbitrary retirement continues to be enforced—will not be as fortunate as this man. With the loss of job, many men lose their self-respect; their customary roles as homemakers and providers; their positions as productive and useful members of society. Many never recover from these losses.

As a person ages, he is often less able to bounce back from stress and tension. Dr. Francis Braceland, former president of the American Psychiatric Association, observed that: "In some patients who develop a psychosis for the first time in old age * * * the role of stress is quite often evident. * * * Retirement from work often antedates the illness. This bears out the thesis that one of the greatest sources of gratification in life is work and that its loss may have tremendous psychological impact."

The role of stress in aggravating heart disease, migraine, arthritis, and ulcers has been indicated time after time in both medical and lay magazines.

After extensive examinations of 3,000 persons, Dr. Lawrence E. Hinkle, Jr., and Dr. Harold G. Wolff, of Cornell University Medical College, announced that they believed that fully one-third of all human illnesses—from colds to cancer—can be traced to man's reaction to his environment. The study showed that individuals tended to become ill when they were forced to adapt to difficult situations and that the greatest number of major afflictions were among persons who believed that their life situation was unsatisfactory and had the greatest difficulty adjusting to it.

A SERIOUS IMBALANCE

Today, 1 out of every 12 persons is over 65; in 10 years the count will be 1 out of 10. Government population projections predict a serious imbalance in our labor force within the next decade; a smaller working group supporting more children and elderly people. Today, 57 percent of the population is between the ages of 20 and 64; in 20 years, only 43 percent will be in this age group.

If industry continues to slough off workers as they reach 65, the result, aside from medical considerations, can only be a sizable financial drain on the "productive" segment of the population.

Companies offer many reasons for compulsory retirement—misconceptions also held by millions of Americans. The most common: older workers don't produce enough; they're not as efficient; they're too weak; they have more accidents.

Any medical man and some enlightened personnel officers know these arguments don't fit a large number of the men and women over 65.

In one test of a group of normal people aged 60 to 80, a sizable number were actually faster than the average of any younger group in performing any measurable mental function.

Other studies found no difference in attendance records between older and younger workers; that elderlry workers actually had fewer accidents; that any decrease in speed or physical capacity was compensated for by steadiness, reliability, and accuracy.

Economic arguments are also put forth in defense of compulsory retirement. However, a Department of Labor study group composed of experts from the pension and insurance fields found that later retirement reduces considerably the overall costs of pension programs: total payments made to a worker who retires at 67 average 15 percent less than if they started at 65.

The committee also stated that: "The impression that the related benefits of group life insurance, workman's compensation, and sickness and accident insurance cost a great deal more for older workers is mistaken. If benefits for dependents included maternity care, the cost may be less."

CLEAR AND URGENT DANGER

The dangers of compulsory retirement are clear and urgent. The American Medical Association, through its Committee on Aging, has asked labor and industry to stop and reevaluate their support of arbitrary retirement systems. We ask that they be abandoned in favor of more flexible and practical systems. And we ask that they be abandoned now.

Alternatives can be found among the many varieties of voluntary retirement plans in which the decision to retire is based on a worker's ability on the job rather than his age.

Lockheed Aircraft, for example, instituted voluntary retirement in 1942; 17 years of experience have proved that age does not determine a man's capabilities. The work record of every Lockheed employee, regardless of age, is reviewed regularly. When a decline in efficiency appears to be caused by an increase in age, the situation is discussed with the employee. He may be transferred to a less exacting job or recommended for retirement. Personnel files at Lockheed show hundreds of employees 65 and over at work as inspectors, flight test mechanics, drill press operators, and in many other skilled job classifications.

In many companies the decision to retire is a joint one based on frank discussions between the employee, his physician, job supervisor, and a personnel man. Other organizations have similar review boards. Interestingly, at such places the decision to retire is often initiated by the employee. The important point is that the worker has a choice; he is consulted, not arbitrarily let go.

THE SEMIRETIREMENT PLAN

Another alternative is semiretirement. In the Wm. Wrigley Jr. Co., Chicago, workers can take a 1-month leave of absence at 65, 2 months at 66, and so on. As time away from work increases, the employee reaches a point where his pension and social security benefits provide more income than his salary does.

A large Midwestern department store places retired employees on a daily hiring list, thus allowing them to keep busy 2 or 3 days a week. Another office switches its over-65 workers to a 4-day week.

The method is immaterial. What is important is letting the qualified 65-year-old continue working if he wants to. As long as arbitrary retirement plans exist, continued employment for older Americans will rank high on the list of urgently needed preventive health measures.

HOW SOME BIG FIRMS SOLVE THE OLD-AGE PROBLEM

"Flexible retirement" plans pose many problems for industry. But more than 20 major U.S. firms have already put into effect programs in which employees do not necessarily retire at 65. Among them are such companies as Minnesota Mining & Manufacturing, Montgomery Ward, International Harvester, American Airlines, American Motors, Consolidated Edison of New York, and the Wm. Wrigley Jr. Co.

The Wrigley plan, for example, gives a month's leave of absence in addition to regular vacation to an employee who reaches 65 and wants to keep on working. The following year he gets 2 months' leave, the third, 3, etc. Says Philip K. Wrigley, company president:

"From our 8 years' experience with the plan, we have found it successful in accomplishing two things:

"First, it enables the older employees to develop new interests and adjust to retirement living. Second, it gives younger men the opportunity to take on more responsibility gradually, while receiving the benefit of the older employees' knowledge and experience."

Such plans are an indication that problems of retirement are coming more and more to the fore. Recently, Secretary of Health, Education, and Welfare Arthur S. Flemming named a group of leading citizens to serve on a special National Advisory Committee for the White House Conference on Aging.

And in Atlantic City last month the National Industrial Advisory Committee and the American Geriatrics Society unanimously passed a resolution urging "a more realistic and flexible" system of retirement for American workers.

Unrealistic Income Limitations on OASI Beneficiaries

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ROBISON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from Mrs. John Rosevear of Elmira, N.Y., which points up the problem faced by those who receive old age and survivors insurance benefits under the Social Security System and who must supplement this income with employment.

The current income limitations are unrealistic in the light of today's dollar purchasing value and I believe the Committee on Ways and Means should give serious consideration to my bill, H.R. 2429, and the many other measures now pending before it which would increase the income limitations to a more realistic figure.

The above mentioned letter follows:

ELMIRA, N.Y., *July 3, 1959.*

Hon. HOWARD W. ROBISON,
37th District of New York,
House of Representatives, Washington, D.C.

MY DEAR MR. ROBISON: I wish to call to your attention the plight of those of us who collect social security and have our earning capacity limited to $1,200 a year. Speaking for myself, I recently became a widow and will be entitled to collect my husband's social security when I become 62, which will be August 6 of this year.

Wishing to supplement my income, I have found a very congenial position. This position, though for only 4 hours a day, is one of responsibility and my employers are willing to pay $35 per week or approximately $150 per month. They not only are willing to pay this much but prefer to do so, as they wish to be able to demand performance accordingly. However, I am in the ridiculous position of having to tell them that I cannot accept more than $100 per month, and no prospect of a raise ever.

It is not that we who collect social security are asking for additional funds, or at any rate I am not, many of us simply want to be able to compete in the business world with other normal human beings. We hear and read so much about the problems of older people and how necessary it is to help them to help themselves. Well I, for one, am asking for an opportunity to help myself.

If there be any Congressman who has tried recently to live on social security and $100 per month, may he be the first one to get up and defend this ruling or law.

Respectfully yours,

MRS. JOHN ROSEVEAR.

The Challenge

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. REECE of Tennessee. Mr. Speaker, our Ambassador to Mexico, Hon. Robert C. Hill, made an address to the graduating class of the American Institute for Foreign Trade, Phoenix, Ariz., June 3, which constitutes a worthwhile contribution on the subject of foreign affairs. By reason of Mr. Hill's ability as an observer, together with his wide experience, few people in our Foreign Service are better prepared to speak on this subject. Ambassador Hill certainly ranks high among our many able men in foreign service. His address impresses me so much that I feel it should be put in the RECORD that it might be more widely available.

Some of the major papers in Mexico had editorials on this speech which I would like to include in the RECORD because of the firsthand observations which the editors made of Mr. Hill's impressions.

The address and editorials follow:

THE CHALLENGE

(An address delivered by U.S. Ambassador to Mexico, Robert C. Hill, before the graduating class of the American Institute for Foreign Trade, Phoenix, Ariz., June 3, 1959)

When Carl Sauer, your president, invited me to address the graduating class of the American Institute for Foreign Trade, I rearranged my schedule to permit me the opportunity to speak to this representative group of Americans who are about to leave on important assignments overseas. Today, every American who lives abroad in any capacity is an ambassador of the United States. You are as important to the welfare of the United States as any Government official. Your conduct and your actions will be carefully watched by all people with whom you come in contact abroad. This constitutes a challenge to all of us.

This is really a challenge to ourselves. It is the challenge that right and justice shall prevail. It is the challenge to believe in our concern for human dignity and the individual rights of peoples everywhere. It is the challenge to believe in and practice our democratic ideals. It is the challenge to believe in our historic institutions. It is the challenge to believe in the vast potential of our free economy and a better life for everyone. It is the challenge to communicate these convictions in a positive way to the foreign peoples with whom you come in contact.

However, there are some today who believe the challenge to be Soviet Russia. As a result, I have become greatly concerned with the distorted image of Russia that seems to be increasingly held by many of my fellow citizens. You will recall that the Chinese Communists use the term "paper tiger" to describe the United States. It would appear to me that this term should apply instead to the Soviet Union. In looking at Russia, many of us seem to see only the snarling face of the tiger and not the paper behind it. This seems to be frightening some of us half to death. This image of Russia cannot be attributed only to Communist propaganda, massive though it may be. Many people innocently contribute to this image with dire warnings regarding Soviet advances. Though of course they do not mean it that way, they sound as though they really do believe that communism is the wave of the future.

Recently my wife and I visited Russia and the satellite countries. I came away to freedom encouraged to note that we are many years in advance of their economic development. I returned to breathe the free air outside of Russia convinced that we are miles ahead of them. As General "Lightning Joe" Collins kept reminding us some years back, the Communists are not 10 feet tall.

I am not referring to Russian boasts of military strength. I am not qualified to speak on military matters. What concerns me here are social and economic factors relevant to the two nations.

I learned while traveling in Europe that Mikoyan's report on what he saw in the United States of our economic strength has shaken the confidence of Mr. Khrushchev and company. This is not surprising. After all, none of the other principal Soviet leaders presently in power has ever seen the United States.

Why not seriously consider arranging for other important Soviet leaders to visit us? Why not show them what the United States is really like? Let them see with their own eyes our steel mills, our automobile plants, and our aircraft industry. Let them visit TVA. Show them acres of workers' houses and nearby supermarkets. Let them talk with the American worker at the machine and with the American farmer in the field. Let them get it straight from our citizens. Let's open the eyes of the Soviet leaders. We have nothing to lose and everything to gain by letting them see the power and stability of the United States. The majority leader of the U.S. Senate, LYNDON JOHNSON, stated some time ago: "If we remain economically and militarily strong, we need have no fear." In my opinion, there is absolutely no doubt about it.

We must seize upon new and dramatic ideas to demonstrate to the world what the United States really stands for. Facts do not speak for themselves. They must be communicated. We have not fully utilized our strength in this critical area. You can call it salesmanship, public relations, information, or what you may it is of overwhelming importance.

Let me give you a specific instance. The Russians have done, a massive job of selling the idea in the United States—and elsewhere in the world—that their TU–104 jet is the outstanding development in aviation today. When they want to impress a visiting head of State, they fly him in one of these planes. Or if a high Russian official is going abroad on an important mission, they often send him in their latest aircraft. But the real truth is that, commercially, the Russian jet has been rejected abroad. Aviation experts say it is neither practical or economical. Commercially, they can't sell it.

On the other hand, the United States has jet aircraft in operation and in commercial use both here in the United States and abroad. These powerful jets have not been rejected by domestic or foreign buyers. When Vice President NIXON goes to Moscow in July to open the important American exhibit in Sokolniki Park, why not send him in a Boeing 707, a Douglas DC–8, or a Convair 880? Why not consider sending our top officials to important meetings throughout the world in our latest aircraft? I don't propose this in order to flaunt our military strength, but to demonstrate the great technical advances we have achieved. If Vice President NIXON flies to Moscow in one of our own big jets, let's invite the Russian people to visit the plane. Let them judge for themselves concerning U.S. productive capabilities versus those of the Soviet Union.

What we are talking about here, essentially, is face and prestige. We are talking about communicating facts to foreign peoples in imaginative and dramatic ways. When Mrs. Hill and I visited Warsaw, I was shocked to see how the American Embassy personnel lived. Our American Ambassador lives in modest quarters, while only a few blocks away the Soviet Ambassador lives in a palace. Our Foreign Service personnel in Warsaw are living in quonset huts on the Chancery grounds and in apartment buildings that would have long since been condemned in the United States. Now I am not suggesting that our people overseas should live in an extravagant fashion. I am saying they should live in decent and comparable quarters, if only for purposes of morale. They certainly should not be restricted by the Communists to second-rate quarters that give to the Polish people the false impression that we are not a proud and a strong Nation.

Warsaw is the most depressing city I have ever visited in my life. It was 90 percent damaged during World War II, and today the rubble still remains. And all the while the Russians bleed the Poles white. In Warsaw the Russians have built a monument to themselves—a towering so-called cultural institute that looms over that ruined and desolate city. I thought as I looked down from this building on the devastation below that the world should know more about this condition. How many people in the world are aware that 14 years after World War II Poland remains crushed? Is this what the Soviets mean when they talk about aid? They supposedly have been aiding Poland for 14 years, and look at its deplorable condition today. Is this an example of the kind of aid they mean when they offer economic assistance to other nations around the world? Contrast this with the reality of American cooperation offered those war-devastated nations in Europe when they asked us for a helping hand. Contrast the prosperity of West Germany with the poverty of Poland today.

While in Moscow, I visited a housing development where allegedly 200,000 people live. From photos, the development looks impressive. But a personal inspection revealed that the construction of this vast housing development was unbelievably bad. Some of the buildings only 2 years old have already been condemned.

Even Pravda in a recent editorial took note of this. As quoted in the Washington Post of May 7, the official Communist Party paper said: "The quality of some of the newly erected building 'can be greatly criticized'." William A. Jordan in a recent New York Times magazine article, "Why Russia Needs the Iron Curtain," said: "Authorities on Soviet affairs say more important than keeping foreigners from seeing too much of Soviet life, it is necessary for the Kremlin leaders to prevent any considerable number of their own people from seeing the reality of life in other lands."

The brutal truth is that the Soviet tyranny, just like every tyrannical regime in history, is built on the sweat, blood and misery of its own people, while its leaders have the gall to boast of economic progress.

In my opinion, people should not let themselves be victimized by Soviet propaganda. People should stop giving the appearance of being spellbound by the various publicized technical achievements of the Soviet Union. Our people should remember that the Russian people still live at virtually the same low standard of living as they did back in 1917. Now the Russians say they want to help other nations raise their standard of living.

On a humorous note, speaking of Russian ignorance about the outside world, let me tell you of my visit to a Moscow factory. This was described by Intourist as the outstanding factory in the Soviet Union. My host proudly showed me a bicycle they manufacture, and spent 15 minutes demonstrating the coaster brake. He said it was a new Russian invention. When I told him that 34 years ago—as a boy in New Hampshire, I had a bike with a New Departure coaster brake and so did all my friends, my host was astonished and said he didn't believe it.

Having spent 21 years at home and abroad as Ambassador and businessman and having the opportunity to inspect various manufacturing plants, I can tell you that this particular factory—supposedly one of Russia's best—was obsolete by U.S. standards.

When you are told about the wonders of Russia, you might ask yourself these simple questions: Have you ever wondered why Soviet diplomats so often try to escape to freedom on the eve of their return to Moscow? Have you ever thought of the terrible decision these men and their families have to make when, after a few years abroad, they look at the open roads of the free world and know they must go back to the narrow prison of their homeland? Have you observed the photos of their sorrowing faces, as, flanked by Moscow's burly guards, these seekers for freedom are hustled aboard a plane in Canada, Australia, Burma, or London to be never heard from again? Have you ever heard of an American diplomat who jumped off an Embassy wall to remain in an Iron Curtain country rather than return to the United States?

We need, somehow, to have greater penetration of the Iron Curtain. For one thing, instead of the U.S. Information Agency being criticized, in my opinion, it should be supported by the American people. We must have an information program armed with facts to compete with the massive instrument of Soviet propaganda. On both sides, we need to know more about one another. I say, go and see for yourself. But in doing so, get behind the facade and dig into the real facts about Russia. As more of our citizens go to Russia, I would like to see many more Russians emerge from behind the Iron Curtain and come to the United States to see for themselves our way of life.

I would like to urge all of you to contrast the rise in the standard of living in the United States where we have what has been called the continuing revolution with that of Russia. I think you will be astonished at how far we have come in such a short time. This represents another problem in communication. Many people in the world think that the United States somehow has always been a rich country with a high standard of living. This is not true. Arm yourself with facts and get the true story across to your foreign friends. We have come a long way in the past 50 years, a fantastically long way. This progress has not been accomplished at the expense of our democratic ideals, nor wrung from the sweat and blood of the American people.

As you travel and work abroad, communicate to our foreign friends that we are not trying to cast the rest of the world in our image. We do want them to understand that we are ready and willing to help them along the road to economic progress and with no political strings attached. We believe that social and economic progress in any country is a contribution toward our own search for peace and prosperity in a world of greater abundance for all.

Speaking of contrasts between systems of government, compare the Mexican Revolution with that of Russia. Here we have a great neighboring nation, dedicated to the ways of freedom and justice, a nation that continues to achieve extraordinary economic and social progress as each year passes. Next year—1960—Mexico will celebrate the 150th anniversary of her first revolution, that of 1810 when the Grito of Dolores, the cry of revolt, was heard from the doors of a little church in Dolores. Next year, Mexico will also celebrate the 50th anniversary of her revolution of 1910, the uprising which set the framework for modern Mexico. In all its phases, the Mexican Revolution, to use Lincoln's words, has been a revolution of the people, by the people, and for the people, and not as was the revolution in Russia—for the glorification of party and state against individual freedom and the pursuit of happiness.

Possibly you would be interested in a few additional comments about your neighbor, Mexico, and the other countries of Latin America. Here we find a vast area, rich in resources with an exploding population, industrializing rapidly, an area that shares our democratic ideals, an area making enormous progress. Here we find a dynamic part of our three Americas—North America, Central America, and South America—with which we are vitally concerned, and with which we must intensify the whole range of our relations. Here we find an area which is an important bastion of the free world, where proud nations cherish their freedom and independence.

Working together under modern conditions means the creation of a long-range, mutually helpful pattern for cooperation. It does not mean thinking of Latin America in terms of occasional, one-shot profitable deals. It means that constructive, workable solutions must be found for the problems of inter-American trade. We have to think in terms of a mutually beneficial balance for the long pull. I am happy to say that my experience in Latin America has shown me that the vast majority of American firms operating in the area do think and act in exactly these terms of long-range, mutual interest.

The economic opportunities lying ahead for Latin America, as in our own country, are beset with many problems. In our search for ways to work with Latin American countries to solve these problems, we have recently been carefully reexamining our policies. Within the last 2 years, a number of constructive moves have been made, including our participation in a billion dollar inter-American bank designed to accelerate economic development. This idea, I might add,

originated with Mexico at the first Inter-American conference in Washington in 1889.

We have also been reexamining our policies with regard to one of the most critical problems affecting numerous Latin American countries, stability and fair prices for key raw materials. The leveling of the peaks and the valleys in the supply and the prices of raw materials present a formidable problem which must be solved. Some feel strongly that stability can only be achieved by international price or quota agreements such as that which has operated well for many years for the sugar industry. Why, the question arises, cannot this type of agreement operate equally well in the case of coffee and cotton and other basic agricultural and mineral products? Others strongly question the feasibility or desirability of the commodity agreement approach. Still others feel that the long-term solution for individual Latin American countries lies in greater diversification of production and increased industrialization. Much serious attention is also being given to the gradual development of broader commercial and economic unification within the Latin American area—that is, the common market idea.

I make this reference to some of the basic Latin American problems in order to underline their importance. For if the Western Hemisphere is to achieve that needed progress in economic development that so many millions of our fellow Americans to the south insist upon, these problems must be solved. Inevitably, they will be solved through increasingly intensified inter-American cooperation. The challenge to us all is to find the most practical and workable means to accelerate this cooperative spirit. I say challenge to us all because, as many of you go abroad to Latin America on your individual business pursuits, you—even as individuals—will see and feel the effects of these broad problems. Therefore, it is up to you as individually responsible leaders to think beyond your immediate concerns and to contribute in every way you possibly can in both idea and action toward the solution of these problems. This is the way in which you will be real representatives abroad of the United States of America.

In these remarks on this very important evening of your lives, I have tried to indicate to you some aspects of the challenge we face as a nation and as individuals. From the very nature of the American Institute for Foreign Trade and my previous visit to your school, I know that you here have eager, inquiring minds. When you arrive at your foreign post, get out and mix with the people. Exchange ideas with your foreign friends. Learn to speak their language. Make a positive contribution to the ideals and institutions of the free world.

May God bless you in your various assignments.

[From the Mexico City Excelsior, June 5, 1959]

DICTATORSHIP OR FREEDOM

The continuing dilemma that is the essence of the road that the individual, society, or the state is to choose—the dilemma in which man must decide between dictatorship or freedom—has seldom been set forth with such clarity of decision as was done by Ambassador Robert C. Hill in his speech in Phoenix, Ariz.

Without resorting to the subtleties or trickeries of language, avoiding somber or threatening tones, deleting the tedious and vain expressions "I saw" and "I know," without praising some and insulting others, Mr. Hill, in the comprehensive address to which we refer, set before the world the need for choosing between the road to freedom and the road to dictatorship.

In referring to the road to freedom, Mr. Hill accurately pointed to one of the most outstanding events of our day, the Mexican Revolution.

In fact, how great is the difference between the Mexicans of 1910 clamoring for the public liberties and the Russians of 1917 establishing the dictatorship of the proletariat. And what an extraordinary difference between one movement, made up of the Mexican people of 1910, and the intellectual sedition which took place in Russia in 1917.

The Mexican Revolution may have made great, extremely great, errors; but all was saved because its leaders did not—like the Russians—demand the establishment of a violent dictatorship for the benefit of an intelligent oligarchy instead of a democracy for the welfare of the people.

Let us not consider wherein Ambassador Hill's speech may benefit his country in its struggle against international communism. But let us make the necessary and thorough considerations about the usefulness of such a document to the doctrine of independence and sovereignty of peoples, to public and civil freedom of Mexico and the world and to the guarantee of a reign of permanent justice.

WITHOUT DOORS OR WINDOWS

Our country * * * is more than just a flagbearer for a social issue as a consequence of the revolution; our country has been and is the champion of freedom.

Consequently, if we are to defend ourselves against communism and to safeguard Mexico against the dictatorship of the proletariat and against Soviet propaganda, we must rely on the high dedication to liberty of all Mexicans. * * * Freedom represents good as against the evil of Sovietization. * * * Mexico is a nation without doors and without windows. * * * Mexico is a country without secrets because Mexico loves and practices collective freedom.

We allow strangers freedom of movement. * * * Because our people love and respect public freedom—the strongest wall against communism—there never has been an attempt to curb freedom of the press or freedom of expression.

Therefore, Ambassador Hill's opinion fills us with pride and satisfaction. * * * The U.S. diplomat asks that more and more Soviet citizens visit and study his country, the United States. We repeat that Mexico's doors are wide open to all, with the exception of those whose aims are to create chaos or to establish a dictatorship of the proletariat or any other dictatorship.

[From the Mexico City El Universal Grafico, June 5, 1959]

THE PAPER TIGER

The statements made in Phoenix, Ariz., by Mr. Robert C. Hill, U.S. Ambassador in Mexico, have been widely commented upon throughout the world. Among other things, Mr. Hill stressed the contrast between the Mexican revolution, which was truly a people's revolution, and the Russian revolution, which had as its purpose the glorification of the Communist Party. Mr. Hill also said that the Chinese Communists use the term "paper tiger" to describe the United States. "It would appear to me," said the Ambassador, "that this term should apply instead to the Soviet Union."

The distinguished diplomat then went on to describe some of the observations he made during his recent trip to the Soviet Union, where he saw for himself that the much-talked-about Soviet power was inferior to that of the United States.

But the most important part of Mr. Hill's statements was the reference to "the brutal truth of Soviet tyranny, which, like every tyrannical regime in history, is built on the sweat, blood, and misery of its own people, while its leaders have the gall to boast of economic progress." However, what he did not say—and undoubtedly not because he ignores it—is that, as far as propaganda is concerned, the Soviets are ahead of the United States and of other countries. Of course, this propaganda costs money, much money, obtained with the blood and sweat of the oppressed peoples; but undoubtedly this propaganda has had results. Europe first, then Asia, and now America have seen how the clever and cunning farce, the great lie of the Red paradise, infiltrates and penetrates to such an extent that it makes some converts who believe blindly that the Communist regime is better than the democratic form of government.

All of America is saturated with Red propaganda. And it has been positively established that most of this literature is produced by the Soviet Embassy in Mexico. When we were children, our grandparents used to scare us with the childish threat "Ahi viene el coco" ("Here comes the scarecrow"). History now repeats itself. Moscow is trying to scare us again. But the Russian scarecrow is outdated. The world knows that Khrushchev's threats are nothing but bravado. Russia will never dare to attack the Western Powers because she would lose the war as she has lost them all. She wants to dominate the world but * * * with propaganda. She wants to enslave humanity but with fairy tales. But the Kremlin leaders should remember that all fairy tales, no matter how long, have an end. And this end may be closer than they think.

[From the Mexico City El Zocalo, June 8, 1959]

HILL'S SPEECH: TWO REVOLUTIONS

Speaking in Phoenix, Ariz., before the graduates of the Foreign Trade Institute, the U.S. Ambassador to Mexico, Robert C. Hill, uncovered the Communist farce, pointed to the brutal tyranny which reigns in Russia and in the satellite countries, and then showed the contrast which exists between the Mexican revolution and the revolution of 1917, which the Bolshevik Party used to take over Russia.

With firmness of thought, the Ambassador pointed out that our revolution could be described as truly a revolution of the people, by the people, and for the people—to use Lincoln's unforgettable words. On the other hand, the Russian revolution served only to glorify the party and to crush individual freedom and human dignity.

The North American diplomat spoke of our efforts, of our struggle, of our aspirations and of our customs and, in every one of his statements, he emphasized above all that Mexico is a country where the revolution has brought about a regime of dignity and unity.

Speaking of the Soviet Union, he defined it as a "paper tiger," stating that the West must not let itself develop a fear complex and must look behind the facade of Soviet imperialistic communism and see the humiliations and sufferings which it has brought to its peoples. For, after all, Russia has built its power on slavery. And this cannot possibly be compared to the strength of civic consciousness which our revolution has brought about in its 50 years of existence.

History has proven that Marxism-Leninism is inadequate both as a philosophy and as a science. And the main reason for this is first of all that this doctrine ignores human values and secondly that it is based on hatred and the negation of the concept of patriotism.

To illustrate that this is true, we wish to point out that in the difficult hours of World War II when Hitler's hordes invaded hundreds of square kilometers of the territory of the Soviet Union, the propaganda for the defense of the latter country was not based on Marxist dialectics, on Leninist positions, or on doctrines originated by Stalin. Holy Russia was used again as a theme. Holy Russia was invoked by those who, shortly before, were denying the concept of patriot-

ism and were propounding the concept of internationals based on class struggle.

The Russian revolution of 1917 was marred from its very birth. It was marred because the dictatorship of the proletariat implied the very negation of any sense of unity and signified the taking over of power by a group representing an absolute minority lacking any sense of patriotism.

The state which the Russians call a Socialist state is a denial of freedom; it is a state which expropriates the national wealth of the country at the cost of the slavery of large masses of people. Therefore, the Russian revolution was neither of the people, by the people nor for the people.

Democracy is nothing but a system of political organization under which, for the benefit of the people, the people themselves elect their representatives who govern in their name and who, with the people's support, plan the development and progress of the country.

The mere use of the word "democracy" does not guarantee the government is truly a democratic one. Just like other things in life which can be imitated and falsified, there is a counterfeit democracy, an imitated democracy, a false democracy.

But Mexico has established a political and economic system perfectly adjusted to its needs in which the collective interest is guaranteed by constitutional norms which reflect the common aspiration.

But above all, the noteworthy, the most definitive aspect of the Mexican revolution was to have brought about a political system which encourages the struggle for unity and exalts the concept of patriotism.

For a country to be truly free, these rights which our Constitution upholds must be fully guarded * * * these rights which are ours and which no Mexican will ever allow to be violated.

Furthermore, the constant preoccupation with progress and social justice is linked in our minds to absolute respect for human dignity. We do not want and cannot conceive of collective concepts based on slavery.

The U.S. Ambassador to Mexico—who lives among us and whose skill, warmth and personality no one can deny—has proven that he has understood the very essence of our revolution and, in comparing it with the Russian revolution, he has truly pointed out the abyss which separates the two: It is the difference between the negative hatred represented by the concept of class struggle and the firm and coherent concept of nationalism without xenophobia and of progress without slavery.

[From the Mexico City Excelsior, June 6, 1959]

TRUTH: A SECRET WEAPON

We want to underline other parts of the important speech made by Ambassador Hill in Phoenix, Ariz. They confirm the fact that democracy's most powerful secret weapon against Soviet totalitarianism is truth.

Whereas U.S.S.R. propaganda disseminates lies throughout the world for the purpose of impressing naive people with a supposed technical, social, and economic development, Hill urges that all facilities be accorded to the people on the other side of the Iron Curtain so that they can travel to the United States to see for themselves and compare the high standard of living enjoyed by U.S. workers.

Ambassador Hill urges his countrymen to display U.S. prosperity as the best weapon against Russian lies. "Why don't we seriously consider the possibility of arranging for visits of important Soviet leaders?" asks the U.S. Ambassador. "Why don't we show them what the United States really is?"

An article in the New York Times magazine, by William A. Jordan, expresses more or less the same idea. The writer points out that "experts in Soviet affairs say that more important to Kremlin leaders than preventing foreigners from seeing too much of Soviet life is preventing their own people from witnessing living conditions in other countries. The Russian man in the street thinks that his living conditions are not as good as those of North Americans, but he has no idea as to how different they really are. Nor does he realize that he enjoys much less of the good things of life than the people of almost all other European countries."

The realization of the contrast between slavery and liberty, between a life of privation and a life filled with comfort and abundance—that is, the difference between the U.S.S.R. and the United States—is the best and most powerful weapon that democratic nations can wield in the cold war against Communist imperialism. The secret weapon most feared by the U.S.S.R. is truth, and this explains the Iron Curtain and Soviet propaganda geared to maintain a situation that is possible only through isolation and lies.

ECONOMIC BALANCE

Better relations between the countries of our hemisphere cannot be achieved while there is a tremendous economic difference between countries and while Latin American nations are forced to sell raw products and to buy manufactured goods at the prices set by economically powerful nations which control the world market.

Resentments will disappear only when an economic balance is achieved on this continent, when imports and exports are balanced and disadvantageous competition, which causes the ruin of countries with limited resources, is abolished. Through long and sinister experience, Latin America knows that for charming expressions of cooperation and solidarity to be believed they must be based on fair treatment, without one-sided privileges.

Ambassador Hill agrees with us in envisaging this goal as he set forth in his recent speech at Phoenix, Ariz., during graduation week at the American Institute for Foreign Trade. He specified that "working together under modern conditions means establishing a system of far-reaching cooperation that will be mutually useful. It does not mean thinking of Latin America only in regard to occasional momentary and greatly profitable business deals. It means the need for finding constructive and useful solutions to the problems of inter-American commerce. We must think in terms of balance that will in the end be of mutual benefit. * * * One of the most critical problems affecting numerous countries in Latin America is that of fair and stable prices for key materials. * * * Some people feel stability can only be achieved by setting international prices or quota agreements, such as those governing the sugar industry. Why would not the same type of agreement be equally useful in the case of coffee, cotton and other agricultural products and basic minerals?"

Considering present crises in relation to coffee, cotton, zinc and other Latin American products, Ambassador Hill's statements are of current interest and it is to be hoped that they will be taken into consideration by U.S. political and economic leaders. In order to affirm the ties which unite the free peoples of America before the totalitarian threat of the U.S.S.R., we must be, reciprocally, good friends and associates.

Hill emphasized that "our problems should be solved by means of ever-increasing inter-American cooperation. * * * The challenge to us all consists in finding the most practical way of strengthening this spirit of cooperation," he said, "in order to reach an economic balance without which the prosperity of American nations is impossible. No effective alliance can be based on inequality; lasting friendship and business association demand mutual respect of our real and common interests."

Report on Arbitration by the Commission on the Administration of Justice in New York State

---

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House I include herewith a report on the subject of arbitration procedures in the courts made by the Commission on the Administration of Justice in New York State. This report refers to the satisfactory results as the result of arbitration procedures achieved under Mr. Justice Nathan Sweedler, former justice of the Municipal Court of the city of New York. It reads as follows:

Arbitration as a process intended to supplement, not supplant the work of the court, is a more effective method of disposition than conciliation. Although the rules governing arbitration have been in effect since 1917, they have hitherto received small attention.

In April 1932, Justice Sweedler, of Brooklyn, initiated a plan under which he offers voluntary arbitration to the parties in each action coming before him. Broadly speaking, his purpose was twofold: to make real use of the municipal court arbitration rules and to help relieve calendar congestion. He himself provides a certain number of arbitrators, any one of whom, the parties may choose to arbitrate their controversy. He has obtained the services of many prominent attorneys and laymen.

As soon as the parties have presented themselves to the arbitrator, he causes them to sign an agreement binding them to accept the results of the arbitration. The plaintiff and defendant then tell their stories, on the basis of which the arbitrator makes his award and the court enters judgment.

It was observed that, while attorneys were present, they took little part in the proceedings, the arbitrator acting as judge and counsel. Because he could dispense with the rules of evidence, much time was saved. Litigants seemed satisfied with the results of arbitration, possibly because of the attitude of the arbitrators, one of whom explained in each case why he held as he did. In one case, the arbitrator, after holding for the plaintiff, brought about an agreement that the plaintiff would not press for payment until the defendant obtained a position.

Attorneys, also, were favorably disposed toward arbitration. Their reaction was, however, that they would be more willing to arbitrate before a lawyer than a layman.

Both jury and nonjury actions have been arbitrated in the courts presided over by Justice Sweedler. He himself estimates that in about 2 years he has disposed of between 1,500 and 1,800 actions by informal methods of disposition including conciliation and arbitration. He further estimates that, if arbitration and conciliation became settled practices, at least 50 percent of the actions

in the municipal court would be disposed of by these methods of disposition.

The system has had excellent results and has met with general approval. In November 1931, Justice Sweedler, in denying a motion to set aside the award of an arbitrator and restore the case to the trial calendar declared that this was the first objection to the award of an arbitrator in the year and a half during which he had provided facilities for arbitration. (See *Schulter* v. *Lerney*, 142 Misc. Rept. 21.)

There have been several other recent applications of arbitration. On March 6, 1933, Justice McHugh inaugurated in the Second District of the Bronx, a system of arbitration much like Justice Sweedler's except that it applied only to nonjury actions. During the month 142 cases were arbitrated.

During the month of January 1933, in the ninth district in Manhattan, Justice Lauer conducted, in connection with the regular calendar of the court, a special calendar of arbitration. After his appointment as president-justice, the experiment was continued by Justice Roeder. A number of attorneys consented to aid the court and were in daily attendance, prepared to act without compensation as arbitrators and conciliators. Their names were published in advance in the Law Journal. The notice in the Law Journal stated that it was hoped in this way to dispose of twice the usual number of cases. Seventy-five cases were arbitrated. The attorneys acting as arbitrators were circularized by the Association of the Bar of the City of New York for comments and criticisms.

Thus, wherever tried, arbitration has been an unqualified success. Besides doing away with the animosity that often springs up at trials, it provides expeditious and equitable disposal of actions with little if any expense to the litigants or the city. At the same time, wider use of arbitration would measurably decrease the intolerably congested conditions of municipal-court calendars.

The Association of the Bar of the City of New York has several times endorsed arbitration and suggested its extension to the justices of the municipal court.

Amendments to the National Banking Act

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee today favorably reported H.R. 8160.

In connection with the consideration of this bill in subcommittee, of which the distinguished gentleman from Georgia [Mr. PAUL BROWN], is the chairman, the question was raised about the provision in the bill which dealt with nonnegotiable paper.

In order to clarify the factual situation with reference to such paper, the Comptroller of the Currency, the Honorable Ray Gidney, was requested to furnish certain data.

He has done so in a letter dated July 14, 1959, addressed to the distinguished chairman of Subcommittee No. 2.

In view of the fact that the hearings have already been printed and in order that the membership of the House may be fully apprised of these facts, and at the suggestion of Mr. BROWN, I submit herewith the information as contained in that letter, as follows:

JULY 14, 1959.

Hon. PAUL BROWN,
Committee on Banking and Currency, House of Representatives, Washington, D.C.

DEAR MR. BROWN: At our conference a few days ago it was suggested that it would be desirable to have some information as to the reasons for the development of nonnegotiable consumer paper and the amount held by the banks in that form.

It appears that among the reasons for the creation of the consumer installment paper in nonnegotiable form the provisions of State legislation are very important. Following is a brief summary of law provisions for a number of States relating to this matter.

The following States have in force a retail installment sales act which, by its terms, prohibits the taking of a promissory note or other instrument which could cut off defenses of the purchaser in connection with a retail installment sale:

New York: Applies to sale of all commodities.

Pennsylvania: Applies only to sale of motor vehicles.

North Dakota: [1] Applies to sale of all commodities.

The following States have in force a retail installment sales act which does not contain an express prohibition but which provides that the contracts "shall contain all the agreements of the parties":

Connecticut: Applies to sale of all commodities.

Colorado: Applies only to sale of motor vehicles.

Kentucky: Applies only to sale of motor vehicles.

Maryland: Applies to sale of all commodities.

Minnesota: Applies only to sale of motor vehicles.

New Jersey: Applies only to sale of motor vehicles.

Wisconsin: Applies only to sale of motor vehicles.

The following States have in force a retail installment sales act containing neither the express prohibition nor the clause quoted above, but which has specific and detailed requirements as to the provisions of the retail installment contract:

Illinois: Applies to sale of all commodities.

Iowa: Applies only to sale of motor vehicles.

Massachusetts: Applies only to sale of motor vehicles.

Michigan: Applies only to sale of motor vehicles.

Mississippi: Applies only to sale of motor vehicles.

Ohio and Indiana have in force a retail installment sales act which is applicable to the sale of all commodities, and which expressly authorizes the taking of a negotiable instrument in connection with such sale.

We find that aggregate figures for holding of nonnegotiable paper are not presently available, though it is clear that State laws have made the use of this type of obligation necessary for retail consumer installment sales.

From the Board of Governors of the Federal Reserve System we have obtained the following information showing relative volume of consumer paper acquired direct and by purchase in 1958:

Total of all installment loans acquired by all commercial banks during the calendar year 1958	$14,645,000,000
Aggregate of such loans which were purchased	6,370,000,000
Aggregate of such loans which were originated by the respective banks for their own accounts	8,275,000,000
Total of all installment loans held by all commercial banks as of Dec. 31, 1958	12,730,000,000
Aggregate of such loans which were purchased	5,883,000,000
Aggregate of such loans which were originated by the respective banks for their own accounts	6,847,000,000

It will be noted that of the total installment loans held at December 31, 1958, over 46 percent represented purchased paper of which a very large proportion would be nonnegotiable.

A large New York City bank has given us the following information for all central reserve city banks in New York City. Consumer installment credit totaled $799 million. Of this total, $328 million were in personal loans, usually direct loans on promissory notes and generally in negotiable form; $149 million on consumer installment credit extended for automobiles (new and used) of which about half were on a direct loan basis, and the other half were on dealer-originated nonnegotiable retail installment contract with some form of recourse on the dealer. In actual practice the banks credit check the individual purchasers and rely principally on the purchasers to repay the obligations, although there may be some measure of recourse on the dealer.

Credit outstanding for property improvement purposes totaled $153 million in these banks. The bulk of this is on a direct-loan basis, with negotiable promissory notes either the FHA title I plan or the bank's own plan. Assuming the direct loan part to be about $100 million, there would be about $53 million in such paper which originated with dealers and in a nonnegotiable form. Again, the banks generally credit-check the maker and look to him for repayment, rather than to the originating dealer or contractor for any measure of recourse.

A large Philadelphia bank advises that, of the paper which it has purchased from dealers, between 75 percent and 85 percent is in nonnegotiable form. This is practically necessary to meet the requirements of the uniform commercial code as enacted in Pennsylvania. The bank considers that there is not much difference in the safety of the consumer paper as between nonnegotiable and negotiable.

A moderate-sized Pennsylvania bank with $4 million of consumer credit states it has $1.5 million in automobile loans, practically all taken from dealers and nonnegotiable in form. In response to a question as to whether they could readily evaluate the credit standing of the individual makers of the paper thus acquired, they replied that they could readily do so as they keep their automobile paper segregated by dealers and also have their own credit files on the individual makers. They estimate that 75 percent of the paper would be of a quality which they would be willing to discount without the endorsement of the dealer. They know most of the people in their com-

[1] North Dakota has amended its version of the retail installment sales act by deleting this express prohibition. The new act provides that the contract "shall contain all the agreements of the parties." It is uncertain as to when the new act takes effect.

munity personally and can readily comply with the proposed provision for evaluation of the credit of individual makers.

We learn that New York State and Missouri have amended their laws practically in line with the provisions of section 3(d) of H.R. 8160. The action taken in New York is particularly interesting, and I quote a comment received from a New York City bank concerning it:

"The first—senate introduced No. 856, chapter 984, of the 1958 laws—was prepared under the direction of the New York State Banking Department for the purpose of amending the general lending limits of section 103–1 of the banking law, applicable to State-chartered commercial banks and trust companies (similar amendments were made to section 294–8 of the banking law, applicable to State-chartered industrial banks). We understand that, in drafting this bill, the banking department adopted the principles set forth in the ill-fated Financial Institutions Act of 1957, H.R. 7026, section 24, page 32.

"Apparently there was some confusion as to the applicability of this legislation, and the banking department prepared two new bills for the 1959 session of the legislature—assembly introduced No. 2801, for commercial banks and trust companies; and assembly introduced No. 3007, for industrial banks—which were enacted into law under chapters 701 and 620, respectively. The principal effect of the 1959 legislation was to more precisely define 'installment consumer paper,' as used in the statute. A copy of section 491, referred to in the bills, is enclosed for your information.

"If H.R. 8160 is enacted, national banks doing business in the State of New York then will be on an equal footing with the State-chartered commercial and industrial banks in this area of banking. The larger banks have little interest or concern in this matter, but the smaller banks providing consumer installment credit financing facilities in their respective communities might need the relief afforded by this legislation."

Copies of the New York legislation above mentioned are attached.

I hope that this material will be helpful to the committee.

Sincerely yours,

R. M. GIDNEY,
Comptroller of the Currency.

U.S. Rights in Certain Areas of Antarctic

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of a resolution approved by the American Coalition of Patriotic Societies:

ANTARCTICA

Whereas the proposed treaty with 11 other nations regarding scientific harmony in the Antarctic includes as part of the arrangements a freezing of the status quo relative to territorial claims; and

Whereas the United States has made no announcement of Territorial claims in Antarctica although having rights to vast tracts through discovery and exporation; and

Whereas the language of the proposed treaty indicates that the way may be opened for the United Nations to take over the administration of the Antarctic: Therefore be it

Resolved, That the American coalition urges the U.S. Government to announce its rightful claims and assert sovereignty over the Antarctic areas discovered by the United States rather than surrrender this sovereignty to the United Nations; and

Resolved, That the American coalition supports the principle of House Joint Resolution 97 declaring the right of sovereignty of the United States over certain areas of the Antarctic Continent.

Federal Construction of the Trinity River Powerplants

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. GUBSER. Mr. Speaker, in recent months we have observed a significant change in the tune played by the California public power advocates of Federal construction of the Trinity River powerplants. Nearly a year and a half ago, the House Interior Subcommittee on Irrigation and Reclamation held 8 days of hearings, totaling over 400 pages, on the joint development proposal to construct the Trinity power facilities.

But the committee was not permitted to vote on the bills providing for joint development, although 6 months passed between the time of the extensive hearings and adjournment. I believe it is safe to state that the issue is about where it was 1½ years ago because the voters were lacking at that time to kill the bills in committee. This conclusion is supported by a statement issued on August 22, 1958, by a majority of the House Interior Committee members, urging "that the Secretary of the Interior not request funds, and the Appropriation Committees not approve funds for the Trinity project power facilities until such time as the Congress has had ample opportunity to carefully consider and act on this legislation."

An editorial of June 23, 1959, entitled "Months Delay Last Year—In a Hurry Now," from the Oroville Mercury, of California, emphasizes that partnership opponents are now "in a hurry for action on Trinity power," and that they say, "Congress should appropriate $2.5 million now to begin Federal work on the power features." The article further relates, "Now, without a vote ever having been taken, and with the weeks of the hearings wasted," the Federal construction supporters want "to nullify the whole thing and have Congress do what would cost the country $60 million unnecessarily in caiptal investment. That is bad enough; but when one considers that the city of Sacramento would get the power if the Government developed it, and would get it at half price, while farmers in the Central Valley made up the difference between the Sacramento price and the cost of production—$80 million—it will be seen that there is something very shady in the whole matter." The article concludes with the observation that "the House Appropriations Committee, no doubt having in mind the 'dilatory tactics' employed last year, recently turned down the request for Trinity power funds."

The Petaluma Argus Courier recently stated editorially, "This is one area of Government spending where an economy-minded President can do a little cutting of that spending," and that "it is foolish to spend taxpayers' money on such projects when private industry can do the job and do it at an actual profit for the Government. Under the partnership plan, the taxpayers would be the beneficiaries by many millions of dollars in costs saved and taxes and fees paid by the utility."

On June 23, 1959, Dave Minch's column in the Red Bluff (Calif.) Daily News related that he had talked to many residents of the area near Trinity and was "of the opinion that by far the majority" in this locality "are not in favor of Government development of any project where private capital is available. Several things have caused this change over the last few years. One is that people do not have faith in the efficiency of public development of such projects; another possibly is that quite a percentage of people in this area own stock in the Pacific Gas & Electric Co. and believe the Government is interfering in a project that could be developed much more reasonably by private capital. These are, of course, in addition to the enormous amount of taxes that would be lost if the Government did the developing." According to the company's 1958 annual report, which is available to anyone for the asking, Pacific Gas & Electric is owned by 226,180 individual and institutional investors, over 65 percent of whom have California addresses; therefore, it is quite likely, as Mr. Minch mentions, that a number of the company's nearly 150,000 California stockholders reside in the small communities of the Trinity area, such as Red Bluff. Here are some of the "little people" who are part owners of Pacific Gas & Electric and are naturally desirous of their local company's participating in the projects in their localities. This is true public ownership.

Cities Have a Responsibility, Too

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ROBISON. Mr. Speaker, the recent U.S. Conference of Mayors held in Los Angeles was marked by considerable criticism for what one newspaper categorized as "stinginess in Federal aid to cities, particularly in respect to housing and urban renewal."

One of the speakers, a former mayor himself and now a U.S. Senator, was quoted as telling the conference:

I am unable to understand the philosophy of government which treats the cities as beggars at the backdoor. The partnership of Federal and city governments makes sense in politics, because as things stand now, it is the only break through the discriminations practiced against them in so many State legislatures.

Mr. Speaker, I believe that this partnership should be a real partnership with a sharing of the responsibilities as well as the costs. As a commentary on the conference regarding the administration policy concerning urban renewal, I include in these remarks an editorial from the Christian Science Monitor for July 13, 1959, which points out very well that the cities and individual landowners have responsibilities, too, and until effective measures are taken by the municipalities, criticism on their part directed toward the Federal Government is often a case of the "pot calling the kettle black":

BATTLING THE SLUM LORDS

American cities, spending billions of their own and Federal tax money to fight slums, have largely overlooked the possibilities of furthering the same aim by fighting slum landlords.

It would be an exaggeration, of course, to say that all owners of slum properties are cheating both their tenants and the other taxpayers of their cities. But many thousands of them are doing just that. And, under existing tax practices, they are being financially encouraged to do so.

In a survey of major American cities made by this newspaper it was found that many such landlords, by chopping up existing dwellings into single rooms, were getting a return on their investment of from 22 to 50 percent per year. At the same time, these landlords often sought (and got) yearly abatements on the amount of local property taxes paid, because of the fast deterioration of their tenements. They also sought (and sometimes got, on the basis of high rental income) big eminent domain payments when their rundown properties were finally taken for slum-clearance projects. And they were meanwhile using property depreciation to reduce income tax payments.

There are several remedies for this apparent official encouragement to slum breeders—remedies consistent with the principle of equitable taxation and careful of the rights of property ownership.

Aside from tight enforcement of building safety codes, probably the most useful remedy lies in the field of property tax assessment. Many tax experts feel appraisal of slum tenements should be based on their income-earning capacity. Others urge that urban land be assessed relatively higher, buildings lower.

Such appraisals would tend to make it unprofitable for landlords to operate dilapidated structures, since their taxes would remain relatively high even when their buildings deteriorated.

The high land assessment formula also tends to encourage the growth of efficient new commercial buildings in slum areas, thus helping to accomplish by justifiable tax control what slum clearance programs now are using tax revenue to accomplish.

In essence this system is a fair method of restoring a realistic tax balance to cities that find themselves burdened with what New Haven's Mayor Richard Lee calls Bowery buildings on Tiffany real estate.

Another remedy now being used in some cities (notably Chicago, St. Louis, Philadelphia, and Baltimore) is that of requiring actual owners of multiple dwellings to register under penalty of fines or jail sentences. This legally difficult system prevents absentee ownership from becoming hidden ownership, and pins down responsibility for repairs and taxes.

We urge all cities facing the slum problem to examine these methods of tightening up on the profiteers who do so much to create slums. Statistics indicate why tax-bought renewal and rehabilitation programs cannot alone overtake the growth of new slums unless some such preventive techniques are also adopted. Some 12 million city dwellings in the United States are defective. One out of every four city dwellers lives in a slum.

For these slum-dwellers and for the heavy-hit taxpayers who support the war on slums through Federal and local levies, it is only just that existing government checks on urban real estate be tightened to catch those who now make money by creating new slums.

U.S.S. "Long Beach" Christened

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. HOSMER. Mr. Speaker, a significant event in the history of seapower occurred Tuesday with the christening of the U.S.S. *Long Beach* at the Bethlehem Shipbuilding Co.'s Quincy, Mass., yard. The 14,000-ton, 761-foot-long *Long Beach* will be powered by two atomic reactors and be armed solely with guided missiles. The ship is our Navy's and our country's first nuclear powered surface ship. Under command of Capt. Eugene P. Wilkinson, first skipper of the U.S.S. *Nautilus*, the *Long Beach* undoubtedly will create as much history on the seas' surface as did Wilkinson's prior command beneath the seas. Atomic Energy Commissioner Harold S. Vance made the following appropriate remarks on the occasion of the christening:

It is a pleasure and an honor to participate in this historic launching of the U.S.S. *Long Beach*, our first nuclear powered naval surface ship.

I am sure this event is one of pride for this old shipbuilding community, whose contributions to the development of the United States as a world seapower date back to the construction of the Yankee Clipper ships. Just as those early ships were constructed to gain our freedom as a maritime Nation, the *Long Beach*, a revolutionary naval vessel, is being constructed to guarantee that this freedom is not destroyed. A product of the missile and atomic age, this magnificant naval vessel with her two powerful nuclear engines, will be free to travel the seas for unprecedented distances at high sustained speed. Her endurance and mobility will far outstrip her conventional predecessors. She is the *Nautilus* of our surface naval forces. This nuclear powered cruiser will pave the way for the nuclear-powered aircraft carrier, the *Enterprise*, being built at Newport News, and the nuclear-powered guided missile destroyer leader, the *Bainbridge*, whose keel was laid recently at this Bethlehem yard. These ships are the forerunners of our nuclear powered surface Navy, just as the *Nautilus* provided the technological basis for our nuclear-powered submarine fleet.

The progress represented by these surface ships is particularly noteworthy when one reflects that less than 5 years have passed since the first atomic-powered ship, the *Nautilus*, went to sea. In that brief period the Atomic Energy Commission, in cooperation with the Navy, has developed or has under development 8 different types of naval nuclear propulsion plants designed to power many types of submarines and surface vessels. They range from a plant to drive the small hunter-killer submarines, the *Tullibee*, up to the *Enterprise*, powered by 8 reactors. I doubt that many scientific fields have seen as intense a development effort over so short a period of time as has been the case for naval nuclear propulsion. The conversion of the Navy to nuclear power is well underway.

I hope we all can appreciate the stirring challenge that has been presented to this shipyard with the construction of its first nuclear-powered ship and that we are all well aware of the changes that have had to be made to face up to the new and higher plateau of design, production, and quality control that is intrinsic to the construction of any nuclear powerplant, especially one which has to operate in the stringent confines of naval application and with the reliability and safety essential to a successful naval vessel. Those of us who are experienced in the shipbuilding business know that the hardest part of the job is still ahead; is will be a test of the very character of this yard, and all of its technical talent.

We recognize too, that to fabricate the new materials and components unique to the naval nuclear program, industry has been required to develop new production techniques and extend industrial skills to new heights of technical accomplishments.

We of the Atomic Energy Commission are proud of our association with the Navy in the design, development and construction of this important ship. The reactor plant for this ship and its land-based prototype now operating in Idaho, were developed at the AEC's Bettis Laboratory operated by the Westinghouse Electric Corp. The effective integration of the AEC, Westinghouse, Bethlehem, and Navy efforts that are being applied to this ship was made possible by the unique organizational setup which has been so successful in the development of the *Nautilus*, the *Seawolf*, the *Skate*, and the *Skipjack*. I am referring of course to the unified direction of this entire Naval nuclear propulsion development program by Vice Admiral Rickover who acts for both the Navy and the AEC in these matters.

Like many other military developments, the naval nuclear power program has produced innumerable benefits to our civilian programs. The nuclear powerplants developed at the Atomic Energy Commission's Bettis and Knolls Atomic Power Laboratories, although highly classified in themselves, have provided to the entire atomic power industry basic knowledge in the fields of physics, chemistry, shielding, radiation, metallurgy and heat transfer. Much of the technology of our civilian power program is based on naval nuclear propulsion developments. It is heartening to know that the great efforts which go into these military programs have peaceful derivatives which we expect will have widespread benefits in other fields.

The seagoing operation of the *Long Beach* will serve as the real proof testing of the many technical concepts and the pattern of developments that have led to her nuclear plant design. Personnel assigned to operate this plant have been carefully selected and intensely trained not only to operate the controls but to understand the basis and

limitations of their design. Operating experiences from such personnel will provide a valuable addition to our reactor technology and broaden the base of knowledge upon which plants of the future will be designed.

The United States has achieved world leadership in the development and application of atomic power for naval propulsion. The construction of this cruiser is direct evidence of our intention to maintain the technical lead in this field. To the men in the Navy who conceived it, to the many industrial concerns that furnished the components, to the shipbuilding industry who built it, this ship is a great tribute. The AEC is proud of its partnership with the Navy and industry in accomplishing this task.

Chicago Captures the Heart of Canada

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am indebted to the beloved Bing Morris, who left our own Congressional Hotel 3 years ago to take over the Park Plaza in Toronto, for an editorial in the Toronto Telegram of July 7, 1959, which I am extending my remarks to include. Bing writes me:

I find in the 3 years I have been here that Toronto papers are neither pro nor anti-American but call the shots as they see them. That they saw, in Chicago's welcome to the Queen, an unusual warmth is really a tribute to your constituency.

The editorial follows:

THE QUEEN CONQUERS CHICAGO

The whole of North America has taken the Queen to its heart, so what could be a more appropriate place for the most tumultuous welcome of her tour than Chicago, the geographical heart of the continent.

Chicago is many things to many people, but to all people it is a city of wonderful superlatives, always breaking new ground to achieve the biggest and the best. In its welcome to the Queen, it was true to style.

With a quarter of a mile of red carpet and an expansive greeting, Chicago showed its good neighborliness as a great city of great people.

It was left to Elizabeth, the symbol of all that is good in government and the descendant of George the Third, the king who started the feuding in the English-speaking family, to draw from Chicago the final evidence of its great heart.

The Queen swept through the Windy City adored, cheered, and applauded by millions. Few cities on this continent, none in Canada, could have staged such a populous welcome. But Chicago was just trying to give the little lady a good time.

The affection that so many people feel for Chicago begins to take meaning. Carl Sandburg, the poet of Chicago, wrote affectionately of his dynamic hometown as: "the hog butcher of the world, toolmaker, stacker of wheat, player with railroads and the Nation's freight handler; stormy, husky, brawling city of the big shoulders."

Sure it, is all these things, but it is more. Beneath its roughness is a heart that beats for a continent, a heart that is a true symbol of pioneer America. It chases prosperity, but it can stop to show a warm heart to a visiting queen from a friendly neighbor.

In doing so, Chicago has made many new friends on this side of the border. Well done, Chicago, we couldn't have done better ourselves. We're glad you like our Queen. Chicago has qualified for honorary membership in the Canadian Confederation.

Maybe, one of these days, Toronto will have the honor of saluting the head of the American Union. We will never be able to exceed the standard set by Chicago, but perhaps we can arrange to spread out a half mile of red carpet for the President, one of these days.

Hospital and Surgical Benefits

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. ALGER. Mr. Speaker, the hearings before the Committee on Ways and Means on H.R. 4700, known as the Forand bill, to provide medical care for the elderly under the OSAI, are proving to be very thought provoking. Indeed, the subject is controversial and there seems to be a sharply drawn line between the reasoning of opponents and proponents of the bill.

A Texas witness, Dr. Milford O. Rouse, past president of the Texas Medical Association and current president of the Southwestern Medical Association, testified in opposition to the bill. I would like to present both the testimony of Dr. Rouse and an editorial from the Dallas Morning News—Dallas, Tex.—dated July 15, 1959, entitled "Blueprint for Socialism":

STATEMENT OF THE TEXAS MEDICAL ASSOCIATION ON H.R. 4700 BEFORE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES, BY MILFORD O. ROUSE, M.D., JULY 16, 1959

Mr. Chairman and members of the committee, I am Dr. Milford O. Rouse of Dallas, Tex. I am appearing here as a representative of the Texas Medical Association. I appreciate very much the opportunity to appear before you, and to discuss with you the views of the medical profession in our State concerning the provisions of H.R. 4700.

The medical profession of Texas is acutely aware of its great responsibility to make available the best medical care possible for the aged as well as for the State's entire population of more than 9 million. We are particularly cognizant of the existence of certain medical care problems among our senior citizens. We fully concur that efforts to resolve existing problems should be continued and increased.

Nevertheless, we do not agree with advocates of H.R. 4700 as to the nature and extent of existing problems, nor as to the means of resolving them. In a State steeped in the traditions of individual liberty and initiative, we feel that the voluntary private approach should continue to be utilized to provide hospital and surgical benefits for older persons. Permit me to summarize the basis of our opposition to this legislation, and to report the positive approach which is being pursued vigorously in our State.

The policymaking body of our 8,000-member association repeatedly has expressed its opposition to H.R. 4700 and similar legislation. The basis of our position is as follows:

First, and foremost, we feel that hospital and surgical services for the aged can and should be handled in keeping with the American traditions of free enterprise. Blue Cross-Blue Shield of Texas and the private insurance companies have demonstrated their ability to meet the extensive insurance needs of the growing population of our State.

Second, we oppose Federal intervention in medicine because it is detrimental to the doctor-patient relationship and to good medical care. We believe that each illness is a personal problem which is of primary concern to the patient and to the doctor and not to an expensive third party like the Government. We oppose Federal intervention because we believe that the patient should have unrestricted free choice in selecting a doctor. We also believe that the doctor owes his unqualified responsibility directly to the patient and not to a Federal agency which might use the individual's tax contributions in order to pay for his medical bills.

Third, H.R. 4700 actually is national compulsory health insurance. It embraces the principle of Government regulation of professional fees, wages, prices, and services.

Fourth, we do not feel it will solve the primary problem of financing medical care for the aged. In our State, for example, only 42½ percent of the aged are covered by social security benefits.

And fifth, this legislation will result in higher taxes, and less take-home pay for all covered by social security. It also will impose another tax burden on the employer. It could result in the fiscal wrecking of the entire social security system.

Permit me to report that the Texas Medical Association is fully engaged in a multiphased program which is designed to alleviate many existing problems related to medical and surgical services for the aged. Following preliminary investigation, the association's committee on voluntary health insurance reported that a need does exist for a tailormade insurance plan for the 675,000 Texans who are 65 years of age or older. The committee has asked Blue Cross-Blue Shield of Texas to undertake a fact-finding survey related to all aspects of medical care for the aged. We believe that at the completion of this study that we will have far more accurate information than presently is available. With these facts on hand, our committee will formulate a realistic plan of coverage for the aged, a plan designed to fulfill those needs which are brought out in the survey. The Texas House of Delegates has authorized Blue Cross-Blue Shield to initiate the plan, and I am pleased to report that it will be introduced in October.

Several other positive programs are worthy of brief mention. The association's committee on voluntary health insurance has embarked upon a comprehensive plan designed to control the costs of medical care, and to keep the availability of good medical care within the reach of as many individuals as possible. The Texas Medical Association's committee on aging has been very active. It presently is completing an intensive educational and informational program among the profession. The committee, in cooperation with the American Medical Association, conducted a very successful regional conference on aging in Dallas. Another State conference is in the planning stage, and likely will be presented at the Texas Medical Association's annual meeting next April. In addition to its independent activities, the Texas Medical Association is cooperating with many other State organizations which hold the primary responsibility for health services. This past April our State Association joined with the Texas Hospital Association, the Texas Dental Association and the Texas Association of Nursing Home Operators to form the Texas Joint Council To Improve the Health Care of the Aged. This Council is exploring the entire spectrum of problems relating to the aged and the aging process. During the past 18 months, the association has been working closely

with private insurance carriers and Blue Cross-Blue Shield to encourage a million more Texans to procure voluntary health insurance.

In summary, we in Texas believe that this legislation is unwise and not needed. We believe that private, individual care is greatly superior, and far less expensive, than Government medicine. We hope that you will reject the proposed legislation which is before you. In this way, you will be endorsing the philosophy of free enterprise which has given the United States the highest quality of medical care in the world today.

Thank you very much.

[From the Dallas Morning News, July 15, 1959]

BLUEPRINT FOR SOCIALISM

A blueprint for American socialism is now on display in Washington. It is the Forand bill on medical care. Since 1935 the pseudo-Socialists in Washington have been trying to put the Federal Government in charge of all medicine.

The Forand bill would extend Government aid for medical expenses to those receiving social security benefits. Sixteen million persons—mostly over 65—would get hospital, surgical, and nursing home treatment under a Government-run program.

The Government would contract to pay hospitals, nursing homes, physicians, and dentists for their services. Estimated cost for the first 2 years is $2 billion, but as more and more reach 65 that cost would soar.

The bill would be paid by everyone who pays social security taxes. Already those taxes are scheduled to reach 9 percent of the payroll up to $4,800—in the years ahead.

But the staggering cost is not the worst feature of it. This is the entering wedge for socialism on all fronts. If this bill passes, it will be amended in the future to apply to all persons on social security rolls at all ages.

Once the medical profession is socialized, then journalism, law, engineering, and every other profession and business will be attacked.

Washington has no more business providing free medical care to people over 65 than it does to provide them shoes and bread and automobiles. That is the point made by Dallas Representative BRUCE ALGER in hearings on the bill Monday: Existence of a problem in this country, like medical care, does not justify Government control to solve it.

The British have had socialized medicine 11 years. A recent survey showed that an average waiting period of 4 months is necessary for a child's tonsillectomy. There is little freedom in choosing doctors. The doctors spend more time in filling out government forms than in treating illnesses.

Medical care is a problem for any family—and why? Because most families do not budget for it. They budget for a car, for food, clothes, entertainment—but gamble they will not be sick. It's an unpleasant thought, and unpleasant thoughts are put into the background. When trouble hits, the money is not there.

Is that a valid reason for the Federal Government to step in and provide the service? Should it do the same thing if you get behind on your car payments?

Either this country stops the steady push toward socialistic services or it goes headlong into them. That is the issue with the Forand bill.

Shall We Keep Our Cake?

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD an editorial by Wendell E. Long of the Bennett County Booster, Martin, S. Dak.

Mr. Long very aptly describes the change in philosophy which has taken place in this country in recent years from the time when a man assumed it was his own responsibility to provide for himself and his family, to the present time when Uncle Sam is expected to provide this security. His editorial is as follows:

[From the Bennett County Booster, Martin, S. Dak., July 9, 1959]

SHALL WE KEEP OUR CAKE?

Millions of Americans no longer go into and out of debt, as their forebears did. Today's family goes into debt when it starts as a family and stays there indefinitely.

Car dealers say that the most ideal prospect for a new one is the man who is just about to make his final payment on the bus he now drives.

Nowadays, management of the family finances has passed from the household to the bank or finance company. What's left after the first-of-the-month payments are made is left for day-to-day living.

And Americans seem to like it this way.

No one seems to give a serious thought about the problem of making payments when the breadwinner is out of a job.

Perhaps, this can be attributed somewhat to inflation which has resulted in a whole new generation having grown up in an era when jobs hunt men, not vice versa.

Full employment is not only a political necessity, it appears to be a matter of life and death for most of us.

This desperate need for full employment fostered by loss of household management of finances, the Booster believes, is a dominant factor in the continually stronger demand for "cradle to the grave" security.

The most deplorable thing about this security trend is that it is impossible to achieve in a democratic, capitalistic state.

"Cradle to the grave" security can be provided only by an all-powerful organization or group that can own, control and equitably distribute all wealth. Of course, such an organization could only be government.

That of course, is communism. And a communistic state can offer cradle-to-the-grave security.

But on the other hand, it destroys all the individual initiative to get ahead. There is no reason for any person to exert any extra effort to accomplish any task or any great feat because there is no reward.

Let's take a good look at our present system. Except for dipping our fingers slightly into socialism, it is still every man's responsibility to provide for himself and his family. If he works hard, puts forth his best effort and honestly seeks out his place in life, he may be reasonably assured of financial security for himself and his family. The less effort, the less work and the less determination he exhibits, the less security he will be able to provide.

In other words, the need for people to provide their own security and their own standard of living is the driving force that makes great accomplishments possible.

That driving force has built the United States to its present position in the world and given its citizens the highest standard of living ever known to man.

Now, instead of allowing the same system to continue, we have allowed our success to go to our heads. We take for granted our high standard of living and have lost sight of the fact that it is possible only through sincere and unrelenting effort.

We want to shirk our responsibilities, exert less effort in return for greater rewards, and generally pass off all our problems to someone else to solve.

In other words, we are trying to get rid of the driving force that gave us our great wealth and still enjoy the benefits.

It can't be done. We cannot have a high standard of living and cradle-to-the-grave security at the same time. We cannot eat our cake and have it, too.

United States Should Make Claims in Antarctica

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. TOLLEFSON. Mr. Speaker, I am sure that many Members will be interested in what David Mills had to say about U.S. claims to certain areas in Antarctica in one of his radio broadcasts. I am inserting it in the Appendix of the RECORD for their information:

Exploration of the Antarctic Continent was greatly widened during the recent International Geophysical Year. To plan the indefinite continuation of such joint exploration, President Eisenhower has proposed an international conference of 12 nations. But 3 months of diplomatic discussion of the idea has failed to reach any agreement.

The stumbling block is the President's suggestion that for the duration of such exploration all claims to territory in Antarctica should be frozen. Congressional critics feared this would prejudice our own rights by opening the door wide for Soviet exploration which the Communists would use later to claim territory for themselves. The congressional suspicions are confirmed: The Soviets object to the President's plan precisely because they fear it would prevent them from establishing claims they do not now have.

The Reds are already planning a very large exploration program for next season which would carry them into almost all corners of Antarctica.

Seven countries have laid claim to Antarctica territory, either on the basis of discovery, or on the argument that the regions of Antarctica opposite their lands should be theirs. These claims overlap and none of these seven wishes to prejudice their supposed rights.

Although the United States has done the major part of Antarctic exploration, it has claimed nothing, and does not recognize the claims of others. The purpose of the President's suggestion was to keep the continent open for peaceful scientific research, but the failure of the diplomats to agree suggests that the alternative approach might be much more effective. That is for the United States to claim all that it has explored and iron out conflicts with the other seven claimants. This would leave no room for a Soviet foothold in Antarctica, and the proprietors could permit all the peaceful exploration their hearts desire.

Fourth of July Message: "Wake Up, America"

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. ROGERS of Florida. Mr. Speaker, on July 4, the Fort Lauderdale News printed a fine editorial "Wake Up, America," which I believe will be of interest to all Members. In the hope that the comments of Editor Jack Gore will be an inspiration and a stern warning, I have requested that it be printed here in the CONGRESSIONAL RECORD.

FOURTH OF JULY MESSAGE: "WAKE UP, AMERICA"

(By Jack W. Gore)

We have often wondered in recent years if Americans of this generation would ever have the courage and the fortitude to defend their liberties with the same determined attitude that their forefathers did when they broke away from English rule and fought a bitter war against overwhelming odds to establish their God-given right to govern themselves.

Somehow, it seems, as this Nation grows older, larger, more prosperous and more powerful, our people tend to become less appreciative of the heritages handed down to them by past generations.

Here in America today, for instance, you don't find many people who are deeply concerned about the vast changes that have taken place in our governmental structure over the past 30 years. Many are well aware of the fact that these changes have come about, and that the overall effect of them has been to give us a type of government vastly different, vastly more expensive and vastly more socialistic than was ever envisioned by our Founding Fathers.

Yet, how few of the many who are well aware of these changes really are interested in doing anything more than just shaking their heads over what's happening.

The vast majority seem content to take the attitude that there's not much one person can do to change the drift of a nation. So they go on doing nothing while the Federal Government becomes ever more dominant, the self-seeking politicians grow bolder and bolder, taxes get heavier and heavier and pressure groups grab an ever firmer grip on the throat of the country.

People today seem to have a great fear of speaking up to defend the principles upon which this Nation was founded. More and more in recent years we have noted an increasing trend among our most successful and most intelligent classes of people not to let themselves become involved in controversial issues of the day. More and more we have noted that even among those who are contributors to our "Letters to the Editor" column there is an increasing trend for anonymity as if the mere act of a person expressing his ideas on paper and identifying himself with those ideas automatically labels that person as a nonconformist or a crackpot.

What this trend signifies, of course, is that Americans are losing their "guts." They are becoming afraid to take a definite stand for or against anything, and in the process they are fast becoming a faceless mass of humanity increasingly controlled and directed by an institution of their own creation—their own Federal Government.

Back in 1776 it took a tremendous amount of courage and determination for men to stand up and demand an end to the oppressive acts of the British Crown. In those days there was no freedom of the press and precious few other rights which an individual citizen could call his own. Those who sparked the American Revolution did so in full knowledge of the ignominous traitor's death that lay in store for them if they failed in their attempt to break away from British rule.

Today it is no crime to speak out in opposition to Government policies with which we don't agree. No man can be called a traitor nor can he be hauled away to jail and punished for standing upon his rights as a free man in a free country.

Yet, it is sad to see how few there are who are willing to stand up and be counted when a controversial issue arises today. Fear of taking a stand and speaking our piece is making us a nation of sheep looking for someone to lead us along a path of untroubled security. Why think for ourselves anymore when there is always someone smarter around we can look to for guidance? Why worry and fret about the state of our Nation when it is a lot earier and certainly much more pleasant to let our Congressmen and our other elected officials do that for us no matter how badly they botch up the job? Why be concerned over the future of our children in this land of ours when it takes all of our time and effort merely to keep up with the present?

If our forefathers had abandoned themselves to this kind of thinking there would never have been an American nation. There would never have been a Declaration of Independence and a Constitution which has stood for centuries as a beacon light for freedom-loving people the world over.

We need to wake up in this Nation. We need to realize on this Fourth of July that the security we all long to possess isn't something that can be handed to us by an act of Congress or a Presidential proclamation. No government can promise a citizen security without limiting his rights and the trouble with this Nation today is that too many Americans mistakenly believe they can get security from the Government without paying for it in one way or another.

Antarctica's Importance Grows

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. TOLLEFSON. Mr. Speaker, a newspaper article by Walter Sullivan has recently been brought to my attention. It points up the growing importance of Antarctica, and should be of interest to Members of Congress who have some concern about the future of that continent so far as our Nation is affected:

ANTARCTICA'S IMPORTANCE GROWS—MANY NATIONS VYING FOR A SHARE

(By Walter Sullivan)

During the past week the highest echelons of this country's Government have been concerned with the most remote region of our planet. The National Security Council has been trying to decide such questions as these: Should the United States remain in Antarctica? What should be our objectives there? How should we try to achieve them?

An aura of cooperation marked the International Geophysical Year and extended to its many activities in Antarctica. Now that the IGY is over it is feared that this may change. The fact that the situation is not static was demonstrated on Thursday when Poland asked for a voice in settling the future of Antarctica. The Polish Embassy in Washington sent notes to this effect to the 12 nations that have been consulting to find a formula that would freeze the political status of that continent.

The advent of the space age has significantly affected the importance of the continent at the bottom of the world. And it is being suggested that the South Pole, where the United States now has a scientific station established under IGY auspices, may one day be as strategic a position in the era of air transportation as the Panama Canal was in the days of dependence on sea routes.

Because of its location on the spin axis of the earth, the South Pole has unique advantages for the observation of space vehicles. The best satellite orbit—the only one that covers all parts of the globe—is a north-south track over both poles. A single station at the South pole could collect information from every pass of a satellite in polar orbit.

SPACE TRACKING

As with all satellite capabilities, this would have military applications as well. Likewise a single tracking station at the pole—unlike stations elsewhere on the turning earth—could keep continuous watch on any space probe launched toward a point in the heavens south of the Equator. It is no coincidence that the National Aeronautics and Space Administration is represented on the Interdepartmental Committee on Antarctic Research.

The antarctic also may step into a new role in monitoring our planet and its environment for nuclear explosions. The network of stations proposed by the Geneva technical conference on monitoring a test ban is said to call for eight sites in Antarctica.

Perhaps the most valuable known resource of the antarctic today is scientific information. We must know what role its harsh climate plays in the world's weather. We should learn what lies within its mountains, how much ice there is and what lies beneath it.

The frightening pace of population growth is bound, sooner or later, to force us to turn to the resources of the icy continent. Its minerals are little known and difficult of access by present standards, but this will change. Its coastal waters teem with potential foods which we have not yet learned to capture and make palatable.

AIR HUB

As for transport, commerce between the southernmost countries is now small. But

the United States has been negotiating with them for trans-Antarctic air routes. It is noted that the construction of the Air Force base at Thule, Greenland, opened the Arctic to transpolar air routes and some believe the building of a field at McMurdo Sound would do the same for the Antarctic. It might cost $100 million or more, but whatever country built it would control a year-round link between that continent and the rest of the world.

The most subtle motive for Antarctic activity is prestige. For the Latin-American countries, Argentina and Chile, who claim Palmer Peninsula in rivalry with one another and with Britain, this has become an emotionally charged issue.

For the two great powers, the United States and the Soviet Union, the problem is a more general one. If each is to maintain its claim to world leadership it must play an important role in the scientific exploration of Antarctica. Should the United States withdraw from the continent, some fear that the high-quality research of the Russians there would have an impact on world opinion comparable to that of the sputniks.

Assuming that the United States does not withdraw from Antarctica, what sort of political future should it try to achieve for that region? At the start of the IGY seven nations claimed pie-shaped slices of the continent, all converging at the pole. They were Argentina, Australia, Britain, Chile, France, New Zealand, and Norway.

The United States and the Soviet Union made no claims, but both had reserved their rights in the area.

The IGY led to a tacit understanding that no nation would raise political issues and thus upset the research program. A half-dozen Soviet stations were established in the Australian claim, some of them manned by only a handful of men. The United States likewise set up seven stations, all but one of them in sectors claimed by others.

Although the entry of the Russians into Antarctica produced some alarm within Australia, the expeditions worked in harmony.

To continue this cooperation, scientific representatives from the nations concerned formed the special Committee on Antarctic Research. It comprised the 12 nations active in the program—the 7 claimants, the United States, the Soviet Union, Belgium, Japan, and South Africa.

The Committee, known as SCAR, held its most recent meeting in Australia last February. It was agreed that Poland, which was taking over one of the Soviet Antarctic stations, would be admitted to SCAR once a wintering party had been established by the Poles.

U.S. PROPOSAL

Last May, with the stated intention of preserving the scientific cooperation that marked the IGY, the United States proposed a treaty that would freeze the political claims and create some sort of international administrative machinery. All the members of SCAR agreed to discuss the plan, but the South American countries have been reluctant to bury their claims and the Russians have been hesitant to sign any treaty which gave such claims legal status, even though frozen.

The present friendly atmosphere in Antarctica derives from an absence of conflict of interest and the harshness of the environment. One leading scientist has suggested half seriously that no one have a say in the rule of the continent until he has spent a year there. This, he feels, is enough to purge a man of thought habits engendered by the heritage of international politics.

Do We Have a Gentleman in "the Gallery"?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles which appeared in the July 3, 1959, edition of the Island Times, Puerto Rico's only English-language newspaper.

ADMIRAL GALLERY FETED BY TRUJILLO

Adm. Dan Gallery was guest of honor last Thursday night at a reception given by Dominican Dictator Rafael Leonidas Trujillo in Ciudad Trujillo.

Admiral Gallery said he had accepted an invitation to a party the same day given by the U.S. Ambassador to the Dominican Republic, Joseph Farland, for a group of Coast Guard cadets stopping there during a summer training cruise. He took along the Navy steel band, "Admiral Dan's Pandemoniacs," to play.

From his own party Farland (who was at the time under fire for diplomatic "indiscretions" after being photographed with renegade Dominican pilot Juan Ventura Simo) took Admiral Gallery and his steel band boys, along with another visiting admiral, to Trujillo's party. "I didn't know anything about Trujillo's party until Farland took us there," Admiral Gallery told this paper Tuesday.

During the reception an American flag was unfurled with the claim that it had been taken from one of the yachts used in the recent "unsuccessful invasion attempt."

PORTRAIT OF A DICTATOR

The everyday human crime, although it may appall us, is accepted as part of the general scheme of things. A man who murders another or betrays his friends—a rapist or a racist—a sadist or a thief—fills us with horror and anger. We may not understand what makes people commit crimes, but we are able to grasp the fact that they have been committed and we react accordingly. Man's mind, however, balks at monstrosity. If we find a man who has committed all of these crimes, not once or 10 times but hundreds or thousands of times, caused other to commit them, and continues to commit them, our imagination goes into a state of shock. We are unable to comprehend such enormity. Can anyone accurately measure the effects of a hydrogen bomb, or draw a picture of genocide?

Such a man, we use the word only in its zoological sense, is Rafael Leonidas Trujillo y Molina, self-styled benefactor of the Dominican Republic. No list of his crimes, although it includes the countless thousands of people massacred on the Haitian border in 1937 and the numberless, nameless political opponents that he has caused to be assassinated, and his use of torture, terror, falsehood, and corruption could give a true idea of the damage that he has done to his country and to mankind. When a ruler not only exhibits inhuman degeneracy, but also promotes and nurtures it as a policy of state, it is bound to infect the whole body politic. When the inevitable retribution comes it is likely to be bloody, unreasoning, and uncontrolled. The Dominicans and their friends who are trying to rid themselves of this malignant growth have the sympathy of the whole world.

ADMIRAL'S ERROR

Not being familiar with the protocol covering officers of the armed forces, we don't know if they are subject to the obligations (and immunities) of diplomats. We think not.

In any case, the action of Adm. Dan Gallery last week in attending a reception given by Trujillo—not to mention taking along the steel band which he sponsored here—strikes us as a disservice to the citizens of his present home, whose belief in democratic principles is as deep as their hatred for the men who trample them.

Admiral Gallery has made himself a respected and admired civic-minder member of our community. We can neither respect nor admire his action last week.

PERHAPS TRUJILLO'S STAR IS SETTING

(By Earl Parker Hanson)

It is hard to tell just what is going on in the Dominican Republic, but the Benefactor and his fellow workers sure seem to be busier than a bunch of bird dogs, proving to everybody who will listen that nothing at all is going on and that every revolutionist who lands is cut down, immediately and relentlessly, either by Trujillo's brave soldiers or by the embattled country people who love their dictator so much that they'll take the machete to anybody who dares say a word against him.

The official line that there is no revolution left and that all the would-be rebels have long ago, officially, gotten their just deserts, may of course be largely correct, even though the rebel radio was still functioning and broadcasting somewhere in the Dominican Republic as of last Monday and perhaps even as of today. I haven't checked, and though it is always hard to know what one can believe when the two-bit Caribbean Generalissimo, Rafael Leonidas Trujillo Molina, and his cohorts, open their mouths and go through the motions of protesting too much.

Whatever is happening and has happened in the last few weeks, we know now that Trujillo's days are numbered and that virtually all of Latin America is holding its collective thumbs in ardent prayers that the number of those days be small.

The wave of democracy that began in Argentina a few years ago, and swept north to Peru, Colombia, Venezuela, and across the Caribbean to Cuba, is too powerful to be resisted indefinitely by Trujillo, even if it is true, as they say, that he has strengthened his air force by hiring Japanese mercenary pilots, and his army by stuffing it with a lot of Spaniards. The man who runs that "well-ordered graveyard" called the Dominican "Republic," who at one time bolstered his democratic regime by butchering at least 10,000 Haitians in one night's border incident that spread all over the country, who later perpetrated the Moca massacre which failed to make the newspapers though it accounted for somewhere between 250 and 500 victims, whose murderous fingers have reached into New York, Havana, and God knows where else, whose agents spend well over a million dollars per year attempting to buy good will in the United States, who did in Galíndez, Gerald Murphy and Morris Ernst, who recently had the unmitigated gall to stop one of Luis Ferré's steamers on the high seas, who runs an office here in San Juan to use the U.S. mails for spreading his libelous lies, is himself acting almighty nervous these days, as though he knows that he won't last any too long, and that it may not be too many months before he and his friend Batista have to pack up

and get out—maybe, as has been rumored because people like that aren't always too welcome in too many places, to Liberia to play pinochle with President W. V. Shadrach Tubman who is a pleasant enough fellow but himself no great shakes as a democrat.

There is one thing you can be sure of. If Trujillo does fall, there will be a lot of true-blue. Americans around who will say it's the Communists who did it, that's who it is, and the Communists are busy everywhere and are taking over Latin America, and it's a big shame. Just why such people insist on giving communism and the Communists so tremendous a buildup, I don't know, but I do think that they should be investigated as maybe being Moscow agents for spreading the colosal lie that only the Communists care about liberating millions of people from the clutches of one of the world's bloodiest and most ruthless murderers of human freedom. That seems to me one of the surest ways of making communism immensely popular throughout Latin America, except that the Latin Americans don't seem to fall for the line and have in recent years demonstrated a fine capacity for doing their own liberating instead of having Moscow do it for them.

Some of our best legislators are already laying the foundations for the line about the Communists, like Senator EASTLAND of Mississippi, who last September got up in Ciudad Trujillo to tell the Dominican legislature that Christianity, as personified by Trujillo, and communism, as apparently personified by all who don't like him, can't live side by side in this world, and who went on to say that Trujillo is one of the free world's great men for whom everybody should thank God, and who went so far as to say "as a U.S. Senator I respect him, I admire him, and I render him homage." (Maybe those weren't his exact words, since I believe that he probably spoke in English, and I got the speech in Spanish as published in the Dominican Republic's Diplomatic Information Bulletin, and this is therefore a retranslation, but no matter: it is astonishing enough any way you read it.)

Next to EASTLAND on the same occasion and platform was Senator W. Jenner of Indiana, who also made a speech, packed with adulation for the Benefactor, but I haven't the stomach to translate any part of that one, though it doesn't make much difference—you know already what kind of oratory it is.

I just wish that such people, representing the world's greatest democracy, would stop buttering up, and bolstering up, one of the world's worst remaining enemies of everything that democracy stands for.

American Committee for Liberation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in the CONGRESSIONAL RECORD for Monday, July 18, 1955, I had the honor and pleasure of calling the attention of my fellow Members of the House of Representatives to the fine work being done by a group of patriotic citizens in combating communism. You may recall that I brought to the attention of the Congress the fact that in 1951 a group of farseeing citizens had formed the American Committee for Liberation. The American committee supports Radio Liberation and the Institute for the Study of the U.S.S.R.

In my address at that time, I mentioned the fact that Radio Liberty was beaming news and other vital information through the Iron Curtain, 24 hours a day, in Russian and 17 other languages spoken in the Soviet Union. I mentioned the fact that in these broadcasts Russians actually talked to Russians—Ukrainians to Ukrainians, Uzbeks to Uzbeks, and so on—as the majority of the broadcasts were not only written but broadcast by emigres from the U.S.S.R. I said further in my remarks, and I quote:

> I want to commend the efforts of the American Committee for Liberation and the people who have worked so hard to realize its aims and objectives. The accomplishments of the committee in the fight against communism constitute a worthy example of what can be achieved through cooperative efforts of private citizens.

I felt this to be a modest tribute to a fine organization. And if I spoke feelingly then, I can honestly say that the remarks are merited twofold today—some 4 years later—in view of the progress made by the committee in both the quality and quantity of output under its able president, Howland H. Sargeant, a former Assistant Secretary of State for Public Affairs.

At the time of my former remarks in July 1955, the committee's radio station at Lampertheim, Germany, had nine transmitters totaling 86 kilowatts of power. Today, the committee has installed four of the most modern 50-kilowatt transmitters and five 20-kilowatt transmitters with a total power of 300 kilowatts.

In addition, the American committee has initiated, on a pilot basis, the installation of what will be one of the most powerful short-wave broadcasting stations transmitting to the Soviet peoples.

Across the world, from the island of Formosa, the American committee is broadcasting to the Far Eastern areas of the U.S.S.R. Radio Liberty went on the air from Taipei in the summer of 1955 with one 20-kilowatt transmitter broadcasting to the maritime provinces of the U.S.S.R. and Sakhalin Island. Today, Radio Liberty broadcasts from Formosa 40 hours a day, 10 hours on each of 4 transmitters with a total power of 150 kilowatts. This station now reaches the populated areas along the Trans-Siberian railroad east of Lake Baikal, as well as the maritime provinces.

Progress, however, has not been confined to the technical equipment of Radio Liberty. The programs, too, have been increased and made more effective. At the European headquarters of the American committee in Munich there are nine desks covering the main ethnic groups in the U.S.S.R. These desks broadcast in Russian, Ukrainian, Byelorussian, Armenian, Azerbaidjani, and Georgian as well as in other major languages of the Soviet Union. News constitutes an important part of each program with items of interest broadcast to the citizens of the U.S.S.R. which they would not be able to get otherwise.

When Djilas, the Yugoslav Communist leader, wrote his book "The New Class," exposing the weaknesses of communism, Radio Liberty broadcast a daily summary of the actual contents of the volume at dictation speed. It is also interesting to note that a year before the great Russian poet and author, Boris Pasternak, was awarded the Nobel Prize for Literature, Radio Liberty was already hailing "Doctor Zhivago" as a great literary triumph. When the Nobel Prize was awarded to Boris Pasternak, Radio Liberty broadcast passages from "Doctor Zhivago" together with comments on the novel by leading Western intellectuals. It also reported the actual developments in the Pasternak affair, including facts that were being kept from the Soviet public by its rulers.

In its programs, Radio Liberty attempts to stress internal developments in the U.S.S.R. and in the Soviet orbit which are denied to the Soviet peoples by their own media or presented to them in distorted fashion. Radio Liberty also attempts to acquaint its listeners with the institutions, ideas and ideals of the free world as possible alternatives to the totalitarian system forced on them by their rulers.

Since my last remarks to you on the subject, the Institute for the Study of the U.S.S.R., a self-governing body of emigree scholars, incorporated under German law and supported by grants from the American Committee for Liberation, is continuing its valuable work in the battle for freedom from communism. Each year the institute holds and important conference attended by free world scholars of every nationality who actively participate in seminars on the vital problems of the day. The Institute publishes a monthly bulletin in English on current Soviet affairs and also issues 12 other periodicals, mainly in English but also in Arabic, Turkish, Russian, and Ukrainian. These are widely distributed to scholars, journalists, and opinion leaders throughout the world.

A unique, and it seems to me, extremely worthwhile project of the learned scholars of the Institute was the preparation and publication of a biographical directory of the living personalities in the U.S.S.R.; a sort of "Who's Who in the Soviet Union." This publication has found wide use among students, professors, journalists, authors, and so forth, who specialize in Soviet affairs.

The Institute also prepared and sponsored a series of half-hour broadcasts under the title of "The Anatomy of Soviet Communism," which were carried over the Mutual Broadcasting network for 13 weeks and which aroused much highly favorable comment. It is estimated that some 7 million listeners heard the programs.

The American committee launched a program to inform academic centers sponsoring Russian area studies about it work and its capabilities on research and information which could be useful to these institutions. The major link in communicating with them is a publication, News Briefs on Soviet Activities.

Published bimonthly, News Briefs presents its audience with insights into current Soviet affairs as interpreted by its emigre staff members. News Briefs is sent to about 2,000 educators in colleges and universities throughout the United States. Tapes of Radio Liberty broadcasts for use in Russian language classes are also made available by the American committee.

For the emigres from the U.S.S.R. themselves, one of the most important projects of the American committee is the publication of a semimonthly newspaper in Russian entitled "Our Common Cause." From a small original printing of 1,000 copies, the circulation has risen to 15,000 copies with distribution in all the main centers of emigre concentration in the free world. This publication aims to keep Soviet emigres in touch with current news and thinking in the Western World about their former homeland. It also works to gain their continuing support for the efforts of the American committee and other free world agencies fighting against communism.

The Soviet Union cannot afford to ignore the activities of the American Committee for Liberation. Within a few hours after Radio Liberty went on the air, back in March 1953, the Soviets starting their jamming tactics and have expanded their efforts in this area manyfold since that time. Indeed, engineers have estimated that the Soviets are spending at least 10 times as much to jam the broadcasts as the American committee spends to get them through the Iron Curtain.

And Radio Liberty gets through. Enno Hobbings' statement in the New Leader of October 6, 1958, that Radio Liberty broadcasts pierce the curtain is confirmed by free world visitors to the U.S.S.R., by Soviet visitors to the free world, by defectors and by mail to Radio Liberty from the Soviet Union.

One of the best opportunities for audience research that Radio Liberty has had was the Brussels Fair last summer. Radio Liberty interviewers spoke to a sizable sampling of Soviet visitors and much useful information was gleamed for future Radio Liberty programs. The Brussels study also conclusively established that like the Voice of America and the BBC, Radio Liberty has a respectable audience in the U.S.S.R.

Radio Liberty broadcasts mention an innocuous-sounding name and address in the free world to which Soviet citizens may write as if addressing a relative or wartime acquaintance abroad. The resulting letters—all anonymous, naturally—have meaning beyond their words. Some ask for the small comfort of a reply: "If you receive this, please sing 'We Met by Chance.'"

A few heartier souls transmit information they think may be useful to Radio Liberty. A Ukrainian wrote:

The Bolsheviks are as scared of your words as the devil is scared of incense. Many people listen to you, but they are afraid to write letters.

Radio Liberty naturally cannot know how large its audience is—

Says Howland H. Sargeant, president of the American committee—

but every now and then a message comes from the target areas that makes staff members proud of their work.

He cited one recent letter which said:

When I hear your voice, my eyes fill with tears of joy. I have a feeling that I, too, have friends.

Pravda and Izvestia continually blast the efforts of the American Committee for Liberation. The Committee for the Return to the Homeland was especially set up by the Soviet Union to try to lure emigres back behind the Iron Curtain.

But despite all attacks, the group of emigres from the Soviet Union in cooperation with their American partners in the American Committee for Liberation continue to go about their task quietly and efficiently, achieving impressive results.

I feel my colleagues will be as interested in this interim report on American Committee for Liberation activities as they were in 1955, when I called their attention to this splendid record of achievement.

The following are publications of the American Committee for Liberation since 1955:

PUBLICATIONS OF THE AMERICAN COMMITTEE

First. "Biographic Directory of the U.S.S.R.," a basic reference work which contains biographical data on over 2,000 prominent figures in Soviet public life. The 782-page volume was published by Scarecrow Press, Inc., for the Institute for the Study of the U.S.S.R.

Second. "Soviet Youth: Twelve Komsomol Histories," a book published by the Institute for the Study of the U.S.S.R. in July 1959.

Third. "Stalin and the Soviet Communist Party: A Study in the Technology of Power," a book by Abdurakhman Avtorkhanov which will be published for the institute this fall by Frederick A. Praeger Publishers, New York.

Fourth. "Genocide in the U.S.S.R.: Studies in Group Destruction," published by the Scarecrow Press, Inc.

Fifth. "Opposition to Sovietization in Byelorussian Literature," a study by Anthony Adamovich of Soviet literary policies and resistance to it in Bélorussia, a Soviet Republic.

Sixth. "Anatomy of Soviet Communism," a documentary radio series in pamphlet form based on broadcasts by radio station WOR, New York, and the Mutual Broadcasting System, by the Institute for the Study of the U.S.S.R.

Seventh. "The Khrushchev School Reform," an analysis of the recent Soviet educational changes, prepared by the Central Research Department, Radio Liberty.

Eighth. "Life in a Siberian City," a study of life in Siberia by Yevgeny Zhago, who left this area in 1956.

Ninth. "Boris Pasternak and Dr. Zhivago," a study by Arkady Gaev of Pasternak, the man, and the significance of his work, "Dr. Zhivago."

Tenth. "Foreign Trade as an Instrument of Soviet Policy," a study on Soviet economic policies in the underdeveloped areas, prepared by the Soviet Affairs Analysis Service of the Institute for the Study of the U.S.S.R.

Eleventh. "Berlin," a compilation of analytical materials pertaining to the Berlin crisis, prepared by the Institute for the Study of the U.S.S.R.

Twelfth. Nashe Obshcheye Delo—Our Common Cause—a biweekly publication in Russian for the free emigration from the Soviet Union.

Thirteenth. News Briefs on Soviet Activities, a bimonthly news bulletin on Soviet developments.

Fourteenth. "The Soviet Writers Revolt, 1956–57," by James Critchlow, Research Department of Radio Liberty.

Some Observations on Highway and Urban Economic Development

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following important observation on highway and urban economic development in the RECORD.

These remarks were made by Mr. William R. Davlin, secretary, Pennsylvania Department of Commerce, and chairman, Pennsylvania Industrial Development Authority, at the bi-State conference on highway planning for urban growth, Binghamton, N.Y., May 25, 1959.

It covers exceptionally well the tremendous problems arising from the complexity of the relationship between the economic development of our urban areas and the growth of highways.

Mr. Davlin's remarks follow:

It would be laboring the obvious to say that this topic of highways in relation to the economic problems and opportunities of our cities is a large one. It is much too large for a single luncheon address or for the competence and orientation of any speaker, at least this one.

It is in recognition of that situation, I suppose, that this splendid conference on highway planning for urban growth approaches the topic in symposium fashion, with an array of speakers viewing the matter from the standpoint of their several specialties and interests.

If these remarks of mine are to deal in something more than easy generalizations, applicable everywhere because of their elementary simplicity, or nowhere because of their vagueness, I should perhaps pause first to identify for you the viewpoint from which I am speaking.

My own official responsibilities and duties relate to economic development and redevelopment in the Commonwealth of Pennsylvania. The two major programs of the State's commerce department which I head deal with (a) industrial development, aimed at fostering expansion of our existing industry and attraction of new industry from the outside through research, plant location data services, guidance of community industrial

development efforts, national advertising and industrial financing, jointly with banks, insurance companies and local nonprofit corporations, and (b) urban planning and renewal through technical advisory services to urban planning and redevelopment agencies, supervision of the Federal 701 planning assistance program, and administration of Pennsylvania's grant-in-aid program for urban slum clearance, redevelopment and renewal, supplementing the Federal program under Housing and Home Finance Agency.

During the past 3 years, the Commonwealth of Pennsylvania, itself, through its commerce department, has spent just over $20 million on these programs. A somewhat larger sum is projected for expenditure during the 2 years beginning this June.

Participating in these programs are more than 100 official urban planning commissions, 44 urban redevelopment authorities, and 80 community industrial development corporations, these latter and our department working in close collaboration with financial institutions, utilities, railroads, and industrial realtors. Cooperating and collaborating, too, are other appropriate agencies of State government, including importantly, the Pennsylvania Department of Highways.

The problems with which we are dealing are in some ways unique, and our approaches to them are certainly not applicable everywhere.

For one thing, though Pennsylvania ranks third in population and second in industry, nationally, some of her basic industries—lumbering, textiles, railway shop maintenance, anthracite and bituminous coal, steel—have experienced technological or market readjustments that, over the years and continuing into the present, have greatly reduced manpower requirements and left numerous cities and areas with chronic labor surpluses.

This is largely in contrast to the economic history of cities in neighboring New York, Ohio, New Jersey, and most other States.

For another thing, our cities all of them, are among the older cities of the Nation, many dating back to colonial times. Some of them, in layout and architecture, were built to provide a great deal of charm and good taste; but they were not designed for the populations they now accommodate, nor for the automobile, the jet age, and the coming population explosion. In this, they are not unlike cities in neighboring New York, Ohio, New Jersey, New England, and the larger cities of the near Middle West and the old South. Still other of our cities, however, were built around lumbering, coal, and steel operations, in areas of extremely rugged topography. They were not built to be charming; declining employment and a shifting economic base deprived families of the stability of income required for the building and maintenance of good residential housing, and the tax revenues required for adequate municipal facilities and services. These cities, then, have more than the normal amount of residential, commercial, and industrial blight, obsolescence and deferred maintenance in public facilities.

It is against that kind of a background of urbanism that these remarks on highways and urban development are made. The problem of development for the Pennsylvania city is doubtless quite different from that of Dallas or Fort Worth, or Denver, or Salt Lake City. It may be more akin to that of a city in New York or one of our neighboring States—with the difference that not only must many Pennsylvania cities plan for the very large population and industrial growth implicit in the population and gross national product projections, but it must work at this with a sense of acute urgency in order to replace that portion of the State's economic base lost through the readjustments and maladjustments experienced in basic Pennsylvania industries.

What is the problem for such a city? The answers recall the old story of the blind men describing the elephant after separately touching him at various points on his anatomy.

To the mayor and council it is a problem of mounting requests and expenditures for municipal services and facilities, in face of a deteriorating tax base and the preemption of major revenue sources by the Federal Government.

To the downtown merchant it is the flight of the retail dollar to the shops and shopping centers of suburbia; it is the losing race between off-street parking and the constantly growing number of automobile owners insisting on entering central city to shop or work.

To the transit company it is the continuing decline in the volume of passengers utilizing mass transit in face of increased operating costs.

To the industrialist it is the inefficiency of the old, multistoried plant, hemmed in by still other plants, and streets, and rail lines, leaving no room for expansion nor for parking of the cars of the workers who refuse to use mass transit.

To the citizen it is the neurosis-inducing congestion, traffic jams, expensive parking (if he can find it), the perils of pedestrianism despite the genius of the traffic engineers. (The other day I heard of a visitor in a strange city who phoned his host from downtown explaining in the course of the conversation that he was at the corner of "walk" and "don't walk.")

Modern highways and modern highway planning alone, can't solve these problems, of course. Indeed, modern highway projects can both contribute to a solution and at the same time compound the problem, as for example, we pour additional thousands of shoppers and workers from suburbia with their individual automobiles along high-speed, four-lane, limited-access expressways into the central city to struggle with its congestion in search of parking. The mayor has lost a taxpayer, the frustrated worker is late to work or late getting home, the merchant has an irate customer, the transit company has lost another passenger, the central city plant loses a disgruntled employee to that new industrial park out in the county.

With exceptions, variations in degree, and spectacular though piecemeal successes, that impressionistic sketch is pretty much the picture at the core of most of our Pennsylvania cities, and, by our observations, most cities of the Nation's East regardless of size. It may hold as well for cities in other great regions of the Nation.

Yet the central cities of our urban areas, precarious as their present plight may be economically, and baffling as are the related physical facts of living and land use, have so valid a function to play in our American life that they will and must survive. Much of business and finance, shipping, merchandising, warehousing and distribution, major activities in art and music and education, and the theater require central city locations for optimum efficiency and convenience. And, residentially, the central city continues to be the preference—even the growing preference—for a vast number of those employed in such undertakings.

This brings us inevitably to the observation, so oft repeated as to sound like a meaningless platitude, that the solution to the present and future problems of the central city lies in a comprehensive and coordinated approach to those problems. This need not scare us. Neither the elements of the problem nor its solution are as closely articulated as the gears in the transmission of an automobile. It is, rather, that each element of the problem must be attacked concurrently, knowledgeably, adequately, and in relation to the other elements. Such coordination doesn't require a czar or commissariat or all the powers in a single agency. Mainly it requires wisdom and good communications between the various agencies and organizations at work in the field.

On the basis of population projections, it is obvious that our present central cities are not going to contain the population growth that is in store for urban America. Their limited land areas and problems of congestion dictate two major avenues of adjustment for them: First the clearance and reuse of blighted residential, commercial and industrial land, and, secondly, an integrated system for the movement of people into and out of downtown and near downtown, involving mass transit, expressways and related major street improvements, and parking facilities; and of the latter, for a variety of reasons, the greatest of them would seem to be mass transit.

But the urban area is more than the central city, and it is beyond the corporate limits or downtown that the bulk of future growth must come. And here highway developments have gotten ahead of urban planning. These high-speed roads carrying traffic at 50 miles per hour extend the radius of urban development to 20 or 25 miles from downtown, opening up those outlying sections to growth. Not in many places have we added this dimension to the scope of our urban planning activity.

Throughout the entire urban area, downtown and outlying, we need effective programs of land-use controls, so that the location and extent of traffic generating uses are subject to regulation. Such land-use control can take the form of zoning, subdivision regulation, purchase of development rights and other techniques not yet explored. We need to think of new patterns of land uses which will include industrial plants and regional shopping centers located around the periphery of the urban area. Traffic around the circumferences of these areas will probably increase faster than that into and out of the central city; advance acquisition of highway rights-of-way for circumferential routes when land is relatively undeveloped in terms of urban uses can mean very large savings in ultimate highway expenditures.

All of these problems of urban growth are already upon our major metropolitan areas, and with a vengeance. They are present in kind, but not with the same critical urgency, in our medium-sized cities. And those cities are soon to become large cities, by today's standards. They have a chance to avoid the crises. They have time to prepare.

Our medium-sized cities have enough of a taste of the maladies and frustrations of congested urbanism so that a discussion of highways and urban planning in these terms is not likely to seem mere theory to civic leaders and the general public. But without intelligent understanding and support from civic leaders and the general public, there is little hope for avoidance of an irrational, costly and inefficient growth.

Step No. 1 for these cities is the visualization of the problems before they occur—a job of local education, through the press, in movies, by models and drawings, by forums and discussion groups. In the absence of such local educational efforts there is a tendency for the public to accept urban maladjustments as inevitable. Well conceived educational efforts can instill a feeling of self-confidence and assurance that the community can control and solve its problems of growth.

As we achieve a comprehensive approach to the solution of these problems of urban development and redevelopment, comprehensive and areawide, a very large part of the job of urban highway planning will

have been achieved, and highway planning and construction in urban areas need no longer proceed in a partial vacuum with respect to other aspects of urban land use and urban economic life. In the field of Federal assistance to slum clearance and urban renewal the concept of the workable program of urban planning and development is a prerequisite for receiving funds from Washington. This same type of concept might well be adapted to the system of Federal aid to urban highways as a means of hastening the integration of highway developments into planned programs for controlled growth of our urban areas.

Further, with respect both to our metropolitan areas and medium-sized cities, there is a special problem involving land-use and highway planning that bears directly on economic development, and that is the problem of industrial land. We have said that our central cities will not contain the population growth in store for urban America. Neither will they contain the industrial growth. To provide the manufacturing, warehousing, and distribution space that growth will require, vast new acreages of industrial land will be needed for new and expanded industrial facilities on the periphery of our cities. Wise planning and the related zoning controls must see to it, now, that this land is reserved, and sagacious developers should see that it is developed.

In doing that, we will be providing directly for an expanded urban economic base. Not to take that provision is to put the urban economic base in jeopardy, for it is difficult for the unglamorous purpose of industrial land to compete with the more exciting and speculatively interesting commercial and residential uses. In many places, an ultimate industrial land shortage threatens to put a ceiling on urban economic growth.

Highway planning has a vital role to play in this. Negatively, proper highway planning can avoid alinements that destroy or reduce the acreage of outlying urban land potentially available for industrial use. Positively, through wise planning of alinements and interchanges in relation to rail lines, feeder roads and utility connections in outlying urban areas, highway planning can greatly maximize the acreage or urban land potentially available for industrial use.

There is another aspect of this matter of highways and economic development that is particularly vital to us in Pennsylvania, in light of the economic vicissitudes to which I referred initially, but which is also pertinent to our neighboring States. Outside our metropolitan areas and medium-sized cities, the new interstate, regional system of highways holds great promise for accelerated industrial growth in our smaller cities.

Pennsylvania's Turnpike, stretching across the State from Ohio to New Jersey was a pioneer in modern, limited access highway development. In recent years it was extended from Philadelphia northeastward, through the distressed anthracite area to Scranton, where its terminus will soon be connected by the Penn-Can Highway with the Binghamton area, where we meet today, and other New York cities into Canada.

And now, the new interstate program will give Scranton and the anthracite area a new expressway extending to the Southwest, past Harrisburg, into Maryland and Virginia. Recently, ground was broken for still another East-West highway from the Delaware River at Stroudsburg through the Poconos, the anthracite area and westward through the relatively underdeveloped forest and bituminous coal lands to Sharon on the Ohio line. And a new North-South highway will connect Erie, on the St. Lawrence Seaway, with the Pittsburgh industrial complex and on southward into West Virginia.

The areas and mileage these new interstate projects will traverse have but a few of our major cities. They are smalltown Pennsylvania, the very towns that stand most in need of economic redevelopment. Thanks to the transportation requirements of Pennsylvania's steel and coal and limestone, historically and presently, dozens of them are well served by trunkline railroads. Now they are to be served by modern-day, four-lane, limited-access highways.

The interchanges of these highways will number several hundred, and a very large number of them will offer superior basic advantages for plant location. The expansion of plant capacity related to a growing population and gross national product, coupled with the preference for an adaptability to small communities exhibited by manufacturers in many product fields, means that these new highway projects will open up dozens of Pennsylvania's distressed area communities to new industrial growth, as they will in small towns along the new interstate highways in other States.

The approaches to these planned interchange points need to be carefully studied if they are to serve the purposes of basic economic growth. Left to chance and random development, they can become a hodgepodge of filling stations, motels, hamburger joints, bars, souvenir shops, and what not—and raw land of potential industrial value gobbled up in uses making no basic contribution to the local economies. Moreover, the use of land along the interchange approaches will be entirely beyond the scope of Federal control; it will be wholly a matter for determination by units of local government, often our smallest units of rural local government.

Here is a task for civic leadership; only, again, with broad public understanding and support, will proper land use planning and the related zoning and other controls be instituted, to maximize the value of the interchanges for economic development. In Pennsylvania, this is a matter that has engaged the joint efforts of our State department of highways, our State planning board, and the State department of commerce.

What can one say, in conclusion, on this matter of highways and urban development? Again, it is too vast a subject to embrace in a single statement or by any one individual or specialist.

When we talk of urban highways, we are talking about urban transportation, and transportation enters into every phase of the economic life of our cities. And it enters into urban economic life in different ways, depending on the size and nature and history of our cities.

But this stands out: To serve their purpose in an optimum way in urban development, highway projects require broad, imaginative, practical, and effective programs of urban land use planning and control: this imposes obligations and responsibilities upon the general public, civic leaders, and agencies of State and local government who have no direct obligations and responsibilities in the field of urban highway planning, as such.

But such a jointure of responsible interest and action is at the heart of the survival and orderly growth of our metropolitan areas and medium-sized cities. For our smaller communities, underdeveloped or maladjusted economically, it is part and parcel of the job of creating economic growth and stability. This, of course, is the job of building America.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS JUSTICES ASSIGNED TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Promises and Challenges of the St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 17, 1959

Mr. WILEY. Mr. President, last weekend I was pleased to participate in a number of ceremonies in Wisconsin held to commemorate the significance of the St. Lawrence Seaway to our Badger State and the Nation.

As a sponsor of the seaway legislation, I was particularly gratified to see the enthusiasm and realism with which our Wisconsin communities, not only recognize the importance of the seaway to our future, but also the dynamic spirit with which they are laying the groundwork for gaining maximum benefits from the completed waterway.

We recognize, of course, that full rewards will be attained by constructive and realistic planning, as well as by a willingness to undertake and resolve the problems that confront us in the future.

During the celebrations, I was privileged on a number of occasions to review the problems and challenges ahead relating to full utilization of the seaway.

As an illustration of the major challenges that, I feel, still lie ahead of us, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts of my remarks at Superior, Wis., where, incidentally, a splendid 4-day celebration was held in recognition of the St. Lawrence Seaway to the community.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WILEY HAILS SIGNIFICANCE OF SEAWAY TO SUPERIOR'S FUTURE—URGES UNITED STATES-CANADIAN CONFERENCE TO ELIMINATE BOTTLENECK AT WELLAND CANAL

I am delighted to have the opportunity to participate in your special seaway program here in this fine port of Wisconsin.

Your splendid 4-day program—in recognition of the significance of the St. Lawrence Seaway—is a most inspiring illustration of community cooperation and forward-looking spirit.

The deep-founded enthusiasm and realism with which your fine community, and others around the State, are laying the foundation to obtain ever-greater benefits from the seaway excites the imagination; and strengthens a confidence in the willingness and ability of communities, like Superior, to progress and create a better life for your citizens.

You in Superior are opening a new chapter in one of the most historically interesting and promising periods of the world's history.

The completion of the Seaway exemplifies one of the steps in this Age of Exploration—this Age when we have shrunken the world so that every nation is neighbor to every other nation.

In a nation whose population is increasing 3 million a year, we can expect that this area will receive the impetus of this growing country. We know that human progress is a never-ending business. It is an age of whirlwind scientific advancement. The Seaway—a magnificent engineering feat—is akin to our satellite program and other great discoveries in the scientific field. Overall, it is a part of man's irrepressible effort to conquer and extend control over forces of nature in order to harness them for the service of mankind.

SENATOR ALEXANDER WILEY DAY

As you know, the St. Lawrence Seaway was not completed without a long, hard-fought struggle.

For myself, I have considered it a real privilege to share in the efforts to complete the seaway—a project that I believe will bring measureless benefits to Wisconsin and our Nation.

Today, I am humbly grateful for the honor you have shown me—in naming this "Senator ALEXANDER WILEY Day."

The experience makes me feel very humble and grateful.

The spirit in which you bestow the tribute is deeply gratifying.

I welcome, too, the invitation to share this splendid occation in celebration of the completion of the seaway.

BENEFITS OF THE SEAWAY

With you, I look forward to rewards which Superior, and other communities, will reap from this great project.

For a moment, let's look briefly toward the future. What can Superior expect from the seaway?

Among other things:

1. The increased flow of trade and commerce in and out of this fine Superior-Duluth Harbor will bring new economic life to our homes, farms, factories, stores, and other places of residence and business.

2. There will be traffic of greater volumes of farm products, particularly of grain, from the States west and southward. Until now, the grain often had to be transferred to smaller vessels at the seaway.

3. Port cities, such as Superior, will experience new growth and expansion.

4. More jobs will result from the increased business and industrial activity.

5. There will be a demand for more services.

6. We can expect—and encourage—an increased tourist trade—now our third largest industry; with a stimulated flow of visitors from other States, Canada, and other lands around the globe.

7. The presence of the destroyers here in the harbor; and the movement in recent weeks of an estimated 80 foreign ships in and out of the Superior-Duluth Harbor; the record of a 50 percent increase in traffic over a year ago through the seaway itself—all of these are only symbols of yet greater things to come as a result of the seaway.

This is, of course, only a brief review of the new kind of life and activity which the seaway will create for Superior and other port cities around the Great Lakes—America's fourth seacoast.

CHALLENGES AHEAD

We recognize, however, that the picture is not all rosy.

Through the aura of celebration, let's take a penetrating look at the challenges ahead.

What are they? The major ones include paying off the costs of the seaway through tolls, expanding the capacity of the Welland Canal, completing the connecting channels, finishing port improvement projects, developing better tie-ins with rail and trucking networks to expeditiously handle goods and materials, developing a suitable system of deicing the seaway.

COST OF SEAWAY

First of all, let's take a look at the cost of the seaway.

Overall, this joint United States-Canadian effort to improve, deepen, and modernize the St. Lawrence Waterway runs at somewhat over $1 billion; including the New York and Ontario power development projects.

CANADA GETS 71 PERCENT OF SEAWAY TOLLS

To pay off the seaway costs, tolls are charged for vessels utilizing the waterway.

The major objectives in establishing tolls have been:

1. The lowest tolls consistent with the encouragement of maximum traffic; and with the need for revenue to make the project self-liquidating within the 50-year period required by legislation.

2. A simple toll structure.

3. And the most convenient method of collecting tolls.

Generally, there has been a popular opinion that the tolls would be distributed on a 50–50 basis between the United States and Canada. However, this is not true.

The costs of construction of the seaway have been shared approximately on a 70–30 basis, with Canada bearing the larger financial burden. By agreement between our two countries, it has been stipulated that tolls would be distributed in proportion to the investments. Consequently, with this agreement, Canadians will receive about 71 percent of the tolls from the international rapids sections of the seaway. This does not, however, include tolls on the Welland Canal, an all-Canadian project, but officially a part of the seaway. All tolls from this canal go to Canada.

WILL TOLLS PAY OFF THE SEAWAY?

Now the question arises, Will the tolls pay off the cost of construction?

Today the Welland Canal is the No. 1 trouble spot which affects the revenue as well as the volume of traffic on the waterway.

Of the 8 locks in the Welland, 5 are single locks—permitting approximately 28 passages a day in both directions; that is, about 14 passages each way per day.

According to estimates, the capacity of the St. Lawrence Seaway ranges to about 55 million tons a year.

Unfortunately, the capacity of the Welland Canal may be considerably below that level—some say as low as 46 million tons annually.

Consequently, the seaway, despite its completion, will—until improvements are made in the Welland Canal—continue to be limited by the capacity of the Welland.

The ability of the seaway to pay off its obligations also may well depend, for example, upon how soon action can be taken to twin the locks of the canal.

According to earlier calculations, an income from tolls of $16 million annually was expected to retire the seaway debt. Because of increased costs, however, it is now esti-

mated that the United States-Canadian costs will run about $28 million.

Even though early season traffic through the waterway was larger than anticipated—almost 50 percent over a year ago—the traffic income will not yet provide the $28 million.

Consequently, the future of the seaway is tied to the Welland Canal, both in terms of volume of traffic and of paying off the debt.

NEEDED: UNITED STATES-CANADIAN CONFERENCE TO ELIMINATE THE WELLAND BOTTLENECK

I believe that a United States-Canadian conference, aimed toward finding a solution to the Welland bottleneck, would be in the best interests of both countries.

The conference would include representation of the U.S. and Canadian Governments including members of the St. Lawrence Seaway Development Corporation—the agency charged with responsibility for U.S. construction—and its Canadian counterpart.

We recognize, of course, that Canada already has a tremendous investment in the seaway. According to estimates, "twinning" the locks of the canal may well cost an additional $150 million.

However, in view of the significance of maximum utilization of the seaway to both countries; the fact that traffic is already jamming up at the canal resulting in waiting periods of 24 to 36 hours, or longer, for ships travelling the seaway; and the time lapse which inevitably accompanies the start and completion of such a large project, I believe that efforts should be made as soon as possible to find a solution to the Welland bottleneck.

COMPLETION OF GREAT LAKES CONNECTING CHANNELS

The United States, too, has a challenging job ahead; namely, the deepening and improving of the Great Lakes connecting channels.

According to estimates, the total costs will run about $146 million. Until now, about $46 million has been spent on the project.

Currently, we are attempting in Congress to get approval of adequate funds—about $29 million for fiscal 1960—so that construction can go ahead on the channels.

Unless this project is completed by its target date—1962—Wisconsin and other Great Lakes States west of Lake Erie will be denied full benefits from the seaway—perhaps as long as 1963 or 1964.

FURTHER PORT AND HARBOR DEVELOPMENT

To supplement development work on the seaway, the connecting channels, and the Welland Canal, there is still also the task of further deepening and improvement of harbors around the Great Lakes. The Corps of Engineers has been making a comprehensive study of Great Lakes ports. According to estimates, this may cost another $100 million for deepening of the harbors sufficiently to handle 27-foot draft vessels from the St. Lawrence Seaway.

In addition, there is the job—faced largely by local communities—of adequately developing docking, unloading, warehousing, and other facilities, together with dovetailing water traffic with rail and road transportation.

This, then, is a brief look at some of the problems to be resolved, and challenges to be faced in the future.

SCOPE OF CONSTRUCTION PROJECT

From time to time, there are attempts to show just how great a construction and engineering job has been accomplished on the seaway.

For illustration, the following comparative figures on the construction project have been calculated:

The power produced by the generating stations of the waterway would equal the power of a double line of horses reaching almost two and one-half times across the continent.

If the rock and earth removed from the project sites were piled into wheelbarrows and the wheelbarrows were spaced 10 feet apart, they would reach around the world 210 times.

The steel used in construction would encircle the earth if it were pressed into a single large bar.

The concrete poured for the project, if distributed evenly, would provide each U.S. resident—every man, woman, and child—with a piece weighing 48 pounds.

In more specific terms, the seaway construction job—dwarfing the world's other well-known waterway projects—included construction of a new waterway in scattered sections of a 369-mile area from the Welland Canal to Montreal; construction of hydroelectric power projects that would generate more than 1.8 million kilowatts of electricity; more than 22,000 persons working around the clock for 4½ years with giant floodlights illuminating construction areas at night; engagement of more than $75 million worth of construction equipment; excavation of over 210-mile cubic yards of dirt, rock, and river bottom (according to estimates it would take over 60,000 railroad cars to haul it away); more than 6 million cubic yards of concrete were poured during the construction; the homes of more than 6,500 Canadians were lifted from their foundations and shifted to other sites; three whole communities—Iroquois, Ingleside, and Long Saulte—were built to accommodate displaced resident; on the U.S. side, 225 American farm families and about 500 cottages were moved.

This, then, is briefly a look at the size, scope, and significance of the seaway.

HISTORY OF SEAWAY LEGISLATION

Now, I would like to turn back the pages of history briefly to give you an inside look into the struggle behind the enactment of the Wiley-Dondero law that authorized the deepening, developing, and modernizing of the St. Lawrence Seaway.

The battle was a long and a difficult one. The courage and strength of many men constributed to victory. I would at this time like especially to pay tribute to the splendid leadership of President Eisenhower—without which the seaway dream would not have become a reality.

Over the years, lip service has been given to the idea of a completed, improved, and modernized St. Lawrence Seaway. Six previous Presidents, including Wilson, Coolidge, Harding, Hoover, Roosevelt, and Truman expressed interest in the U.S. development of the seaway.

However, it was President Eisenhower who "took the bit in his teeth"—stating that he not only favored it, but would use the strength of his office to support efforts for approval of the project.

The battle within the hallowed halls of Congress to get approval of legislation to carry forward the St. Lawrence Seaway project was not an easy one.

STRONG OPPOSITION TO SEAWAY

The opponents of the seaway were legion and powerful. Who were they?

The opposition forces included the eastern railroads and money interests; the eastern seaboard and the gulf ports; shipping interests on the Atlantic and gulf coasts; overall, it is estimated that over 200 clubs, organizations, and associations—many of them abounding in legislative strength—opposed the seaway.

You may ask: In the face of this strong opposition, how was the project finally approved?

In 1952, under the chairmanship of the distinguished Senator Arthur Vandenburg of the Senate Foreign Relations Committee, I was appointed chairman of a subcommittee before which a seaway bill was pending.

Hearings were held on the legislation. The bill was favorably reported by the subcommittee, and the full Foreign Relations Committee, to the floor of the Senate. Unfortunately, the opposition mustered forces and the bill was killed.

As I look back, the battle that ensued was, indeed, an educational experience in tactics which opposition forces devised to stop the legislation.

Again in 1953, when your senior Senator was privileged to be chairman of the Foreign Relations Committee, I reintroduced a seaway bill, appointed a subcommittee, and appointed myself as chairman. Again, we held hearings and again it was possible to get favorable action by the full Senate Foreign Relations Committee.

Having learned a lesson the hard way, I knew that a meeting with President Eisenhower to discuss this legislation was essential. I felt the bill was important not only to Wisconsin but to the economy and defense of the future of this country. Graciously, the President granted the appointment and we had a full dress discussion on the legislation.

Upon request, the President was kind enough to review the complete report by the U.S. Army Corps of Engineers relating to the proposed seaway. After completion of the review, the President promised full support for the project.

Recalling that previous Presidents had uttered similar words, Mr. Eisenhower promised full support not only in words, but also in deed.

WILEY BILL—MUST LEGISLATION

There was, however, one more battle to fight. The big question was: Should it become must legislation?

What does this mean? Just this: That it must be brought up on the calendar of the Congress for consideration.

During a conference at the White House, late in 1953, to determine a calendar of must legislation for the next session of Congress, the meeting almost turned into a real powwow.

Let me say, frankly, that interests opposing the seaway—the railroads, eastern ports, and others—were not without their spokesmen in Congress.

After a "toe to toe" political exchange, however, it was agreed that the seaway would become must legislation.

During the ensuing weeks, there was a great deal of "missionary work" to be done. This included discussions, conferences, reviews of the merits of the project, rebuttals to arguments aaginst the project, and endless efforts to open eyes, as well as to dissuade those who, because of special interests, were strongly opposed to the seaway.

Unfortunately, it is not possible to recount all the infighting that took place at that time. However, the history book shows that on January 20, 1954, the Wiley bill passed the Senate by a vote of 51 to 33. The CONGRESSIONAL RECORD reports the votes of those who came over and those who refrained from voting.

With the major battle won in the Senate, the legislation sponsored by Congressman George Dondero, of Michigan, then literally rolled through the House of Representatives.

In some instances, those who had once opposed the legislation found themselves voting in support of it.

On May 13, 1954, President Eisenhower signed the Wiley-Dondero Act into law—culminating 50 long years of dreams by many people to make the seaway a reality.

Now, let's look briefly at additional challenges ahead of us.

SEAWAY DE-ICING

A major battle that must be fought—and won—is combating the age-old foe of winter ice. As you know, winter freezing results in the most important physical limitation of the St. Lawrence Waterway.

The average navigation season, computed over a 37-year period, has been limited—due to ice conditions—to the following averages: The Welland Canal, 252 days; the St. Mary's Falls Canal, 250 days; the St. Lawrence canals, 241 days; and Montreal Harbor, 235 days.

As these figures illustrate, icing is plainly a major obstacle to full utilization of the seaway, as well as to trade on the lakes themselves.

As you know, we can normally figure on about a 230-day navigation season for upper lakes boats; and a 245-day season for ocean-going vessels plying between ports along the Great Lakes-St. Lawrence Seaway and overseas ports (allowing 15 days on the high seas beyond the Gulf of the St. Lawrence at the beginning and end of navigation).

This certainly does not compare favorably with the movement from U.S. ports along the Atlantic, gulf, and Pacific coasts, where there is a 345-day navigation year.

To lay the groundwork for possible ultimate development of a de-icing system on the Great Lakes and the St. Lawrence Seaway, I have introduced a bill in the Senate—S. 2242. The proposal, if enacted—as I believe it should be—would authorize the U.S. Army Corps of Engineers to make a comprehensive investigation and study of a means of making the Great Lakes and the St. Lawrence Seaway available for navigation during the entire year.

The development of a de-icing program would, of course, be a necessarily long-range program. However, there have been enough successes with such systems—in Greenland, Canada, and the Scandinavian countries—to merit a complete study of their applicability to the Great Lakes, connecting channels, ports and harbors, and the St. Lawrence Seaway.

CONCLUSION

This, then, is a brief review of the history, problems and challenges evolving around the greatest engineering and construction feat on the North American Continent—the St. Lawrence Seaway.

Now, friends, in conclusion, I want to express my warm appreciation for the opportunity to join in your 4-day gala celebration in recognition of the significance of the St. Lawrence Seaway to Superior, to Wisconsin, and the Nation.

Too, I want to again humbly express my deep gratitude at your gracious tribute in calling this special day in your celebrations "Senator Alexander Wiley Day."

Thank you very much.

Administration Education Proposals

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, July 17, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming, who is in his own right a well-known and respected educator.

This statement discusses the education proposals of the administration and because I feel it is very informative, I thought it should be called to the attention of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ARTHUR S. FLEMMING, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

On June 4 I reviewed this Department's legislative program. I pointed out then that what would be accomplished in the fields of health, education, and welfare would be determined in the following 90 days.

In the 40 days which have elapsed since that review, most of the Department's noncontroversial programs have made reasonable progress. Unfortunately, there has been no action on school construction. As for the status of two of our other major proposals—those in the fields of higher education and civil rights—recent developments call for special comment at this time.

1. HIGHER EDUCATION CONSTRUCTION

The Congress has taken no action on the administration's recommendations for Federal assistance in financing the construction of college housing, classroom, administration, and related facilities.

Administration measures on this subject have been lying dormant in the House Committee on Education and Labor and the Senate Committee on Labor and Public Welfare since February. In the meantime, Congress attempted to deal with this subject in an omnibus housing bill.

This bill the President found necessary to veto on July 7. The President specifically disapproved of the provisions relating to higher education construction because they "would * * * substitute public for private financing." He stated, however, in his veto message that "the college housing program proposed in the budget message of [January 1959] should be enacted."

The budget message recommendation would provide an additional $200 million for the current college housing loan program in order to permit a phasing out of that program and an orderly transition to the administration's new higher education construction program.

The time has come for the construction needs of higher education to be considered separately and on their own merits, unencumbered by consideration of other specialized housing problems.

The administration's proposals, if enacted, would provide assistance which is vitally needed by our colleges and universities in order to meet a problem that is, literally, almost at their doorstep—the rising tide of enrollments. The administration has proposed an emergency, 5-year plan that includes:

1. Federal guarantees of principal and interest on non-tax-exempt bonds sold by colleges to private investors to finance construction of housing, classrooms, administration, and related facilities. The proposal allows $1 billion as the aggregate total of guaranteed bonds outstanding at any one time over the 5-year period.

2. Debt retirement assistance in the form of Federal commitments to pay 25 percent of the principal on long-term (over 20 years) bonds (either taxable or tax exempt) issued by colleges and universities to finance construction of housing, academic, or other related facilities. Aggregate Federal payments would be limited to $500 million, representing 25 percent of a total principal construction cost of $2 billion. This assistance would be limited to projects which would increase enrollment capacity or improve and expand teaching and research in the sciences and engineering.

The administration proposal would be more effective than the existing college housing loan program in two major respects:

(a) It would result in lower annual payments of principal and interest by the institutions, assuming loan maturities of 20 to 25 years and interest of 4½ percent or less (A comparative tabulation is attached.)

(b) It would include classrooms, laboratories, libraries and related facilities, as well as the types of income-producing buildings (cafeterias, dining halls, dormitories, etc.) now eligible for college housing loans. The total volume of academic building construction provided for under this program would be at the rate of about $200 million a year for 5 years as compared with the total of $62.5 million in direct loans for such facilities provided for in the vetoed housing bill.

2. CIVIL RIGHTS PROGRAM

As part of the administration's civil rights program, I transmitted to the Congress on February 5, 1959, two proposals in the field of education. The Subcommittee of the House Committee on the Judiciary which held hearings on civil rights legislation this spring recently reported a civil rights bill to the full committee. I was pleased to note that two of the titles of this bill (titles VII and VIII) incorporate the proposals recommended by this Department. The full committee is now meeting to consider the subcommittee bill. To me, this is the most hopeful sign yet that Congress will enact at this session the reasonable and non-coercive civil rights measures requested by the administration.

One of the Department proposals (title VII of the subcommittee bill) would amend the laws providing assistance to federally affected areas (Public Law 815 and Public Law 874, 85th Cong.) to authorize the Federal Government to provide for the free public education of children of military personnel where the local public schools are closed as a result of official action by State and local governmental authorities.

The second Department proposal (title VIII of the subcommittee bill) would authorize grants to State and local school authorities to pay half the costs of special services required in carrying out desegregation programs. It would also authorize the Commissioner of Education to collect and disseminate information on the progress of school desegregation and to provide technical assistance in the development and conduct of desegregation programs upon the request of States and local agencies.

Costs of borrowing under the College Facilities Act of 1959 compared with the present college housing program

[Per $1,000 of borrowing]

	20 years		30 years		40 years	
	4¼ percent	4½ percent	4¼ percent	4½ percent	4¼ percent	4½ percent
1. Annual payment of interest and debt service	$75.22	$76.88	$59.60	$61.39	$52.42	$54.34
2. Total payment	1,504.40	1,537.60	1,788.00	1,841.70	2,096.80	2,173.60
3. Total cost if Federal Government pays $250 (¼ of principal)	1,254.40	1,287.60	1,538.00	1,591.70	1,846.80	1,923.60
4. Annual payment by institution	62.72	64.38	51.27	53.06	46.17	48.09
5. Annual payment by institution under present college housing program	[1] $67.99		[1] $51.85		[1] $44.14	

[1] Assuming interest at 3⅛ percent.

Use of So-Called Executive Privilege

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. MANSFIELD. Mr. President, at the President's last press conference Mr. Clark Mollenhoff asked a question relative to executive privilege. At that time he did not get much of an answer, but I wish to invite the attention of Senators to an editorial entitled "The Misplaced Anger," which appears in today's issue of the Wall Street Journal.

Unfortunately, over the years, under both Democrats and Republicans, there has been too much of a shift in power to the Executive, at the expense of the legislative branch of the Government. This is unhealthy, because it does away with the coequality which is supposed to exist under the Constitution.

Because of the importance of this question I ask unanimous consent that the editorial from the Wall Street Journal be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MISPLACED ANGER

President Eisenhower is a man who believes that public office is a public trust, and for that reason it is understandable that a question about "impudence, mismanagement, and fraud" in Government caused him to show anger.

The question, asked at his latest press conference, concerned the use of the so-called "executive privilege" by Government agencies to deny access to information to the General Accounting Office.

The General Accounting Office was created by the Congress as an auditing and investigating agency, empowered to keep a check on the executive branch of Government which spends the money Congress appropriates. The GAO was made independent of the executive branch on the sound ground that if it were part of that branch it could harly be expected to investigate itself impartially.

However, the GAO has had increasing difficulty in getting all the information it believes necessary to carry out its function as an auditor because the executive branch has pleaded so-called executive privilege—that is, that it has a right to withhold information not only from Congress but from its own auditors.

Recently, Comptroller General Joseph Campbell put the complaint of the GAO specifically when he reported to Congress that the Department of Defense was withholding necessary information.

Mr. Campbell said the Defense Department denies GAO information "expressly required by law to be made available." This, he said, creates the "opportunity to conceal substantive evidence of waste and extravagance, improvident management, poor procurement practices, or other adverse conditions." It also creates "public distrust as to the desires of the military for unquestioned secrecy."

Now in the conditions described by the Comptroller General, there is certainly all the opportunity in the world for "imprudence, mismanagement, and fraud." These are not the reasons, however, that Government agencies like to keep to themselves what they are doing. One example is found in the testimony of F. Trowbridge Von Baur, general counsel for the Navy, when he appeared before a House Government Operations Subcommittee.

He said, "If we give something to the General Accounting Office there is no power on earth that can restrain the General Accounting Office from giving that material to the Congress if the Congress wants it. Also, through that channel we know very frankly, material of that kind is apt to reach the newspapers and the headlines, and we feel that this kind of material, opinions, conclusions, and advice from subordinates, would mislead, confuse, cause a lot of commotion."

A lot of commotion, to be sure, is what most bureaucrats want none of, where their bureaucracies are concerned. But, while understandable, that is hardly reason for denying material, internal papers or no, that the General Accounting Office says it must have if it is to carry out its legal responsibility of checking on Government agencies.

Mr. Eisenhower has a great many responsibilities in other fields and so he cannot be expected to know the extent to which his own executive agencies and departments are using executive privilege to keep from the public knowledge to which the public has a right.

Along with his belief that a public office is a public trust, Mr. Eisenhower also believes, unless we are greatly mistaken, that the public is entitled to know what its Government is doing. And if he were to inquire into the extent of secrecy, we have an idea the President would be far more angered at some of his own bureaucrats than at the reporter who brought the secrecy to his attention.

Tribute to President of the American Optometric Association

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. ERVIN. Mr. President, one of North Carolina's finest citizens, Dr. P. N. DeVere, of my home town of Morganton, N.C., has been elected president of a great national organization of professional men, namely, the American Optometric Association.

This association is to be congratulated upon the wisdom it has exercised in making its choice. The Morganton News-Herald for July 10, 1959, contains an editorial indicating the unselfish service which Dr. DeVere has rendered to his community, his State, and his Nation.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMUNITY SHARES IN DR. DEVERE'S HONOR

Morganton and Burke County are justifiably proud that one of the professional men in our community has been given the top national honor in his field. This is especially significant since this is the first time, to our knowledge, that any man in North Carolina has ever approached his standing in that profession.

Dr. P. N. DeVere, who has been practicing optometry in Morganton since 1939, was elevated last week to the office of president of the American Optometric Association during the association's 62d annual congress in Dallas, Tex.

What is almost as significant is that he has not only been elected president of the association, but he has also held all four of the top offices in the national group.

Four years ago he was selected second vice president, and he has steadily ascended the ladder of national offices each year. From second vice president, he stepped up to first vice president. Last year he was chosen president-elect, which was the real test of his popularity among his associates, and the expression of confidence in his professional ability and character.

His recent confirmation as president of the association, although in some ways a mere formality, marks the crowning honor that Dr. DeVere's fellow eye specialists could bestow upon him. We are confident that he deserved the honor.

Dr. DeVere has amply demonstrated that his professional ability is based upon a sincere desire to be of service to humanity. Instances of his uncompensated participation and leadership in worthy public service projects are too numerous to mention.

On the national level, he is a member of the Research Committee of President Eisenhower's Committee for Traffic Safety, and a member of the National Research Council on Night Visibility.

On the State level, to name a few of his activities, he is optometric consultant to the North Carolina Department of Motor Vehicles, a member of the Governor's traffic safety council, and a member of the board of directors of the North Carolina Parent-Teachers Association.

On the local level, he is a director of both the State Bank of Burke and the Morganton Building and Loan Association, and holds offices and memberships in service, lodge, and recreational organizations literally too numerous to mention.

Dr. DeVere is also a devoted family man.

We can forgive the fact that he was born in Washington State and educated in Illinois. We are proud that Dr. DeVere calls Morganton home.

A National Fair Trade Law

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. PROXMIRE. Mr. President, a recent newspaper column in the Cincinnati Enquirer by Mr. Ed Wimmer, vice-president and public relations director of the National Federation of Independent Business, adds significant evidence to the argument for a national fair trade law.

Mr. Wimmer and his organization have been tremendously effective leaders in the fight for protection of independent businesses. Mr. Wimmer is unquestionably one of the best-informed men in the country on the problems and needs of small business.

Particularly noteworthy in this column is a statement by the president of a department store chain to a congressional subcommittee concerning the purposes and effects of the sort of price-cutting practices that a fair trade law would prohibit.

Mr. President, I ask unanimous consent that a portion of this column be published at this point in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

One of the greatest battles ever fought for the preservation of freedom of opportunity in the American marketplace, has been conducted by the National Association of Retail Druggists, and the Bureau of Education on Fair Trade, in attempts of these two groups to bring about passage of effective fair trade legislation.

Dr. John Dargavel, head of the drug association, and the team of Maurice Mermey, bureau director, and Herman Waller, general counsel, have carried the fight into every nook and corner of the Nation. They have compiled an amount of evidence in support of proposed fair trade laws that no reasonable person, either in or out of Government, could fail to respect. Among exhibits recently presented before congressional hearings by Mr. Waller, included a bulletin from the St. Louis Better Business Bureau, which read:

"A noisy advertiser in St. Louis who claimed 'lowest prices in town' was lowest on only 7 out of 75 items offered by competitors. Yet, one such advertiser like this can ignite the fires of a price war, bringing harm to everyone." Another interesting statement submitted was by Fred Lazarus, president of Federated Department Stores. Said Mr. Lazarus:

"The current bad pricing situation is actually the result of an attempt to lead the public to believe that prices in one store are generally lower than in other stores, and this just isn't so. * * * The public should understand that no store can stay in business and sell its merchandise below overhead cost unless it subsidizes loss leaders with profits from other merchandise. * * * Loss-leader selling hits tens of thousands of small businesses that perform a real service to the communities—as distributors of the very merchandise being used as loss leaders."

In the BBB release you have a result of expert research, and even though Mr. Lazarus has indulged in a little self-incrimination, who will say that he doesn't know what he is talking about?

Consider the testimony of Mr. Mermey when covering a price study of items offered by two large New York discount houses, which showed profits on "unfamiliar" goods ranging up to 269 percent in one discount store, and 300 percent in another, and you'll see what the BBB and the defenders of fair trade are trying to get across—that something for nothing just ain't.

Ohio legislators set example of enlightened thinking on fair trade for the U.S. Congress. Bill passed Ohio House 123 to 4; Senate, 30 to 2.

How You Can Influence Foreign Policy

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 17, 1959

Mr. WILEY. Mr. President, we recognize that, in our representative form of government, policies and programs can be most effectively administered if created upon the solid foundation of public support.

As a youthful Nation, the United States has been catapulted into a position of world leadership.

If our country is to adequately perform its role as a free world leader, we must encourage greater and greater participation by our citizens in formulation of domestic and international programs and policies.

There are, of course, a great many unanswered questions relating to our international responsibilities and obligations. These include: How can we most effectively carry out our responsibility for United States and free world security? What is the extent of our obligation in international affairs? To what degree should we tap our resources, brainpower, and manpower to assist friendly nations economically; to wipe out disease, poverty and illiteracy; to lay the foundation of ideas and ideals upon which to build a better future?

In today's world—in which time and space as barriers and protective walls are rapidly diminishing—there is a real need for further crystallization of our role in world affairs and of greater public attunement to our obligations and responsibilities.

The future of the free world—in fact, of life on the globe—may well depend upon the success with which we recognize, and assume, our proper role in the international community of nations.

The July edition of Kiwanis magazine carried a thought-provoking article by Saul K. Padover, entitled "How You Can Influence Foreign Policy."

Constructively, the article reviews ways and means by which individuals and community leaders can and should participate to a larger degree in the formulation of public opinion as it relates to our foreign policy.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW YOU CAN INFLUENCE FOREIGN POLICY

(By Saul K. Padover)

Now that the United States and Canada are deeply immersed in foreign affairs, with commitments on a global scale, the question, the vital question, is: How—and how well—do our community leaders perform their function in enlightening the people?

The question is crucial because, unlike domestic affairs, international problems are too complex and too difficult for the average citizen to understand without guidance. For example, in a recent nationwide poll conducted by the New York Times on the Berlin issue, about 39 percent of the Americans queried did not know whether Berlin was in East or West Germany and proved poorly informed on many other aspects of the problem. Here is where effective, well-informed leaders might have helped.

Who are the leaders? In every community there are individuals or small groups with power and influence. They shape public opinion and create the policies that influence their fellow citizens. These men are the leaders. If they provide proper enlightenment and direction they contribute to a sane and sensible policy. If they fail, their country is in trouble indeed.

American and Canadian life today exemplifies Jefferson's conception of a natural aristocracy. Whether in business or government or the professions, our leaders are those whose positions were attained through individual effort and skill, rather than birth. Cases of inherited wealth and social status do exist among the leaders, but the majority, including the last two Presidents of the United States and the present Prime Minister of Canada, come from modest homes. Surveys indicate that most leaders—mayors, presidents of civic organizations, Members of Congress and Parliament, heads of industries—are college graduates; and, on community levels, more than half of them have professional degrees. The educational ladder—that is, training for positions of power and influence—still remains the primary avenue of advancement.

Of all the categories of leadership, that of business is perhaps the most influential. In every community in our two nations, it is the top business leaders who are admired and heeded. Business and service organizations, particularly in the smaller and middle-sized communities, are main centers of influence regarding public (including international) affairs. A speech or statement before the chamber of commerce or Kiwanis is likely to carry more weight than a lecture in a classroom or, for that matter, a sermon in church. Furthermore, local newspapers and radio-TV stations—direct and continuous molders of public opinion—are the property of community leaders. To put it in different terms, ownership of these media, which are often multimillion-dollar properties, almost automatically bestows influence and power—leadership—on the proprietor.

Business leadership in our communities is rarely absolute, however. The leader, to be successful, cannot act contrary to the basic expectations of those he hopes to lead. A man challenging the fundamental beliefs and hopes of the community, no matter how rich or powerful he may be, soon finds himself "out on a limb," likely to end up talking to himself in a social vacuum. Hence, in all communities the leaders—whether political, social, professional, or economic—are nearly always "joiners." They belong to anywhere from a half dozen or two or three dozen local or national organizations that are very influential in their communities. Through these organizations — Kiwanis, Rotary, Lions, chamber of commerce, American Legion, community fund, church affiliations—they exert influence and help to set community patterns of thinking and doing.

In what fields do leaders lead? Everywhere they occupy themselves primarily with local affairs, although on occasion they may deliver a talk on foreign policy. Community needs—such as schools, housing, taxes, and real-estate development—absorb the time and interest of the leaders, as well as of the public at large. Problems of state or provincewide nature concern them mainly insofar as they impinge on the communities. As for national affairs, they are of secondary interest, confined largely to elections or to some special doings in Washington or Ottawa.

This general situation gives a partial answer to our question as to what the leadership does in foreign policy. By and large, the answer is that the leaders do very little. Although they are somewhat better informed on foreign affairs than the general public, the truth is that most of them are indifferent. About 1 out of 10 leaders in American communities trouble themselves with world problems, but this figure may be too high. In Canada, traditionally more foreign affairs minded, interest is more pronounced, but still not startlingly so—especially in the West.

Two main reasons account for this general indifference to international problems on the part of most community leaders. One is remoteness; the other is helplessness.

Leaders are inclined to feel, as does also the general bublic, that foreign affairs are not only foreign but very far from home—far both physically and psychologically. The world's trouble spots are distant places on the map, and it requires an effort of the imagination to realize that the current troubles in Iraq or Tibet may have serious consequences for our own future. Even more important is the prevailing feeling among leaders that international affairs are out of their hands.

With the best intentions in the world, what can even a prominent community leader do in the field of foreign policy?

To sway events, he has to have the ear of a high government official, he thinks, and if he does not, why waste his time? In other words, the leader knows that on a community level his efforts can bring tangible results: the school, the park, the swimming pool for children he helps to build are there for all to see, use, and appreciate. But what can he do in or for India, Ghana, New Guinea, or even his State Department or Department of External Affairs? He senses that he can do nothing, and this begets frustration and, ultimately, indifference.

The truth, however, is that local leaders are too pessimistic on the subject. They are not, or at least they need not be, as helpless as they think themselves to be. To be sure, they cannot formulate foreign policy or execute it or directly change the course of events abroad. But they can do the next best thing: they can shape and enlighten public opinion for desirable ends. For democracies such as ours it is public opinion that, in the last analysis, decides major policies, including those affecting foreign affairs. Without the support of the people through their representatives in Congress and Parliament, important policy decisions cannot be executed in our capitols.

Today, public opinion in regard to international affairs is of peculiar importance because of finances. In the past, foreign policy consisted largely of consular activities, diplomatic negotiations, and treatymaking, requiring a minimum of financial outlay. Nowadays, however, our positions as world leaders involve a minimum of routine diplomacy and a maximum of dollars. In the last decade, the United States spent nearly $20 billion on nonmilitary assistance abroad. During the same period Canada, with one-tenth the population of the United States, and one-thirteenth the national gross product, spent $2.5 billion.

Under the Constitution, money bills are the prerogative of the Congress, which means that the latter, operating through the powerful standing Foreign Relations Committee in the Senate and the Foreign Affairs Committee in the House, now plays a preponderant role in foreign affairs. Hence, the American people are deeply involved in the situation, since they are called upon regularly—every 2, 4, and 6 years—to vote for those who make and carry out foreign policy in Washington. Canadians are equally involved, for while policy is made in a somewhat different manner than in the United States, the chief decision makers—the Prime Minister and Members of Parliament—are also elected officials.

At this point, public opinion comes fully into play. The wisdom, or lack of it, shown in the voters' choice of their Representatives depends largely on prevailing local opinion. Opinion, we have seen, is molded by local leaders, first from the business community and, secondly, from professional, civil, religious, and educational bodies. But in foreign affairs these leaders have not lived up to their potentialities. The majority of them are indifferent to "political" problems that transcend the boundaries of their communities. It is a disturbing fact that the American press as a whole devotes on an average less than 5 percent of all its news space to international affairs; most newspapers, indeed, give less than half that amount. Canada, again, is somewhat more foreign affairs minded. A pre-World War II survey put the figure at 10 percent; today it is probably somewhat higher. But even this figure is no bargain in a changing world. The leaders of the press, both editors and publishers, justify their practice on the ground that their readers are not interested in foreign affairs. This, however, is an avoidance of responsibility in an age of crisis.

The local leaders can do much more than they are doing at present to enlighten the public on international problems which are now matters of national survival.

They can, for one thing, give greater support to existing organizations devoted to foreign affairs. At present, 60 cities in the United States have councils on foreign relations or world affairs; 20 cities in Canada have branches of the Institute of International Affairs. But membership and attendance are generally small. The leaders can organize systematic study groups. They can provide for a continuing series of lectures in their communities. They can keep in constant contact with their legislators. They can, above all, enlarge the foreign policy content of the media and encourage the writing of interpretative articles in the newspapers. They can stimulate public debate on the airwaves.

These suggestions are not councils of perfection. Nor are they fringe luxuries. The way the world is going, they are, indeed, urgent necessities for our survival as a free world power. For in any democracy there is absolutely no substitute for public opinion. Vital decisions cannot be left to the specialists or the much-abused "politicians." The people have to make them. And the community leaders have to assume the burden of guidance and leadership more than they have hitherto done.

Let's Not Forget That Laos Was Saved

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Worchester Evening Gazette of Thursday, June 18.

The Gazette is one of our leading newspapers in Massachusetts.

As one who has visited Laos, South Vietnam, and Cambodia, I can readily see how important the preservation of Laos as a free nation is in that area of the world. I think this editorial is certainly worthy of the attention of all of us.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S NOT FORGET THAT LAOS WAS SAVED

The current argument in Congress over the aid program to Laos is ironic. Those who charge that the thing was shot full of bribery, corruption, and politics seem to forget that the program was also one of the most brilliantly successful in the whole history of U.S. foreign aid. It literally snatched a whole country—Laos—from the jaws of communism.

Two years ago most observers would not have given a plugged nickel for Laos' chances of surviving in freedom. Snuggled up close to Red China and the Red North Vietnam, it seemed a sitting duck for Communist subversion. Its long border with Burma on the west was a nest of intrigue in which private armies, guerrilla, Communist, and bandit roamed. Its 1,800,000 people seemed to have little attachment to the ideas of freedom and little understanding of the dangers of communism.

Yet, in the past year the Communists, who almost controlled the government 2 years ago, have been practically neutralized. Government forces have surrounded the last battalion of Communist troops.

The tip off to the way things are going is shown by the sudden demand by Red China and Russia to have an investigation of the "critical" situation in Laos. Prime Minister Nehru of India, in a rather fuzzy-headed way, has given his support to the Soviet and Chinese demands. He says the situation in Laos is unsatisfactory.

It is certainly unsatisfactory to the Communists, who are being driven into a corner. Just why there should be international meddling at this time is hard to understand from the western point of view.

In the meantime, the indignant Congressmen in Washington should take a hard look at what we have accomplished in Laos. To be sure, we poured in millions of dollars of supplies and arms, and some of it was wasted in graft and politics. But after all, it's not every day that we can claim to have saved a nation from the Reds.

River and Harbor and Flood Control Projects

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

(Mr. HOFFMAN of Michigan asked and was given permission to revise and extend his remarks.)

Mr. HOFFMAN of Michigan. Mr. Speaker, I understand this is a bill to authorize the construction of public works to be paid for by Federal funds. Am I right, I ask the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. It is an authorization bill only. First of all, the Bureau of the Budget will have to approve any appropriation items that may be necessary. Next, the President must include them in his budget message to Congress, and finally Congress must appropriate the money.

Mr. HOFFMAN of Michigan. Usually, when the House authorizes an appropriation, we follow through with an appropriation bill for some amount.

Mr. BROWN of Ohio. Usually, but not always, by any means.

Mr. HOFFMAN of Michigan. Not always; but this being a public works bill, unanimously reported out, it would be a fair guess to say that the projects will be paid for by Federal funds. I assume I did need not ask the gentleman, that Federal funds means the taxpayers' dollars. So we are or should be interested in the amount as well as the authorization.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield.

Mr. BROWN of Ohio. The amount contained in this authorization bill is a little over $600 million. This bill carries authorizations for expenditures amounting to a little over $600 million which is about half, and I understand a little less than half of the amount that was carried in the previous bill 2 years ago. So the committee has done a pretty good job of screening these projects. The number of projects that have been authorized has been very limited. Seemingly, the report indicates there are projects that are vitally needed. Some, of course, are the continuation of projects that have been underway and, I believe, the gentleman from Michigan, if he studies the report, will find that the measure is one of the most satisfactory bills of this type to come before the Congress for a long, long time.

Mr. HOFFMAN of Michigan. That is my understanding, but one thing still bothers me a little. Our experience with the highway construction, which is federally financed and in part by the States, is that as soon as we get through a bill to construct a project, the cost begins going up and we just get less of whatever we are trying to buy with the amount that is authorized or finally appropriated than we could have bought just before the authorization. That practice really hurts and should end. I know the gentleman from Ohio was interested in labor legislation which will prevent or at least lessen the cost of project whether public or private, because a little while ago he asked the leadership when something would come out on the labor bill—we have on the floor here now a very distinguished member of that committee who has participated in the deliberations all through, the gentleman from West Virginia [Mr. BAILEY]. I wonder if the gentleman from West Virginia will give the gentleman from Ohio any information as to when we will quit trading and bargaining over there on political matters and get out a bill—if that is what we are trying to do.

Mr. BAILEY. May I suggest to the gentleman from Michigan that the matter is quite controversial in the committee, and I think we should continue with our deliberations, which I hope will end in a day or two and we will have some kind of a bill to bring to the House.

Mr. HOFFMAN of Michigan. In your judgment, will we get a rough draft by Monday or Tuesday of next week? Perhaps tomorrow or Saturday?

Mr. BAILEY. Probably Tuesday.

Mr. HOFFMAN of Michigan. I hope that will give the gentleman from Ohio the information he wants. He says there is some controversy there. We are divided in a way between the ADA, the Reuther men, the steel fellows and, yesterday, for the third or fourth time, a representative of Mr. Hoffa, and he is a Republican, was in my office and I asked him what Mr. Hoffa wanted. He said they did not want any bill at all. So you gentlemen, if there are any here, who are inclined to accept Mr. Hoffa's views, I give you that for what it is worth. Of course, there are some of us over there on committee, and I happen to be one who thinks we should have legislation at least on three subjects. One covering this no man's land which will give a remedy to those who are too small to be recognized by the National Labor Relations Board, and another one which will give us, give people generally a protection against secondary boycotting and against organizational picketing. We may all assume that the Kennedy-Ervin bill covers pretty thoroughly the racketeering and extortion phases and so far as I know there is no great opposition to the provisions in there which deal with those two subjects. But the other three we just must have.

The SPEAKER. The time of the gentleman from Michigan has expired.

Alumna Lucy Hon Cuddy, B.A., 1911, Is One of Anchorage's First Citizens

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Friday, July 17, 1959

Mr. BARTLETT. Mr. President, the title above is copied from the magazine Arkansas Alumnus for July 1959. This heads an article about Mrs. Lucy Cuddy, of Anchorage, and was written by my friend Stanley J. Erickson, also a resident of Alaska's largest city. It is a most interesting, well-written article about one of Alaska's great ladies and I take pleasure in giving it even wider circulation by asking unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALUMNA LUCY HON CUDDY, B.A., 1911, IS ONE OF ANCHORAGE'S FIRST CITIZENS—ALASKA'S GRAND DAME FROM ARKANSAS

(By Stanley J. Erickson)

If any lady can lay claim to the title of "Grande Dame" in the biggest city of our largest State, it is an alumna of the University of Arkansas, Lucy Hon Cuddy, B.A., 1911. Not that Alaskans are wont to put much emphasis on such titles or that Lucy Hon Cuddy preoccupies herself with such superficial trappings of the vital role she has played—and is playing now—in the development of our newest State.

Chairman of the board of the State's largest bank, member of the board of regents of the University of Alaska, and first chairman of Anchorage's United Good Neighbors drive, Lucy has been a part of the Alaska scene for 43 eventful years and is one of the State's most respected and loved citizens. Traditions passed down to her from her Arkansas heritage, and ideals instilled at the University of Arkansas have in turn been transmitted by her into the cultural foundations and the fabric of our newest State.

It was in 1916 that Lucy Hon of Fort Smith decided that she had sufficient resources to warrant the risk of going the way west; 5 years' teaching experience in Arkansas, a liberal amount of youthful self-reliance, and a generous allotment of youthful disdain for the counter advice of her elders. She decided that if she was actually to seek her own fortunes in the west, it would be as far west as the country's territory extended. That was Alaska and she soon found herself a job as a teacher in Valdez.

Teachers at that time were rarely destined to continue in a state of maidenhood in such a male-dominant town as Valdez. In Valdez, "If they didn't get a teacher married off in her first year, they got her a job as telephone operator in the Valdez exchange, where she would meet more people," Lucy explains. However, the possibility of such career transference never confronted Lucy. When she and a young College of Puget Sound law graduate, Warren Cuddy, met, the die was early cast for the termination of her teaching career and assumption of the role of housewife and mother. Her parents back in Fort Smith did insist, however, that the young couple's union be blessed and perhaps made more certain through performance of the marriage rites back in the more civilized society of Arkansas. "They looked quite suspiciously on a man who chose to seek his life in such a dangerous and uncivilized country. But then, his parents back in Washington had the same misgivings about a girl who would venture into those northern ramparts."

With their nuptials properly performed under stateside sanctions, and with the trepidations of their families somewhat allayed, Lucy and Warren Cuddy returned to Valdez, Warren soon to become the U.S. attorney for Alaska's western judicial district, itself about the size of Texas.

"We came to Alaska about the end of the horse and dog team era and at the beginning of the model T era," Lucy says, and goes on to explain it was the model T that really got Alaska on the road; that and the Alaska Railroad which the Government was building at about the same time, running north and south from Anchorage to connect the seaport of Seward, on the Gulf of Alaska, with Fairbanks, 450 miles north in the heart of the interior.

"Valdez lay at the foot of a low mountain pass. A trail and road of sorts led up and over the pass and meandered northward also to terminate at Fairbanks. The big task those days was to make that trail work as a road, and I don't know how many tons of horsepower I put forth behind our model T pushing it up the Richardson Highway over Thompson Pass." Today the Richardson is a fine, paved highway linking Valdez with Fairbanks and Anchorage.

When Anchorage in the late twenties and early thirties became the more important town, and the center of Federal Government activity was moved there from Valdez, the Cuddys and their two young sons moved along also. Warren entered private practice and gave more and more time to the young First National Bank of Anchorage, later as its president; Lucy took an active interest in helping to build the new town and in raising her two sons, David, Jr., and Dan.

The Cuddys didn't let themselves become provincial Alaskan sourdoughs, however. Every year or two there was a trip outside—sometimes to Europe or South America—and a constant widening of horizons and the broad spectrum of interests in peoples, events, and ideas that now so clearly characterize Lucy Cuddy. There were tragedies, too, the loss of their son David at Anzio, and in 1951, the death of her husband. She and her son Dan stepped in to take over active direction of the bank, now growing at an even faster pace, she as chairman of the board, Dan as president.

In 1956, the bank built a large addition with a fine lobby and a big plate glass front, before which just about everyone in Anchorage passes during any 2-week period. And that gave Lucy the opportunity of putting into practice one of her pet ideas—that of dynamic public interest displays.

"One of the things we all miss in a new country such as Alaska is our roots and our links with the fine old traditions and hallmarks of our stateside origins," Lucy explains. She decided to make the bank lobby and that big plate glass front a show place for these symbols of the roots, traditions, and memories of Alaskans. Her first display was her own—family heirlooms from Arkansas—grandmother's clock, her woven coverlet, and patchwork quilt, an old doll, candlesticks, family album, odd pieces of old glass.

Since then, hardly a fortnight passes without a change of display. Today, there may be an art show, displaying the varied painting talents of Anchorage residents. Next week, perhaps an exhibit of old coins, to be followed by an exhibit of fine ivory carving from the Arctic North. Lucy's bank thus serves not only as the leading financial institution of the North; it also acts as a kind of museum for Alaskana and Americana, with Lucy as curator. Mrs. Cuddy has received national recognition in banking circles for this work and for her other activities in promoting public relations on a high level in the field of finance.

Lucy's Anchorage, by virtue of the airplane and its unique position up near the top of the hemisphere halfway between Tokyo and Copenhagen over the Pole, has become literally a crossroads of the world. Each day sees transpolar planes of KLM, SAS, and Air France stopping there. Likewise, aircraft of Canadian, Japanese, and American carriers stop there for refueling. Far from remaining a distant isolated place, it is fast becoming perhaps the most urbane and cosmopolitan small town on this continent, if not in the world. Into Lucy's bank may walk, one after the other, a homesteader with problems of financing his cabin and land clearing, a Texas oil developer with a couple of million looking for a likely place to explore for Alaska's new-found oil, a representative of Japanese industry interested in Alaska coking-coal deposits, a trio of young Swedes to change their Swedish kroner into American dollars before a weekend of skiing or trout fishing.

Lucy Hon Cuddy, presiding as chairman of its board, reflects this cosmopolitan character of her bank's clients. Alaskans travel 20 times more by aid than do their cousins in the south "48"; so too does Lucy. Last year she traveled around the world in a group that included her sister and brother-in-law, Arkansas alums, Mildred Hon Murry and Dr. Harry E. Murry.

She's as much as ease in Caracas, Venezuela, as Cordova, Alaska. She might turn up anywhere, as she did to the surprise of an old classmate, Phil Huntly, B.C.E., 1910, who was sitting in the lobby of the Imperial Hotel in Tokyo a year ago when his wife, the former Kathleen "Neen" Garvin, former student '12, got into a conversation with Lucy and discovered not only that they were from the same State but also classmates with fond mutual remembrances of Fayetteville and the university.

But there's always this drive to come back to Alaska, she admits. None of this Palm Springs-Phoenix-in-the-winter stuff for her. Her home is one of the oldest in Anchorage, but it's moved along with the changing scene and today sits long, low, and modern on a bluff in the heart of downtown Anchorage, overlooking the harbor and a vast panorama of mountains and a distant shore 2 miles across the inlet on which moose, wolves, and brown bear roam and where a few hardy homesteaders are only now beginning to settle. From her window she can see a new $8 million ocean dock abuilding or watch powerful diesels pulling long trains of construction supplies and electronic gear for the Alaskan military bases. To her left, a few blocks along the bluff, well diggers are driving test holes for a 12-story pair of office and hotel buildings.

Books and magazines scattered around her living room attest to her catholic tastes: The Atlantic, Harper's, The New Yorker, Harry Golden's "Only in America," Hardy's "Return of the Native," and Max Shulman's "Rally Round the Flag Boys."

It was perhaps the broad viewpoint that is suggested here, together with her intimate knowledge and understanding of Alaska, that led the governor 2 years ago to appoint Lucy Hon Cuddy as a regent of the University of Alaska. The development of this institution is now one of her closest interests.

The University is as fast growing as the rest of Alaska; its geophysical institute is doing outstanding and pioneering work in probing the secrets of physical phenomena in the far north, and its scientists are learning secrets of agriculture on ground that covers everlasting ice.

Four years ago, when Anchorage business leaders decided the town had grown sufficiently large to warrant a single United Good Neighbors activity, their logical choice for its first chairman of the drive, and the person to bring together representatives of all walks—labor, government, business, interracial—was Lucy. As first chairman of the United Good Neighbors drive, Lucy was brought closer to the newest generations of Alaskans, the young migrants from the "South 48," eager to make Alaska a successful State.

And now there's another generation of Cuddys, her five grandchildren from whom Lucy is receiving new rewards and experiences in her full life. In this full life one of the guiding principles that has stood with her is a maxim she learned back in the university:

"Education is only the preparation for self-education."

Proposed Turkey Legislation

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 17, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD correspondence I have received from North Dakota, and a statement before the North Dakota Farm Bureau Livestock Commission by Leslie Johnson, of Manfred, N. Dak., all having reference to proposed turkey legislation.

There being no objection, the letters and statement were ordered to be printed in the RECORD, as follows:

NORTH DAKOTA FARM BUREAU,
Fargo, N. Dak.

Hon. WILLIAM LANGER,
U.S. Senate, Washington, D.C.

DEAR SENATOR LANGER: The board of directors of the North Dakota Farm Bureau Federation, at their recent meeting held in Fargo, June 17, discussed current turkey legislation before Congress and unanimously went on record in opposition to all nine known turkey bills now before the House and Senate of the United States (H.R. 5180, H.R. 3069, H.R. 5071, H.R. 1344, H.R. 5583, H.R. 5614, H.R. 2490, S. 1395, and S. 430). These bills, it was felt, involve eventual Government ocntrol of the turkey industry. Their vote was based on recommendation of the North Dakota Farm Bureau Livestock Committee which also unanimously opposes the enactment of these legislative measures. It was the opinion of the Livestock Committee and board of directors that these bills would not benefit the turkey industry in long run, but would hinder the operation of the law of economical production if enacted. North Dakota is definitely in an advantageous position from the standpoint of low-cost turkey production operations and has climatic conditions which are conducive to relatively disease-free and profitable operations. Some of the legislative measures before Congress would tend to freeze turkey production areas and would not allow production to shift to the lower production cost areas.

We are opposed to Senate bill 1395 because we question the feasibility of extending a Federal Marketing Act to a national level due to the administrative cost and complete control of the turkey industry which would result. We favor marketing agreements where they are used in localized areas, to develop the orderly marketing of a particular product. We also oppose this bill because of the monopoly powers which it would give to a producer committee to be provided under the bill, and feel that the program resulting from the passage of this legislation would be a gross waste of the taxpayers' money. We have attached a statement presented by Leslie Johnson, Manfred, N. Dak., representative of the poultry industry on the North Dakota Farm Bureau Livestock Committee, which brings out not only aspects of the turkey industry in North Dakota and its tremendous potential, but also some of the reasons why the North Dakota turkey grower does not want Government control of his industry. North Dakota farmers need more, not less alternative enterprises on their farms as their wheat acreage consistently continues to be cut, and turkey production provides a very good alternative enterprise at the present time. We urge you to protest this alternative by opposing the enactment of the above-listed bills.

Sincerely,

G. J. STAFNE,
Secretary.

STATEMENT BEFORE NORTH DAKOTA FARM BUREAU LIVESTOCK COMMITTEE BY LESLIE JOHNSON, MANFRED, N. DAK., REPRESENTATIVE OF POULTRY INDUSTRY ON NORTH DAKOTA FARM BUREAU LIVESTOCK COMMITTEE

Mr. Chairman, gentlemen, probably none of you will ever raise turkeys. There is one aspect of turkey production, however, that may be of interest. We are all concerned about the tremendous surplus of good North Dakota grain.

A unit of 10,000 turkeys will consume, in 6 months, 500 tons of grain; that's 1 million pounds.

One man, working alone, and by no means overworking, can produce 10,000 market turkeys, or about 100 tons of the best quality meat.

Turkey meat is the highest in protein, the lowest in fat, and the lowest in cholesterol of any meat.

The consumption of turkey can be greatly increased without having too much effect on the consumption of red meats. We don't like turkey every day, but we like it quite frequently, and probably eat just as much beef and pork anyway.

There are about 750,000 turkeys raised in North Dakota. These utilize nearly 40,000 tons of grain.

North Dakota is not ranked among the leading turkey producing States, but it should be. We can produce turkeys more economically than growers in any other State. Our experience has been that we can make a net labor return of about $1 per head more than producers in the leading turkey States.

There is now before Congress nine separate bills concerning the regulation of the

turkey industry. One of them is backed by the National Turkey Federation, but all are opposed by the North Dakota Turkey Federation, and by us growers, who feel we can compete on the open market with any grower, anywhere.

Mr. Chairman, I propose a resolution, or other appropriate action, to be submitted to our Congressmen, indicating our opposition to the following bills, and I have them listed here by number. H.R. 5180, 3069, 5071, 1344, 5583, 5614, and 2490; S. 1395, and 430.

Thank you, gentlemen.

NORTH DAKOTA FARM BUREAU,
Fargo, N. Dak.

Hon. WILLIAM LANGER,
U.S. Senate, Washington, D.C.

DEAR SENATOR LANGER: The North Dakota Farm Bureau board of directors, on recommendation of the North Dakota Farm Bureau land and water use committee, composed of G. C. Robinson, chairman, Otis Tosset, Clarence Jensen, Ken McIntyre, and Bert Hill, vote unanimously to support House bill 5555, introduced by Congressman ROGERS, of Texas, and Senate bill 1416, introduced by Senator Moss, of Utah, which concerns the preservation of State water rights, which is in peril at the present time.

As you know, under present conditions, the Federal supremacy theory of water gives the Federal Government priority over the State in determining the use of water supplied. In other words, the Federal Government, under present law, could go into an established irrigation area, for example, stop the flow of the water into the canals, and divert it to another Government use without receiving permission from the State involved by simply serving summons on the farmers affected.

This has happened, as you know, in California and other States and has created a great hardship on farmers in the area affected.

Water-rights legislation is of particular significance to North Dakota as we begin plans for irrigation from the Garrison Reservoir.

There are many other water-rights bills up before Congress at the present time, but, after an analysis of these legislative measures, we feel that House bill 5555 and Senate bill 1416 are the only measures which will guarantee State priority over Federal supremacy in water-rights cases.

The North Dakota Farm Bureau board of directors and the North Dakota Farm Bureau land and water use committee urge you to do everything possible to secure passage of the bills. It may be the last opportunity.

Sincerely,

G. J. STAFNE, *Secretary.*

Why Nobody Can Save Any Money

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, July 16, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD portions of an article published in Life magazine, The Life magazine has done us a service by showing that fiscal responsibility should begin at home, that much of our family incomes are siphoned off by the installment collectors and the tax collectors, and by indicating that fiscal responsibility is needed in the Nation's seat of Government, just as it is needed in the Nation's families.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY NOBODY CAN SAVE ANY MONEY

(By Ernest Havemann)

In St. Louis there lives a young man of 28 who, in the opinion of his contemporaries, really has it made. This young man has a special gift for technical writing: the articles and brochures on complicated equipment and procedures which modern industry needs in such quantity. As a result he has moved up rapidly and now finds himself earning $12,000 a year. This startles and pleases him. "Ten years ago," he says, "I figured that $12,000 was on a block of Easy Street that I'd be lucky to reach by the time I was 50, if ever." But it also greatly worries him, in a way that his envious friends probably never suspect.

At least once a week this young man sits down with paper and pencil and draws up a balance sheet of the family finances. He has done this so many times that he knows the figures practically by heart. But he is moved to repeat the process over and over by a kind of fearful and deadly fascination which the figures possess for him. "I feel," he says, "that some hidden, mysterious, cancerous element is eating away at my income—and that I would solve my problems if I could only find it, recognize it and blot it out." On his optimistic days he cannot bring himself to believe that he is really so financially insecure as his figures tell him. On his pessimistic days he foresees a future when he will sink deeper and deeper into this unfathomable morass. He is not a particularly extravagant young man and not noticeably neurotic, but he privately admits that his budget has got him down.

The young man and his wife figure that expenses which they cannot possibly reduce in any way eat up $905.77 of his $1,000-a-month salary. They allow themselves $65 a month for the babysitters, the once-a-week restaurant meal and the liquor which they consider a minimum reasonable amount of social life and entertainment. Total outgo: $970.77. Left over: $29.23.

The young man grinds his teeth and says, "Even $29 a month isn't a decent cushion between fixed costs and ruin—and most months the $29 just seems to evaporate anyway. We have absolutely no savings. All sorts of problems loom ahead. Now that we have three children, our house is no longer big enough for us. But all we have in it is a $1,000 equity, which isn't enough for a down payment on a bigger house. In the meantime our present house is getting to the point where it's going to need some expensive maintenance. I have to drive to work and we really need a second car for my wife. But we still owe $1,200 on the one we've got. * * * Well, aside from the present, what am I going to do when the three kids start to school and need additional clothes and maybe tuition? How about when they go to college? What about the time when I retire and my income is shut off altogether? I don't think we have any hope in the world of ever accumulating any substantial savings."

While many readers of this article who have to struggle along on far less than $12,000 a year may be tempted at this point to send the young St. Louisan a long-playing record of "Hearts and Flowers," his is, in many ways, a typical 1959 American family. Most of us are making considerably more money then we would ever have guessed 5 or 10 years ago and far more than our grandfathers ever dreamed of making. Our pay checks say we are rich. The monthly bank statement and the stack of unpaid bills on the pantry shelf say we are "stony broke." We have to ask ourselves a sad, bewildered question: "Where does the money go?"

Marriage counselors state flatly that money, not sex, is the greatest cause of trouble between American men and their wives. (Usually one spouse thinks the other is so extravagant as to be hellbent for bankruptcy and an indigent old age. Sometimes, on the other hand, one spouse considers the other too stingy to take advantage of all the delightful new ways which have been devised to spend money pleasantly.) Whenever the pollsters have tried to find what the Nation is most worried about, finances have ranked at or near the top of the list. In the world of business, it is one of the great ironies that among the most prosperous of all firms in this period of unprecedented prosperity have been the banks, small loan companies, and automobile finance companies which specialize in supplying money to people temporarily or permanently afflicted with shorts.

THOSE STATISTICS ON SAVINGS

Those of us who keep wondering where the money has gone are frequently aggravated by items in the financial pages of the newspapers. "Average Man Saves 7 Percent of Salary," the headlines are likely to say, or "National Savings Reach Record $630 Billion." Apparently everybody but us is taking advantage of the national prosperity and stashing money away "like crazy." What is wrong with us that we have no savings accounts, no stocks and bonds, no mason jars full of $100 bills buried beneath the garden walk? Are we extravagant? Improvident? Immoral?

We may be all these things but we are certainly not unique, all the statistics on the financial pages notwithstanding. The statistics, indeed, are thoroughly misleading. It is true that Americans are now saving at the rate of $18 billion a year—but only if you accept the statisticians' definition of savings. As these experts figure it, any reduction of a debt is listed as a saving. In other words, the extravagant rascal who goes from bank to bank and from loan shark to loan shark until he has committed his next 3 years' pay is automatically a big saver thereafter. Every time his creditors catch him and force him to pay back a dollar on his monstrous debt, he is credited with a dollar's worth of "saving." In a way, of course, this definition is legitimate, but it is scarcely what our forefathers meant by thrift, nor what most of us mean by it today. The man who is in debt up to his eyeballs hardly considers himself a big saver just because he has managed to reduce the debt by $500 in the past year.

It is also true, at least according to the latest figures of such a respectable statistical agency as the Federal Reserve Board, that the total accumulated savings of Americans amount to $630 billion, a most impressive sum. There is nothing phony about the definition in this case: the Federal Reserve Board counts nothing but such irreproachable items as cash in the bank, stocks, bonds, and the cash value of insurance policies. But an analysis of the statistical tables shows that the total is accounted for chiefly by a relatively few fortunate people, presumably prospectors who struck oil or uranium, authors who wrote five straight best-sellers, corporate executives who got a lucky stock bonus, rich boys who inherited a bundle that father made before taxes, widows whose husbands carried big insurance policies.

At the last count only about 10 percent of all U.S. spending units (a statistical term which includes bachelors, spinsters, and widows as well as families) had $5,000 or more in savings, and it was this one happy exception in 10 who accounted for most of the $630 billion total. The majority of Americans, it can be seen in the fine print of the Federal Reserve Board's reports, would have had a hard time scraping up as much as a few hundred dollars in cash, and are only holding this pending the arrival of the bill collector.

GOP Economic Policy Ignores Hunger Pangs

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. MANSFIELD. Mr. President, our colleague, the senior Senator from West Virginia [Mr. RANDOLPH] is an avid reader of the Charleston (W. Va.) Gazette. On more than one occasion he has brought to my attention—and I am sure to the attention of others—editorials and opinions expressed by that outstanding West Virginia newspaper. The latest one has to do with an editorial entitled "GOP Economic Policy Ignores Hunger Pangs," published in the July 15, 1959, issue of that newspaper.

In view of the meat in this editorial, I believe it would be well worth while for Members of the Senate to read it with great interest and appreciation.

We all know, of course, that West Virginia is in straitened circumstances, and has been for a number of years, because of declines in certain elements of its economy. It is our hope that, with the able assistance of the two distinguished Senators from West Virginia, the Congress will be able to bring about an alleviation of this difficulty in that beautiful State, to the end that its economic stability can be restored to an even keel and its people given the hope to which they are entitled.

I ask unanimous consent that the editorial from the Charleston Gazette be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOP ECONOMIC POLICY IGNORES HUNGER PANGS

Following a custom of long standing the Eisenhower administration has lately been making political capital at the expense of some of our more unfortunate citizens. In the most gleeful and "I told you so" tones, it has been pounding home the theme that business is in a boom the likes of which this Nation has never seen.

It's not our intention here to find fault with what Mr. Eisenhower and his minions have been saying about the more obvious facets of the economy. We're in a period of generalized prosperity. What's more, rarely has confidence in the boom's lasting power been so high among so many experts. But bright though the prospects are, there's a gray side that deserves more attention than it's been getting.

We're speaking of the fact that in spite of high and rising prosperity almost 11 percent of the Nation's employable workers are still without jobs in 179 areas spread across 29 States. West Virginia is one of those States.

Summed up, here's what we find when we look beneath the froth of the administration's pronouncements:

The boom has hardly touched the pockets of joblessness in cities hit by major industrial upheavals or migrations.

A full one-third of the Nation's unemployed are concentrated in such chronically depressed cities as Pittsburgh, Detroit, and Atlantic City.

Many of these cities were depressed even before the 1957–58 slump hit full stride, and it has made an already bad situation worse.

The hardest hit are not fly-by-night towns, dying because of the stupidity, greed, or laziness of their own people. They're communities with proud histories, above-average schools, good cultural and recreational facilities, an established place in the American scheme.

For the most part they were caught in the backwash of progress itself, and try though they have to improve their lot, technological changes, switches from old to new production techniques, development of new operational methods, new processes, and the like have kept them depressed in spite of prosperity elsewhere.

So let's face the truth. If a business upsurge already 14 months old still leaves us with so many soft spots, there is little chance that anything short of help from the outside will erase their problems.

Let's face this truth also. So many of the jobless in these labor surplus areas are either too old or too short on cash to learn new skills, and their local governments are so sapped by depression that they're not financially able to render the necessary assistance.

What we need under such bleak and oppressing circumstances is a program of technical assistance, financed in part at least by the Federal Government, which will again make these people employable and the areas or cities where they live healthy contributors to the Nation's economy.

The Senate has already passed an area redevelopment bill aimed at this objective. It is now awaiting action in the House. But even if it passes there, which it probably will, Mr. Eisenhower is on record as opposing it, as he was a year ago when today's starving millions were just beginning to feel the pangs of prolonged hunger.

And why does he oppose area redevelopment? It's an old Republican story. Mr. Eisenhower wants more than anything else to keep his big business friends happy.

The status quo rather than hunger is the issue with the Republicans. Let the hungry grow hungrier; the budget must be balanced at all costs.

Chicago Water Diversion

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. WILEY. Mr. President, at the recent hearing in regard to Chicago water diversion, I was unable to be present. I prepared a short statement, and I have attached to it excerpts from proceedings in the House of Commons.

I have received a number of inquiries about this matter. In order to make this material available for distribution, I ask unanimous consent that my statement and the excerpts from the proceedings in the House of Commons be printed in the Appendix of the RECORD.

There being no objection, the statement and the excerpts were ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. ALEXANDER WILEY, ON CHICAGO WATER DIVERSION, H.R. 1 AND S. 308

Gentlemen of the committee, I am informed that on July 13 H.R. 1 and S. 308, relating to diversion of water at Chicago, will be considered by the Public Works Committee.

Unfortunately, I shall be unable to attend the opening day of the hearing because of a previous commitment in the State of Wisconsin.

As you know, these bills propose to authorize withdrawal of an additional 1,000 cubic feet of water per second from Lake Michigan.

The proposed legislation raises serious questions of domestic, international, and legal concern, which I believe deserves your attention.

DOMESTIC ISSUES

(1) These bills propose to divert water from one watershed to another, an action which would appear unwarranted and inequitable unless it is done by mutual agreement of all States concerned.

The Chicago district has diverted three rivers which used to flow into Lake Michigan. Besides that, it takes 3,200 additional cubic feet per second. Now, the district wants to take an additional 1,000 cubic feet. Ten years ago, the plant in Chicago operated efficiently. Since that time the district has loaded it with additional sewage and taken in additional territory so that the plant does not operate efficiently now.

(2) The proposed diversion would divert additional water from a body of water common to many States. If carried out, it threatens to damage rights of abutting property owners; port and harbor developments around the Great Lakes; traffic through the St. Lawrence Seaway; $500 million power project on the seaway; and other navigational interests around the Great Lakes.

(3) The additional diversion, which the Federal Government is asked to authorize, is not needed for navigational purposes, or for purposes of commerce—which purposes are the only constitutional basis for the Federal authority over streams and water. It is questionable, therefore, whether the Congress has authority to direct diversion for purposes completely removed from navigation and commerce.

(4) The underlying purpose of the increased diversion is to help the city of Chicago resolve its sanitation problems.

Chicago created this situation, and as the Supreme Court said in 1929, it is for them to remedy it. How can it be remedied? By improving its plant and doing what Milwaukee does—purify its sewage and return it to the lake 95 percent pure. Chicago doesn't return any of the water taken. In this connection, we must remember that Illinois occupies only 50 miles of the lake front, while three other States occupy a total of 500 miles. We must remember also that these other three States account for about two-thirds of the population living around the lake and the future needs of these other States must be taken into account before further diversion is permitted of the water of Lake Michigan.

(5) The bill would set a dangerous precedent upon which our Canadian neighbors could base their decision to divert water flowing into the United States, particularly the Columbia and Kootenay Rivers in the Great Northwest, thus jeopardizing power and other interests in this country.

INTERNATIONAL ISSUES AT STAKE

The diversion of water from Lake Michigan is of deep concern to our Canadian neighbors.

Recently the Canadian Government stated unequivocal opposition to the proposed water diversion legislation. (See Canadian note and comments from Canadian House of Commons annexed.)

The Canadian Government stated that such diversion would not only jeopardize its shipping, commercial, port development,

and other interests around the Great Lakes, but would also violate in letter and spirit the provisions of several agreements and notes exchanged between the United States and Canada.

Furthermore, the Boundary Waters Treaty of 1909 between the United States and Canada provided that no further diversion of boundary waters be undertaken without the approval of the International Joint Commission then established. And, although Lake Michigan was exempted from the boundary waters definition, article II of the treaty provides that "any interference with or diversion from their natural channel of (nonboundary) waters on either side of the boundary * * * shall entitle the injured parties * * * to * * * legal remedies."

The development of the St. Lawrence Seaway and the exchange of notes between the two countries has resulted in the understanding that no unilateral action, which would result in materially affecting the operation of the seaway, would be undertaken.

PENDING ACTION BY SUPREME COURT

Currently, the Supreme Court is considering the matter of water diversion at Chicago. The Court has appointed U.S. senior circuit court judge, the Honorable Albert B. Maris, as special master to consider the diversion cases relating to Chicago.

Congressional action, I believe, should be held in abeyance until the Court has had an opportunity to consider the case and issue its findings.

For your use, I am enclosing exhibits relating to the appointment by the Supreme Court of a special master to consider the case and the statement reflecting the position of the Canadian Government on this proposed legislation.

Sincerely yours,

ALEXANDER WILEY.

SUPREME COURT OF THE UNITED STATES—WISCONSIN ET AL. *v.* ILLINOIS ET AL., NO. 2 ORIGINAL; MICHIGAN *v.* ILLINOIS ET AL., NO. 3 ORIGINAL; NEW YORK *v.* ILLINOIS ET AL., NO. 4, ORIGINAL; ILLINOIS *v.* MICHIGAN ET AL., NO. 15, ORIGINAL (JUNE 29, 1959)

Per curiam.

The motion of Chicago Association of Commerce and Industry for leave to file brief in Nos. 2, original; 3, original; and 4, original, as amicus curiae, is granted. The amended application of complainants for a reopening of the decree of April 21, 1930, in Nos. 2, original; 3, original; and 4, original, is granted.

The motion for leave to file a bill of complaint in No. 15, original, is granted.

It is ordered that Honorable Albert B. Maris, U.S. senior circuit judge, be, and he is hereby, appointed special master in each of the causes, with authority to summon witnesses, issue subpenas, and take such evidence as may be introduced and such as he may deem it necessary to call for. The master is directed to hold hearings with all convenient speed, and to submit such reports as he may deem necessary.

The master shall be allowed his actual expenses. The allowances to him, the compensation paid to his technical, stenographic, and clerical assistants, the cost of printing his report, and all other proper expenses, shall be charged against and be borne by the parties in such proportion as the Court hereafter may direct.

[From Proceedings of the Canadian House of Commons]

CHICAGO DIVERSION—STATEMENT ON CANADIAN ATTITUDE TO U.S. LEGISLATION

Right Hon. J. G. DIEFENBAKER (Prime Minister). Mr. Speaker on April 8 the honorable member for Rosedale asked: "Would the Prime Minister tell us the attitude of the Canadian Government toward the legislation recently passed in the U.S. House of Representatives in regard to the diversion of water from the Great Lakes at Chicago?"

I replied, after dealing with one or two matters of history, and said: "We are paying the closest attention to this matter, at the same time not wishing to do anything that would in any way cause a situation to arise which might not be beneficial."

I now wish to bring the House up to date on this subject. When I last spoke on April 8, I stated what the fact was, that the Government was giving careful consideration, and since then has given further consideration to the most effective manner of making known Canada's opposition to the bill which, as I said a moment ago, has passed the House of Representatives and is now before the Senate Committee on Public Works. A note registering the reasons for Canada's objection was delivered on April 9, and with the leave of the House I ask permission to table it so that it might possibly appear in "Votes and Proceedings." I am not going to read the entire note, but just two particular paragraphs thereof to indicate the general tenor and attitude of the Government in this regard. In the third paragraph the following appears:

"Every diversion of water from the Great Lakes watershed at Chicago inevitably decreases the volume of water remaining in the basin for all purposes. The government of Canada is opposed to any action which will have the effect of reducing the volume of water in the Great Lakes basin. Careful inquiry has failed to reveal any sources of water in Canada which could be added to the present supplies of the basin to compensate for further withdrawals in the United States of America. The Government of Canada considers that many agreements and understandings between the United States of America and Canada would be broken if unilateral action were taken to divert additional water from the Great Lakes watershed at Chicago and directs attention to provision of two treaties in particular."

The first is the Boundary Waters Treaty of 1909 and the second is the Niagara Treaty of 1950.

The general summation of the attitude of the Government in this regard is contained in the last two pertinent paragraphs:

"Because of the importance attached by the United States of America and Canada to the honoring of international undertakings in letter and in spirit, the government of Canada views with serious concern any possible impairment of agreements and undertakings relating to the Great Lakes basin. Furthermore, the alarms created by repeated proposals for diversion which inevitably disturb the people and industry of Canada are a source of profound irritation to the relations between our two countries which we can ill afford.

"I am instructed, therefore, to express the hope of the government of Canada that the United States of America will view this matter with equal concern and will be able to give satisfactory assurances that unilateral action will not be taken which would imperil the present regime of the waters in the Great Lakes basin and the status of the agreements and understandings to which I have referred."

Mr. SPEAKER. Would the Prime Minister perhaps modify his request so the letter will be printed as an appendix to Hansard?

Mr. DIEFENBAKER. Yes.

Mr. SPEAKER. Is the House agreeable to having this document printed as an appendix to Hansard today?

SOME HONORABLE MEMBERS. Agreed.

[For text of document referred to above, see appendix.]

Hon. L. B. PEARSON (leader of the opposition). Mr. Speaker, perhaps I could say a word with regard to this extremely important matter. I think the house will have learned with satisfaction that a note in the terms which the Prime Minister just read has been, I think on April 9, presented to the U.S. Government. It will be recalled that a note in not very strong terms was presented by the Canadian Government last year expressing our concern. This note of April 9 seems to be a much stronger one, and I think that is all to the good.

I believe I am right when I say that this note, however, presented on April 9, has been presented at a time when it is too late to influence Congress which has, if I am not misinformed, already taken action in this matter. Therefore, Mr. Speaker, it now remains for the President of the United States to protect Canada's rights in this matter by vetoing action which may have been taken by Congress. Perhaps if this note had been presented earlier before congressional consideration had been given, it might not have been necessary to rely entirely on the President of the United States to protect our interests in this matter.

However, the note has been presented and I hope it will have the effect it should have in preventing the United States from taking action which would be a breach of treaty arrangements between the two countries.

Mr. H. W. HERRIDGE (Kootenay West). Mr. Speaker, on behalf of this group I want to say that we are extremely pleased to hear the statement of the Prime Minister with respect to this latest note. We are, also pleased to note that it is in stronger terms than any previous note. We support the Government in any effort it may take to protect Canadian interests. We in this group hope that the Congress of the United States will pay attention to this day's proceedings and note from the proceedings that Parliament in this respect is unanimous.

[From the House of Commons Appendix, Apr. 16, 1959]

CHICAGO DIVERSION—CANADIAN NOTE TO UNTED STATES

[No. 184]

THE CANADIAN EMBASSY,
Washington, D.C., April 9, 1959.

SIR: I have the honor, on instructions from my Government, to refer to proposals for legislation in the United States of America concerning an increase in the diversion of water from Lake Michigan through the Chicago drainage canal. It is noted that one proposal to this effect has been approved by the House of Representatives and will shortly be considered by the Senate. During a period of many years there have been numerous occasions on which the Government of Canada has made representations to the Government of the United States of America with respect to proposals concerning the diversion of water from Lake Michigan out of the Great Lakes watershed at Chicago.

Many of these representations have been directed toward particular proposals then under discussion by U.S. authorities. Because of the importance of the question, the Government of Canada believes it timely to reexamine the considerations which it regards as most important concerning any proposals for additional diversion of water from the Great Lakes watershed. Accordingly, in order that there may be no misunderstanding as to the views of the Government of Canada, I have been instructed to bring the following considerations to your attention.

Every diversion of water from the Great Lakes watershed at Chicago inevitably decreases the volume of water remaining in the basin for all purposes. The Government of Canada is opposed to any action which will have the effect of reducing the volume of water in the Great Lakes Basin. Careful inquiry has failed to reveal any sources of water in Canada which could be added to the present supplies of the basin to compensate for further withdrawals in the United States

of America. The Government of Canada considers that many agreements and understandings between the United States of America and Canada would be broken if unilateral action were taken to divert additional water from the Great Lakes watershed at Chicago and directs attention to provisions of two treaties in particular:

(a) The boundary waters treaty, 1909: The applicability of either article II, paragraph 2 or article III of this treaty depends upon the interpretation of physical facts.

If Lake Michigan physically flows into the boundary water Lake Huron, article II preserves to Canada the right to object to such a diversion which would be productive of material injury to the navigation interests in Canadian waters.

If, as has been asserted by eminent U.S. jurists, article III of the treaty applies, no further diversion shall be made except with the approval of the International Joint Commission.

(b) Niagara Treaty, 1950: This treaty allocates water for scenic and power purposes. The amount of water which shall be available for these purposes is the total outflow from Lake Erie. The specific inclusion of certain added waters in article III of the treaty emphasizes the underlying assumption that existing supplies will continue unabated. In addition to these treaty provisions, there is a further agreement of far-reaching importance. Power development in the provinces of Ontario and Quebec is predicted upon agreed criteria for regulation of the flows of the St. Lawrence River. The order of approval of the International Joint Commission of October 29, 1952, as supplemented on July 2, 1956, and accepted by both our Governments, forms the basis for the construction and operation of the hydroelectric power installations in the international section of the St. Lawrence River. Criterion (a) of this order of approval assumes a continuous diversion out of the Great Lakes basin limited to the present 3,100 cubic feet per second at Chicago.

Navigation and commercial interests depend upon the maintenance of the basis upon which channel enlargements have been designed in order that vessels of deep draught may proceed with full load to and from the ports of the upper Great Lakes. In this connection I would refer to the following matters:

(a) The construction of the St. Lawrence Seaway. Legislation in the two countries and the several exchanges of notes concerning the construction and operation of the seaway now just completed are based on the assumption and understanding that there will not be unilateral action repugnant to the purposes of the legislation. Withdrawal of water from the Great Lakes basin would materially affect the operation of the St. Lawrence Seaway;

(b) Dredging. By agreement contained in the various exchanges of notes between the two countries, profiles have been prepared for the excavation which has taken place or is about to take place in the International Rapids section of the river, in the Amherstburg Channel, and in the St. Clair River. These agreements are based on the implied understanding that material changes would not be made in the volume of water available for navigation;

(c) New channel. In an exchange of notes dated February 28, 1959, it has been agreed that a new channel should be constructed to eliminate the so-called southeast bend of the St. Clair River. The agreement by the Government of Canada to this proposal was based on the understanding that there would be no artificial interference with the present supplies of water.

Because of the importance attached by the United States of America and Canada to the honoring of international undertakings in letter and in spirit, the Government of Canada views with serious concern any possible impairment of agreements and undertakings relating to the Great Lakes Basin. Furthermore, the alarms created by repeated proposals for diversion which inevitably disturb the people and industry of Canada are a source of profound irritation to the relations between our two countries which we can ill afford.

I am instructed, therefore, to express the hope of the Government of Canada that the United States of America will view this matter with equal concern and will be able to give satisfactory assurances that unilateral action will not be taken which would imperil the present regime of the waters in the Great Lakes Basin and the status of the agreements and understandings to which I have referred.

Please accept, sir, the renewed assurances of my highest consideration.

A. D. P. HEENEY.

[From the House of Commons Appendix, April 23, 1959]

CHICAGO DIVERSION—MEETING BETWEEN PRIME MINISTER AND MEMBERS OF U.S. CONGRESS

On the orders of the day:

Hon. LIONEL CHEVRIER (Laurier). May I direct a question to the Prime Minister. Will the Prime Minister be good enough to tell the house whether he received Senator PAUL DOUGLAS, of Illinois, this morning in order to discuss with him the question of the diversion of water from the Great Lakes Basin into the Chicago Drainage Canal; and would the Prime Minister say, if he met the Senator, what was the result of the interview?

Right. Hon. J. G. DIEFENBAKER (Prime Minister). The honorable member for Essex West also intended to ask this question. Some few days ago the U.S. Ambassador suggested that it might be possible for me to meet with U.S. Senator DOUGLAS and Congressman YATES, one a Member of the Senate from Illinois and the other a Member of the House of Representatives, from the same State. They were here this morning and I met with them, though they were not here in any sense as an official delegation because the suggestion had been made that the meeting might provide an opportunity for them to place before the Government the views which they hold respecting the bill which would provide for an additional diversion of water from Lake Michigan at Chicago.

I listened to the expression of their views and we had a very interesting talk together, but I may say without any equivocation that I was unable to offer them any hope that as a result of the expression of their views the known opposition of the Government of Canada to the bill would in any way be diminished.

That is clear enough, I think, to make it understandable to all that while I was very happy to meet with these gentlemen, their views did not alter the views expressed in the message to the Acting Secretary of State of the United States, sent by this Government on April 9.

National Seashore Area on Padre Island, Tex.

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, July 17, 1959

Mr. YARBOROUGH. Mr. President, my proposal to establish a national seashore area on Padre Island in Texas has been widely discussed.

Therefore, I shall not relist its many attributes or the dangers of the beach being closed to the public by private ownership, but will simply request unanimous consent to put into the RECORD at this time some of the comments of others.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Post and Times Herald for Thursday, July 2, 1959, entitled "Shoreline S O S."

I request unanimous consent to have printed in the Appendix of the RECORD an editorial from the Corpus Christi, Tex., Caller for Saturday, June 13, 1959, entitled "Final Approval Is Urged on Beach and Park Bills."

In addition, I request unanimous consent to have printed in the Appendix of the RECORD an editorial from the Beaumont, Tex., Journal for Friday, June 26, 1959, entitled "Public Should Always Have Easy Access to Beaches."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, July 2, 1959]

SHORELINE S O S

The Interior Department's request for $15 million to purchase and preserve 100,000 acres of the Nation's shorelines surely merits the support of Congress. Since the end of World War II private developers have been turning desirable shore lines into residential and commercial areas so rapidly that unless Congress acts soon the public may have access only to rocky ledges and dangerous beaches.

The shoreline legislation, sponsored by Senator RICHARD L. NEUBERGER, Democrat, Oregon, would authorize the Government to establish three national seashores. Among areas recommended for preservation by the National Park Service are the great outer beach on Cape Cod, Padre Island off Texas on the gulf coast, a 23-mile stretch of sand dunes and caves in southern Oregon, and the Indiana dunes along Lake Michigan.

Action is especially urgent if the striking Indiana dunes are to be saved. As Senator DOUGLAS points out in his letter, two steel companies are preparing to sweep the dunes away for an industrial site. The very least Congress can do is to enact the modest legislation Mr. DOUGLAS is proposing to preserve these dunes from imminent destruction.

Shorelines ought to be preserved for historical as well as recreational reasons. Man will probably never be able to duplicate the sweeping grandeur of many shorelines. These areas should be protected from commercialization so that succeeding generations can enjoy them in their natural and irreplaceable beauty.

[From the Corpus Christi (Tex.) Caller, June 13, 1959]

FINAL APPROVAL IS URGED ON BEACH AND PARK BILLS

Corpus Christi and the entire coastal bend must watch with anxious concern the close race against Tuesday adjournment deadline to complete action on the legislative measures to assure permanent public enjoyment of this area's vast and varied seaside recreational resources.

This is a critical juncture in the coastal bend's long-range development, an opportunity that should not be delayed, and possibly missed, by involvement in any other political business. The Governor and legislators have responded commendably to the urgency of the situation; it is now up to

them to demonstrate that they can serve the public interest by completing final action.

The House passed a concurrent resolution to authorize the creation of a national seashore recreation area on Padre Island, in accordance with the Yarborough bill now pending in Congress. The Senate concurred Friday in granting that necessary legislative consent. The resolution amicably adjusts the Federal, State, local, and private interests involved. Legislative approval opens the way for a park development that can make this one of the outstanding recreation spots in the Nation.

The other pending measure is to remove any danger of public exclusion from the gulf beaches that could result from further interpretation of the recent Luttes case. Governor Daniel opened the special session to this bill, and it has House favor. The Governor issued a ringing call for the preservation of the public rights and uses of the gulf beaches up to the vegetation line, which have been held by the State in trust for the people since the days of the republic. It is now up to the State senate to protect that Texas heritage.

Nothing which the legislature has done or may do in the regular and one or more special sessions, including the taxing and spending bills, are as important to the coastal bend as these recreation and conservation measures, which do not involve any State funds. They can give the people of this area a fonder memory of the 56th legislature than they are otherwise likely to have.

[From the Beaumont (Tex.) Journal, June 26, 1959]

PUBLIC SHOULD ALWAYS HAVE EASY ACCESS TO BEACHES

In signing a resolution giving Congress consent to make Padre Island a national seashore area, Governor Daniel rightly recognizes a growing need for public access to and use of Texas soil kissed by Gulf of Mexico waters.

Development of Padre Island as a national park would not be setting a precedent. It would be following the trend started in an earlier and successful effort to save the Big Bend area for the public.

The island, with one of the longest and finest beaches on the coastline, would be an additional inducement to tourists from other States to visit and enjoy Texas every month in the year.

Congressional action to make Padre a park, or seashore area, ought not to conflict with pending legislation aimed at keeping gulf-coast beaches open to the public. Actually, the Secretary of the Interior has asked Congress for money to buy only a part of the island. There probably would be room left for sufficient private commercial developments.

The real danger in not doing something now about such coastal areas is the possible loss of them to commercial developers. Once they are developed and, so to speak, fenced in by such developers, the public could easily be made to pay through the nose to wet its toes in the gulf waters.

This ought not to happen.

Is There Equal Protection in Kentucky Coalfields?

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. SILER. Mr. Speaker, a recent editorial apeared in the Harlan Daily Enterprise, a newspaper published in my congressional district, bearing the title "Is There Equal Protection in Kentucky Coalfields?" The problem of law and order in some parts of southeastern Kentucky is such at the present time that I would like to help focus the attention of Congress on this serious situation now faced by our good citizens in some of my counties. Personally I do not have one single dime invested in any coal mine anywhere, but many law-abiding people in my district have actually invested their lifetime savings in various coal-producing properties. They deserve to have their property protected and all our people, whether rich or poor, black or white, union or nonunion, believing or unbelieving, deserve to have life, liberty, and the pursuit of happiness without molestation of lawbreakers or peace destroyers. The editorial is as follows:

IS THERE EQUAL PROTECTION IN KENTUCKY COALFIELDS?

There are times when it becomes difficult for even the most firm believers in the due process of law through the courts and regulatory bodies of our Government to hold fast in their beliefs.

Certainly the thinking people of eastern Kentucky today must be wondering what has happened to the fundamental principles on which our Government was founded that guaranteed the protection of private property. For the coal industry in eastern Kentucky apparently no longer has such protection.

Coal tipples, coal augers, and railroad bridges have been destroyed and three lives have been wiped out since the coal strike began March 9. The property loss alone runs into hundreds of thousands of dollars, and who can claim to place a value on the lost lives?

The eastern Kentucky coal operators and the railroad have based their hopes for protection of their property on the Federal courts and the National Labor Relations Board. And that is only proper.

But what has been the result of action taken by these governing bodies? Right on the heels of the NLRB's second postponement of their hearing on the operators' complaints against the United Mine Workers, a coal auger and shovel were dynamited in Perry County. The NLRB claims that present court orders will maintain the status quo. Does the status quo mean more coal tipples, augers, and railroad bridges destroyed? Does the status quo mean more lives uselessly lost? That is the only logical assumption based on the situation as it has existed for the past 4 months and the NLRB's statement.

Delay after delay, through postponement, of any final action by either the Federal court or the NLRB has practically voided any protection of private property that these sources can give, even though the Federal court has granted an injunction against union violence.

Does the NLRB realize that most of the financial losses now being suffered in the coal fields are losses that cannot be replaced? Does the NLRB realize that many coal operators can no longer insure their property against losses by fire or violence? Does the NLRB realize that many insurance companies will no longer write such insurance and are in fact actually cancelling many policies covering coal mining porperty? These insurance compaines realize what has been apparent for some time in eastern Kentucky, that coal operators' property is not adequately protected under any form of law enforcement and that to insure this property is to run too great a financial risk for even the largest insurance companies.

Our Nation's laws also guarantee the protec-right to negotiate contracts without fear of intimidation or violence from any source. A casual look at the records will show that these rights are zealously enforced by the courts and regulatory bodies of our Government.

Our Nation's laws also guarantee the protection of private property and they do not require that management must accept every union demand made to them. The thought that comes to mind in view of the present situation is this:

Are private property holders in the eastern Kentucky coal fields receiving equal protection under the law due them from our courts and regulatory groups? If not, where lies the future of eastern Kentucky, and the Nation?

Statement of Representative L. H. Fountain Before House Committee on Agriculture

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include the statement of Representative L. H. FOUNTAIN, chairman of the Government Operations Subcommittee, which was presented to the House Committee on Agriculture at this morning's session. While Representative FOUNTAIN was unable to personally deliver this statement, it was capably presented and elaborated upon by chief counsel for the subcommittee, Mr. James Naughton.

The facts contained in this statement are extremely pertinent to the general farm program and to the fiscal responsibility of the United States Government. I commend Representative FOUNTAIN for releasing this information, and believe that as his subcommittee continues to investigate in the matters outlined in this statement, the Congress will be better apprised of the situation, so that corrective legislation may be undertaken where necessary.

The statement follows:

STATEMENT OF REPRESENTATIVE L. H. FOUNTAIN, PRESENTED TO HOUSE COMMITTEE ON AGRICULTURE, JULY 17, 1959

Mr. Chairman and members of the committee, I appreciate the invitation extended by the chairman to present this statement.

I strongly endorse the extension of Public Law 480. This legislation has been of great value in providing needed food and fiber to friendly nations of the world and at the same time helping to dispose of surplus agricultural commodities by increasing exports. In view of the prospect of continued agricultural surpluses in the future and a continued need for these commodities by countries which are not in a position to pay for them in dollars, I believe it essential that the programs authorized under Public Law 480 be continued.

On the whole, I think that Public Law 480 provides appropriate authority for carrying out its stated purposes. I hope and trust, however, that the Agriculture Committee will give careful attention to the provisions of this complex legislation in order to ascer-

tain whether improvements can and should be made.

As you may know, I am chairman of the Government Operations Subcommittee which has responsibility for inquiring into the activities of the Department of Agriculture with respect to economy and efficiency. This subcommittee is conducting a comprehensive investigation of the operations of the Commodity Credit Corporation. As a part of this investigation, we are presently giving particular attention to Government financing of surplus agricultural commodity exports under title I of Public Law 480. Because of the complicated nature and tremendous size of this program, the subcommittee's investigation will not be completed for some time. In view of your present consideration of the program, however, I think it is advisable to call your attention to some of the information developed in our investigation. Since the subcommittee's investigation has not been concluded, I want to stress that my comments at this time represent my personal views as a Member of Congress and are not intended to express the official position of the subcommittee.

Title I agreements under Public Law 480, as you know, are negotiated through diplomatic channels between the U.S. Government and foreign nations. Under the agreements, the Department of Agriculture makes available a specified dollar credit for financing of exports of designated surplus agricultural commodities. The foreign government itself either uses the dollars to finance imports, or authorizes private importers to make use of the dolars for this purpose. Importing countries or firms make their own arrangements with exporting firms in the United States for purchase of the designated commodity. As soon as the exporter loads the commodity on board ship he submits a copy of his sales invoice, along with copies of the bill of lading, to a designated bank (usually in New York) and is immediately paid the face amount of the invoice by the bank. The bank, in turn, is immediately reimbursed for this payment by the Department of Agriculture. The importing country or firm pays the agreed price in local currency to a designated bank in the importing country, where it becomes available for use by the U.S. Government. A large proportion of the funds developed through title I transactions has been loaned back to the importing country.

In title I transactions, CCC pays out dollars for foreign currency at an agreed exchange rate. In some cases the agreed exchange rate has been more favorable than the free market rate. In order to prevent title I transactions from being used to convert foreign currency into dolars at a profit, Department of Agriculture regulations specify that the exporter's sale price must not exceed the prevailing range of export market prices. Each transaction is reviewed by the Department to ascertain whether it is in compliance with the price regulation and a claim is supposed to be made against the exporter if the price is excessive. The ICA also conducts price review on section 402 transactions.

From the begining of the title I program in 1954 until June 30, 1959, title I agreements were negotiated covering commodities with an export market value of more than $3.3 billion. Actual shipments during the same period amount to nearly $3 billion. About $2 billion more has been expended to finance exportation of surplus commodities for foreign currencies under programs authorized by sections 550 and 402 of the Mutual Security Act and administered by the International Cooperation Administration and its predecessor agencies. Procedures used under these programs are similar in most respects to those used under title I.

Transactions under title I have been handled, almost without exception, through private exporting firms. However, the commodities shipped usually either come from stocks of the Commodity Credit Corporation or are subsidized for export by that agency. In some instances, commodities which are neither held in inventory nor supported by CCC—such as evaporated milk and poultry—have been authorized for export under title I upon a finding by the Secretary of Agriculture that they were in surplus.

Although exact figures are not available, our investigation indicates that a comparatively small number of firms have received the bulk of Government funds expended to finance exports under title I. I would estimate, on the basis of preliminary information, that less than 10 firms have probably received at least half of the billions of dollars expended by CCC and ICA to finance commodity exports in the last 5 years. If grain shipments only are considered, I would judge that 5 large firms probably handled more than half of the Government financed shipments. A number of the largest firms, incidentally, although incorporated in this country, are essentially worldwide commodity traders owned or controlled by foreign interests.

I should like to call the attention of the Agriculture Committee to certain areas of weakness or possible weakness in the manner in which the Department of Agriculture is administering the title I program. Ordinarily I would prefer to wait until our investigation was completed before making any comments, but at your chairman's request, I am calling these matters to your attention at this time in view of your current study of the title I program. I want to stress that any critical comments I might make concerning the manner in which the program is being administered should not be interpreted as opposition to the program itself, since I strongly support its continuation.

Congress has a difficult task in trying to ascertain whether the title I program is being administered effectively and economically and whether changes should be made. This job is made even more difficult, in my opinion, by the failure of the Department of Agriculture to provide Congress with complete and unslanted information concerning the manner in which the program is working. This situation is certainly not limited to the title I program and, human nature being what it is, perhaps it is too much to expect the Department to voluntarily disclose program weaknesses while it is claiming accomplishments. I have noticed, however, as I'm sure you have, that the Department is plentifully supplied with favorable information which it disseminates widely.

On the other hand, even though the Department may be aware of things that are wrong with a program, a congressional committee will seldom receive this information unless it really digs for it. And when we do request information which might disclose waste or poor administration, the Department sometimes either takes an unreasonably long time to release it or even tries to refuse it altogether.

I have learned through experience, also, that reports which are furnished by the Department do not always give a complete and fully informative picture. For example, our subcommittee has been receiving for some time what we presumed were copies of all agreements signed under title I. During the course of our current investigation, however, we learned that the published agreements furnished to congressional committees are not always complete. According to the testimony of Agriculture Department witnesses, important parts of agreements are sometimes contained in separate documents which are kept secret. No notice is given in the published agreements that they are not complete.

The basic weakness in the administration of title I program, I believe, is the apparent failure of responsible officials of the Department of Agriculture to appreciate the value of a dollar and to take ordinary commonsense precautions in spending the taxpayers' money.

The Commodity Credit Corporation buys and sells billions of dollars worth of commodities every year. Its inventory is larger than the combined total inventories of the five largest U.S. industrial corporations. An increase or decrease of a fraction of a percent in operating costs means literally millions of dollars to the taxpayers.

Officials of private corporations many times smaller than the CCC are, I am sure, constantly on the alert to make savings or additional profits for their stockholders. They keep closely informed about their operations in order to insure that there are no unnecessary or wasteful expenditures and that sales are not made below the market price. No one expects a Government agency to be run as a profit-making organization or exactly like a private business, but the Government's business should be conducted as carefully as a prudent private businessman would conduct his own operations.

Unfortunately, this is not always true of the Commodity Credit Corporation. Too often congressional investigations have shown instances of waste and carelessness in the operation of the CCC. Moreover, in most of these cases, those in charge of the CCC apparently either did not know or did not care what was going on, because it was obvious that government money was being wasted. As an example, our investigation of CCC activities revealed that dry milk sold by CCC for less than 10 cents per pound had been resold to the Army for 34 cents per pound. The documents provided to CCC as proof of export showed clearly that the milk was being resold to another Government agency at more than triple the CCC sale price. Yet, so far as I know, no CCC official ever questioned these transactions until after the subcommittee investigation.

Since 1954, the International Cooperation Administration and its predecessors have spent about $2 billion to finance exportation by private firms of surplus agricultural commodities for foreign currency. A very substantial portion of these commodities came from CCC stocks and much of the remainder was subsidized for export by CCC. The subcommittee's investigation has developed evidence of extremely large margins, in some cases, between the price at which CCC sold commodities and the price at which ICA financed the identical commodities for export. For example, CCC sold 7,000 tons of broken rice at an average price of about $38 per ton; ICA paid $58 per ton to have the same rice shipped overseas, a difference of more than $100,000 on just one transaction. Yet the head of the Commodity Credit Corporation, when asked whether there was coordination between CCC and ICA with respect to prices, testified: "I don't know why there should be," and went on to say that as long as an exporter got the commodity purchased from CCC out of the country within the specified time "that is all we are interested in."

It is bad enough that CCC officials have never been interested in comparing their sales prices with the prices at which ICA was financing export of the same commodities. What is even worse is that CCC officials have seldom even compared their sales prices with the prices at which their own agency was financing the identical commodities for export.

The Department of Agriculture does conduct a price review on transactions it finances, and that portion of the price which exceeds the prevailing range of export market prices is ineligible for financing. However, price review procedures leave much to be desired. The subcommittee's investigation disclosed that the Department of

Agriculture relies primarily upon competition to keep prices at reasonable levels. However, selection of importers is left entirely to the discretion of the foreign government concerned; the Department has no procedures designed to insure that exporters are selected on a fair and competitive basis. Furthermore, many so-called sales are between two branches of the same worldwide firm; a situation in which competition obviously is not a factor. Affiliated firms, in fact, might often be tempted to increase prices, rather than decrease them, in order to exchange foreign currency into dollars at a favorable rate.

Even if competition did give reasonable assurance that prices were not excessive—and I do not think it does—the Department of Agriculture's dependence on it would still be an abdication of the Department's own responsibility for assuring wise and careful expenditure of public funds.

The Department of Agriculture bases its price review on a comparison of the price charged by the exporter with the "prevailing range of market prices" on the date of the sale. However, with the exception of cotton, the Department has no knowledge of a sale until weeks or months later when banks which have made payment to exporters apply to CCC for reimbursement. At that time a statement by the exporter as to the date the sale was made is submitted. Since the price of the commodity concerned may vary considerably between the alleged contract date and the date CCC receives notice of the transaction, there is an obvious opportunity for submission of false contract dates in order to justify otherwise excessive prices. Furthermore, under this system, a firm could make a contract with a subsidiary to be financed by CCC and then back out without penalty in the event an increase in the price of the commodity made it more profitable to sell elsewhere.

At the time the price review is made, CCC funds have already been paid out to banks which in turn have paid the exporters. Thus, if excessive prices are discovered, it is necessary to attempt to collect claims rather than simply withholding payments. Although CCC has authorized banks to pay out several billion dollars on its behalf, it has specifically released banks from liability in the event they make payments to companies furnishing price review documents which are incomplete or obviously irregular.

The Department of Agriculture does not have—or at least did not have when our investigation began—uniform price review procedures. Instead these procedures vary from commodity to commodity. They are set forth in letters and telegrams issued by different commodity divisions, and are not available in compiled form. There is little, if any, centralized control over the price review procedures—in fact, the subcommittee made a diligent inquiry concerning cotton price review and was unable to find any official in Washington who would admit to knowing what those procedures were, let alone how they were working.

Even though CCC and ICA were both conducting price reviews on the same kind of transactions involving the same firms and the same commodities, their procedures varied widely and we found no evidence that either agency had ever made any attempt to coordinate such procedures.

The subcommittee found that personnel making grain price reviews had instructions not to file claims even where they determined that prices were excessive, unless the price exceeded the average market price by a specified tolerance of as much as 4 cents per bushel. This tolerance was made known to the grain trade, and the subcommittee has evidence that the trade took advantage of this knowledge.

Cotton price review, until after the subcommittee's investigation, was apparently based on the domestic price of cotton, even though CCC was selling cotton for export at prices at least $30 per bale lower. The head of the New Orleans Commodity Office, which handles cotton price review operations, admitted that their procedures were "pretty sorry."

The Department of Agriculture has little real assurance, particularly with respect to cotton, that the quality and quantity of a commodity financed is actually delivered to the importer. The Department has financed exportation of more than 3 million bales of cotton at a cost of over $500 million. However, unless it was specifically requested by the importer, to the best of our knowledge none of this cotton was inspected by the Department to make sure it was the quality it was represented to be. The subcommittee has found a number of instances where cotton purchased from the CCC was resold under Public Law 480 as a much higher quality. In one case, for example, the General Accounting Office traced 206 bales of cotton sold to an exporter for about $95 a bale. The exporter claimed that the cotton was a lower grade than represented in the CCC catalogue and received an average refund of about $20 per bale, making the cost per bale to the exporter approximately $75. The same cotton was then sold under Public Law 480 as a much higher grade, and CCC financed this transaction at a price of $124 per bale, a gross margin of $49 per bale. The head of the New Orleans Commodity Office told the subcommittee that he had recommended that CCC inspect all cotton being financed under Public Law 480 but that the cotton trade opposed this and his recommendation was not adopted.

At the request of the "trade," Department of Agriculture regulations provide that claims for excessive pricing on title I transactions will be made within 90 days or not at all. This, in effect, means that the Department has adopted an administrative statute of limitations of only 3 months—many times shorter than the legal limitations provided for Government claims. The advantages to the trade are obvious, but it is difficult to see any benefit to the taxpayers. Agriculture Department witnesses claimed the provision was necessary to relieve the companies of burdensome preservation of records. However, it is interesting to note that the International Cooperation Administration, which deals with the same firms on the same type of transactions under section 402, has no such arbitrary limitation on claims. Most of its claims, in fact, are made after the 90-day period has passed.

It is interesting, also, to compare the records of the Department of Agriculture and the ICA with respect to claims collected. Even though ICA procedures were far from adequate, that agency collected $1.6 million in claims on some $383 million in transactions examined. Nearly 80 percent, by value, of the claims filed were collected, and only about 20 percent were withdrawn or still pending. CCC, on the other hand, examined transactions totaling well over $1 billion and filed 155 claims amounting to $1,207,000. Only 12 claims, totaling $24,000, or 2 percent, were collected. Sixty-six claims, amounting to $202,000, or 23 percent, were still pending, and 77 claims, totaling $901,000, or 74 percent, were withdrawn. CCC officials had no comment to make concerning this comparison.

Although some refunds have been made as a result of complaints by importers, to the best of our knowledge CCC has never made a single claim on the more than $500 million in cotton transactions it has financed.

I am sure you have noticed, as I have, an apparent tendency on the part of the Department of Agriculture to try to excuse transactions with private firms which result in waste of the taxpayers' money on the ground that Congress directed the Department to utilize private channels of trade and therefore it had no alternative.

I think this kind of excuse is completely invalid.

It is quite true that Congress has stated, on numerous occasions, that private channels of trade should be utilized "to the maximum extent practicable." This is not, however, a mandatory directive to use private firms under any and all circumstances. It simply expresses, in my opinion, the intention of Congress that private firms should be utilized whenever such firms are in a position to provide necessary services at a reasonable cost. On the other hand, the interpretation which the Department appears at times to be suggesting, would mean that Congress intended to require the use of private firms to provide unnecessary services at excessive costs. I doubt that you will find many Members of Congress who would take that position, particularly when some of the major beneficiaries of such a policy would not even be U.S. owned firms.

I think the intention of Congress is well expressed in the following language adopted by the Foreign Affairs Committee without dissent in its report on the Mutual Security Act a few weeks ago:

"The committee desires to emphasize that language in the act with respect to use of private channels of trade 'to the maximum extent practicable' should not be construed as a mandate that private trade channels be used under any and all circumstances without consideration of the cost to the American taxpayer. It should be clear, under any reasonable interpretation of the law, that ICA is not required to finance exportation and sale for foreign currencies of surplus agricultural commodities in a manner which results in excessive costs to the taxpayers. Questions of efficiency and economy should be carefully considered in determining whether and how it is practicable to use private channels of trade in particular transactions."

I could place more credence in the Department's apparent contention that it has been forced to waste money because it was obliged to follow the policy of Congres if it had not been for some past experience with the Department on this very point. You may recall the cheese cases which our subcommittee investigated some time ago. In them, the Department bought cheese and butter and immediately resold it to the same companies at a lower price without ever moving it, sending the companies involved checks for the difference in prices totaling more than $2 million. Our subcommittee concluded that these weird transactions were not in accordance with the law. Our conclusion was supported by the Comptroller General, the Attorney General, and the decisions of every Federal judge who ruled on the resulting court cases. To the best of my knowledge, however, the Department of Agriculture still maintains that it had a perfact right to do what it did.

In the present situation, I might note that Agriculture Department officials testified that they felt that Congress intended any benefits resulting from use of private trade channels should accrue to U.S. firms. Yet the Department's regulations are so loose that these officials had to admit that if Amtorg, the Russian state trading agency, were incorporated in New York it would qualify as a U.S. firm.

It would hardly seem appropriate, moreover, for the Department to contend that there is a mandatory directive to use private trade channels in all cases since the Department has made direct Government to Government sales on at least a few occasions.

I should like to emphasize that I would personally like to see commercial exports expended and the role of government reduced, wherever this is possible on a sound

basis. One of the most important purposes of Public Law 480 is to stimulate and facilitate the expansion of foreign trade in agricultural commodities. Although many studies have been made, if the Department has conducted a really objective and critical analysis of the foreign trade situation with a view to permanent expansion of commercial agricultural exports, it has not come to my attention. I am sorry this has not been done, because we need to be accurately informed about our export situation. We need to know whether our activities have really expanded exports with some hope of continuation or whether what we think are markets will disappear the moment we stop financing shipments.

We need to distinguish, in my opinion, between exports that are essentially government-aided commercial shipments and exports which are essentially gifts to foreign countries without real prospect of developing markets. It is easy to see the benefit to the national economy which can result from Government assistance in developing commercial markets. Most of us would agree, also, that gifts of surplus commodities to less fortunate nations generally have been and are desirable. However, it would be difficult to justify unnecessary dollar expenditures to channel what are essentially gifts through private firms.

I have been able to cover only a very small part of the information developed in our investigation. I am sure no one needs to remind you of the complicated nature and vast extent of the title I program. Our subcommittee will do its best to prepare a comprehensive and objective report on this subject, but it will be many months before we can complete our investigation.

In order to be as helpful as possible at this time, I should like to make the following recommendations representing, of course, my personal opinions rather than the official position of the subcommittee. They are necessarily based on preliminary and sometimes incomplete information. In some cases, also, the Department may already have begun corrective action as a result of our investigation. As you will note, all of these recommendations could be carried out by the Department of Agriculture and other agencies concerned without additional legislation. I want to make it clear that the matters I have criticized are not due, so far as I have observed, to Public Law 480 itself but to the regulations adopted by the Department and the manner in which the program has been operated under those regulations.

In my opinion, the most important single step that can be taken to insure greater economy and efficiency in the operation of the title I program is for Department of Agriculture officials to inform themselves completely about their operations and to take commonsense precautions to see that they are getting a dollar's worth of value for every dollar they spend. I would specifically recommend that the Department of Agriculture:

I. Take immediate action to improve coordination between the various Federal agencies having responsibilities with respect to exportation of agricultural commodities.

II. Make a thorough study of present methods of administering programs for Government financed exports of surplus agricultural commodities, with the view of obtaining greater economy and efficiency in such programs. Such a study should include consideration of:

(a) What services are performed by companies participating in title I transactions where the commodities involved come from CCC stocks or are subsidized by CCC. The study should ascertain whether the services performed are necessary, whether the cost to the taxpayers is reasonable, and whether it would be more desirable to compensate firms performing necessary services as brokers or agents rather than as entrepreneurs.

(b) Whether the present method of allowing banks to make payments on behalf of CCC without opportunity for prior audit properly protects the public interest.

III. Strengthen CCC price review and claims regulations and procedures, including:

(a) Requiring exporters to furnish contract information (such as quality, terms of payment, delivery terms and any other data which might affect the price) on the date the contract is made in the case of all large transactions.

(b) Taking adequate steps to insure that the quality and quantity of commodities delivered in title I transactions are in accordance with the quality and quantity financed.

(c) Comparing prices at which CCC sells commodities with the prices at which it finances commodities to insure that margins are reasonable.

(d) Eliminating the arbitrary tolerance now being allowed before making claims on grain transactions.

(e) Eliminating the arbitrary 90-day limitation on claims.

The above suggestions are, of course, not intended to cover all aspects of CCC financing of commodity exports, but simply to bring some of the more important points to the attention of the Agriculture Committee. I will be glad to provide any further information I have that may be helpful to the committee.

About That Housing Veto

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 9, 1959, edition of the Coos Bay (Oreg.) World. Executive Editor Forest W. Amsden makes some astute observations and suggestions:

PICKING UP THE PIECES

Although President Eisenhower's veto of the housing bill is easy to deplore, such action won't do housing much good. The bill has been vetoed and barring a miracle, Congress will not override the President's objections.

Politically, there can be no recriminations. The people of the Nation, and the people of Oregon for that matter, have twice placed this administration in power and presumably knew the administration's philosophy in doing it. The housing bill veto is typical of that philosophy.

An attempt to override the veto should be made even though it is doomed to failure. After that, Congress must try to pick up the pieces and rescue a number of essential programs—provided for in the Presidentially rejected bill—in new legislation before this session ends.

Shortness of time before the fall recess makes it unlikely that a basic or comprehensive bill can be drawn and passed which would meet the Eisenhower requests. However, legislation can be passed to, for instance, rescue the Federal Housing Administration from a situation which finds it running out of authorization to insure mortgages.

Withdrawal of FHA from the field of mortgage insurance, even temporarily, would be a severe blow to homebuilding, on which this area is so dependent. With clouds of a soft market already on the horizon, failure to increase FHA authorizations might prove to be a disaster.

The Importance of the Dairy Herd Improvement and Sire Proving Program

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. QUIE. Mr. Speaker, next year when the Department of Agriculture prepare its budget and the Appropriations Committees of both Houses consider agriculture appropriations, I hope that a vitally important program of importance to dairy farmers will be given proper funds to insure continued and improved service to agriculture.

I am referring to the dairy herd improvement and sire proving program. This program performs a real service to dairy farmers. It gives farmers essential information that can mean more net income. It is a true cooperative program between the Federal Government, State governments, and the dairy farmers themselves.

At this time, Mr. Speaker, I would like to insert in the RECORD a recent editorial from Hoard's Dairyman magazine on the subject and a statement from the National Milk Producers' Association to a Senate committee:

MORE RELIABLE SIRE PROOFS

Dairymen now have 1,600,000 cows being tested for milk production. Last year they invested over $8 million in this extremely important herd improvement service.

But the testing of the individual cow for feeding, management, and culling information provides only part of the benefits which accrue through our D.H.I.A. program. Of great importance is the use of these records for proving dairy sires.

As each record on a cow is completed, a report is sent to the State D.H.I.A. office where records are checked and forwarded to U.S. Department of Agriculture's Dairy Cattle Research Branch. Here calculations are made to prove sires, quickly and accurately, so that the best sires may be discovered and used to greatest possible benefit during their productive lives.

Last fall we reported in these columns that an estimated 30 to 40 percent of today's sire proofs may be misleading. Too often the proofs have measured the man rather than the sire. In other words, the quality of feeding and management had more influence on the daughters' records than did the transmitting ability of the sire. The effort currently being made is to try to eliminate the environmental influences.

We reported how electronic machines can calculate and print reliable sire proofs almost instantaneously. They can do calculations and come up with reports which are practically impossible to do with manual labor. To prove this statement, it is only necessary to report that a new electronic machine now available can make over 6 million digit calculations per minute.

Because this equipment is available in the department, the service to dairying can be provided at a very low cost. The equipment cannot be used, however, because the Depart-

ment of Agriculture has not asked the Congress for the necessary funds to transfer the present records over to the machines.

The department has not requested these funds in spite of the fact that its own Dairy Research Advisory Committee, for the last 3 or 4 years, has given first priority recommendation to expanding and improving the D.H.I.A. activity. In addition, such organizations as the American Dairy Science Association, the National Milk Producers Federation, the National Association of Artificial Breeders, and many other groups have requested U.S. Department of Agriculture to provide more adequate support for this work. It is difficult to understand how greater evidence could be accumulated to justify the merit of the change to the use of these highly efficient machines.

To convert to electronic equipment the first year will cost $150,000. Thereafter, the cost will be somewhat less. If this sire proving work were done with present equipment and manually, the cost would be at least $275,000 annually and the proofs would still not be reliable because it would be physically impossible for people to do manually what the machines can do so quickly. Because the electronic equipment is already available through the Commodity Stabilization Service, the per-hour cost of using this equipment would be less than one-half the normal per-hour cost to the dairy research branch.

We hope the Congress will use better judgment in approving a U.S. Department of Agriculture budget than the department did in preparing it and submitting it to Congress.

COOPERATIVE DAIRY HERD IMPROVEMENT AND SIRE PROVING PROGRAM

We respectfully direct the committee's attention to the fact that funds available for this program have remained at a static level for several years with provision being made only to meet Federal employees' pay increases authorized by the Congress. We believe the significance of this program to dairy farmers plus the increased demands made on it warrant the action of this committee and the Congress to approve additional funds for program operations.

The cooperative dairy herd improvement and sire proving program performs a real service to dairy farmers. It gives farmers information that can mean more net income. It is truly a cooperative program among Federal and State Governments and dairy farmers. The bulk of the cost is borne by the dairy farmer participants. It is estimated that of a total program cost of $8 million in 1958, some $300,000 were Federal funds and about $500,000 were from State funds. The remainder came from dairy farmers. The success of the program, however, depends greatly on the processing of the data received by the U.S. Department of Agriculture and the dissemination of this data to farmers.

The basic data on individual cow performance is collected by D.H.I.A. supervisors and forwarded to the State colleges. The colleges in turn forward this information to the U.S. Department of Agriculture. This data is processed to determine the production performance of daughters of individual bulls. This performance is then compared with the performance of the dams to determine sire proving. Such proving can indicate the bulls of superior transmitting lines. This is the information that dairy farmers and artificial breeding associations use in their breeding programs. This information, together with other data available from D.H.I.A., helps farmers adjust their herd management to assure best possible income return.

The economic significance of information through D.H.I.A. to individual dairy producers can best be illustrated by the following table based on D.H.I.A. information gathered in 1957. The table shows the relationship among the level of production to feed and other costs and income:

Level of production	Feed costs	Total costs	Net returns
4,000 pounds	$115	$232	—$4
6,100 pounds	143	286	31
8,000 pounds	168	336	64
9,894 pounds	180	360	76
12,000 pounds	194	388	111
14,000 pounds	215	430	153

The problem we face and the one we ask the committee to give its attention is the threat to the success of the DHIA program unless steps are taken to make it possible for the U.S. Department of Agriculture to participate fully in the program by cutting down the time lapse between receipt of data and publication of results. At the present time this lapse is estimated between 10 and 12 months. This is inordinately long. The solution to the problem is quite simple and calls for a minimum cash outlay. An increase of some $150,000 in the Department's budget request for DHIA will make possible the mechanization of data processing to the point where up to date and more complete sire proving information can be placed in the hands of dairy farmers in reasonable time to be useful.

More Fizzles

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I include an editorial from the Washington Post and Times Herald, June 17, 1959. I commend it to the attention of the Members of the House:

MORE FIZZLES

It has been obvious for some time that this country is making very little headway in overcoming the Russian lead in earth satellites and ballistic missiles. But the failure yesterday of the latest American satellite launching together with the fifth successive fizzle of an Atlas intercontinental ballistic missile and the malfunction of another Polaris missile adds up to a useful and forceful reminder of how seriously the country's rocket program is lagging.

The Nation was assured months ago that the Atlas would be ready for the troops by the end of this month. The date has been officially postponed, and it seems clear enough that no one at this stage can be sure that Atlas will ever be a dependable or really useful combat weapon, even though it may ultimately be good enough for space research projects in which an occasional failure is not so critical. Polaris is a newer weapon and deserves a further period of trial, but the repeated failures here, too, are disquieting. And of course in the satellite field, the Russians remain far ahead in thrust and payloads and for that reason could well be first with a man in space.

The pinch-penny research budgets of earlier years and the marvelously confused and disorganized direction of development efforts since Sputnik I have both contributed to this potentially disastrous lag of the American missile and space program. Perhaps there is no way quickly to build the great fund of experience and to achieve the consistency of direction and of effort that seem to be needed for success in these fields. It may be that a dictatorship has a democracy at an unavoidable disadvantage.

We think that the President could move things along more quickly, however, if he and his Defense Secretary would stop trying to make American progress look better than it is and avoid any more overly optimistic estimates like that on the operational date for Atlas. A little sense of urgency and realism at the top might help to straighten out the rivalry ridden confusion down below in which the American space program seems to be floundering.

Less Regulus, More Regular

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. PORTER. Mr. Speaker, in a blast-off from the U.S.S. *Barbero* to Mayport, Fla., the Postmaster General a few days ago shook loose a sizable chunk of taxpayer dollars when he projected the first official missile experiment of the U.S. Post Office Department.

Mr. Speaker, I feel the taxpaying public of the United States is entitled to know to which appropriation the cost of this experiment was allotted. The taxpayer is also entitled to know the cost of printing both the envelopes and the enclosures that were transported in the mail missile.

The Regulus I, which was used as the carrier for the missile mail, is now outmoded and has been replaced by flashier flashes in the sky.

It is hard at this point to determine whether the record of our launching of missiles is poorer or better than our record of postal service. Accordingly, it is difficult to conclude whether it would be better to send mail by missiles or missiles by mail. One thing is certain—our mail service should be more regular than more Regulus.

A few days after the mail by missile episode, the Washington Post published a cartoon by Herblock showing mail being unloaded from a missile and bearing the caption that if this speedy mail movement is continued, it will soon be possible to transport mail across town in fewer than 4 days.

Mr. Speaker, as a member of the House Committee on Post Office and Civil Service, I intend to ask that a financial accounting be given of the Postmaster General's latest public relations stunt. The neatest trick the Postmaster General might turn is to make suitable use of available transportation and distribution media. In the Portland region of the Postal Service, there have been highway post office routes discontinued in recent weeks. We would not have this problem if the Postmaster General were not playing games with sectional centers and satellite offices, to use the outer space terminology of the Heller Associates engineering firm.

Missile mail and satellite offices are being used to throw stardust in the taxpayers' eyes. Congress should act now to demand a strict accounting of postal expenditures in these fields and in the area of public relations as well.

Wiley-Dondero Canal Living Monument to the Efforts of Wisconsin's Senior Senator, Alexander Wiley

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 17, 1959

Mr. PROXMIRE. Mr. President, we recall that on June 26 the St. Lawrence Seaway was formally dedicated.

The ceremony marked the completion of a 50-year struggle by those who dreamed that deepening and improving the St. Lawrence River would ultimately serve the interests not only of the great agricultural-industrial complex of the Midwest but also the economy and defense of the whole Nation.

Today I should like to pay tribute to my colleague who, through his relentless effort, helped to spearhead the campaign to successfully enact legislation to authorize the modernization of the St. Lawrence Seaway. I speak, of course, of the senior Senator from Wisconsin [Mr. WILEY], from my own State of Wisconsin.

In recognition of his efforts as a sponsor of the seaway legislation, a portion of the great waterway bears his name, having been designated the Wiley-Dondero Ship Channel.

Recently the Evening Telegram of Superior, Wis., carried a splendid article reviewing the commendations received by the senior Wisconsin Senator for his fine efforts on behalf of the seaway legislation. The article reflects the views not only of those who worked shoulder to shoulder with him on behalf of this project, but also of those who, though opposing the project, graciously recognized his leadership in achieving enactment of the seaway law.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILEY-DONDERO CANAL LIVING MONUMENT TO THE EFFORTS OF WISCONSIN'S SENIOR SENATOR

The St. Lawrence Seaway project had been attempted for a good many years before work actually began on the huge undertaking. It was only after a long uphill fight that the greatest engineering project of the second half of the 20th century in the United States, as it is referred to, became an actuality, greatly through the efforts of Senator Alexander WILEY, of Wisconsin.

The living monument to Senator WILEY's efforts is the Wiley-Dondero Canal, the 10-mile long shipping channel which is an indispensable part of the deep-draft seaway. The canal was named in honor of Senator WILEY and former Michigan Representative George Dondero who piloted the Wiley seaway bill through the House of Representatives.

COMMENDATIONS

Here are but a few of the commendations paid to Senator WILEY.

Senator H. Alexander Smith, New Jersey:

"It is often said that some segments of the public may tend to forget some of the accomplishments of their legislators in Congress. I believe, however, that the tribute to the man who has so consistently set upon and hatched the idea that has at last come into fruition in the legislative measure about to be acted on finally by the Senate. I pay tribute to the senior Senator from Wisconsin, Mr. WILEY. His great humility and fine self-effacement have, of course, caused him to omit mentioning his own name. However, all his colleagues pay testimony to the persistence, vigor, and great vision with which he has pursued this great cause. Today, we saluate him for his victory in connection with this great ideal."

MOMENTOUS

Senator Potter, Michigan:

"Mr. President, I wish to pay tribute to the leadership shown by the senior Senator from Wisconsin [Mr. WILEY] throughout the work on this momentous piece of legislation.

"This is the first Congress in which the bill has received favorable consideration by either House of Congress. I wish to join the other Senators who have spoken in expressing my appreciation for the leadership shown by the senior Senator from Wisconsin, Mr. WILEY.

"So, Mr. President, this occasion is a momentous one which the people of the great Midwest will cherish for many, many years to come."

Senator HUMPHREY, Minnesota:

"Mr. President, I cannot help notice how much joy and happiness there is in this Chamber. In victory there is great joy. There is today no Member of the Senate who deserves to feel a sense of accomplishment and fulfillment of purpose more than the Senator from Wisconsin.

"I was highly honored to be privileged through the good advice of the Senator from Wisconsin, of being a cosponsor of S. 2150."

Senator KEFAUVER, Tennessee:

"Mr. President, I cannot let this occasion pass without adding a word of commendation of the distinguished senior Senator from Wisconsin and the other Senators who joined him in bringing about the fulfillment of the long-time dream of a St. Lawrence River Seaway.

"The senior Senator from Wisconsin has exercised a great deal of statesmanship in bringing together the Senators and the interests of various sections of the country and finally accomplishing the passage of the proposed legislation."

Senator Ferguson, Michigan:

"Mr. President, I wish to say a few words on the subject in praise of the distinguished Senator from Wisconsin. At times it can be said that, after all is said and done. I believe this is an exception. The exception is that, in this instance, we have finally done more than we said."

Senator Lehman, New York.

"Mr. President, I take great pleasure and satisfaction in congratulating the distinguished chairman of the Committee on Foreign Relations, the senior Senator from Wisconsin, Mr. WILEY, on the final enactment by both Houses of Congress of the St. Lawrence Seaway bill.

"I wish to express my satisfaction, and appreciation for the efforts of the senior Senator from Wisconsin. Without his interest, without his determination, and without his continued agitation for this legislation, particularly after fine record with respect to the St. Lawrence Seaway should not be forgotten by the people of our country. In particular, it should not be forgotten by the people of Wisconsin, who, like the other lake States, will reap tremendous dividends from the seaway down through the years. The Wiley law is generally regarded as the greatest single milestone in the history of the lake States in this century."

Senator Knowland, California, Senate Republican leader:

"I should not want this opportunity to pass without paying my tribute to the distinguished Senator from Wisconsin, chairman of the Foreign Relations Committee (Mr. WILEY). Over a period of a great many years he has diligently worked for the enactment of this legislation. It has been a rather heartbreaking job over the years, because of the obstacles of one type or another which have been thrown in the way."

Senator DIRKSEN, Illinois:

"So, Mr. President, today I pay tribute to the chairman of the Committee on Foreign Relations for his efforts without which the final enactment of the bill would have been impossible."

Senator DOUGLAS, Illinois:

"I should like to add a word of congratulation to the eminent chairman of the Committee on Foreign Relations for the part which he has played in securing the passage of the bill. As a somewhat junior member of the Senate, I have watched his very effective work, not only in committee and on the floor, but off the floor; and I would say that his has been perhaps the greatest effort toward getting the bill passed. We of the Midwest owe a debt to the Senator from Wisconsin. I am sure the citizens of his State are grateful.

"I want to express the appreciation of the members of all parties for the very effective and untiring work which the distinguished senior Senator from Wisconsin, who is chairman of the Committee on Foreign Relations, has devoted to this task."

Senator AIKEN, Vermont:

"Let me say that for the past 2 years it has been a great pleasure to be a cosponsor of the St. Lawrence Seaway bill under the able, sincere and enthusiastic leadership of the senior Senator from Wisconsin."

Senator COOPER, Kentucky:

"Mr. President, I should like to join my colleagues in expressing admiration for the successful fight which the senior Senator from Wisconsin [Mr. WILEY] has made in connection with the passage of the St. Lawrence Seaway bill.

"It was the long-continued insistence and the fine and convincing arguments of my friend, the Senator from Wisconsin, which removed any doubt I may have had about the bill. I congratulate him for the successful outcome of his efforts in connection with the great St. Lawrence River project."

Senator Thye, Minnesota:

"Mr. President, when I came to Washington I found such Members as the senior Senator from Wisconsin [Mr. WILEY] working vigorously to accomplish the development of the seaway. I was pleased to see that a great many of the newspapers of Wisconsin commended the great contributions made by our colleague in achieving the passage of Wiley bill, S. 2150, to complete the Great Lakes-St. Lawrence Seaway."

Senator Gordon, Oregon:

"Mr. President, I have been glad to note that the newspapers of Wisconsin have given well-deserved credit to the senior Senator from that State [Mr. WILEY] for his valiant and successful sponsorship of the St. Lawrence Seaway law."

NEWSPAPER COMMENT

Two Rivers Reporter:

"No man deserves more credit for the success of the project than Wisconsin's Senator ALEXANDER WILEY. It was he who, more than any other legislator, worked unflaggingly

to engineer the undertaking through both Houses.

"While Senator WILEY was, of course, thinking of benefits for his State, he was nonetheless an exponent of the seaway for the Midwest and the Nation as a whole."

Sturgeon Bay Advocate:

"Senator WILEY in his efforts on behalf of the bill has displayed genuine statesmanship in the service of both his country and the State which he presents in the Senate."

Wausau Daily Record-Herald:

"Wisconsin's Representatives and Senators, it may be noted, were in unanimous support of the legislation, but special credit belongs to Senator WILEY who sponsored the seaway proposal in the Senate and played a leading role in obtaining its passage."

Burlington Standard-Democrat:

"Our congratulations to Senator ALEXANDER WILEY for his successful labors toward the passage of the St. Lawrence Seaway project. Our Wisconsin senior Senator worked hard for this State for many years, being the only man, at times, who would stand up and be counted."

Wisconsin State Journal:

"This State can be proud of its many hard-to-lick citizens, public and private, who have fought for the seaway for more than 20 years.

"In that category must be included ALEXANDER WILEY.

"It was WILEY, perhaps more than any other individual, who kept the seaway issue alive during its darkest days."

Wisconsin Rapids Daily Tribune:

"Principal spokesman for the administration in steering the St. Lawrence Seaway legislation to final enactment was Senator ALEXANDER WILEY. He led the fight in a manner which gained for him the admiration and respect of all his colleagues, Republican and Democrat alike, regardless of whether they favored or opposed the project. He deserves a great part of the credit for bringing the seaway to realization. Wisconsin should be proud to acknowledge his splendid work and thank him for it."

Eau Claire Leader-Telegram:

"Senator ALEXANDER WILEY, of Chippewa Falls, has been in the forefront of seaway battles during his three terms as United States Senator and it is fitting that the legislation finally passed bears his name—the Wiley-Dondero bill. WILEY led the fight in the Senate and Representative DONDERO, Michigan Republican, was floor manager of proseaway forces in the House."

SENATORIAL OPPONENTS

Senator BEALL, Maryland:

"Mr. President, as a member of the opposition, I congratulate the Senator from Wisconsin for the tremendous job he has done.

"I think the Senator from Wisconsin is to be congratulated for his generalship in the handling of parliamentary matters in connection with the bill. I cannot refrain from congratulating the Senator from Wisconsin on his victory today."

Senator BUTLER, Maryland:

"May I say that I congratulate my very worthy adversary, the Senator from Wisconsin, not only on behalf of myself but of others who participated in the opposition."

Senator STENNIS, Mississippi:

"I recall that when I first came to the Senate, more than 6 years ago, the Senator from Wisconsin was working on a bill on the same subject matter. He has spoken on this subject many times since then, always with great sincerity, earnestness, and persuasion. I know he has worked very persistently for the bill, both among his colleagues in the Senate and elsewhere.

"As one who did not vote for the bill, I wish to commend him very highly.

"I feel that at times his work made the difference between abandoning the bill and continuing with it. I salute and congratulate him on his fine achievement, which I know will prove to be most worthwhile for a great many people, even beyond his own State."

Security of Workers' Jobs Should Begin at Home

EXTENSION OF REMARKS

OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. SILER. Mr. Speaker, I am always perturbed by any indication of American workers losing their jobs. Therefore, I have been considerably concerned by an article under the heading "Ghost Plants in Packing Town." This article should be seriously pondered by Members of Congress, especially that part of the article calling our attention to the foreign products coming into our American stores at the present time. As the article says:

We have no quarrel with our worker friends in other countries. They too have their problems. But, it would seem to us Americans that the security of workers' jobs should begin at home.

How true that is. Every time an American worker is displaced or loses his job it should be considered a real tragedy. And if I should hear of two dozen men in my district losing their jobs, I would want to put a rough pebble in my shoe for at least 1 full day so that I could feel this evil thing and keep it on my mind and try to figure out some kind of remedy. We must never forget that our first obligation, after our duty to the Lord, is toward our own country and its people, all of which the Lord Himself gave us to honor and cherish. The article I have mentioned is as follows:

GHOST PLANTS IN PACKING TOWNS

(By Patrick E. Gorman and Thomas J. Lloyd)

The saddest sight on the American industrial scene is a closed factory or plant. From coast to coast these sad sights are increasing. These empty buildings look like, and actually are, job morgues. Thousands of workers' jobs were destroyed when the plants closed, and most of them are closed forever.

MORE THAN ITS SHARE

The meat packing industry has had more than its share of these graveyard plants. It is doubtful if slaughtering or production will ever resume in them again. Packing towns are becoming ghost towns. Some say that mechanization is to some extent responsible. Others blame these sad sights upon poor management. Management, very erroneously, criticizes the unions for this unhappy situation. Whatever the cause, the tycoons in the packing industry should shed a tear over their inability to cope with an industrial situation which could, and should, be remedied, thus saving the jobs of thousands upon thousands of workers who need them.

It is hard to believe that Chicago, which was once the heart of the giant meat industry, is now but a shadow of its former stature. The Swift & Co. plants which normally employed nearly 10,000 workers in Chicago, now look deserted and forlorn. In all of the Swift operations in Chicago at present, there are but slightly more than 900 still enjoying production employment with this giant concern. The ghostly atmosphere hovering about the Armour plants in Chicago is equally as pathetic. No longer does Armour slaughter or kill hogs in this once powerful metropolis of meat packing. Wilson & Co. long since has moved out of the Windy City, lock, stock, and barrel.

If, perchance, bad labor relations did have something to do with the situation, then there is the consoling thought that our international union in no manner is responsible. We are proud that we have lived up to our agreements faithfully with no quickie strikes or slowdowns permitted.

Chaos, sooner or later, had to develop because only recently the shelves of our retail stores were being abundantly stocked with canned meat products labeled, "Produce of Argentina." These Argentina products came from packing plants bearing the same name as several of the large meat packers of the United States. Recently, by Government order, all this has been remedied, at least temporarily, because of the hoof and mouth disease among cattle which is raging rampant in some South American countries.

FOREIGN MEAT

We ask the wives of our members, the next time they go to the butcher shop, to look around. What will they see? Canned hams galore from Denmark, Holland, Sweden—in fact from all countries not operating directly behind the so-called Iron Curtain. Shipload after shipload of beef from our friends in Australia are finding their way into the markets of the United States, and strangely again the same powerful names in the American meat packing industry are operating in the land "down under."

It is impossible for strictly American operated meat packers to compete with the somewhat lower quality of beef from Australia. It is dumped on the open market cheaper per pound than the American packers can produce it. There is every likelihood that our American packers who have plants in South America and other foreign countries would like to bring in more of the products produced in these foreign lands. The reason—packing plant workers in the United States are employed under good union conditions. They benefit from the American standard of living. They receive wages and working conditions better than that which is received by workers in foreign lands. If the American market can be flooded with meat from foreign countries, production here will fall off badly. If this is accomplished our unions could therefore be weakened, and a harder bargain can be exacted at the conference table.

Certainly we are proud of the wage rates we have negotiated in years gone by for the men and women in the meatpacking industry, but it has been difficult for all workers to keep pace with the high prices of all commodities.

MORE GHOST PLANTS

Now comes more ghost plants in packing towns. Armour & Co. just recently announced the closing of six more of their plants. This giant in the meatpacking industry will then have but 1,000 people in all of its Chicago operations. The jobs of 9,000 formerly employed by Armour & Co. here are in job morgues, never, except by miracle, to be revived.

"NO HELP NEEDED"

Two thousand Chicago packinghouse workers in this latest Armour layoff will be walking the streets going from employment gate to employment gate of industries in which they are not experienced, and the probability is that they will face the heartbreaking sign, "No help needed." Other Armour plants which will close, according to their statement, will be at Columbus, Ohio; East St. Louis, Ill. (with some 1,500 employees); Fargo, N. Dak.; Denver, Colo.; and Tifton, Ga. Previous to this announce-

ment, Armour abandoned its plant at Atlanta, Ga. Armour also may abandon their plants in Kansas City and St. Joseph, Mo.—not only abandon them, but demolish them. If this is done, it is probable that they will build a new plant, to take the place of the two old plants, somewhere in between Kansas City and St. Joseph.

DREAMS DESTROYED

In the meantime, the ranks of the unemployed in the meatpacking industry, as a result of the closing of all these plants which should be operating, will look back upon these ghostly morgues with heavy hearts. These were the places in which they earned their livelihoods. From these plants, paying good wages, they had hoped they could send their children to college. Gone are the hopes that they could buy their own homes not too far away from packing town.

All of these dreams are vanishing because, as indicated, packing towns in most cities are becoming ghost towns.

It seems that there is a responsibility on the part of management and the unions in the industry to make more frequent use of the conference table; for each to lay their cards on the table and examine carefully all of the reasons why these sad sights of closed plants are multiplying. A remedy certainly can be found between management and the unions, and when the remedy is found both should pound hard upon the door of Uncle Sam with a demand that "We have a right to live too."

We have no quarrel with our worker friends in other countries. They too have their problems. But, it would seem to us Americans that the security of workers' jobs should begin at home. Other countries, where our Nation is giving a helping hand, have no unemployment problems. They have our open door here for their products, and in some countries of our foreign friends there actually is a shortage of workers instead of unemployment and closed plants as we witness here.

Sooner or later, there will have to be regulations. Why isn't it done before closed doors will appear on every industrial scene to a greater extent than what exists today? A body can give only so much blood to save another without dying itself. Such is quite true on the world political scene. It is about time for action, because really, it's later than you think.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Independence Day Address

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. PUCINSKI. Mr. Speaker, I would like to take this opportunity to include in the Appendix of the RECORD my remarks delivered at the Independence Day observance which was sponsored by the Edison Park Community Council at Olympia Park, Chicago, Ill., on this past Fourth of July. The Edison Park Community Council is to be congratulated for arranging this patriotic gathering to call attention to the significance of this day. The remarkable spirit of the people present at this gathering clearly showed that in the Edison Park area of Chicago the full import of the meaning of Independence Day was deeply felt by the entire community. I am proud that the Edison Park area is in the 11th Congressional District of Illinois, which I represent. My remarks follow:

REMARKS BY HON. ROMAN C. PUCINSKI, 11TH CONGRESSIONAL DISTRICT, ILLINOIS, DELIVERED AT THE INDEPENDENCE DAY OBSERVANCE SPONSORED BY THE EDISON PARK COMMUNITY COUNCIL IN OLYMPIA PARK, AVONDALE AND OLYMPIA AVENUES, CHICAGO, JULY 4, 1959

Mr. Chairman, ladies, and gentlemen, may I first take this opportunity to thank the Edison Park Community Council for arranging today's Fourth of July tribute. I was very interested to learn from the Association of Community Councils that your community celebration being held today is one of the last such neighborhood celebrations still being observed in this city. It is lamentable, indeed, that the annual Fourth of July observance has now become an occasion for "taking a day off," so to speak; a day for going out in the country; perhaps playing golf; or maybe even catching up on the many household chores that confront the average homeowner.

Instead of seeing headlines which rally the Nation to observe this most beautiful of our holidays, which reflect upon the independence of our Nation, in modern America, the headlines issue sober warnings that hundreds of people will be killed in traffic fatalities over the Fourth of July weekend.

Because you people and the committee of Edison Park Community Council do take the time and effort to put this holiday in its proper perspective, the residents of Edison Park, at least, are reminded of the real meaning of this holiday. I congratulate you and commend you for setting aside the more comfortable pursuits in which you could today be engaged, and instead are participating in this tribute.

God grant that what you are doing here today could again be repeated all over our Nation so that we, as Americans, could properly reflect on the full meaning of the Fourth of July, on the depth of Independence Day, and what it really means to the people of our Nation.

I was indeed very saddened when I read an account by an enterprising Chicago reporter last week that a survey which he had conducted among many people of our city showed overwhelmingly how few Americans really understand the meaning of July Fourth. I might say I was even chagrined to see how many people thought that July Fourth is a tribute to the end of World War I. Others expressed a belief that it is a holiday signifying the end of the War of 1812. Tragically, only a relatively small percentage of those interviewed by this reporter actually knew that the Fourth of July is an annual tribute by the American people to the Declaration of Independence signed by the Founding Fathers of this Nation, a declaration which had dedicated this Nation to the fundamental belief that people are endowed by our Creator with the inalienable right to be free.

Because of the fine work which the people of this community are doing to keep the true spirit of this holiday, I feel certain that if that reporter were to conduct his survey in this area, he would certainly find much more impressive results.

What is the real meaning of this holiday?

On July Fourth in 1776, the Declaration of Independence was signed. The 56 men who gathered in that hot and sultry room in Philadelphia so long ago to read and sign a paper that had been drafted by Thomas Jefferson did not know they were helping to create the Eighth Wonder of the World.

The simple words reaffirmed their conviction in the belief of human dignity and their disgust with tyranny. Each man who signed his name pledged his wealth, his position, and his life to preserve the message of justice contained on that single sheet of paper, regardless of the personal consequences to himself. And largely because of the efforts of these few men, the Thirteen Original Colonies went to war with England and won the independence they were seeking so strongly.

Their single-minded devotion to justice and equality for all men, not only those of their generation and their century, but to those who would come after them and would witness the changes of an expanding nation, helped to make this document an enduring guidepost for our democratic concept of Government. This guidepost has lasted, inviolate and unchanging, for almost two centuries. If we want to continue its tradition as the greatest example of dedication to democratic principles the world has ever known, we must take the time to refresh our memories. We must remember what this Declaration of Independence stands for, and further, what we ourselves stand for today.

"That governments are instituted among men, deriving their just powers from the consent of the governed—that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it." Those words are as fresh and eloquent this afternoon as they were 183 years ago, and they apply to each of us in 1959 as much as they did to our forebears. This, then, is the fundamental precept on which our Government is based.

Think of it, for a moment. Each of us has been guaranteed by right, not privilege, the ability to speak freely, without fear of persecution, and to worship as our minds and hearts urge us. If the Government we have voted into office does not measure up to its promises and our expectations, we can express our disapproval by voting it out of office. We can sit down and write to our Congressman, telling him what we think of the job he is doing; and if our opinion is unchanged when he runs for reelection, we can express our approval or distrust with a vote for or against him.

Government is so much a part of our lives today that we must all participate in its growth and development. We parents should encourage intellectual curiosity in our children to explore American history, to compare it with histories of other nations, to find out more about our vast country in relation to its position with the neighboring powers in the world. As parents, we must guide our youngsters to better enable them to meet the new problems of their generation and to solve some of the old ones. Our Government needs intelligent, receptive and resolute people, with the courage of their convictions and the ability to carry them out.

In many nations of the world, children are taught their national history throughout every year they attend school. They are encouraged to think about politics from a very early age; to discuss current events and their significance to their own countries and to the world in general. Pride in nationality and heritage is part of the basic makeup of most of the nations on our globe.

In America, however, too often our youngsters place their greatest value on the material aspects of their surroundings, and I fear that, more and more, we are failing here in this country to instill in our young generation the full meaning of liberty. History teaches us that the democratic processes of great nations had been subdued or even brazenly crushed by tyrants and dictators only because the people failed to recognize that to be free requires great sacrifices.

These sacrifices manifest themselves in many ways. One such sacrifice is the giving up of aimless leisure—the complete waste of time which so many of us, both young and old, engage in—and instead use this time for worthwhile intellectual pursuits toward a better understanding of the complex structure of a republic.

Orators all over the country are today extolling the great virtues of freedom and liberty. And yet, do we really know what is the true meaning of freedom and liberty? I am distressed that so many of our Americans who speak with great pride of their own liberties on the one hand, can be so quick to deny these same liberties to others on the other hand, whenever we disagree with them.

What do I mean? Simply stated, if we are going to have liberty, we must have liberty for all. The very cornerstone of liberty and freedom is the right to dissent or disagree. Only when we Americans recognize this fundamental right to disagree can we give full meaning to the words "liberty" and "freedom."

Your right to disagree with your Government; your right to disagree with your Congressman; is inviolate; but you must remember that if you are to have this right, you must also recognize that your fellow citizen has this right.

This is a fact that more and more of our citizens tend to forget. As a result, the Nation is slowly slipping into the limbo of conformity. Nothing can destroy our Nation faster than conformity because it is out of

the free discussion of debate and ideas—even though frequently we do not agree with some of these ideas—that we find the basis for the dynamics of a republic.

Emerson once stated, "Whoso would be a man must be a nonconformist."

We must distinguish, however, between irresponsible obstructionism are responsible nonconformity if we are to conduct ourselves as decent Americans.

The men whom we are today honoring, the authors of this great Declaration of Independence, the founders of our Republic under its concept of freedom for all, were perhaps the greatest nonconformists in the history of this country. Because they refused to surrender to the ideology of tyrannical rule, they banded together and had the courage to write a new concept around which free people could rally.

Imagine if you can what those, who today find so little patience with nonconformists, would be saying about Jefferson and his followers if they attempted to write a declaration of independence in 1959 instead of 1776.

Admiral Rickover, the father of the atomic submarine, likes to tell the story of the ancient Locrians in Greece, who gave freedom of speech to all of their citizens, though at a cost which many must have considered too high. He recalls that at public meetings anyone could stand up and argue for changes in law and custom on one condition: a rope was placed around his neck before he began to speak, and if what he said did not meet with public approval, he was forthwith hanged.

Here in America in our time it would indeed be tragic if democracy deteriorated into mass tyranny over the unconventional individual.

I subscribe fully to what this great modern day Navy admiral recently stated when he said that democracy and equality do not require that we deny to the minority of people with creative minds the right to use them in their own way and to their fullest potential. People who use their minds successfully ought not to be expected to pretend they are just like everybody else.

We are today confronted with perhaps the most dangerous situation that has faced our Nation by the ever mounting rise and despotic ambitions of international communism, stubbornly determined that the free institutions, which we honor here today, can be destroyed and replaced with the tyranny of Kremlin rulers. This Nation will find means of survival only by giving full encouragement to those who come forth with new ideas to fight this menace.

It is from diversity of ideas that springs the great strength for a free people to survive. When we deny any American an opportunity of full and free expression, we rob ourselves of that precious quality that distinguishes man from all other orders, his stubborn determination to think for himself and his inalienable right to be different.

It is up to you parents to encourage your children toward the development of intellectual curiosity. This is what disturbs me about some aspects of our modern educational institution. In too many instances, whether by design or just outright neglect, our youngsters are being denied the full facilities for learning the basic 3 R's. In some communities, homework is viewed with scorn. I hope that you, as parents in a wonderful community, will observe more intensely whether your youngsters are getting the fundamentals of education. Remember this: An American, to fully respect and honor his freedom must first be able to understand the complexities of his society.

In Russia, under Communist rule, in the satellite countries, Poland, Czechoslovakia, Lithuania, East Germany, Hungary, and Rumania, the Communist governments imposed on those traditionally freedom-loving people their determination that the young generations must learn only what the Communists want to teach them. By sterilizing the thinking processes of these young people, the Communists are convinced they can preserve their own dogmatic principles and survive. We in this country must resolve that our young people will be given the tools with which to think, so that never will our American people have to march in the single cadence as is being forced upon the people of these Communist-enslaved nations.

Public apathy is the worst scourge of any national or political ideology. We in America take so much of our material wealth and our prosperity and our leadership of other countries for granted. We don't stop to realize one simple fact: The Communist elements in the world believe just as strongly in their form of government, to the point of forcibly conquering other nations and incorporating them into the Communist governmental structure. How, then, can we afford to take our democratic principles and our guaranteed freedoms so lightly?

The time to resist those powers who would conquer the free world by force is not when their invasion forces are sighted on the horizon, but by stamping out their pervasive influence now, before it has even the smallest chance to become rooted. To do this, we must be armed with a belief in our Government and our elected representatives.

We must recognize the rights expressed in the Declaration of Independence and guaranteed us in the Constitution—the rights of life, of liberty, and of the pursuit of happiness. This isn't a stock phrase we must memorize in school and promptly forget at graduation. We must have a knowledge of what these rights provide, we must recognize them, appreciate their value, and exercise them in our daily lives.

The Declaration of Independence is our testimonial to the intrinsic value of every human person, and it is the first such document in the world to do this. We have been endowed with the powers of selecting capable Government officials, and we are free to use this power within the flexible bounds of a two-party system.

Congress and each individual Congressman must be sensitive to the will of the majority of the people represented. However, if the people through lethargy or ignorance or indifference do not express an opinion, how can Congress be truly expected to anticipate the will of the population? Government is only as good as the people behind it, and that, my friends, places the responsibility squarely on our shoulders.

Our responsibility is to become worthy of our heritage, to carry on the traditions of liberty and human equality through our own generation and pass it on to the next. If we are to preserve and perpetuate what has been given to us at such great costs, we must educate ourselves to the discrepancies in the political ideologies which are confronting us today. We must keep faith with the future by studying and benefiting from the experiences of the past.

I am certain that so long as organizations like the Edison Park Community Council and its officers continue arranging these Fourth of July observances, where the entire family—mother, father, and their children—can come here and pay tribute to the Declaration of Independence and the great flag of America—now with its 49 stars, and soon with a 50th star—this community at least will not fall prey to foreign ideologies. Our freedoms are secure so long as you demonstrate your great respect for the Declaration of Independence, and for this, I admire you and express pride in representing you in Congress.

Thank you.

America's Territorial Sea

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. FLOOD. Mr. Speaker, in the course of my addresses on the Panama Canal, I have made frequent reference to the question of territorial seas in connection with an attempted encirclement by the Republic of Panama of the Canal Zone.

An informative article dealing with the measurement of territorial sea by Mr. Neal Stanford was published in the July 11, 1959, issue of the Christian Science Monitor, and is included in these remarks:

AMERICA'S TERRITORIAL SEA—AN INTIMATE MESSAGE FROM WASHINGTON

(By Neal Stanford)

Everybody (well, nearly everybody) knows that the U.S. territorial sea extends 3 miles (nautical miles, that is) from the coast. In this area U.S. sovereignty is complete—though ships of other nations normally are allowed to enter the 3-mile limit under what is called the right of innocent passage.

Figuring out America's territorial sea, then, sounds like a very simple operation—just draw a 3-mile limit around the United States—and there you have it.

The trouble is—there you don't have it—as I quickly discovered from the State Department's geographer, G. Etzel Pearcy. Figuring out this country's territorial sea, I found can be as complicated as charting outer space or harnessing the atom.

This question of just where our 3-mile limit really is can be very important—for an unfriendly ship operating only a few yards within U.S. territorial waters might well create an incident. Also certain countries (the U.S.S.R., the United Arab Republic, Panama, among them) are trying to get international agreement to push territorial waters out to a 6-mile limit. They failed some months ago to sell this proposition to a United Nations-sponsored conference—but they intended to renew their bid at another UN meeting in Geneva next spring.

There are innumerable things that make charting this country's 3-mile limit (or a 6-mile limit, if it should come to that) frightfully complicated. The reason is that in order to have the territorial set charted exactly 3 miles mrom any point along the coast—a highly irregular coast—some very fine and precise measurements have to be taken. Immediately the question arises as to what to do about bays, inlets, islands, river deltas; what about low tide and high tide; piers, breakwaters; buoys, bridges; reefs, shoals, or rocks exposed at low tide?

First of all, I discovered, the low tide along the coast is the normal baseline from which to measure. Next, arcs of circles with radii of 3 miles are swung from every point along the low-tide line. The result is, theoretically, a 3-mile limit that is neither more nor less than 3 miles from the closest coastal point. But at this point the subject becomes complicated.

Take big bays, little bays, and just coastal indentations. To distinguish a bay from a mere curvature of the coastline, the semicircle test is made. A line is drawn between the entrance points of the coastal indentation. Then a semicircle is drawn into the indentation with the line just mentioned as diameter. If the water thus closed off

is larger than the semicircle, then it is a bay; if smaller, it is only a coastal indentation. In the case of a bay the 3-mile limit is drawn from the baseline across the entrance to the bay; in the case of a coastal indentation, it must be chartered 3 miles from all coastal points.

However, there is an exception to this—under international agreement: If the entrance to a bay exceeds 24 miles, then a baseline, of not more than 24 miles, must be drawn within the bay—drawing it to enclose the maximum water area possible.

But what about bays that have several islands across their entrances? In such cases a closing line is drawn from island to island to coastlines. To be a bay, the area of water closed off must be larger than that of a semicircle the diameter of which is the sum of the individual closing lines.

Next as for islands. Islands have their own territorial seas. Those within 6 miles of each other have territorial seas which overlap. If these are within 6 miles of the mainland, they coalesce with the territorial sea of the mainland.

As for shoals, reefs, and rocks that are exposed at low tide but submerged at high, they do not have territorial seas of their own. However, if such a shoal, reef, or rock lies within a territorial sea of the mainland or an island, its low-water line may be used as a baseline for measuring the 3-mile limit.

When it comes to piers, breakwaters, other manmade installations, these are accepted as part of a coast's baseline. Bridges are not.

It is obvious that offshore islands tend to increase the area of the territorial sea. Were the 3-mile limit extended to 6, it is also apparent that, while the coastline territorial sea would be twice as far out as at present, the 6-mile limit would not just double an island's territorial sea, but quadruple it. And this could mean the territorial sea of some islands would coalesce with that of the mainland, closing off channels now open to international sea traffic.

Yes; it is all quite complicated figuring out just where America's 3-mile limit is—however easy it sounds. And figuring out a 6-mile limit, thank goodness, need not be 4, or even 2, times as difficult.

On-Campus Housing for College Students

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I enclose a very interesting letter received from Dr. Harold C. Case, president of the Boston University, of Boston, Mass., urging that in any housing legislation which might be enacted into law a provision be included therein in relation to loans to college institutions for certain purposes. As Dr. Case said:

Since the Housing Act has become law of the land, it has proved to be a very valuable instrument for assisting colleges and universities to finance on-campus living facilities for their students. It is fair to say that without this legislation, institutions in the United States would not have been able to expand their plan to care for the increasing demands of students.

I am in agreement with Dr. Case's views.

The letter follows:

BOSTON UNIVERSITY,
Boston, Mass., July 10, 1959.

The Honorable JOHN W. McCORMACK,
House of Representatives,
Washington, D.C.

DEAR MR. McCORMACK: Undoubtedly you have received the expression of opinion of many groups regarding the so-called omnibus housing bill which was recently vetoed by the President. As the president of the New England university offering educational opportunities to the largest number of area residents, I feel it is my duty to ask you to give your full support to at least those portions of the housing bill which relate to educational institutions. Since the Housing Act has become law of the land, it has proved to be a very valuable instrument for assisting colleges and universities to finance on-campus living facilities for their students. It is fair to say that without this legislation, institutions in the United States would not have been able to expand their plant to care for the increasing demands of students.

I should also like to call to your attention the fact that this is the second successive year in which the college housing facilities have been a part of an omnibus housing bill which was vetoed by the President. It is unfortunate that legislation which so seriously affects higher education generally has been the victim of omnibus aspects of housing which have little relation to education.

May I therefore express my conviction that housing legislation is urgently needed. If the President's veto is sustained, may I earnestly request you to lend your support to the introduction of separate legislation which would authorize appropriation of funds for college and university housing as presently contained in the omnibus housing bill, but as a separate piece of legislation.

Very truly yours,

HAROLD C. CASE,
President.

On the Inflation Front

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 16, 1959:

ON THE INFLATION FRONT

One of the giants of American industry has just administered some of its prices downward. The General Electric Co. has announced on successive days reductions in prices of its turbines, both large and small.

In a nation that had become used to the "ratchet" movement of heavy-industry prices—up, steady, up again, and never down—this is to be heartily welcomed. Furthermore, the General Electric Co.'s announcements, both in what those announcements say and what they do not say, contain some hints of better days to come on the inflation front.

First, the company said the price reductions were made possible by improved manufacturing processes that have cut costs. There would be nothing unusual about this except that it has not been happening enough in the economy as a whole in the postwar period. Improved efficiency has all too often been eaten up in higher wage and other costs, with prices the same or even rising.

Second, in its announcement on the big turbines the company said it would modify the escalator clause in its contracts—a clause under which customers have been required to pay more than the originally agreed price if a certain index of costs rose.

The change is aimed to help sales, but it also may represent a shrewd hunch on the part of GE that costs in the future may be a lot more stable than in the past.

Finally, what the announcements did not say was that foreign competition is a large element in the decision, at least for the big turbines. The revival of Western Europe is producing a benefit that Americans had perhaps not foreseen—the infusion of an extra element of competition in parts of American industry that have been to some extent immune during most of the postwar period.

In a sense, we as consumers are getting our Marshall plan money back.

Report of National Projects Committee to the Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the report of the national projects committee, which was unanimously adopted by the recent 46th national convention of the National Rivers and Harbors Congress held in Washington on May 13-15, 1959.

The permanent national projects committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in line for approval. The projects recommended by the committee and endorsed by the congress are vigorously pressed for inclusion in the Government's public-works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public-spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The members of the committee who served at its recent session are as follows:

Projects committee: Representative PHIL WEAVER, Falls City, Nebr., chairman.

New England division: Member, William S. Wise, executive secretary, Flood Control and Water Policy Commission, State of Connecticut, Hartford, Conn.

North Atlantic division: Member, Brig. Gen. James H. Stratton, U.S. Army, retired, consulting engineer, New York, N.Y.

South Atlantic division: Member, H. H. Buckman, consulting engineer, Jacksonville, Fla.; vice chairman.

Southwestern division: Member, Dale Miller, executive vice president, Intracoastal Canal Association of Louisiana and Texas, Houston, Tex.

Lower Mississippi Valley division: Member, Hu B. Myers, chief engineer, Department of Public Works, State of Louisiana, Baton Rouge, La.

North Central division: Member, Al Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River division: Member, John B. Quinn, executive director, Missouri Valley Development Association, Inc., Lincoln, Nebr.

Ohio River division: Member, J. I. Perry, chief engineer, Indiana Flood Control and Water Resources Commission, Indianapolis, Ind.

North Pacific division: Member, Herbert G. West, executive vice president, Inland Empire Waterways Association, Walla Walla, Wash.

South Pacific division: Member, Vice Adm. Murrey L. Royar, U.S. Navy, retired, Washington representative, Oakland (Calif.) Chamber of Commerce.

Western intermountain region: Member, E. W. Rising, Washington representative, State Water Conservation Board of Montana, Helena, Mont.

REPORT OF THE PROJECTS COMMITTEE TO THE 46TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 15, 1959

HON. OVERTON BROOKS,
President, National Rivers and Harbors Congress, Washington, D.C.

DEAR MR. PRESIDENT: In pursuance of the call of the President, your projects committee met on May 13, 1959, to reconsider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 54 proposals embracing all resource improvements with which this Congress is concerned, including navigable waterways, harbors, flood control, hurricane protection, soil conservation, reclamation and water conservation.

Of the proposals examined, this committee is convinced that 27 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $291,145,800. Nine proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 13 proposals, surveys have been authorized but the reports of said surveys have not been completed and we therefore recommend in these cases that the Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this Congress. We find five proposals which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

Since our national convention last year, the Congress enacted Public Law 85-500, the omnibus river and harbor and flood control bill, which was approved by the President on July 3, 1958. This act authorized construction of 139 river and harbor, beach erosion and flood control projects in 44 States, Alaska, Hawaii, and Puerto Rico.

The total estimated Federal cost of work authorized in the bill is $1,556,230,500, of which $1,356,230,500 is for the Corps of Engineers and $200 million is for Missouri River basin work by the Department of Interior.

The grand total is broken down as follows:

Type of improvement	Number of projects	Estimated cost
Navigation and beach erosion	71	$202, 350, 700
Flood control	68	545, 579, 800
Basin authorization	12	608, 300, 000
Department of Interior (Missouri River)	1	200, 000, 000
Total	152	1, 556, 230, 500

There are also authorizations for 61 surveys in 27 States and Hawaii. In addition the act contained several general provisions, including a section on water supply which liberalizes the policy applicable to advance provisions of facilities needed to meet future needs. This section is particularly appropriate to the future planning of Federal reservoir projects in order to serve the expanding economy in an orderly manner. Section 208 of the act eliminated preliminary examination reports. This and other improvements are expected to provide more economical and faster preparation of survey reports.

The projects included in this act are of high importance to the Nation's expanding economy and should be provided as soon as practicable. Your projects committee, therefore, recommends that the Congress of the United States be requested to give consideration to early appropriation of funds for construction of these projects.

Flood control became a major part of the national water resource investment program when in 1928 the Congress declared a national interest in preventing human suffering and economic losses from floods in the Mississippi Valley, and authorized the Alluvial Valley project. In 1936 flood control was authorized on a nationwide basis. The flood control projects of the Corps of Engineers completed or placed in partial operation have already prevented flood damages totaling about $9 billion, which is about twice the amount invested. The reservoir system of the Corps of Engineers with millions of acre-feet of storage capacity are mitigating the damaging effects of floodwaters and are benefiting water supplies, pollution abatement, recreation and fish and wildlife. However, construction of authorized projects and additional authorizations are necessary to alleviate flood conditions in other parts of the country. The devastating floods in the Ohio River basin this year, as well as those along the west coast and in the Atlantic and Gulf States during the past few years, are fresh in our minds and show that much remains to be done in the field of flood control particularly in the determination of the feasibility of projects for the prevention of these flood damages and the loss of human lives. Where and when another great flood may strike is not known but it could be in any river basin at any time.

The inland waterways which now total over 22,000 miles handled about 115 billion ton-miles of cargo in the calendar year 1957. This does not include the Great Lakes which in 1957 handled over 117 billion ton-miles. There are over 400 improved coastal harbors.

The hydroelectric power production facilities of the Corps of Engineers are contributing greatly to alleviating power shortages, particularly in the critically deficient Northwest region. During the fiscal year 1958, 27 billion kilowatts were generated at projects operated by the corps, representing 20 percent of the total hydroelectric power produced by all sources in the Nation.

As we all know, the Corps of Engineers survey program is nationwide and it includes investigations called for by Congress to determine the practical means of reduction of loss of human lives and damages to property. Reports recommending flood control works on many of the most severely damaged areas through the country have been completed and submitted to Congress by the Chief of Engineers. As a result of hurricane damage to our coastal and tidal areas, three projects, New Bedford-Fairhaven, Narragansett Bay and Texas City were authorized by the Flood Control Act of 1958.

Many other areas which have been severely damaged have been designated for detailed study and a number of these investigations are well advanced. Congress has also authorized investigations to study hurricanes including the securing of data on hurricane frequency and behavior and the establishment of means to prevent the loss of lives and property that have been experienced. It is evident, therefore, that the development of plans for the control of floods and minimizing the destructive force of hurricanes are of paramount importance. In this connection, we must never for one moment lose sight of the objectives of the National Rivers and Harbors Congress in supporting this great program of water resource development.

The need for funds for carrying out investigations for flood control, hurricanes, navigation, and related uses is as urgent at this time as any time in the history of this program. The investigations should go forward in order that a well-planned construction program can be made for the time that construction funds will be available for those projects which may be recommended as a result of these studies and that are authorized by Congress. Although much work remains to be done in the field of water resource development throughout the country, we feel that the problem is being expertly handled by the Federal agencies in cooperation with the States concerned. The need for full scale development of our water resource program is greater today than ever before. The projects committee, therefore, considers it highly important that sufficient funds be provided in order that the Federal agencies can carry out their respective water resource program in an orderly fashion. Your committee is concerned over the large backlog of investigations authorized by Congress to be carried out by the various Federal agencies and recommends that appropriations be increased at this time in order that the backlog be reduced and that an adequate reserve of current projects may be built up for activation particularly at this time when the economy of the Nation appears to warrant construction of worthwhile public works.

We wish to commend the various Federal agencies involved in the investigations and provisions of water resource projects on their improvements in development of sound procedures of project analysis and formulation, and the increased cooperation among agencies and with the States and local interests. We believe that true partnership between the Federal Government and its citizens lies not only in the sharing of costs, but also from the common sharing of problems and their development and solution. An example is the many hurricane studies being made along the eastern and southern seaboards, in which the States, local munici-

palities, and many of the Federal agencies are cooperating in making these studies.

Respectfully submitted.

PHIL WEAVER,
Chairman.

(NOTE A.—A project which has been placed in class II, III, IV, or V by the committee may be reexamined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.)

(NOTE B.—Attention is called to the fact that when a project is once put in class I, endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new applications. All projects "endorsed" by the Congress, upon the recommendations of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.)

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE

APPENDIX A

[Letter "R" following the project number indicates revision of a previous application]

DIVISION I—ENDORSED

[Endorsed. This means that it is the judgment of the Committee that the project is sound, needful, and sufficiently advanced in status; and that its construction is justified by the public interest it will serve]

Docket No.	Name of project	State or States	Division	Classification
728-R6	Morehead City Harbor	North Carolina	South Atlantic	I
813-R2	Pantego Creek and Cucklers Creek	do	do	I
823-R	Baltimore Harbor and channels	Maryland	North Atlantic	I
840-R	Freeport Harbor	Texas	Southwestern	I
841-R	Galveston Harbor and Channel; Houston ship channel; and Texas City Channel.	do	do	I
863-R	Boston Harbor (reserved channel)	Massachusetts	Northeastern	I
883-R4	San Juan Harbor	Puerto Rico	South Atlantic	I
890-R5	Kahului Harbor, Maui	Territory of Hawaii	Pacific Ocean	I
892-R	Port Aransas-Corpus Christi Waterway	Texas	Southwestern	I
1097-R	Turkey Creek Reservoir	Kansas	Missouri River	I
1097-A-R	Sutphen Mills Reservoir	do	do	I
1097-B-R	Woodbine Reservoir	do	Missouri River	I
1097-C-R	Humboldt Reservoir	do	do	I
1097-D-R	Camp Creek Reservoir	do	do	I
1097-E-R	Onaga Reservoir	do	do	I
1097-F-R	Grove Reservoir	do	do	I
1097-G-R	Clinton Reservoir	do	do	I
1099-R	Michigan City Harbor	Indiana	North Central	I
1110-R	Bayfield Harbor	Wisconsin	do	I
1119	Saxon Harbor	do	do	I
1120	Two Rivers Harbor	do	do	I
1121	Mississippi River, Baton Rouge to the Gulf of Mexico, modifications of	Louisiana	Lower Mississippi Valley	I
1124	Port Everglades Harbor	Florida	South Atlantic	I
1125	Yaquina Bay and Harbor	Oregon	North Pacific	I
1129	Shenango River Reservoir	Pennsylvania and Ohio	Ohio River	I
1133	Caesar Creek Reservoir	Ohio	do	I
1135	Santa Cruz Small Craft Harbor	California	South Pacific	I

DIVISION II—MERITORIOUS

[Meritorious. This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and that the committee is willing to consider in due course, its advancement to division I upon presentation by its sponsors of additional evidence justifying such action]

781-R5	Raystown Reservoir	Pennsylvania	North Atlantic	II
793-R6	Cleves flood protection	Ohio	Ohio River	II
1039-R3	New York Harbor; entrance channels and anchorage areas	New York and New Jersey	North Atlantic	II
1100-R	Wilmington Harbor	North Carolina	South Atlantic	II
1114-R	Flint River channelization, flood control, hydroelectric power, water conservation.	Georgia	do	II
1116-R	Apponaug Cove	Rhode Island	Northeastern	II
1123	Delaware River, Philadelphia to the sea, anchorages	Pennsylvania, New Jersey, and Delaware.	North Atlantic	II
1139	Municipal commercial harbor at Dubuque on Upper Mississippi River (dredging).	Iowa	North Central	II
1140	North Branch Park River flood control	Connecticut	Northeast	II

DIVISION III—EXPEDITIOUS REPORT ON AUTHORIZED SURVEY REQUESTED

[Expeditious report on authorized survey requested. This means that the committee believes that the National Rivers and Harbors Congress should request the engineering authority to expedite any report on any authorized investigation or survey of the project to the end that appropriate further action may be had thereon in regard to its classification]

876-R4	Whitewater River, West Fork, at Brookville	Indiana	Ohio River	III
1039A-R3	New York Harbor anchorage area (port of New York entrance channel project)	New York and New Jersey	North Atlantic	III
1062-R	Passaic River Basin flood control	New Jersey	do	III
1086-R	Port of New York to St. Lawrence River Waterway	New York, Vermont, and Quebec, Canada.	do	III
1094-R	Rend Lake	Illinois	Lower Mississippi Valley	III
1096-R	Deep draft and small craft harbor development—Port San Luis	California	South Pacific	III
1101-R	Cold River Dam	New Hampshire	Northeastern	III
1122	Petersburg small-boat harbor (expansion of facility)	Alaska	North Pacific	III
1126	Norfolk Harbor and channel to Newport News	Virginia	North Atlantic	III
1132	Great Lakes to Hudson River Waterway (New York State barge canal)	New York	do	III
1134	East Fork Reservoir; East Fork, Little Miami River	Ohio	Ohio River	III
1136	Tidal flood protection for city of New London	Connecticut	Northeastern	III
1138	Mississinewa River channel improvement, Randolph County	Indiana	Ohio River	III

DIVISION IV—PROJECTS RECOMMENDED FOR SURVEY

[Recommended for survey. This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government]

1127	Southern Branch of Elizabeth River, Norfolk Harbor	Virginia	North Atlantic	IV
1128	Imperial Beach small-craft harbor (Oneonta Lagoon)	California	South Pacific	IV
1130	Searsport	Maine	Northeastern	IV
1131	New Harbor navigation project	do	do	IV
1137	Brazos River and Harbor Survey	Texas	Southwestern	IV

Ways of Improving Relations Among Suppliers, Dealers, and Jobbers

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. ROOSEVELT. Mr. Speaker, recently, Mr. John Nerlinger, Jr., executive secretary, National Congress of Petroleum Retailers, Inc., addressed the management conference sponsored by the Indiana Independent Petroleum Association, at Indiana University, Bloomington, Ind., on April 8, 1959.

My colleagues in Congress who are interested in the problems of the small businessman will find it well worth reading because of its broad and intelligent approach to a serious problem. In addition, I believe that the speech will be of great interest to the many people in the Nation who are concerned with the problems in the petroleum industry:

WAYS OF IMPROVING RELATIONS AMONG SUPPLIERS, DEALERS, AND JOBBERS

There are a number of reasons why I am particularly happy to have the opportunity of being here today. Personal considerations such as the opportunity to see old friends and acquaintances and to make new associations among my fellow oilmen are, of course, important. In addition, and even more important, is the opportunity afforded by the intellectual integrity and breadth of thinking of this group for meaningful and significant discussion in depth of the basic realities involved in improving relations between suppliers, jobbers, and retailers.

There are five steps which I shall follow in an effort to make my contribution to this discussion as meaningful as possible:

First. The definition of terms so as to encompass the basic realities of the relationships between suppliers, jobbers, and retailers.

Second. Analysis of basic industry relationships in which improvement is needed and discussion of the fundamental objectives and direction of such needed improvement in terms of economic principles.

Third. Analysis of industry relationships and the need for improvement in terms of human values and the ideals of our democratic society—wtih discussion of the fundamental objectives of such needed improvement from the standpoint of human values and democratic ideals.

Fourth. Analysis, evaluation, and recommendations as to the means by which the needed improvements in industry relationships may be attained.

Fifth. Discussion of the ultimate questions: Which road? Which destination? Who will make the decisions? How will they be arrived at and carried out?

To recapitulate:

Step 1 is definition.

Step 2 is analysis in terms of economic principles; in other words, diagnosis of the economic sickness.

Step 3 is similar to step 2, but in terms of basic human values and democratic ideals instead of economic principles.

Step 4 is a discussion of remedies—ways of reducing or eliminating the causes of the economic sickness and disruption of human values in our industry's internal relations; and

Step 5 is a prognosis on the ultimate questions of where our industry is going and how we will get there.

The balance of my paper deals with the subject matter of these five steps in numerical order:

I. DEFINITION OF TERMS

One key factor in making this discussion as meaningful as possible is the way in which we define our terms, particularly the term "relations" as used in the subject of our discussion. If we define the term "relations" the way it seems to be understood by some public relations experts—as having to do only with attitudes, or the psychological cover or verbal aspect of underlying realities—we will miss the opportunity afforded by this meeting for discussing ways of improving industry relations at the most meaningful level and in the most significant terms.

The key to reaching the subject in depth is in defining the term "relations" to mean not merely the attitudes which are at the surface, but so as to embrace the underlying economic and social realities which are the actual substance of the relationship between suppliers, dealers, and jobbers.

My contribution to the discussion today, therefore, deals with the fundamental economic and social realities of the relationships under consideration and ways of improving these realities and relationships, and not, except incidentally, with ways of disguising the realities, manipulating opinion, or having friendly attitudes without regard to the realities.

This in no way implies any lack of respect or concern for those friendly feelings which we retailers and jobbers, along with others in this industry, have done our best to engender. Friendly feelings, good attitudes, good feelings between different divisions of the industry, are very worthwhile and very helpful. It is important that we should know and like one another and do the things which will kindle the personal warmth that dissolves many problems. I like the people in this industry and I believe in industry relations meetings, even when there is little attained by them except the glow of personal warmth associated with closer acquaintanceship and personal understanding.

Much as we like the camaraderie of such sessions, however, sometime or other we have to face the problems underlying the relationships with which we are dealing in depth where the problems are. That is the opportunity which this meeting affords us.

Hence, discussing the relations between suppliers, jobbers, and retailers in this talk, I define the term "relations" to mean the totality of factors, arrangements, and practices constituting or affecting the relationships between suppliers, jobbers, and retailers as sellers and buyers for resale in our free enterprise economic system and under our constitutional and democratic system of government.

The words "among suppliers, dealers, and jobbers" following the word "relations", in our subject, may be defined as embracing conjunctively three structurally separate but interacting relationships; namely (a) the relationship between suppliers and jobbers, (b) the relationship between suppliers and retailers, and (c) the relationship between jobbers and retailers.

II. ANALYSIS OF BASIC INDUSTRY RELATIONSHIPS IN WHICH IMPROVEMENT IS NEEDED AND DISCUSSION OF THE FUNDAMENTAL OBJECTIVES OF THE NEEDED IMPROVEMENT IN TERMS OF ECONOMIC PRINCIPLES

The principles of our free-competitive, free-market economic system constitute the most generally recognized and widely accepted yardstick for measuring economic conduct and economic relationships in our society.

The appropriateness of free enterprise principles—as a yardstick for measurement of economic relationships and need for improvement in such relationships in the oil industry—is further acknowledged and demonstrated by the position of industry leaders as articulate spokesmen of the free enterprise system and as formidable opponents of any form of government interference with the free market economy—and, of course, by the fact that the tremendous assets and prosperity of the dominant companies in the oil industry are, in so large a measure, the result of freedom afforded under our free enterprise, free market economic system.

"We are fighting for freedom itself," Mr. Frank Porter, president of the American Petroleum Institute, has said, adding "and either the oil industry stays free or one by one the lights of private enterprise will go out."

Since economic freedom for the largest companies in a particular industry under the principles of our free enterprise system can hardly be defended or long preserved if such economic freedom is denied small business competitors in the same industry—all divisions of the oil industry and all industry members from the giant integrated companies to the smallest retailers have a fundamental mutuality of interest in the analysis and evaluation of industry relationships in terms of economic principles of the free competitive economic system.

Confining our analysis to negations of free market principles which are peculiar to supplier-jobber-dealer relationships in the oil industry (that is, disregarding patterns such as price leadership and administered price techniques which are characteristic of economic concentration generally), we find that there are five basic aspects of supplier-dealer relationships, three of which apply also to supplier-jobber relations, which are basically hostile and adverse to the most fundamental principles of our free-competitive, free-market economy.

First, there is the control over prices and margins resulting from many major integrated suppliers' dual role as competitors of their own jobbers and retailers at succeeding levels of distribution. In gasoline distribution, from the marketplace in which retailers purchase the product from suppliers to the marketplace in which consumers purchase the product from retailers, margins and prices which would otherwise be determined by the competitive conditions of a free economy are fixed in many areas by the fact that at least 11 of 20 major integrated suppliers are competitors of their own retailers through commission and company-operated stations. Prices posted and advertised in these commission and company-operated stations fix the retailers' margins, very often at a level less than would be fixed by freedom of competition. This process thus destroys the basic principle by which prices are determined in a free-market, free-enterprise economy, namely, free and independent competition between many buyers and many sellers acting independently at succeeding levels of distribution.

When the results of athletic contests, horseraces, or buying and selling activities in particular securities are rigged—that is, determined in advance by factors other than honest competition in accordance with the rules of the game, the sport, or the market—the resulting "fixed situations" or predetermination of the results by noncompetitive factors are clearly recognized as being as disastrous to the game or to the trade in the security involved as they are offensive to integrity and our sense of fair play.

"Fixed situations" in gasoline price competition—that is, predetermination of the results of competition through patterns of dual distribution in which price squeezes are applied to retailers and jobbers through suppliers' use of company operated and commission stations—are similarly disastrous to fair competition, destructive of small business' right to compete on the basis of efficiency, offensive to our ideals of fair competition and therefore basically hostile to the

principles of a free market, free enterprise economy.

A second broad negation of free market, free enterprise principles in the relationship between suppliers and both jobbers and retailers occurs in the widespread practice of price discrimination by suppliers between customers for resale who are in competition with each other or with the supplier. Jobbers are as vulnerable to this anticompetitive practice as retailers, though they may not have been subjected to it on so wide a scale except as regards price discrimination in supplier sales to commercial accounts.

Overwhelming evidence from the oil industry has been accumulating for nearly 100 years to show the appalling effects of price discrimination in destroying free competition and leading to monopoly.

As shown in the record of the Government's case against the Standard Oil trust (*U.S. v. Standard Oil Company*, 173 Fed. 177, modified and affirmed, *Standard Oil Company v. U.S.*, 221 U.S. 1), during the years 1870 to 1882 the Standard Oil trust used rebates, preferences, and other price discrimination practices as primary instruments of acquiring approximately 90 percent control of the entire industry.

Though reduced somewhat by congressional enactments to deal with the problem and particularly by the Robinson-Patman Act, price discrimination practices have continued to inflict appalling injuries in our industry—as shown in the records of congressional investigations, antitrust cases, and Federal Trade Commission proceedings.

Retailers and jobbers in many areas know of these destructive injuries to competition by price discrimination practices from their own harsh practical experience—especially since weakening of the Robinson-Patman Act by the Supreme Court decision in the Standard-Detroit case in 1951.

Economists (Prof. Vernon E. Mund, University of Washington; Prof. Horace Gray, University of Illinois, and others) show the conflict between price discrimination and price competition under free competitive conditions analytically through definition of the free market economy as characterized by transactions openly and publicly arrived at in a free market with all competitors having an equal right to buy or sell at the same current competitive price.

The third element in the relationship between suppliers and retailers which militates against the principles of free competition is the captive status of the overwhelming majority of branded retailers under leases and dealer agreements.

By the terms and effect of their leases and dealer agreements, these captive lessee dealers are required to purchase their requirements of gasoline from the particular supplier who owns or controls the station at the prices which the supplier posts. This is a double negation of basic conditions of a free market economy: First, because it isolates the retailer as a purchaser from the normal competitive opportunity of purchasing gasoline from his supplier at competitive as opposed to supplier-determined prices, and second, because the retailer who is bound to the particular supplier by lease and dealer agreement is foreclosed from even the nominal competitive alternatives of going elsewhere when charged an exorbitant price.

The fourth factor affecting the relationship between suppliers and both jobbers and retailers which is adverse to principles of our free competitive system is the extent to which the supply-demand equation in establishment of retail facilities is thrown off balance by uneconomic over-investment by suppliers in such retailing facilities. Economically speaking, the exact measure of such overinvestment is statistically difficult to determine since no major integrated supplying company has ever published a departmentalized profit and loss statement showing to what extent its investment in retail facilities is or is not self-liquidating or justified by the rental return on such facilities. Opinions differ and the extent of such uneconomic over-investment will certainly be different with different companies. But as we look around us and figure the tremendous costs of the modern stations being built in profusion by so many major suppliers, we are able as experienced oil men to calculate that a cent to a cent and a half a gallon rent does not defray the costs of these inflated station building programs. And to the extent that this investment in retailing facilities is not justified by the rental return, it constitutes a basic interference with supply-demand relationships and is an uneconomic disturbance of free market conditions.

The fifth group of practices in supplier-retailer relations which are adverse to principles of our free competitive economy are those practices coming under the general heading of lease domination and T.B.A. pressure. Compulsion as opposed to free choice in buying and selling is abhorrent to the spirit of a free economy, and such practices on even a limited or receding scale are inherently destructive of retailers' economic rights and profit opportunities in a free competitive society.

As practical men in the retail division of the petroleum industry have felt the impact of these five types of destructive and anticompetitive practices on themselves and their fellow dealers, and have observed the adverse effect of these practices on internal industry relationships between suppliers and retailers, they have shown an increasing concern for finding means to eliminate these abuses.

It is deeply significant, I believe, that the great majority of the recommendations and proposals for improvement in relationship between suppliers and retailers adopted by the duly accredited delegates representing the Nation's organized retailers at annual sessions of the retailers' national trade association, the National Congress of Petroleum Retailers, during the last 12 years since NCPR was established, deal with and seek the solution for problems arising in connection with the five types of anticompetitive practices described above. These are the areas of injury not only to retailers but to the relationship between retailers and suppliers—and in applicable categories, to the relationship between suppliers and jobbers as well.

In the fourth part of this paper, dealing with specific means for attaining the needed improvements, I will present the proposals and recommendations from the Nation's organized retailers dealing with improvement in industry relationships through elimination of abuses in the five categories described above.

But before leaving this analysis of problems in industry relationships from the standpoint of economic principles—it will be helpful to state clearly the objectives to which proposals should be directed for dealing with these problems in the light of economic principles—and here, with as much emphasis and earnestness as I am capable of, is my statement of those basic objectives:

Effective proposals must be directed (a) to the objective of applying, extending and protecting principles of the free competitive-free market system in the oil industry and to economic relationships among suppliers, jobbers and retailers—and (b) to the parallel objective of eliminating destructive practices which are adverse to the basic economic rights of oil's small businessmen, particularly jobbers and retailers, to compete on a basic of efficiency under the fair competitive principles of our free enterprise-free market economic system.

III. ANALYSIS OF INDUSTRY RELATIONSHIPS AND THE NEED FOR IMPROVEMENT IN TERMS OF HUMAN VALUES AND THE IDEALS OF OUR DEMOCRATIC SOCIETY—WITH DISCUSSION OF THE FUNDAMENTAL OBJECTIVES OF SUCH NEEDED IMPROVEMENT FROM THE STANDPOINT OF HUMAN VALUES AND DEMOCRATIC IDEALS

This step in our analysis is similar to step 2—but in terms of basic human values and democratic ideals instead of economic principles.

The underlying principle of democracy is stated by political scientists to be the principle of Government by consent as opposed to Government by force or arbitrary authority. And in the light of the political philosophy under which our constitutional system was developed, there has been an extension of the democratic concept of consent in the political sphere—to protection for individual freedom of choice against tyranny and unwarranted compulsion in other basic social and economic relationships. More succinctly stated, this concept means that America stands for democracy versus dictatorship in business and economic relationships as well as in Government—that business relationships based on consent and the mutual advantage of all parties thereto, rather than on economic coercion, are a basic ideal of our democratic society.

Analysis shows that of the five types of economic practices affecting relations between suppliers, jobbers, and dealers in the oil industry which violate principles of the free competitive system, at least four of these principal types of practices are also offensive to the democratic ideals which affirm individual human values and the principle that business relationships should be based on consent and mutual advantage, not economic tyranny or coercion.

The "fixed situation" predetermined competitive result of price squeezes applied through commission and company-operated station competition—the unconscionable injustice of price discrimination in which some purchasers for resale are required to pay a higher price for the principal product they sell than is charged other purchasers for resale with whom they must compete—the aggravation of both the commission station price squeeze and price discrimination types of injury through retailers' captive status—and the direct pressure and control tactics which are sometimes found to exist in the form of lease domination as to business methods and T.B.A. purchases—all do violence not only to the economic principles of our free competitive system but also to basic human values and the ideals of our democratic society.

Therefore, further basic objectives for improving the relationships between suppliers, jobbers, and retailers must be (a) the realization of conditions in industry relationships under which the democratic ideals of dignity, freedom of choice and consent in commercial relationships (as opposed to economic tyranny or coercion) are fulfilled, and (b) the elimination of any practices in industry relations which do serious violence to the individual human values and democratic ideals of individual dignity, freedom of choice and democratic consent as opposed to dictatorship and arbitrary authority in business as well as in government.

In the broadest and deepest sense, these objectives for protection and realization of human values and democratic ideals, as well as our economic objectives for extending and protecting principles of the free enterprise system involve an allegiance to morally sound principles, the principles which give substance to opportunity and the American way of life—principles upon which I hope all in the oil industry can agree.

Surely, I am convinced, many of the repressive practices which are rife in our in-

dustry today doing serious injury to the relationships between suppliers, jobbers, and retailers would be brought to an end—if only those responsible would have the courage to say to themselves, is this practice morally right?—and to be governed by the answer.

How much good could be accomplished for our industry and in our industry if each of us, every company executive, every individual businessman, every person whose decisions affect the conditions in our industry, could act in accordance with the morally sound business principle that true prosperity, whether in a community, a nation or an industry, is founded on consideration for one's fellow man and his right to the just fruits of his endeavor, free from unwarranted pressures or interference—and that neither true prosperity nor worthwhile business success can be secured through practices which impoverish others or degrade their opportunities.

IV. ANALYSIS, EVALUATION, AND RECOMMENDATIONS AS TO THE MEANS BY WHICH THE NEEDED IMPROVEMENTS IN INDUSTRY RELATIONSHIPS MAY BE ATTAINED

What are the specific means and methods by which the objectives for improvements in our industry relationships, outlined in the second and third steps in this paper, may be advanced and attained?

The ideal means for advancing these objectives, surely, would be the development within our industry of broadly observed enlightened concepts of business ethics which would totally reject industry practices which are competitively unfair under our free competitive system, hostile to democratic ideals, or morally wrong.

If that sounds like a dream, it is still worth remembering that dreams, though not fully realized in reality, may still point the way and change reality for the better. I know, and so do you, some men in all divisions of our industry who have worked conscientiously and devotedly notwithstanding discouragements and disheartening obstacles, toward this objective. Their efforts will continue. Their influence will increase. Their dream lays the foundation and gives encouragement for the success of the practical means and methods by which the great objectives envisioned can be fully carried out.

As to practical actions and specific means for attaining these objectives, I will now present some of the significant recommendations of the last two annual sessions of the National Congress of Petroleum Retailers. All of these recommendations were unanimously adopted by our delegates.

Here are the N.C.P.R. proposals, with a few sentences of comment, these proposals being grouped in this presentation according to the forum in which they are to be presented or means adopted for carrying them into effect, that is, (a) proposals for matters to be presented in industry relations discussions and (b) proposals dealing with problems in industry relationships where some form of legal or governmental action or legislation is proposed as a solution.

(a) Proposals for matters to be presented in industry relations discussions:

The following recommendations by action of our last annual session, were directed to be presented in meetings of the service station advisory committee of the American Petroleum Institute by a five-man committee to be appointed by President Cash B. Hawley of the National Congress of Petroleum Retailers, and also, where appropriate, to be taken up and negotiated with executives of any supplying company involved:

"(1) It is recommended that, in industry discussions of equitable lease provisions, favorable consideration be given, among other matters, to provisions embodying the principle that, when certain levels of gross sales volume are reached, certain percentage rental reductions be applied to afford dealers an incentive toward greater business opportunity without the penalty of inequitable rent increases.

"(2) In the light of the undisputed public record that most major oil companies recognize the independent small businessman's status as an independent service station operator, it is recommended that any service station operator or his rightful legal heirs seeking to dispose of his business be permitted to negotiate the sale of that business, including accrued going concern value, without undue interference by the supplying companies.

"(3) It is recommended that any charges made by a supplying oil company against a service station operator for a mechanical credit card recording device or other similar mechanical operating devices be held to an absolute minimum charge which can be substantiated by cost to the supplier when and where the charge is questioned or challenged; and that N.C.R.P. oppose any discriminatory charges for such devices.

"(4) It is recommended that the National Congress of Petroleum Retailers adopt a policy whereby it is unalterably opposed to any marketing practices which include the consignment of gasolines or other petroleum products to any reseller without making the usual tank wagon charges or normal invoice charges or normal invoice charges at the time of delivery.

"(5) It is recommended that the National Congress of Petroleum Retailers condemn the policy of any major oil company's charges for installation and use of any and all forms of company brand signs where such charges are imposed by pressure or dictation in violation of the dealer's rights as an independent businessman, and urges all independent service station operators to resist any attempt by any company to levy any such charges and to discontinue the payment of any such charges where such charges are illegally imposed by pressure or dictation in violation of service station opertaors' rights as independent businessmen under the antitrust laws."

The foregoing recommendations originated with the committee on retailer-supplier relations at our last annual session. Following are additional recommendations for matters to be presented in industry relations discussions or in meetings with particular supplying companies where appropriate, originating with other committees and adopted by our last annual session:

"(1) We recommend continuing effort on the part of N.C.P.R. to sponsor and promote the adoption of an industrywide code of ethics and standards.

"(2) Re overbuilding of service stations: It is recommended that there be a declaration of N.C.P.R. policy that the oil industry should be a good neighbor and avoid service station building in neighborhoods where it would be inappropriate or harmful to adjacent properties.

"(3) That we approve and commend joint action by the N.C.P.R.-N.O.J.C. liaison committee in recommending exchange of economic information and compilation of economic research data—as adopted at the liaison committee meeting in New Orleans, La., in May 1958.

"(4) Approval for N.C.P.R. proposal (on which no action has so far been taken) that N.O.J.C. and N.C.P.R. cooperate in planning a jointly sponsored conference of all industry groups interested in raising the standard of ethics and services of the retail petroleum and automotive service industries and for the solution of basic problems which adversely affect the service station operator.

"(5) In regard to the effect on branded service station operators of supplier sales of branded motor oils and T.B.A. to discount houses—recommended that we vigorously condemn such practices involving price discrimination against branded dealers and that immediate protest be made to suppliers whose products (branded) appear for sale at cutrate prices in chain stores, bargain centers, etc., where prices at which such branded products are offered for sale are below branded service station operators' cost or so low as to strongly indicate price discrimination against the branded service station operators."

The following resolution originated on the floor and after extended discussion was adopted by the delegates at our last annual session as a policy statement:

"Be it resolved that N.C.P.R. go on record as supporting the principle of complete separation of retailing from other divisions of the industry."

In addition, here are important recommendations for matters to be presented in industry relations meetings and in discussions with company executives from our preceding annual session, these matters being still on our current and active list for action through industry relations channels:

(1) That we recommend inclusion of a most favored dealer clause in standard forms of service station leases and accompanying dealer agreements. Under the provisions of such a most favored dealer clause, the dealer who is obligated under the lease and dealer agreement to purchase gasoline from the lessor-supplier would be granted the following protection:

The supplier shall agree with the dealer to supply the dealer gasoline at the lowest price at which such supplier supplies the same product to other retailers with whom the lessee dealer is in competition.

(2) Discussion of problems and injuries in connection with continuance in operation of uneconomic marginal stations.

(3) Continue to present in industry meetings and meetings with company executives evidence and information supporting the advantages to retailers and suppliers alike of longer term and more equitable leases—such longer term and more equitable leases being essential to raise standards and attract better men to the service station business, as well as by reasonable standards of fairness and equity between suppliers and their retailers.

(4) That misrepresentation of service station profit opportunities in dealer recruitment be taken up with suppliers and that prospective dealer counseling services by affiliated associations be conducted to protect prospective dealers against such misrepresentation and give needed help.

(b) Proposals dealing with problems in industry relationships where some form of legal or governmental action or legislation is proposed as a solution:

Here are basic recommendations of our last two annual sessions in the field of national legislation defining legislative objectives to which our efforts are currently directed for improvement in the relationships between retailers and suppliers, and for antitrust law enforcement.

(1) The establishment of a National Oil Industry Supplier-Retailer Relations Board is proposed by the National Congress of Petroleum Retailers for the purpose of providing a forum in which complaints of antimonopoly injury in the field of oil industry supplier-retailer relations may be expeditiously heard and adjudicated with prompt granting of remedial relief and in which such complaints may be presented either by the complaining parties themselves or under legal procedures of such clarity and simplicity as to keep the complainant's legal costs and expenses at a minimum and within the means of the average small retailer; appeals from determinations by such board should, we believe, be defended by attorneys for the board without legal cost to the parties.

In the case of a claim involving two or more retailers of a single supplier, all of the retailers of such supplier having an interest in the matter, according to rules to be determined by the board, should have the

right to be collectively represented in a hearing upon the matter. Remedial relief to be granted by the board could be in the form of cease-and-desist orders or mandatory orders directing an affirmative course of conduct within established limitations.

(2) In regard to the problem of unfair competition by company-operated and commission stations with their own retailers—support for national functional divorcement legislation prohibiting suppliers from competing with their own retailers.

(3) In regard to the problem of price discrimination—vigorous support for adoption of the equality-of-opportunity bill.

(4) Cooperation with Federal agencies and support for vigorous enforcement of existing antitrust laws where relief against anticompetitive practices in gasoline distribution can be obtained thereby.

Comment

As seen from the preponderance of NCPR proposals for discussion and negotiation of industry problems in industry meetings and with companies involved, we believe that intraindustry councils are needed to study and seek solutions to intraindustry problems.

We have, moreover, three very important suggestions for making such intraindustry councils and industry discussion sessions truly effective instruments to accomplish the results which are so necessary.

First is the need that industry relations councils established to seek such solutions be constituted in accordance with basic democratic principles. Recognition must be given to the right of retailers to be represented in such councils by the national trade association of their own choosing, the National Congress of Petroleum Retailers, with which the overwhelming majority of the Nation's organized gasoline retailers are affiliated, and the same right for jobbers.

Democratically constituted voluntary jobber-retailer relations councils (recognizing the same right for suppliers as for retailers and jobbers) will take nothing away from suppliers which is rightfully theirs, and its establishment will give suppliers the cooperation of retailers and jobbers in studying and seeking solutions to intraindustry problems which cannot be solved by suppliers alone.

Our second cardinal suggestion for making industry discussions and industry council meetings more meaningful and successful is that such meetings must actually come to grips with the real problems as they exist—even if this means a reversal of some of the ground rules now observed under which realistic discussion of basic problems has been unbelievably difficult.

Further, integrated company representatives must be willing to accept changes in the interests of the whole industry. If a few giant suppliers who have used their tremendous economic power in a way to cause the basic economic problems with which we are dealing, enter such negotiations determined to discuss nothing and yield nothing which does not leave them free to continue the same abuses, the meetings can be no more than a calculated farce.

Our third suggestion is a reminder in all due respect to industry leaders who use industry conferences to call for confidence in themselves that the call for confidence will be more convincing if it is acompanied by a demonstrated awareness through words and actions that confidence must be deserved, and can be deserved if industry leaders will apply their very considerable abilities to working out feasible solutions to the industry relations problems that really matter.

V. DISCUSSION OF THE ULTIMATE QUESTIONS: WHICH ROAD? WHICH DESTINATION? WHO WILL MAKE THE DECISIONS? HOW WILL THEY BE ARRIVED AT AND CARRIED OUT?

In simple truth, it is not unlikely that the last call is now being sounded for a rational solution to our industry problems.

With all respect, I earnestly suggest that what has been lacking in creative leadership by major company policymakers—leadership capable of envisioning the needs of the supplier-jobber-retailer relationships in breadth and depth. There is a desperate need for such creative leadership now, provided also that it must be forceful leadership—leadership forceful enough to override the empire building rivalries of individual company policymakers and to make this a united industry by improving the quality of the relationships which it encompasses.

I believe it is not yet too late for our industry, by democratic cooperation, to pick up the pieces into which our interests and relationships have been fractured by mistaken policies or practices. But time is of the essence.

In conclusion, I wish to quote a few words from N.C.P.R. President Cash B. Hawley's message to the entire oil industry at the beginning of this year:

"There are periods in history where complacent attitudes which tolerate old uses because things have always been that way can no longer suffice—when the alternative to curtailing old abuses is to lose the opportunity for leadership and cause new forces to rise and undertake the task.

"If this great industry is run like a closed corporation and those who come to the door seeking justice and fair opportunity are kept waiting at the door or put off indefinitely rather than having the opportunity to take their place and perform the part which their interests justify—the closed corporation will be signing its own death warrant. Other forces less moderate than those asking recognition at the door will find a way in—a way to batter down the closed door or to demolish the whole edifice if need be.

"We know what those forces will be if oil industry leaders do not now avail themselves of the opportunity still afforded them to broaden the base of industry leadership and prosperity and to include retailers in the interests served by industry decisions—in short, to abolish abuses which make a mockery of the free enterprise system.

"What will it avail industry leaders to keep the door of real progress closed to organized retailers—only to have the edifice of their own prosperity demolished by nationalization or an allout union assault on the retail division of the industry?

"The most vital question for the future of the oil industry is whether or not the top policymakers in 1959 take the actions which are so desperately needed to solve problems that will not wait very much longer for solution."

Boston: Hub of Space Research

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. McCORMACK. Mr. Speaker, the leadership of the Commonwealth of Massachusetts and of the city of Boston, in the governmental and business life of our country, is well known. While the Commonwealth of Massachusetts and the city of Boston are ancient in the terms of the Western Hemisphere, the people of Boston and Massachusetts have always maintained their forward-looking views in relation to government and business. No matter what economic changes have taken place, Massachusetts and Boston have been the leader in progress. In the world of today and tomorrow, forward-looking minds in Massachusetts and Boston are looking ahead, again evidencing leadership in the economic revolution in the field of atomic and nuclear energy, as well as electronics, and in the far-reaching field of astronautics—outer space—that has taken place.

As evidence of this I include in my extension of remarks a very fine and informative article written by William E. Howard, entitled "Boston: Hub of Space Research," and appearing in the issue of July 13, 1959, of Missiles and Rockets, magazine of world astronautics:

BOSTON: HUB OF SPACE RESEARCH

(By William E. Howard)

BOSTON.—Few cities physically show the Nation's explosive growth in missile space manufacturing and research more than Boston—a culturally endowed community which long ago laid claim to being the "Hub of the Universe," and where industry today is in the process of making this extravagant boast come true.

The entire metropolitan area is rapidly emerging as the country's leading research center. Scientists in hundreds of laboratories are conceiving and putting together the sophisticated offensive and defensive weapons of tomorrow. And they are responsible for much of the brainwork going into astronautic systems which one day will enable man to explore space.

Nowhere is the magnitude of this fast-expanding activity more eye-arrestingly apparent than along a 65-mile stretch of superhighway skirting the city from north to south in a great arc. Down the length of this busy artery there already are more than 200 modern plants employing more than 30,000 persons.

This is route 128—Boston's "golden industrial semicircle." Less than 10 years ago, it did not exist. Route 128 was only a country road meandering through meadows and woods, and connecting suburbs.

Where there were pig farms only a few years ago, today industrial parks are springing up. Once-quiet towns are the scene of more development. Industrial brick and mortar investment alone is estimated at $140 million. The entire complex—including business and home development—is valued at more than $500 million, and the figure is increasing.

Land values have shot up from $1,000 an acre to as much as $26,000—with plenty of takers. All segments of industry are represented in this booming new area. But electronics is far and away the most predominant.

Key to growth: Originally, conversion of Route 128 into an expressway was conceived primarily as a way to divert traffic around Boston's congested streets. But by the time it was opened in 1951, developers were already making plans to attract new industry. Electronics manufacturers just beginning to open a vast new market were the first to see its advantages for locating efficient one-story plants—with the highway affording quick transportation and the historic old towns offering pleasant living.

Gravitation to Route 128 was slow at first. Then research took over, mushrooming the growth of the electronics industry and forcing the construction of new plant facilities. Concurrently, in the early fifties, came the development of missiles with their heavy electronic requirements.

One after the other, Raytheon Manufacturing Co., CBS Electronics, Sylvania Electric, Avco and other well-known companies moved out to the new highway.

Paving the way for the migration were such real estate developers as the Boston firms of Cabot, Cabot & Forbes and R. M. Bradley & Co. They were the ones that launched the industrial park plan, offering in one package a ready-prepared site, well-located, and engineering facilities to design any type of plant for purchase or lease. Both firms are credited with contributing greatly to the orderly development of Route 128.

Thirteen industrial parks are either completed or in final construction stages and three more are being started. These parks are absorbing, too, an ever-mounting number of new firms spawned in the dawning of the space age.

Illustrative of what is happening is the case of Itek Corp. Founded about 2 years ago by four Boston University engineers, Itek now has more than 700 employees engaged in classified reconnaissance satellite and other space work. In quick order it bought one plant on 128, leased 65,000 square feet of the Waltham Watch Co. works, and is planning to build a laboratory on a 43-acre site in Lexington near the Golden Semicircle. Incidentally, Itek also has a new west coast installation.

Another spectacular example is Transitron. Founded 6 years ago with 8 employees, it now has 3,000—and is the second-largest semiconductor producer in the Nation.

In the past 2 years more than $52 million has been poured into new plants along Route 128—and developers feel there is room to double the present total. Visibly supporting their optimism, the fabulous expansion pace keeps on accelerating.

Air Force millions: Perhaps the biggest single contributor to the amazing boom—not only along 128—but elsewhere in the metropolitan area, is the Cambridge Research Center of the Air Force's Air Research and Development Command. CRC has been and still is funneling millions of dollars into research.

As of May 31, CRC had outstanding 1,199 contracts totaling $320 million. Millions more in contracts, production and research, are being poured into the area by the AMC, NASA, ARPA, the Army and Navy, and private industry as well.

The MIT influence: Hand in hand with CRC as a font of new ideas, knowledge—and industrial talent—is the Massachusetts Institute of Technology. Scores of firms owe their existence to MIT, through its creation of new productive fields of research and provision of brains to work them.

Harvard and other Greater Boston institutions also are producing a continuous stream of technical talent.

In September, the Mitre Corp., a nonprofit organization which takes its name from MIT, will move into a $2 million plant at Bedford along Route 128. Mitre, under a contract with MIT, serves as the technical staff for the Air Defense System Integration Division working on correlating activities of human operators with the complex electronic gear of SAGE.

Mitre, which has H. Rowan Gaither as chairman of its board, expects to expand to a $5 million facility and eventually employ 1,500 to 2,000. The firm presently is located in Lexington, where ironically, the liberty of the Nation was once entirely in the hands of human operators. On the village green 77 minutemen armed with muskets fired on the British in 1775 in the first conflict of the Revolutionary War.

MIT made history at its Lincoln Laboratory along Route 128 by bouncing a signal off of Venus in February 1958, when it was 28 million miles from earth, with a 90-ton radar telescope. It took a year to decipher the data, and the feat was disclosed only a few months ago.

From MIT's instrumentation laboratory, headed by Dr. Charles S. Draper, has come the all-inertial guidance system for Titan, which is being manufactured by A. C. Spark Plug division of General Motors, and many more important contributions to the defense effort.

Within a decade: Greater Boston Chamber of Commerce officials estimate there are more than 430 missile, electronics and nucleonics-connected industries—almost all founded within the past decade. These are scattered throughout the area. At last count, however, 63 were situated along Route 128.

One of the oldest research firms is the Arthur D. Little Co. of Cambridge, which among other items is deep in cryogenics and is preparing the design and specifications of MSE for fueling Atlas and Titan. National Research Corp., also of Cambridge, has just come up with a new cryogenic storage vessel which has insulation improved by a factor of 15 over conventional devices.

At Waltham, Infrared Industries is producing missile guidance devices; at Lawrence, missile-carrying cases are being made by Craig Systems; and at Burlington, Dynametrics, Inc., is hard at work on an Avco subcontract making measuring devices for Titan nose cones.

The activities of Greater Boston firms go into virtually every missile/space system, either as components or—as in the case of Raytheon, which has the prime contract for Sparrow and Hawk—the entire system.

The business scene shifts continually. Bomac, producer of Klystron tubes at Beverly, Mass., at the northern end of Route 128, recently merged with Varian of Palto Alto, Calif. Texas Instruments of Dallas has acquired Metals & Controls Corp. of Attleboro—the Nation's first privately owned nuclear fuel manufacturer.

Bostonians are looking to at least three firms to put them in the forefront of the space race. Avco at its new $23 million laboratory in Wilmington is working on interplanetary shockwave research and developing space systems. At the new Goodrich-High Voltage Astronautics, Inc., in Burlington, work is being launched in development of ion propulsion engines. And at Raytheon engineers are working on a sky station which would hover miles above the earth in a fixed position—powered by microwaves beamed from the ground.

The Challenge in Trade

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of the WDSU Broadcasting Corp., which was broadcast over WDSU–TV and WDSU radio on July 14, 1959:

THE CHALLENGE IN TRADE

The importance of Russia's announced aim to overtake this country in world trade cannot be overemphasized.

But, at the same time, we believe the United States cannot afford to overlook another challenge in trade. This is the challenge from friendly nations, not only in the world market but also in the domestic market.

We already have seen an example of this other challenge in the automobile industry. The imports of foreign small cars have risen so steadily that now the Big Three of the auto industry are planning on bringing out small cars in the fall. Two other companies already are producing a made-in-America version of the European small car.

There are other facets, however, which are not so obvious as the emergence of the foreign car.

Take, for example, Japanese radios. In the first 3 months of this year, nearly half of all the radios sold in this country—excluding car radios—were imported from Japan.

American radio manufacturers are not blind to this competition. Most of them, however, say they have no plans to import for the domestic market either Japanese radios or radio parts.

One industry spokesman put the issue on the line this way:

"The only way," the spokesman said, "for American manufacturers to cope with the Japanese import situation is to show more ingenuity and to design and produce better equipment."

This, we think, is the way it should be. The way to beat foreign competition in the domestic market is not by erecting high tariff walls. Nor is it to simply utter the phrase "buy American" and hope that everybody will.

The way for America to meet the challenge in both the domestic and world market is for this country to keep producing superior goods and at a price that will attract the consumer. Despite our thriving economy, we cannot afford to feel secure in our position. For trade affects all of us and a failure to respond to this challenge means a downturn in the American economy.

In other words, if somebody is going to build a better mousetrap, it had better be us.

Representative Earl A. Bollinger Addresses Madison County Citizens During Ground-Breaking Ceremony

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the address given by Representative Earl A. Bollinger, of Madison County, at the historic ground-breaking ceremony on July 12, 1959, for the new Madison Memorial Hospital to be constructed in Fredericktown, Mo.:

REPRESENTATIVE EARL A. BOLLINGER ADDRESSES MADISON COUNTY CITIZENS DURING GROUND-BREAKING CEREMONY

(EDITOR'S NOTE.—Following is the text of the address given by Representative Earl A. Bollinger, of Madison County, at the ground-breaking ceremony last Sunday afternoon for the new Madison Memorial Hospital to be constructed in Fredericktown. Bollinger was the main speaker and chosen to give the address because he is the one who best represents the people of the county.)

Standing here I am truly cognizant of the honor that you bestow on me in allowing me to contribute my small bit to this momentous occasion. It is with pleasure that I address my friends and neighbors and join with them in this ceremony which marks another milestone in the ability of the people of Madison County to work together toward a cause that is beneficial to all.

I am happy to have been a witness to such an assemblage which may well be regarded as proof of the interest felt in this benevolent undertaking and a will that the good work will not be in vain. True enthusiasm means daring and uncompromising devotion. It is not sentiment or intoxicant, but an ardent and quenchless hope that what should be, shall be. This is dedication of your hopes to a common cause. Hope is creative, doubt is abortive, so let us hope, then act. The men who the not willing to deny themselves any possible gain, who forget that a vote is a vow, who forget the patriotism of paying taxes, who forget that law is like a bicycle and the way to keep it standing is to keep it going. That one whose very bones are flabby with civil neglect, such a man is not a man but a manikin. Upon the souls who are full of the enthusiasm of duty rests the unconquerable. To him who truly lives and does, the veil of the visible becomes more and more transparent.

We do not always listen to hear the deep breathing of the people ready to respond to the prophet of progress, we bite into one bad ear, and forget the green stalks of corn that array a thousand prairies. We find one brackish or dirty pool and forget the trickling of thousands of beautiful clear springs, we see one whirling copper cloud and doubt the sun. I am happy this is not the application used by our people in Madison County, we have been united and success has been ours. I could not impress upon you too much that in this project every citizen of Madison County has had a part in the initial pull, and with everyone pulling together on the final pull it will be a grand success.

The job is not finished, we must keep our enthusiasm high and our will bent to success. We have one more big pull and that is to see our purpose through to the ultimate end. That is the step you embark upon today. With your permission I shall digress for a few moments and touch only lightly upon the physical structure of this project. In the first place I understand we are the first to incorporate a nursing home and hospital as one, in a new building. Our good and gracious Government has contributed 50 percent of the cost, by the bare essentials of arithmetic this is a bargain for the people of Madison County. It will contain 25 beds in the nursing home portion and 42 beds in the hospital proper. In this manner more of our people will be served because we are giving a service to those in need of nursing care as a result of infirmities, as well as those needing direct hospital care.

It may be added that the building, from the elegance of its architecture and its conspicuous situation will prove a striking ornament to the area in which it will stand. It will bring more doctors to our area which will supplement the ones we now have. In times of emergency you will be able to get to a hospital quicker because of shorter distance. Another great attribute is the fact that you will have your loved ones close by and will not need to drive great distances to visit. It will bring wealth to our community in jobs and by many other means. It will enhance the position of our country as an enticement to industry and people of other places. These are a few among many of the attributes this structure will give you. Perhaps greatest of all it will give you that feeling of achievement that you have made your county a better place to live, for you and yours.

No doubt we are launching an example, that will be followed by many other groups. Building this hospital is a challenge but one we accept gladly because challenge has become traditional with us. We are ambitious and our neighbors around us know it. We are now building another monument to that ambition and our neighbors will be watching, and we will as in the past give them a good show. The masonry and steel they will see readily, but the concerted effort we will show them by our united front, will be the revelation they are seeking. May I say to you in summary, that the occasion today is a ground-breaking ceremony which means starting the foundation, these physical foundations are only masonry and steel, but the truly great foundation, the only one that can stand under the strain is the one we mould from the ambitions of our people.

We are united now as in the past. This will be a crowning triumph. Look around you and take inventory of the many fine things we have in our county that others do not have. You have an abundance of schools and may I add good schools, good roads, industrial expansion, utility expansion and most of all, the kind of people who know the importance of all these fine things and their contribution to the betterment of the area in which they live. I submit to you that it will be necessary for us to apologize to the coming generation for lack of progressive attitude and ability. These expansions stand as monuments to your foresight and ingenuity. And may I add that we owe these the responsibility of passing on something better, as they will their successors. It takes time infinite to build a perfect community, and with everyone striving together through generation after generation, we arrive a little closer to that sought after perfection.

Over a century and a half ago Washington broke ground for the United States Capitol, in what was little more than a wilderness, but it has stood. Through the united efforts of our people, it has not been in vain, great additional buildings have been added since, which is proof and example of the way in which we have grown as a Nation and the sphere of progress that is possible through efforts that are united. The material problems that face us today are not such as in Washington's time, but the need for expansion and united effort is even greater.

Success is mandatory, failure we cannot afford. Our great country was founded on this basis and we have inherited through united efforts the will for success. What better pattern and what greater project could be followed as an example for our own many causes. As I bring my remarks to a close I wish to thank you again for the honor of speaking to you. I hope I leave you preparing a mental toast "prosperity to Madison Memorial Hospital," and thoroughly resolved that it shall flourish.

Facts Are on Chicago's Side

EXTENSION OF REMARKS
OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. DERWINSKI. Mr. Speaker, in view of the continuing legislative interest in Lake Michigan water diversion, I am including in the RECORD two articles from prominent Chicago newspapers which are clear, concise explanations of the House version of the bill which we recently passed and which the Senate is now considering:

[From the Chicago American, July 14, 1959]

FACTS ARE ON CHICAGO'S SIDE

The lake diversion dispute with Canada seems to be repeating a familiar pattern. Spokesmen for Chicago and the Illinois waterway produce proof after proof that Canada's opposition to a temporary increase in diversion is selfish and irrational; then the Federal Government makes another concession to Canada.

The Canadians, evidently, feel no need to defend their extraordinary stand that Chicago has no right to the extra water it urgently needs, and that Canada can decide how the United States may use water which is entirely within its own boundaries.

A delegation from the Chicago sanitary district, testifying before a Senate public works subcommittee yesterday, emphasized that the water is actually Chicago's by right.

It pointed out that the boundary waters treaty of 1909 allowed Canada to divert up to 36,000 cubic feet a second from the Great Lakes, while the United States was allowed only 20,000 cubic feet. The reason for this disparity is that the treaty did not include Lake Michigan. An unwritten reservation allowed extra diversion for Chicago.

Lake Michigan is not a boundary water, and Elihu Root, then Secretary of State, would not allow it to be included in an international agreement.

Unfortunately, the unwritten reservation is now also unheeded. Canada has gained by default the right to interfere with Lake Michigan diversion.

The delegation also showed that for 40 years Canada has grabbed every advantage it could to increase its share of Great Lakes water. In terms of electric power, it has gained a margin of nearly $330 million over the United States. Yet it is now bitterly fighting a proposed increase that would amount to about $18,000.

In 1950 the Niagara treaty was signed, providing for an equal diversion of outflow from Lake Erie for Canada and the United States. The treaty also provided, however, that any share of the water allowance not used by one nation could be used by the other. Since Canada had cannily started building powerplants years before the United States, the equal diversion turned out to be 104,000 cubic feet a second for Canada and 16,400 for us.

The Canadians got another $30 million worth of power from a 1940 agreement permitting them to divert 5,000 cubic feet per second into the Great Lakes from its Long Lac-Ogoki system. In the high-water period of 1952–1953, that extra diversion increased the millions of dollars' worth of damage to American lakefront property. That didn't bother Canada.

In contrast, the sanitary district delegation said that Chicago was willing to pay for any proved damage that might result from the extra diversion that Illinois needs.

It is inconceivable in the face of evidence like this that an impartial judgment could go against Chicago. So far, however, Canada has had the winning argument: Canada is a foreign government, so it must be right.

An excellent example of the airy disregard for facts that prevails among opponents of the Chicago diversion was provided yesterday by Gov. Nelson A. Rockefeller of New York. Rockefeller sent a statement to the Senate committee declaring that "any reduction" in the amount of water available for electric power production at Niagara Falls would make it necessary to raise the rates for users of current.

Obviously Rockefeller was sounding off without knowing what he was talking about. At the same hearing Representative THOMAS J. O'BRIEN, Democrat of Illinois, testified that the increase Chicago is asking Congress to authorize "will not be injurious in any respect" to any community on the Great Lakes. And that opinion is shared by the U.S. Army Engineers. They have said repeatedly that the increase would make no perceptible difference to lake navigation or to power production.

[From the Chicago Daily News, July 15, 1959]

CHARGES ON LAKE DIVERSION DISPUTED—FAIR TEST IS THE ANSWER

A no-holds-barred attack by Michigan on the efficiency of the sanitary district's sewage treatment methods makes it clear that opponents of greater lake water diversion for Chicago will stop at nothing to thwart the city's fight for justice in this matter.

There is no justification in fact for charges before the Senate Public Works Subcommittee that the district is engaged in unorthodox sanitary treatment or that "a large volume of sewage" goes directly into the Chicago sanitary canal.

The American Society of Civil Engineers has described the district's $420 million sewage collection and disposal system as one of the "seven wonders of American engineering." The sludge lagoons, a particular target of Michigan's attack, are widely used and accepted sanitary settling tanks.

It is simply not true, according to B. A. Scheidt, the district's chief engineer, that large quantities of sewage bypass the district's treatment plants. The district, it so happens, has just completed a comprehensive check on every outfall along its entire system from Wilmette to Lockport and found fewer than half a dozen instances of waste directly entering the sanitary canal. All were industrial, and the violations are being corrected.

No sewers are ever bypassed, according to Scheidt, except to divert storm waters when they reach a point in excess of 175 percent of normal dry weather flow and overtax the treatment plants. This is a normal practice, followed at Milwaukee and other lake cities.

If it accomplishes nothing else, the latest attack may backfire on Michigan and other lake States opposing Chicago. It points up one of the real needs behind Chicago's fight for increased diversion, which is to increase the flow in the sanitary canal and the Illinois Waterway.

Despite an ever-increasing load on its sewage disposal system, the district gives complete treatment to all wastes and removes more than 90 percent of the impurities before discharging the effluent into the sanitary canal.

It has repeatedly asked for more water to assist in flushing away the effluent and as an aid to the expanded navigation needs of the Chicago region. It is currently seeking a 1-year test increase from 1,500 cubic feet of water per second to 2,500 cubic feet per second.

There is reason to suspect that Michigan's opposition and that of the other neighboring Great Lakes States is based not on a fear of lowered lake levels, as they pretend, but upon jealousy over Chicago's favorable port position as the connecting link between the Great Lakes and the lakes-to-the-gulf water route.

Untruth, misrepresentation, and misunderstanding have kept the diversion arguments going for nearly three decades. There is one way for the Senate to determine where the truth lies and that is to pass the diversion bill and and let a fair test be made.

More Pigs, Lower Profits

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. HOEVEN. Mr. Speaker, pursuant to my remarks in the RECORD on July 7, 8, and 9, I include the fourth in a series of articles prepared by Mr. Alvin F. Bull, managing editor of Wallace's Farmer, concerning the farm problems. This article appeared in the July 18, 1959, issues of Wallace's Farmer:

MORE PIGS, LOWER PROFITS

(By Al Bull)

More pigs mean lower prices. This is the same with most industries turning out products for sale.

In agriculture an increase in supply of food items drops prices so much that total income is less than from the original smaller supply. When this happens, demand is called inelastic.

Here's a simple example:

Suppose you are making a product and that you can sell 100 units for a dollar each. If you make 110 of these units, you must cut the price to 80 cents to sell the larger output.

Output	Price	Income
100	$1.00	$100
110	.80	88

Gross income is less from the 110 units than from 100 units. A 10-percent increase in supply decreased price by 20 percent.

An extreme example, some folks will say. Not so. Let's look at hogs.

Here are U.S. Department of Agriculture figures for 1954 through 1956:

Year	Million head slaughtered	Average price per 100 pounds	Income from hogs (billion)
1954	66.0	$21.60	$3.5
1955	75.4	15.00	2.7
1956	77.8	14.40	2.6

If you want to do some figuring, the price drops here are about in line with the simple example given above.

Most other agricultural products not under price support can supply similar case histories. Eggs, for example, are in big supply right now—and prices are down sharply.

Broiler production under integration zoomed in recent years. And prices nosedived. This increased-production low-price route is the usual one for sections of agriculture moving under integration.

Expanding markets faster than population growth within the United States is extremely difficult. Desire for food is limited by the capacity of the stomach—which is largely inelastic.

Two factors do tend to stretch farm markets a little each year. One is rising per capita incomes. The other is a growing population.

Population has been increasing by 1½ to 2 percent a year. That's a help, but no complete solution. The same crop acres now in production will be able to supply the food for the 230 million people expected by 1975, according to USDA estimates.

The climbing income level is of limited help, too. Most folks are already eating about all they really want. So they have a choice of how to spend the extra cash.

Choices include a second car or television set, a boat, better quality food, more built-in food services, and more restaurant meals.

This gives a clue as to why agricultural demands are inelastic while demand for autos or television sets may not be.

If prices dropped low enough, you might buy a second television set or a second car.

But no matter how low prices get you're not likely to eat four eggs for breakfast instead of two. Or to start eating a second breakfast every morning.

Desire for food is limited by the capacity of the stomach, while desire for services, better clothes, improved housing, and the like seems almost endless.

Most of the expenditures for food go toward improved quality or added services. Perhaps the homemaker buys a cake instead of a cake mix.

U.S. consumers find themselves in an enviable position. They are supplied with more food than they can eat. And money enough to buy pretty much what they choose. Food takes a smaller percentage of their income than in the past.

Most nations of the world would gladly trade their food problems for the one we face.

A little study of inelastic demand is rewarding. History shows that it also works in reverse.

That is, a decrease in supply increases prices enough so that total income is greater than from a larger crop.

If enough resources can be transferred from agriculture to other industries, output will be reduced. Then agricultural income will rise.

It isn't easy to get inelastic demand working in the price-raising direction. We have more production facilities than we currently need. They are controlled by millions of operators making independent decisions. An individual decision has no measurable effect.

With this situation, most folks tend to do what is best for them as individuals. Often this is contrary to the best interest of the industry.

The inelastic demand situation we face indicates one thing. We can't produce ourselves to riches. Adequate incomes to farm people can come only by balancing our production with demand in some way.

With adequate guidance, probably from government, decisions could be lined up in the direction of lower production and higher incomes.

In Support of H.R. 5

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. BOGGS. Mr. Speaker, I commend to the attention of the Members of the House and Senate a statement by Mr. Robert M. Mitchell, vice president of the Whirlpool Corp., in support of my bill, H.R. 5.

This is one of the most comprehensive statements that it has been my pleasure to read and it devastates the revenue arguments of the Treasury Department. The statement follows:

STATEMENT BY ROBERT M. MITCHELL, VICE PRESIDENT, WHIRLPOOL CORP., IN SUPPORT OF H.R. 5

I

Last December I had the privilege of appearing before this committee's Subcommittee on Foreign Trade Policy. I urged for the subcommittee's consideration the establishment of a special category of domestic corporations to be known as world trade corporations whose oversea earnings would become subject to the Federal income tax only upon distribution to the U.S. stockholder.

In my testimony I stated that:

"The committee will recognize that this concept is not novel. In fact, it is merely an effort to repatriate to the United States

those American corporations who are now resident in Panama, Canada, the Bahamas, Venezuela, the Netherlands, Switzerland, Belgium, Liechtenstein, and numerous other so-called foreign profit sanctuaries.

"The committee is also aware that the reason for the expatriation of investment capital through U.S. ownership of foreign holding companies is to enable American corporations to accumulate foreign earnings for the expansion of foreign operations without any liability for U.S. income tax. Foreign corporations are exempt from tax on their foreign earnings, by law.

"In effect, therefore, all that I have been saying to you is: Under present law, a U.S. corporation can achieve the desired deferral of U.S. tax on income from foreign operations by organizing a foreign subsidiary. This involves a considerable number of business headaches, apart from taxes. Instead of continuing this practice, let's recognize the facts of life by practical legislation which could furnish the same incentives and advantages for American corporations who have been heretofore deterred by the complexities and expense of organizing and operating a foreign subsidiary."[1]

The tax deferral concept (which was also supported by numerous other witnesses before the subcommittee) was embodied in section 2 of H.R. 5, a bill entitled "Foreign Investment Incentive Tax Act of 1959," and introduced on January 7, 1959, by the Honorable HALE BOGGS.

The Foreign Business Corporation—as the tax deferral corporation was designated in section 2 of H.R. 5—was described by its legislative sponsor as the cornerstone of his bill.

Rarely has a tax measure received such widespread support as has H.R. 5, particularly the provision of the bill which would allow the creation of a Foreign Business Corporation.

H.R. 5 has been endorsed by the following leading business, trade, and farm organizations in the United States:

The U.S. Chamber of Commerce.
The National Association of Manufacturers.
U.S. Council of the International Chamber of Commerce.
National Foreign Trade Council.
The New York Board of Trade.
The Detroit Board of Trade.
The Chicago Association of Commerce and Industry.
The Philadelphia Chamber of Commerce.
American Farm Bureau Federation.
Machinery and Allied Products Institute.
Manufacturing Chemists Association.
U.S. Inter-American Council.
Illinois Manufacturers Association.
Pharmaceutical Manufacturers Association.
New York Export Managers Club.
New England Export Club.
The World Trade Center in New England.
The Free Enterprise Association.
Milwaukee Association of Commerce.
Milwaukee World Trade Club.

Two dozen or more individual industry trade associations support the bill.

A private, confidential questionnaire mailed on May 26, 1959 to some 4,500 U.S. companies engaged in foreign trade to obtain information relative to H.R. 5 elicited returns from over 1,100 firms, or more than one-fourth of the number addressed.[3] One of the highlights of this survey was the overwhelmingly favorable attitude of the respondents to H.R. 5. About 900 firms indicated that the proposed legislation would prove stimulating in some way to their business activity abroad. The provision of the proposed legislation which was cited most often for the stimulating effect it would have on oversea business activity was the deferral of U.S. tax through the Foreign Business Corporation. In a separate postcard to Congressman BOGGS indicating support or opposition to the bill, 995 firms were favorable and 286 of these stated their willingness to testify in support of the legislation. The list of companies whose names were introduced into the committee's record as willing to give testimony in support of H.R. 5 is a veritable "who's who of American industry," encompassing as it does firms of all sizes and representative of all segments of American industry.

The stature of the companies and of their officers who actually appeared at the hearings in support of the bill was in and of itself eloquent testimony of the wide support enjoyed by H.R. 5 throughout the business community.

It is notable that only one witness requested to be heard in opposition to the proposed legislation.

It is an extraordinary fact—perhaps it is best to describe it as an historic fact—that never before has virtually the entire business community been so completely united because any comparable legislation as now prevails in the case of H.R. 5.

In addition, two important studies on the subject of expanding private investment overseas—one, the Straus report, prepared pursuant to a congressional mandate,[3] the other, the Boeschenstein report,[4] prepared at the request of the President—in general support the principles embodied in H.R. 5. Both reports give emphatic support to the concept of tax deferral through the instrumentality of the Foreign Business Corporation.

In a major address on "U.S. Foreign Policy the Rule of Law," Vice President NIXON endorsed tax deferral as a significant device for increasing private oversea investment.[5]

Arrayed agains this impressive background of responsible support for the Boggs bill is the Treasury Department. The review below highlights the basic ambivalence which characterizes the Treasury's position.

II. HOW VALID IS THE TREASURY'S POSITION?

1. The so-called revenue losses: The Treasury's position vis-a-vis the Boggs bill in substance reduces itself to this: the Treasury would be willing to give unqualified support to H.R. 5[6] and to the tax deferral features of the proposed legislation if it were not for the heavy revenue losses. These losses are estimated at $300 million to $500 million, of which sums $200 million to $400 million result from the extension of tax deferral to export income. Since under the Treasury estimates, the bulk of the so-called loss results from the inclusion of export income under the tax deferral umbrella, the validity of the export income figures is crucial to the Treasury's case. Indeed, if the Treasury's estimates cannot be supported, it follows that the Treasury's opposition collapses—or some other ground for opposing the legislation will have to be found.

Hence, the first question which needs an answer is, How did the Treasury derive its estimates? This question was, in fact, asked of the Treasury's spokesman at the public hearings by Congressman BOGGS. The answer of the Treasury spokesman boils down to about this: The estimates on the revenue loss from extension of tax deferral to export income (which covers the bulk of the so-called loss, $200 to $400 million) were speculative. The Treasury's witness stated with commendable candor that the estimates on exports did not purport to be more than speculative. Moreover, the witness conceded that the estimates were based on many assumptions to which the Treasury was forced to resort because of the absence of complete data on exports.

There are two other things wrong with the Treasury's estimates. For one thing, corporate income tax returns (to which the Treasury, of course, has access) "do not provide adequate information concerning the corporations which might qualify under section 2 of the bill as foreign business corporations."[7]

For another, the corporate tax returns do not disclose the taxpayer's present practices or future intentions with respect to deferral of income. "Without knowing present practices or future intentions of interested firms, an intelligent approach to this problem is precluded."[8]

A. The Burgess estimates based on a sampling of over 1,100 business firms

Mr. Ralph E. Burgess, economist for the American Cyanamid Co. (and a former revenue estimator on the staff of the Treasury Department and the Joint Committee for Internal Revenue Taxation) reported to the committee the results of a confidential, private questionnaire sent on May 26 to approximately 4,500 firms engaged in foreign trade. Over 1,100 firms, or more than one-fourth of the number addressed, responded. This sampling is unique in that it is the only one of its kind ever directed toward furnishing a realistic and factual foundation for estimates on the revenue effect of tax deferral.

The sample described by Mr. Burgess represented almost $114 billion of 1958 sales—slightly more than one-third of total manufacturing sales in the United States during 1958—and $6 billion of exports for the same period, or approximately one-third of the total 1958 U.S. exports. Mr. Burgess further informed the committee that small, medium, and large companies were adequately represented in the sample.

In reporting on the revenue effect, Mr. Burgess advised that over one-half the firms responding presently utilize a foreign base corporation to handle either all or part of their exports. More than four-fifths of all firms in the sample, Mr. Burgess noted, handle their export sales either in whole or in part directly, that is to say, without using a foreign subsidiary. Mr. Burgess assumed that such firms would be potentially eligible to utilize a Foreign Business Corporation under H.R. 5. In fact, 485 firms replied to a specific question that they would conduct their export business through a Foreign Business Corporation should the proposed legislation be enacted. These firms estimated that their total tax deferred, based on 1958 experience, would be $57.5 million. Since the survey encompassed 31.4 percent of the total dollar volume of 1958 U.S. exports, the sample was expanded to include a national total. On this basis, Mr. Burgess testified, "The total tax deferred by all U.S. exporting firms utilizing this legislation would be on the order of $183.1 million."

This upper figure is, as Mr. Burgess pointed out, a theoretical figure which will not be attainable since all firms may not wish to utilize the provisions of H.R. 5 for the transaction of all of their oversea business, including exports. Moreover, as Mr. Burgess states:[9]

"The intentions of the firms which presently handle all exports directly require further consideration. When queried on this point, about seven-eights of the firms presently handling all exports directly and nearly three-fourths of those companies intending to establish a foreign business corporation under H.R. 5 specified that if the bill is not passed, they would nevertheless establish a foreign corporation to conduct such business in the future. * * * One can anticipate that the tax payments of these corporations will in any event be deferred. This expected revenue effect coupled with the deferment of additional tax, as other direct exports are initially channeled through presently existing foreign corporations, would act as a significant offset to the deferral loss indicated earlier. Thus, the $183.1 million potential is truly a maximum that is unlikely to be approached. This, the most important disclosure of the survey, in my opinion, justifies discard of the Treasury's unsupported, exaggerated revenue estimate."

In what was perhaps the understatement of the day, the reaction to Mr. Burgess'

Footnotes at end of speech.

testimony, was nevertheless, succinctly stated by Congressman NOAH MASON, Republican, of Illinois, when he commented: "I am inclined to agree with you that the Treasury's estimates are exaggerated."

B. Estimate of Joint Committee on Internal Revenue Taxation

The basic weakness in the Treasury's estimates was disclosed by Mr. Colin Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, when, in a letter dated July 2, 1959, to Congressman BOGGS, he said: [10]

"The tabulations of data from corporate income tax returns do not provide adequate information concerning the corporations which might qualify under section 2 of the bill as foreign business corporations."

Mr. Stam's letter to Mr. BOGGS indicated that, using the same sources of data as did the Treasury, his estimate of the annual revenue loss which would result from the provision in section 2 for deferring tax on the income of a foreign business corporation would be $75 million for all industries excluding export trade.

"Our estimate of loss for export trade is $75 to $150 million, so the total for this provision would be $150 to $225 million."

Mr. Stam observes that his estimates are based on the assumption that one-half of the taxable income of the foreign business corporation will be retained abroad.

C. Prof. Ezra Solomon's estimates

Ezra Solomon, professor of finance at the University of Chicago, who appeared before the committee on July 9, estimated that if tax deferral is confined to income from foreign investment alone, the maximum loss would be about $165 million a year. It is to be noted that this figure assumes that foreign business corporations will retain 100 percent of their earnings. Based on the current pattern of about 40 percent retention, the revenue loss, Professor Solomon testified, will be about $65 million a year.

If tax deferral is extended to cover income derived from exports as well as from investment, Dr. Solomon places the maximum loss—assuming 40 percent of net earnings will be retained—at about $190 million.[11]

In the preceding discussion the concept of revenue loss has been used imprecisely—just as it has been similarly used by the Treasury Department. Over the short run there is a loss but only in the sense that the Treasury forgoes immediate tax revenue; and, moreover, the so-called loss applies only to the revenue effect of the first year of the (proposed) law's operation. Over the long run there is no loss because foreign income must eventually be distributed to the U.S. stockholders. At this juncture, the full 52-percent tax rate applies.

Recapitulation of estimates of revenue loss if tax deferral covers export income

[In millions of dollars]

	Low	High
Treasury	200	400
Burgess	50	183
Stam	75	150
Solomon		190

From the foregoing table it will be seen that, although three different techniques were employed, the three independent estimates support each other; and in no instance do they yield an estimate as high as 50 percent of the Treasury's (maximum) figure.

What happens to the Treasury's case when the estimates on which it has predicated its opposition to H.R. 5 are found to be invalid? Since the Treasury figures of revenue loss have been shown to be exaggerated and unsupported, it is respectfully submitted that the committee would be justified in disregarding them * * * along with the Treasury's reservations regarding H.R. 5.

2. The Treasury's limitation on the geographical coverage of the Foreign Business Corporation: Although there is no sound basis for the Treasury's proposed geographical limitation on the operations of the Foreign Business Corporation, it is, nevertheless, useful to examine whether even these proposed limitations contain any substantive merit.

The busines community is entirely sympathetic with the national objective of promoting private investment in the less developed nations of the free world. The business community merely asks whether the Treasury's proposed method will enable American business to do the job.

Will limiting tax deferral to income derived from the underdeveloped countries spur private investment in these lands? Such a notion has superficial appeal. When subjected to analysis, the scheme breaks down. Why would companies now utilizing a foreign base corporation with world-wide application of tax deferral be willing to trade this privilege for a foreign business corporation with the geographical and other limitations on tax deferral proposed by the Treasury? To ask the question is to answer it.

There are other difficulties inherent in the Treasury's plan. Pressed to give a definition of the underdeveloped countries, Secretary Dillon listed these regions: Latin America, Africa (other than the Union of South Africa), free Asia (other than New Zealand, Australia and Japan), and Europe (with the possible exception of Greece, Spain, and Portugal).

Secretary Dillon further indicated that the list of countries classified as "underdeveloped" would be kept by the Secretary of the Treasury, with the concurrence of the Secretary of State.

Putting aside the lack of administrative and diplomatic feasibility (which the Department of State has apparently been forced to overlook in the interest of going along) the attempt to achieve a geographical sectoring of the flow of investment capital flies in the face of economic reality and business efficiency. While all of Latin America is included in the definition of underdeveloped, it can scarcely be said that the state of development of the economies of Brazil, Argentina and Mexico is comparable with, say, Burma, Ceylon and Vietnam. Yet all are included in the same definition. Brazil, Argentina and Mexico are developing economies where there already exists a sufficiently advanced technology to sustain the beginnings of local consumer goods industries for the manufacture of, for example, refrigerators, washing machines, radio and TV sets. By comparison, Burma, Ceylon and Vietnam are as yet primitive or subsistence agricultural economies. Italy is excluded from the Secretary's definition of "underdeveloped." Yet, southern Italy is a primitive, subsistence economy—even more underdeveloped than either Spain, Greece, or Portugal, which are included. The Italian Government is actively seeking private investment for this long-neglected region. Yet, under the proposed definition it would be ineligible.

Incidentally, what happens after an investment has been made in one of the classified underdeveloped countries and 5 years later, just as the enterprise is about ready to pay out its first dividends, the country is removed from the classified list of underdeveloped countries?

It is universally recognized that the level of private U.S. investment in the underdeveloped countries is pitifully small. It is confined largely to extractive activities—petroleum and mining. As Chairman MILLS himself observed during the hearings, the Treasury proposal will do little, if anything, to stimulate other industries to invest in these areas.

Fundamentally, any limitation of deferral to the poor lands is a mirage. To be effective, tax deferral must generate income for reinvestment. If there is little investment to begin with, then, there is little resulting income; and the privilege of deferring the tax on such slender income is hardly worth the candle.

While the objective of promoting investment in the less developed countries may be sound, the technique which the Treasury proposes cannot even begin to make a significant contribution to this end.

The fundamental difficulty with the Treasury's geographical limitation is that the underdeveloped lands have not held any attraction for U.S. manufacturing investment capital because most of their economies are not economically viable. These nations fall into two categories:

(a) The countries born out of chaos: South Korea, Taiwan, Pakistan, South Vietnam.

(b) Former parts of the British and French Empires or their spheres of influence: Laos, Cambodia, Jordan, Libya, Morocco, Tunisia, Greece, and Turkey.

None of these countries is capable of existing without subsidies. Most, if not all, of these countries are the recipient of U.S. foreign aid or defense support (a euphemism for economic subsidy).

Indeed, the Honorable Leonard J. Saccio, Deputy Director of the International Cooperation Administration, in an appearance before the Foreign Operations Subcommittee on the House Appropriations Committee, freely conceded that seven countries in the Far East require "economic assistance in the form of defense support" in order to exist.[12] He listed these countries as: Cambodia, Taiwan, Korea, Laos, the Philippines, Thailand, and South Vietnam. The point to be noted here is that subsidizing these nations has little or nothing to do with economic development or improving the standard of living. These subsidies are necessary in order to put food into the stomachs of their people, and to keep these countries from reverting to chaos.

Although these nations have great strategic importance to the free world, they are the high risk areas in which American companies cannot possibly afford to risk their stockholders' money.

This is not to suggest that there are no possibilities for private investment in these areas. They do exist but on a selective rather than a diversified basis—for pharmaceuticals, sewing machines, bicycles, and other light industry, if not for the industries that represent advanced technology and require large capital investment.

We do suggest that the flow of outside capital needed to support the rate of economic growth sufficient to make these economies viable cannot be satisfied by private investment alone at this stage of their development. If private capital moves into these areas, it will, as suggested above, do so on a selective basis, probing each area for profitable advantage.

Plainly, the sources of such investment capital can only be found in the developed areas of the world. Under the Treasury's scheme, however, capital from the developed areas cannot flow through a foreign business corporation into the less developed areas.

The unfortunate implication of the Treasury's proposal is that it seeks to compel private U.S. industry to operate abroad in a geographically circumscribed area. Mr. Ralph Straus puts it well when he said in his testimony: [13] "Private U.S. industry cannot be compelled to operate abroad by government fiat; it must participate voluntarily."

It is significant that the Straus report expressly repudiates the Treasury's geographi-

Footnotes at end of speech.

cal limitation on the operations of the Foreign Business Corporation, viz.: [14]

"We believe that there should be no geographical limitation on the foreign activities and sources of income of an FBC because the diplomatic problems and domestic pressures involved in choosing particular countries or areas would make a general system of legislative or administrative selection very difficult. Moreover, since the FBC involves tax deferral rather than tax reduction, it is appropriate for investment both in developed and underdeveloped countries."

Mr. Roy Ingersoll, chairman of the board of Borg-Warner Corp., enunciated the overwhelming opposition of the business community to the Treasury's crippling proposal to limit the geographical operations of the foreign business corporation when he testified: [15]

"In my opinion this limitation is completely unrealistic and if the proposal is accepted by this committee, H.R. 5 will be virtually ineffective in accomplishing an increase in private foreign investment. This is true because as I have previously stated, at the present time domestic capital demands are so great that there is little, if any, left over for American business to invest in foreign countries. The source of funds for such investment must therefore come from the profits generated abroad. These foreign profits are not at the present time being generated to any extent in underdeveloped countries and probably will not be for some time. Where then would the funds for increased foreign investment come from if the Treasury Department's proposal were accepted?

* * * * *

"I must state frankly that, if the Treasury limitations are imposed on the Boggs bill, the entire purpose of the (proposed) law is emasculated. * * * The Treasury version of this bill, which would only benefit a company investing in underdeveloped countries after it had earned the money there in some future year and would not permit the transfer of earnings in other oversea markets to such underdeveloped countries, would be worse than nothing. It will be of no value to American industry."

Interview With British Missile Expert To Set You Straight on Russia's Rockets

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following interview with Wing Comdr. Asher Lee, published in the U.S. News & World Report of July 20, is informative and something that I believe every American interested in the defense of his country should read with interest.

While we may not have been brainwashed by the Russians, our press and some of our politicians have certainly been hypnotized by them.

Once again, it is interesting to note that the people who are, literally, under the guns appraise the situation with more calm and more steady nerves.

We are not defeated in the arms race by any means, as Commander Asher points out, and fortunately the vast majority of our people have confidence in our President and Commander in Chief and will not be panicked by the voices of gloom chanting their dreary dirge.

The above-mentioned article follows:

TO SET YOU STRAIGHT ON RUSSIA'S ROCKETS—INTERVIEW WITH BRITISH MISSILE EXPERT

Question. Commander Lee, what importance do you see in the Russians' announcement that they have fired a rabbit and two dogs into space and returned them successfully to earth?

Answer. This was evidence of some progress in the field of biology and the medicine of space travel, but not in the technical evolution of rockets for military or other purposes. The Russians themselves say it was only a single-stage intermediate-range rocket carrying a payload of 2 tons, and that it reached a "great height." They did not specify the height.

The load of 2 tons is not remarkable. The Germans fired 1 ton of load in their V–2 rocket way back in 1944, and the United States of America in their long-range-rocket trials must have exceeded a load of 2 tons on many occasions.

A few weeks ago the United States fired two monkeys 1,700 miles to height of 300 miles and got them back. The Russians seem to prefer dogs to monkeys.

The general position, then, is this: Both the United States and the U.S.S.R. have at least a decade of experimental flights before them, mainly with animals, before human space travel or manned space platforms become a reality. At this stage it is, broadly speaking, nip and tuck between the two countries in both space and military rockets.

Question. How far ahead of the United States are the Russians in the field of missile development?

Answer. I would not put the gap at more than about a year. Even this gap is totally unimportant, because the state of rocket development today is roughly where the airplane was in 1914–15. The chance of successful launchings and of reaching the degree of accuracy that is required still is so extremely uncertain that you really can't talk about missiles being the top weapon in anbody's long-range-attack plans.

Neither the U.S.S.R. nor the United States of America has yet developed a reliable long-range rocket. The fact that Russia may have 50 to 100 intercontinental ballistic missiles—ICBM's—today whereas America may have only a half dozen or so is not important, since for neither Russia nor America does the missile constitute the main weapon, the main punch.

Question. But, aside from numbers, aren't the Russians substantially ahead of the United States in missile technology?

Answer. I would say not. Let's break the question down.

In power of rocket engine it may be true that the Soviet earth satellites indicate that they have more powerful rocket engines than the United States of America. But the latest statement by Wernher von Braun [chief of the U.S. Army's missile team] is that you have under development an even more powerful engine than the Russians have. Since neither of you really is worried about power, you can get the range you require. General LeMay [Vice Chief of Staff of the U.S. Air Force] emphasized recently that "it is reliability which is the problem."

Question. What do you mean by reliability?

Answer. Reliability means this: When you fire a rocket, do the propellants and the engine function well enough to make it work?

Let me quote some figures on the V–2 rocket that the Germans developed in the last war. Now, the V–2 was one stage. Its mechanism was simple, and it was considered fully developed and operational. The main failing was the inaccuracy of its guidance system. Only some 30 percent of attempted firings impacted within a 50 square mile target area.

Question. But that was back in 1945.

Answer. But the Germans had been test firing that thing for years, and, with great respect, I would submit that both the United States and the U.S.S.R. are still at the stage of test firing ICBM's. The first recorded test firing by the Soviet Union was in August 1957. The first successful test firing by the United States of America was less than a year after that. We are still test firing. This weapon is still adolescent and is still not capable of giving more than 50 percent successful firings.

And this doesn't even take into account the question of the guidance system. It is reasonable to assume that the Russians have had just about the same proportion of successful firings as the Americans—about 50 percent.

Now, this means that if Russia has 100 long-range intercontinental ballistic missiles, a very popular American estimate at the moment, the chances are that not more than 50 of these would even just vaguely take off in the arc and general direction of the target.

That is why I say that the long range rocket, with its liquid fuel engines, is not yet a reliable weapon and not yet the main weapon of Soviet long range attack.

NO PINPOINT ACCURACY

Question. How accurate are the missiles that do get going?

Answer. Well, the last statement put out by the Russians themselves would indicate that when a missile is considered supremely accurate they expect it to get within a 5- or 6-mile radius of the target.

Question. Isn't that sufficient to destroy New York or London?

Answer. That degree of accuracy is sufficient for large cities, but it is not sufficient to cope with the real problem confronting Russian military planners; that is, how to destroy America's retaliatory capacity. It is not sufficient, for instance, to enable the Russians to deal with this kind of practical problem.

Say the Russians knew there was a flight of hydrogen-bomb-carrying B–52's in Alaska. They would have to know the coordinates of that airfield awfully accurately and the dispersal of that flight to hit that target. With present accuracy, you might conceivably do it. But your ability to plan to do it and to say, "We will send off three rockets, and one of them is bound to do the job"—well, I would say they would be hitting and missing in their planning. I don't think the Russians are the kind of people who would choose to go to war on that basis.

Question. So, in your opinion, the Russians still are very far from the point where they could count on destroying America's retaliatory capabilities in a surprise attack?

Answer. Yes, I think that.

Question. Do you think that Russian strategic planning is based on surprise thermonuclear attack in time?

Answer. No, I don't. Even if the Russians had accurate long-range missiles—which they haven't—I believe that they still would not be led to initiate a major war simply because they thought they could achieve surprise. The reason is simply this—they know that on any one day when they might launch this surprise attack two things could happen.

The first is that their knowledge of where your strategic bombers are certainly would be partial. Some bombers would be mobile; some would be on training flights, some might be airborne. That's point 1. Surprise can never mean 100 percent knowledge of where to hit.

Secondly—and this seems to me to be very important—there is no such thing as guaranteed surprise. The Russians have to prepare for this surprise attack by moving missiles in concentrated fashion to key points. In moving their transport aircraft through bad weather they may have to reveal unsual movements in their wireless traffic. The same applies to other preparations. The chances of American Intelligence and NATO Intelligence not being alerted are very thin.

Now, what does an alert mean? It means a high proportion of your strategic-bomber force will be airborne merely on the suspicion—not necessarily the knowledge—of possible attack. This is going to rob the Russians of a high proportion of the value of surprise.

Question. Even if the Russians had reliable and accurate missiles, you don't consider a surprise attack now or in the foreseeable future to be feasible?

Answer. That's right. Let me quote an official Soviet military view on the subject: "Surprise is no recipe for blitzkreig success even in the nuclear age." This view is expressed by the Soviet high command to their own officers, and I think it accurately sums up that situation.

Question. Commander Lee, do you see anything to justify a recent statement by U.S. Secretary of Defense McElroy that the Russians are having trouble with their missile program?

Answer. Yes, I see quite a lot of trouble there.

There is the general fact that the Russians have relied so far on liquid propellants. Soviet rockets that are in serious production—both the intermediate range and the intercontinental ballistic missiles—are all using liquid propellants.

These liquid propellants include liquid oxygen, which is difficult to store and unstable in performance. That poses serious problems when you are faced by the danger of surprise attack or the need to come to an important decision about war in a matter of 24 or 48 hours. The Russians simply cannot tolerate this. They really must go over to solid-fuel rockets I think they will have to regear their production to that.

PROBLEMS OF GUIDANCE

Question. Will solid fuels solve the problem and make the long-range missile a fully reliable weapon for Rusisa?

Answer. No, not solid fuels alone. There still is the problem of the guadance mechanism. That might be perfeoted gradually over a number of years. Or it might be perfected quite quickly. There's always the possibility of a sudden breakthrough on mechanical problems.

You see, this problem of guidance mechanism involves not only the equipment itself but very precise knowledge of two things: the exact point from which you are firing and the exact point that is your target. In other words, detailed knowledge of the earth. So the mapping of the earth, including the ocean floor, is crucial to the use of all long-range missiles, whether they are fired from submarines or fired from land sites.

We know that both America and Russia lack up to date air mapping of their respective opponents' territories on a scale necessary for maximum guidance. It's easy for the Russians to do accurate firing over their own territory. But, if you can fire a rocket 5,000 miles over Soviet territory, that doesn't mean you can do it from Soviet to American territory unless your geographical knowledge of the location of your target is as accurate as it is of targets on your own territory.

Question. That would be simple enough if their target was a city like New York or Chicago wouldn't it?

Answer. Yes. But the problem for the Russians is the retaliatory power of America, not your big cities. I don't think they are afraid of the hit-back from New York City, but they are afraid of the hit-back from the Strategic Air Command.

The first order of priority in Soviet planning must clearly be SAC and your rocket bases. And the Russians are a long way from solving the problem of guidance and accuracy to the point where they can aim at an American base with any reasonable certainty of destroying it.

Question. Earlier you said that the Russians are in some trouble with their missile program because of the need to switch over to solid fuels. Is the United States ahead in this field—the development of solid-fueled rockets?

Answer. I don't think America is ahead, but I don't think there is more than 6 to 9 months between the United States and Russia in this field.

Question. In the United States there is a lot of talk about the dangerous missiles that are supposed to be developed in the early 1960's. Some people claim that the Russians will be so far ahead of the United States that they will be tempted to exploit their advantage with a surprise attack aimed at neutralizing America's striking power. Do you think that a gap of this magnitude is shaping up between American and Russian rocket development?

Answer. It could happen—but only if America fails to maintain the speed-up on its rocket program which has been so manifest since August 1957, when we had the news of the first successful Russian ICBM test-firing, followed by the launching of the Soviet earth satellite in October 1957. Since then America has realized that she must catch up and go ahead. Now, if you maintain this attitude you could catch up within 18 months.

By the middle 1960's you could be ahead on refined guidance and long-range solid-fuel rockets as well as the development—and this is most crucial—of growing numbers of atomic submarines carrying Polaris missiles.

You can do this. Whether you will do it or not is like predicting every Senate Armed Forces Committee debate for the next few years.

AN "IDEAL WEAPON"

Question. Who has the lead in the race to develop atomic submarines equipped with long-range missiles?

Answer. I don't believe the Russians are ahead, and they may well be behind the United States. To my mind, this is getting somewhere near the ultimate weapon—the weapon that can hide its face, that has a secure base and that can fire accurately. This is the ideal military weapon—the weapon with solid fuel like the Polaris mounted on an atomic submarine.

Now, first of all I think that the Russians are behind the United States in the development of atomic-engine submarines. All know they have large numbers of submarines. Figures of 350 and more have been quoted.

But, for long-range-attack purposes, there is no point in having short-range submarines or long-range submarines in the Baltic. You want to have atomic-powered submarines, first-class crews, and stable platforms with long-range solid-fuel rockets. Now, they haven't got all those, and you are closer to having them than are the Russians.

Question. But there are reports that the Russians have been firing missiles from submarines and cruisers for a long time—

Answer. Yes. This is true. Indeed, in my first book on the Soviet Air Force in 1950 I gave eyewitness accounts of some trial firings of rockets from Russian submarines. But these are in the main tactical, liquid-propellent rockets with a range of the order of 500 miles or less.

Now, it is true that, in terms of date lines, the Soviets probably started rocket firing from submarines before the United States. But, at this moment of time in the development of strategic long-range solid-fuel rockets fired from atomic-powered submarines, the United States has the edge. It is not a big edge—not yet important enough really to matter—but it can matter and be decisive in the next 5 to 10 years.

Question. Khrushchev not long ago said that the manned bomber is obsolete. Does he really believe that?

Answer. Oh, no. I don't think he believes it at all. Less than 6 months after Khrushchev said that manned bombers and manned fighters were destined for the museum, NATO authorities identified a new Russian delta-winged six-engine supersonic jet bomber that they dubbed the "Bounder."

There is plenty of evidence that the Russians are continuing to develop faster supersonic fighters, too. Since Khrushchev made that speech, a number of technical aviation journals in Russia have said they were working on fighters of the order of mach 3 and mach 4—three or four times the speed of sound.

THE MANNED-BOMBER RACE

Question. In this manned-bomber race, who is in the lead?

Answer. At the moment, the United States has the advantage for this reason: You can attack the Soviet Union with a number of your tactical fighter-bombers that are almost looking in on Soviet territory from bases in Turkey. With their tactical fighter-bombers, the Russians can attack your advance bases in Western Europe and maybe Britain, but they cannot attack the United States with these aircraft. So, this is America's first advantage.

The second advantage is that you have a much larger and more-experienced force of intermediate jet bombers—that is the B–47. As for long-range jet bombers, I find it very difficult to choose between the effectiveness of SAC and the effectiveness of what the Russians call their ADD—their long-range bomber force.

The new Russian long-range supersonic bomber, the Bounder, has a two-way range of 10,000 to 12,000 miles, with a very small amount of local flight refueling in a safe area near the Soviet Union. So it can reach virtually any part of the United States and return. But the Bounder is not in squadron service yet and is a thing still of the future.

In the overall picture of long-range bombing capacity, the Russians certainly have no advantage. But there is no great difference between the two, because such elements as effectiveness of radar cover, effectiveness of radio countermeasures, skill in navigation, determination of crews—these could mean more than the overall number of bomber forces employed.

Question. Are the Russians building up an effective defense against our Strategic Air Command—our bombers, that is?

Answer. I don't think the Russians can develop an effective defense against SAC with present resources.

First, radar is always vulnerable to jamming, and the Russians have no means of knowing when it is jammed. It doesn't show on the screen.

Secondly, there is the standoff bomb which is being developed in the West. This is a guided bomb which a bomber drops and then guides on to its target from a range of about 200 miles.

This means that the Russian defensive guided missiles—with a range of 25 to 50 miles—cannot be effective against bombers using the standoff bomb. Fighters cannot close to fire at 200-mile range, and Russian air-to-air missiles only have a range of about 3 to 5 miles—perhaps the latest ones have a range of 7 or 8 miles. So the standoff bomb can be launched at a target at supersonic speeds before the Soviet defensive guided missiles or fighters can get into action.

Then there is the undoubtedly successful tactics of skip-bombing, in which the bombers come in low below the radar screen and then rise suddenly and drop their bombs. Defense against this form of attack is extremely difficult.

I don't mean that the Russians are not going to shoot down maybe 10, maybe 15 percent of attacking bombers, but this percentage is not high enough to produce effective defense in the age of thermonuclear weapons. Estimates of the percentage of attacking bombers that must be shot down to provide effective defense range from 50 to 90 percent. I don't think that this is feasible either for the Russian or American air defense.

Question. Khrushchev makes a lot of noise about American rocket bases that are being established in Europe. Is there any evidence that the Russians are putting their intermediate-range missiles in the Eastern European satellites?

Answer. Yes, there is. I've had it from a number of people in the Polish and Hungarian armed forces—notably Hungarians—who say they have taken part in rocket-firing exercises. There have been many other reports of Russian missile sites in Eastern Europe, and there is no reason to disbelieve these.

Question. A lot of people seemed to be impressed by the huge transport plane that carried Deputy Premier Kozlov to New York nonstop from Moscow. Does that plane indicate that the Russians are ahead of the United States in the general development of jets and supersonic transports?

Answer. No, I don't think so at all. This Tupolev 114, which carried Mr. Kozlov to New York, is certainly the largest civilian transport plane flying today. But it isn't the fastest. Your own Boeing 707 has crossed the Atlantic in much faster time. As for design, the Tupolev 114 isn't particulary modern. It derives from a Russian four-turboprop bomber called the Bear, which we saw flying as long ago as 1953 and 1954. It's really now an obsolescent aircraft.

I would like to make the prediction that the Tupolev 114 will never go into regular passenger service with Aeroflot (the Soviet civil airlines), but is simply a demonstration aircraft that recently carried Mr. Khrushchev to Albania and has now carried another leading politician to New York.

Question. Over all, how do the Russians stack up against America in this field of transport aircraft?

Answer. They certainly are not ahead of America either in the field of supersonic transport or bomber aircraft or in the field of subsonic jet bombers or jet transport aircraft. But the extraordinary thing is the extent to which they have closed the gap in the last 4 or 5 years.

In 1950, the Russians had neither a twin nor four-jet transport aircraft within years of the latest American and British ones. Now the Russians have produced five or six different long-range jet transport aircraft that are very close rivals of the Boeing 707 or the Lockheed Electra turboprop or any of the British equivalents, such as the Comet IV or the Vanguard or the Britannia. It is the closing of the gap which is extraordinary—particularly in the field of long-range jet transports.

Auto Seat Belts: Safe or Hazardous?

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. ROBERTS. Mr. Speaker, the Subcommittee on Health and Safety presently is considering several areas of legislation dealing with highway traffic safety.

As chairman of this subcommittee, I personally am greatly concerned over this problem and feel that one of the practical methods of reducing highway deaths is through manufacture of an automobile with more safety features.

Safety belts, it has been proven to my satisfaction, are one of the most readily available of these features.

The American Medical Association, in an issue of Today's Health, discussed seat belts, pro and con.

I think the Members will find this discussion interesting and I ask consent for it to be reprinted in the RECORD.

The article referred to follows:

SEAT BELTS: SAFE OR HAZARDOUS?

(By E. D. Fales, M.D.)

Should your family use seat belts for safety on the highway, or even when going downtown for groceries?

Two years ago you heard a great deal of talk about the need for auto seat belts. Lately you haven't been hearing as much. Does this mean that seat belts were a fad which is dying out?

A while ago one car manufacturer proposed the use of seat belts and installed them at the factory. Two others made belts available if you wanted to pay a dealer to install them for you. Some engineers said they did not believe the public wanted seat belts.

Since then there have been conflicting reports and claims. Motorists today are confused: they don't know whether they should install belts or not. You may have heard drivers say they feel safer without belts. Others say they have them but don't use them all the time. Still others say they never venture out without buckling their belts.

What can the thoughtful motorist who wants to protect his family believe? What are the facts?

Until quite recently there has been no conclusive facts. You may have heard people who favor the use of belts say: "You are 60 percent safer with a belt." "Belts keep you from being thrown from your car." "They add greatly to your comfort." "They're needed in airplanes: so they must be needed in cars."

But you also hear belt critics say:

"You are better off in a wreck if you are thrown clear of your car."

"Seat belts snap your head forward and it hits the dashboard."

"A belt can trap you in the wreckage."

A congressional subcommittee recently investigated seat belts to find out how safe—or dangerous—they really are. Fourteen of the fifteen expert witnesses favored belt use.

Only one of the witnesses, Andrew J. White, of South Lee, N.H., head of an organization called Motor Vehicle Research, Inc., believes you are better off without a front seat belt, until shoulder harness is available. His opposition is based mainly upon three points: (1) A belt can hold you in the car to be crushed; (2) a belt itself can injure you; and (3) the damage to the brain, after head impact with the dashboard or any part of the car, can be great even if not immediately apparent.

But, arrayed against White in the congressional hearings were 14 other experts, also honest and conscientious.

To a man, they favored belts. The Air Force's Col. John P. Stapp, famous for his sudden-deceleration tests, said: "I have 9,000-pound test lap belts in my car, and wouldn't be without them."

In the end the Congressmen declared in favor of belts. So have the American College of Surgeons and a special committee of the American Medical Association.

Meanwhile, a Cornell Medical College team has come up with answers about what happens to belt users. These answers are of great importance to you.

The Cornell automotive crash injury research project in the past 6 years has put no les sthan 20,000 auto wrecks under the microscope, so to speak. They have, for the first time, been able to work with careful and detailed reports, thanks to the police and doctors of 22 safety-minded States. The important thing is: 714 of those wrecks have involved seat-belt owners.

The Cornell project is sponsored by the U.S. Public Health Service, the Department of Defense, the Ford Motor Co., and the Chrysler Corp. Here is how Dr. John O. Moore, director of the project, now answers some of those questions that have worried motorists:

"Can a seat belt trap me and cause my death?"

Careful study indicates this is unlikely. You can be trapped in your car by wreckage. Or you can be trapped because you are knocked unconscious. Your seat belt reduces the force with which you hit anything—and thus tends to keep you conscious.

"But isn't it safer to be thrown out of a wreck?"

This is a a catchy idea and many people believe it. There will always be freak accidents in which people are thrown out and land on soft sod or mud or snow and live. Some survive even when thrown on hard pavement.

But the IBM machines which store up accident statistics for Dr. Moore give this answer:

You are five times more likely to be killed if you are thrown out of your car.

"But suppose a soft-top convertible upsets. Aren't you apt to be dragged under it and killed?"

One of the first deaths to a seat-belt wearer involved a convertible that upset in Michigan. Critics said: "If that man had not been wearing a belt he might have been thrown clear and lived."

This can happen, of course. You must make a mathematical choice if you own a convertible. A convertible is no different from any other car in its tendency to roll over. All cars roll over about once in every five injury-accidents, Dr. Moore has found. He adds: "A rollover in a convertible can be dangerous with or without belts. You can be killed by being thrown out, or by having the car roll over you.

The thing to remember, Dr. Moore says, is: most accidents do not involve rollover. In a convertible there is much greater danger of being pitched over the windshield or over the side. You must decide: if you don't have a belt, you may be killed by being thrown out or by being crushed under your car if its rolls. If you do have a belt, you are well protected against being thrown out and you may or may not be killed if your car rolls over.

(One solution to the convertible problem: convertibles may someday be built with rollover bars. These, plus seat belts, save the lives of many racing drivers.)

"Should children use seat belts?"

Dr. Moore has eight children. Each of them—except the baby—wears a belt.

"But can a child open a belt in emergency?"

Any child of 4 or over should be able to, Dr. Moore says.

"What do highway police, who see many wrecks, think of belts?"

Not all State patrols use them. But police in many States now are beginning to. In Maine and a few other States, use of them is optional. Most Maine troopers use seat belts on fast roads but not usually on short trips.

However, in North Carolina and a few other States, use of belts is mandatory. Carolina troopers need no persuading. Several of them have walked away from bad crashes involving their own cars. Some Texas troopers did not wait for the State to buy belts; they spent their own money to have them installed.

"Suppose your belt breaks?"

A good belt will stand 3,000 or 4,000 pounds pull from your body. Only about 2 in every 100 belts break in wrecks. In a severe crash (45 miles per hour or over) your belt may break—but it has already done its job and you land with a ton and a half less force than if you hadn't worn a belt.

In North Carolina two troopers chased a reckless driver. At 70 miles per hour their car slammed head on into a culvert—almost sure death. The trooper at the wheel unbuckled his belt and climbed out. The other trooper's belt broke. But it had done its work and he walked away.

"Is insurance really cheaper if I use a belt?"

In some areas, yes. Certain companies charge 10 percent less.

"But do people who own belts really use them?"

Of every four belt owners in an accident, Dr. Moore had found, three were using their belts.

"Let's face it; can't the belt itself injure or kill me?"

If you fail to keep it snug, you could slide down and it might choke you. Dr. Moore has found no cases in which this has happened, however.

He has found that belt wearers do suffer some lower torso injuries which may (or may not) have been caused by belts. But among motorists who don't wear belts, such injuries occur six times as often.

Some drivers think a belt pulls back across the tender abdomen. It does not. If kept properly snug, it pulls down and back across pelvis and hips, which are strong.

"I've heard a belt can send a pressure wave through the body and burst blood vessels in the heart or brain."

This idea has been put forth. Neither the Cornell team nor the Air Force (in many tests with humans) has found it happens.

"Won't my front seat passenger's head hit the windshield?"

Without a belt, your passenger may go right out through the windshield, after his head smashes into the steel "header strip" above it at, say, 40 m.p.h. With a belt, his head may still hit the header strip or windshield or dash panel, but in all these contacts his head hits with greatly reduced force because the belt has checked his forward speed. He may be injured but he stands less chance of critical injury or death, the Cornell experts say.

"If I am driving, what happens to me?"

You are helped several ways: (1) the belt reduces the force with which you hit the steering column; (2) it also helps prevent a serious injury; collision of the knees with the dashboard. If the knees hit, the femur (upper leg bone) is often driven back to shatter the pelvis. This type of injury often heals slowly or imperfectly.

Dr. Moore has made another finding: Belts sometimes help you retain control in a minor crash. Without a belt, you might be knocked away from the wheel and brake.

"Suppose my car catches fire. Can I get out in time?"

Only 2 cars in every 1,000 burn after accidents, Cornell finds. But even if yours should, tests by Connecticut State police show it only takes 1 second longer to get out of a car if you are wearing a belt. These tests were made with cars in normal, upright positions, but Dr. Moore says loosening a belt in any position takes only a second or two.

"What about those newspaper stories about drivers killed in belts?"

Now and then you read about a motorist who died while wearing a seat belt. You don't hear about motorists who lived because they wore belts. That's because the first fellow was news; the second is not. "The papers sometimes blame the belt," Doctor Moore says, "but often the man would have been killed with or without a belt."

"Do you need rear-seat belts?"

If people regularly use your rear seat, yes. In a bad head-on crash, the rear seat passenger lands harder due to a curious bit of accident mathematics. In the split second after a 40-m.p.h. crash, the front seat passenger hits while the car is still moving at 25 m.p.h. By the time the rear passenger comes sailing through the air the car has slowed to 10 m.p.h. Hitting the dashboard then is more like hitting a fixed object.

"Are belts uncomfortable?"

The feeling among many motorists is that they add tremendously to your comfort. A wife riding with her husband no longer has to shift and brace on every turn. The belt supports her.

"Is it true that you are 60 percent safer with seat belts?"

That's what the Cornell study shows: you are 60 percent less likely to have an injury of any sort. Don't let this obscure the finding that if you wear a belt you are many times less apt to be thrown out—and are 50 percent less likely to be killed. Being thrown from your car is the great killer.

"Shouldn't I wait until shoulder harness is available?"

It may be a long, long wait. Harness, says the U.S. Public Health Service's Dr. James Goddard, is better. But even harness leaves the head unprotected against a vicious forward snap; in fact, the forward snap may be far worse than with a lap belt.

Cars must be redesigned before they can be built for harness. That's because harness can't be anchored to the floor as your lap belt is. It must anchor to a strong frame at least as high as your shoulders.

"Don't seat belts give you a false sense of security and make you an overconfident driver?"

This is another catchy idea that has gained popularity. Studying accident speed reports, the Cornell team has found no evidence that belt wearers drive any faster than anybody else.

"How can I get a good seat belt?"

Use a belt recommended by the maker of your car, Dr. Moore says.

"What should one cost?"

You can get a 4000-pound belt installed for as little as $10.

"Can anyone install it?"

Any competent garage man who will obtain the drawings prepared by the manufacturer of your car. Insist that he follow these plans, Dr. Moore advises.

"How do belts work out in some real accidents?"

Here are three cases:

Case 1: Near Gallup, N. Mex., three cars collided at a fast clip on U.S. 66. In the first two, five died, two were critically hurt. Out of the third car stepped an entire family—mother, father, and two small children—unhurt. Said the official police report: "Mr. and Mrs. T. wore seat belts, which saved them and the children." The belts kept the parents from plunging into the windshield. Their children flew off the rear seat and were cushioned by the parents.

Case 2: In a western city recently an insurance man driving home from work had a head-on collision with an intoxicated driver who was on the wrong side of a curve. The intoxicated driver was badly hurt. The insurance man escaped. He wore a belt.

Case 3: On a racetrack at Rheims, France, one day the American sportscar driver, John Fitch, rounded a curve and hit a straightaway at 140 miles per hour. His car bounded end over end in four sickening crashes. Police said one bounce carried it higher than a telephone pole. Then it rolled sideways. It stopped—a pile of junk.

Seat-belted John Fitch hunched down, then blackedout in the turmoil. He came to to see a hand—his own turning off the key. Then he unbuckled his belt and ran a half-mile to tell his wife the miracle: He was safe and only bruised.

What about Andrew White's criticism of belts?

Careful experts feel that White is stressing only the negative aspect. There is no doubt about it; you can be hurt, even killed, with or without a belt if you are involved in an accident. A head-on impact, even at 25 miles per hour, between two cars is a terrible force of which few drivers have any concept. But the Cornell study shows that in almost all cases you will be far better off in a belt.

"A seat belt," says Dr. Moore, "is no panacea. It won't work in all cases, but we are finding it helps in a great majority. It is like a great new drug. What physician would discard it as therapy if it helps most of his patients but doesn't help all?"

A seat belt is a stopgap means of diminishing the damage done in accidents—until something can be done about the real problem which is eliminating the accidents themselves.

Responsibilities of State and Voluntary Agencies in Serving the Aged

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. SIKES. Mr. Speaker, I believe that the address delivered by Dr. Wilson T. Sowder, State health officer, Florida State Board of Health, on "Responsibilities of State and Voluntary Agencies in Serving the Aged," will prove of interest to my colleagues; therefore, it is my pleasure to have it inserted in the RECORD:

RESPONSIBILITIES OF STATE AND VOLUNTARY AGENCIES IN SERVING THE AGED

(By Wilson T. Sowder)

The problems of the aged are so broad, so diversified, and so protean in their nature that probably few can claim a competency to understand or solve them all. Such problems as health, housing, employment, recreation, and counseling require the attention of specialists who have little in common and who have a very underdeveloped experience or tradition of working together on a common task. One of the first handicaps that we encounter in a determination of responsibilities is the old, old one, stated very succinctly in the saying: "What is everybody's business is nobody's business." It is for that reason that I have felt somewhat inadequate to apply my own specialized training and experience in the field of public health toward suggesting responsibilities for other State and voluntary agencies. I shall try, however, to look at the problems of the aged from the standpoint of a plain citizen, and to give most of my attention to the forest and very little to the trees.

I find, however, that I have handicaps even when I attempt to do this. In my office in Jacksonville it is a standing joke (I hope) that I am 39 years of age, and that I have been so for several years. My viewpoint, therefore, is that of an outsider. It is that of one who has never been old, alone, neglected, or unemployed. I have never lived on a welfare grant or a small pension. I have never lived in a nursing home or a home for the aged. I have never lost my children, my wife, or even my parents by death, and I do not know what it is like to be old and feeble, sick, and without the friends and family of youth and middle age. I have had little experience to help me to grasp the viewpoint of persons in these situations, and to know what they would like to have or would like to do. I can only guess from my own background and experience, and assume that I am like most other people, and that young, middle-aged, and old people have basically the same emotions, needs, and desires.

Although I have never been old, I have been sick, and I know what that is like. Although I have never been without family or friends, I am moody enough and sensitive enough to have felt alone many times and to know the misery of the feeling. Although I have always had enough money for the essentials of life, I have enough trouble paying my bills to understand at least partially what it must be like not to have money for even these. Also, as the head of a family and of a State agency, and with such authority as goes with these positions, I know the feeling of frustration when things do not go my way. I can imagine the bitterness of old people who have so little power to command either respect or obedience at a time when their thought habits are cast in the somewhat inflexible mold of age. They have little ability to adjust themselves to their new and unpleasant situation. On the other hand, I am crabbed and crotchery and irritable enough, and have insight enough to know it, to see its effect on my family and my friends. I understand, therefore, how much love and tolerance is needed of young people for old people who may be worse than I am in these respects. However, we cannot afford to be overly sentimental or fatuous in evaluating the needs of the aged. We must be realistic and consider their special handicaps and peccadillos as well as their special assets and virtues, and not expect more than human tolerance of them by others.

Who are the aged? Should we accept 65 years as the lower boundary of our problem? Is any other limit feasible in discussing services for the aged? For one I wish there were. It is common knowledge that people age at different rates, and that some people become aged prematurely, while others seem to remain youthful always. It is true that age is a state of mind. It is also true that to a great extent age depends upon the state of one's health. In considering services to the aged, the mental and physical condition is of tremendous importance in determining needs. Other possible services depend upon an evaluation of these. Furthermore, if I may depart a little from my promise to talk to you as a plain citizen, it is important to me as a public health physician to be able to consider all possible preventive measures in connecttion with health services for the aged.

Some have likened our life on this earth to a river that meanders its way through the years to its eventual goal—the great ocean of Eternity. Now if life is a river, or even somewhat like a river, perhaps what we are trying to do is to see that it is clear, attractive, and free of polluting agents in its later course; and just before it empties itself into the great unknown ocean of the Hereafter. If this is what we are trying to do, it will occur to all of us that perhaps the pollution occurs, or at least some of it, farther up toward the source. This should be investigated and if found to be true then our remedies should be applied accordingly. I am sure in my own mind that this is true to a large extent. It is obvious to us in the field of health that many diseases of the aged, such as heart disease, arthritis, diabetes, arteriosclerosis, kidney disease, and others, usually start earlier in life.

Frequently a healthier old age can be assured (note that I say healthier, not healthy) by preventive measures taken in youth and middle age. A healthy mental outlook in the aged can be produced only by the acquisition of a healthy mental attitude early in life. Certainly economic security must be built for old age during the more productive years, and recreation is easier to provide for old people who have already developed interests outside their bread-and-butter occupations. It would therefore be very unfortunate if all our thought and planning were devoted to the people who are already across the arbitrary line that we use to distinguishd youth from age, and none to the tasks of producing a sound, healthy, happy, and economically secure group of older citizens. The object we have in mind, I believe, is to remove the noxious polluting agents of insecurity, poverty, sickness (mental and physical), loneliness, and idleness from the delta regions of the stream of life. We cannot therefore afford to neglect the upper reaches and tributaries; and we must carry on a pollution-abatement program throughout the length of the river.

However, we must distinguish somehow between service programs for the aged and the many, many efforts that have been made, are being made, and must be made in the future to minimize the need for these services. All our public health programs, all medical-care programs, all mental health and child-guidance programs are aimed directly or indirectly at producing a mentally and physically healthy old person. All our retirement systems and our social security system are aimed at reducing economic insecurity in old age. We are concerned today with planning for remedies for the problems that remain in spite of all our best efforts in the area of prevention. It might be well for us to recognize that some of the troubles of older people may be due, paradoxically enough, to efforts to provide for a healthy, secure, and contented old age.

In fact, the magnitude of the problem to begin with is directly the result of the tremendous success of medical science and public health in the past few generations which has led to a sharp curtailment of deaths from infectious and communicable diseases, especially in infancy and early life. The prevention of early death and the prolongation of life have been the goals which even now occupy the major energies of all persons in the medical and allied sciences. Little thought has been given along the way to the possibility that any human misery or unhappiness might follow success in these efforts—but such results face us now. Let me hasten to assure you, however, that I do not favor high death rates in infancy and youth. Our social security system and many of our retirement programs were developed in years when economic conditions were not so good as they are now. They may have been adequate at the time to provide security in old age, but we are now finding that owing possibly to increasing prosperity these are inadequate.

Furthermore, these plans were based on the presumption that people want to retire when they reach the threshold of old age, but we now find that this cannot be taken for granted. It is definitely not true in a high percentage of cases. Furthermore, prosperity and retirement programs have expedited a change in attitudes toward older people by their offspring and other younger relatives. When times were not so good, young families often had to live with their parents. This may have been hard on the young people but it was probably good for the aged. With more prosperity and with our active homebuilding programs most young people are able to afford their own homes, and thus they feel free to let the old folks shift for themselves with their pensions and savings.

I may be very wrong in speculating that some of our past efforts aimed directly or indirectly toward helping the aged have had undesirable side effects. However, right or wrong, there is nevertheless a great need for wise planning for the future so that we do not agravate their problems instead of solving them.

One simple step that might be taken more often was suggested to me by my friend Dr. Robert Kleemeier, whose paper appears elsewhere in this book. He suggested that the old people themselves should be asked what they want before we make too many plans for them. While I hope I am not anticipating his talk too much it does seem to me that this is a very sound approach. We might very well, if it has not already been done, survey representative groups of old people and find out what they want. I think we might take for granted that they want the maximum of mental and physical health; but should we take for granted that we know whether they will be better off

with their own families, or elsewhere? We need to examine carefully a thesis that Shakespeare developed in one of his poems:

"Crabbed age and youth
Cannot live together;
Youth is full of pleasance,
Age is full of care;
Youth like summer morn,
Age like winter weather;
Youth like summer brave,
Age like winter bare,
Youth is full of sport,
Age's breath is short,
Youth is nimble, age is lame;
Youth is hot and bold,
Age is weak and cold;
Youth is wild, and age is tame,
Age, I do abhor thee,
Youth I do adore thee."

It would involve no disrespect to Shakespeare as a poet to study further the question as to whether youth and age can or should live together. Shakespeare was young and possibly biased when he wrote these words, and he never lived to be old. But we do know that he wrote his plays and poems for money and that as soon as he was able he hied himself back to his home and to a peaceful life of retirement with his wife and children. Had it not been for his premature death in middle age from a disease probably now preventable, it is very likely that he would himself have demonstrated that youth and age can live together very well.

It is very likely that if we took more care before we segregated our old people we would detect among them a high proportion of Father Williams, who could be a source of joy and entertainment to their children and grandchildren. Father William, as You know, is a creation of Lewis Carroll:

"'You are old, Father William,' the young man said,
'And your hair has become very white;
'And yet you incessantly stand on your head—
'Do you think, at your age, it is right?'

"'In my youth,' Father William replied to his son,
'I feared it might injure the brain;
'But now that I'm perfectly sure I have none,
'Why, I do it again and again.'"

And in reply to another question about his remarkable ability to chew anything, Father William replied:

"'In my youth,' said his father, 'I took to the law,
'And argued each case with my wife;
'And the muscular strength which it gave to my jaw,
'Has lasted the rest of my life.'"

Nowadays Father William would run a serious risk of being hustled off to a nursing home, or even to the State mental hospital, because of such foolishness.

While I think that there is a very urgent need for further studies to determine what services are needed by the aged and how to provide them, I am certain that we know enough already to be doing more than we are. Some very clear and basic facts are available to all of us who care to look for them. We have in our country and in the State of Florida more old people, and a greater percentage of old people, than we have ever had before. Today we have in the United States 14 million persons 65 years of age and over, and within 10 years we can expect around 20 million. The rate of increase of older people has been twice that of the population as a whole. Also one-third of these 14 million oldsters are already 75 years old or older. Women outnumber men in these age groups, more and more, and year by year. It is estimated that by 1975 there will be 40 percent more women than men alive in the ages past 65. Also most of these women are, and will be, single, usually widowed. The figures are now 62 percent for women, as compared to 31 percent for men.

Less than half of our people over 65 are employed, and most of them do not have an adequate income from any source to maintain a decent standard of living. They are poorly housed because of inadequate income, and yet a larger percentage of the income of the elderly goes for rent than is true of the general population. The aged also suffer more from chronic illnesses. About one-half of them have some chronic disease or physical disability, and although they make up only about 8 percent of the total population, they constitute 40 percent of the total of persons in the country who are disabled for 3 months or more each year.

We therefore have already a fairly clear picture of the present state of that segment of our population whose talents and energies are largely responsible for the progress made in this country during the past 40 or 50 years. Also we know enough to see fairly clearly the fate that awaits those of us in this next younger generation—unless something is done. Many of us do not have long to wait for these chill gray years—and if we do nothing to help the generation of our fathers, how can we expect help from our sons? There is no doubt, according to the facts now available, that the lot of the aged, in this most healthy and prosperous country in the world, is a sad one. It is, in the main, one of poverty, loneliness, unemployment, malnutrition, boredom, squalor, sickness, insecurity, mental depression, and unnecessary mental and moral deterioration. Is it necessary in this country of ours for our own fathers and mothers to say, or to feel, as did the villain Macbeth:

"I have lived long enough; my way of life—
Is fallen into the sear, the yellow leaf;
And that which should accompany old age,
As honor, love, obedience, troops of friends,
I must not look to have."

Could we not on the other hand in this Christian civilization of ours at least make it possible for our elderly citizens to feel as equanimous and secure about old age as did the pagan writer Cicero when he wrote: "Old age is the consummation of life, just as of a play."

And to learn with a Christian poet (Du Bartas, 1544–1590) that:

"Who well lives, long lives; for this age of ours
Should not be numbered by years, daies and hours."

I have mentioned briefly some of the facts that are well known about the aged and some of the problems, as I see them, that concern them. I will now outline a few of the principles that in my opinion may be followed in arriving at a solution. We often hear the saying these days, "I don't have any problems that money won't cure." While it is doubtful that money would cure all the ills of the aged, it is certainly true that an adequate income for all the aged would do more to help than anything else, except perhaps a cure for aging itself. The provision of an adequate income would certainly banish poverty, provide better nutrition, better housing, better medical care, and go far toward relieving the other related ills of our oldsters. In attacking this problem it must be kept in mind that some of our aged are now employed, some are not; some are employable, some are not; some could be made employable through vocational rehabilitation, and some could not; some are sick, and some are well; most are mentally competent, but some are not; and last of all while many want to work, some prefer to enjoy leisure in their old age or to work only part time. We should respect the wishes of this latter group wherever possible. Leisure is not a sin in my view if one can afford it, and the old should have earned it if any group has.

There is a general impression, however, that the aged are in general happier working than not working. Certainly it is desirable from economic and social points of view. It increases the income of the individual. It decreases the burden of the support of the elderly on the young and middle-aged groups. It relelves loneliness and boredom, prevents mental depression and mental deterioration. It is now agreed that retirement policies should be liberalized so that everybody can continue to work as long as they are physically able, if they desire to do so. It is agreed that elderly persons can be useful employees. It is agreed too that every effort should be made to eliminate laws, regulations, and policies that discriminate against the employment of older persons on account of age alone. It is well known that now not only persons over 65 but men as young as 45 and women as young as 35 find their ages a handicap in seeking employment. In seeking such changes we should, however, not fail to study and consider the problems of the employer, whether private or governmental. We must not forget the obligations now imposed upon, or assumed by, the employer to his employees. It would not be economically sound to expect an employer to assume the same obligations toward a new employer 75 years of age as toward one 25 years of age.

The young can more easily learn the intricacies of an unfamiliar job. A business can afford to invest more in a young employee with a longer expectation of employment than in an older person whose anticipated years of employment are few. The placement of older persons in jobs they already know is desirable and preferable. On the other hand, if they must be trained in a new skill, the investment in training must be correlated with the expected time of useful service.

At present there seems to be a shortage of personnel in all fields of endeavor in our country, including unskilled and skilled labor, and in all the technical and professional fields. It would seem, therefore, to be only a problem of education, organization, and distribution to provide employment for every employable person. It seems to me that one of the biggest and least tapped pools of labor, and one that is growing fastest, is that of older women. Most women over 65 are single, usually widowed, are unemployed, and need money. Furthermore, they have developed skills over a lifetime in housekeeping, cooking, home nursing, and related fields. Coincidentally some of the most urgent needs of the aged are in these very fields. Would it not be wonderful if some statesman should appear amongst us with the ability of an Augustus, who could show us that the solution of many of the problems of the aged lies within the problems itself, and among the aged themselves.

We know that governmental agencies are supporting—and must continue, and must increase their support of—aged persons, and particularly those that are sick or otherwise unemployable. We know also that governmental agencies must give supplementary assistance to other aged persons with marginal incomes. There is an increasing realization, too, that cash grants are not enough, and will probably never be enough. There is a growing realization that outright 100 percent governmental care through institutionalization is not a proper remedy in more than a minute fraction of cases. It is generally thought that old people are better off at home than elsewhere. Some think, and some States are acting on the premise, that if they have no home of their own they are better off in a foster home. It is generally agreed that it is desirable to postpone institutionalization for illness or other reasons

as long as possible. The positive side of this philosophy may therefore be stated as follows:

1. Help the aged to stay mentally and physically well; help them to stay in their own homes, with or near their own friends and relatives, young and old; help them to stay employed, gainfully if desired and possible; help them to remain self-supporting; give aid if necessary to accomplish this purpose.

2. If this is not possible, help them to stay in a home near friends and relatives.

3. Even if the aged are ill or infirm, provide home care if possible through home nursing, visiting nurses, and homemakers, with occasional visits to clinics or doctors' offices.

4. If this is not possible, and if the client is not acutely ill, mentally or physically, consider a nursing home near friends and relatives.

5. The next step (or next line of defense) is a chronic-disease hospital nearest home, friends, and relatives.

6. The next step (or line of defense) is a general hospital or medical center where medical and psychiatric studies can be made, treatment given, and the patient returned to as near the No. 1 situation as possible. If a return is not possible, then as a last resort:

7. A distant county, regional, State, or Federal institution. Here every effort should be made to reverse the process and return the patient to the lowest numbered of these alternatives that is possible.

If through professional bias I have stated this process in primarily medical terms I apologize, but I believe that each of you can translate my language into yours whether you are in the field of sociology, vocational rehabilitation, housing, or some other.

Now having dogmatically stated some lines of defense and some points of resistance to the permanent incarceration and segregation of the old; and having assumed benefits to them by these processes, I should like to return to an idea that I brought up a moment ago. I believe I listed as the all-too-common problems of old age the following: Unemployment, poverty and financial insecurity, squalor—poor housing, malnutrition, loneliness, boredom, emotional insecurity, mental depression, sickness, mental deterioration.

I suggested that money was the answer to many of these problems. This can be provided only by personal savings (retirement, and so on), by current employment, or by private or governmental aid. The latter is a sad but necessary last resort. I have suggested that old people—men and women—in general want to be employed, and that many of them can offer valuable services to our present economy which is crying for more workers. I have mentioned the fact that our biggest and most rapidly growing pool of employable unemployed is that of older women. I said that they already had special skills in the areas of homemaking, cooking, home nursing, and so on; and I have pointed out that one of the most common needs of old people is for a home. I know that much is already being done in the country to use the talents of older women in these fields, but could not more be done? Would it not be possible to mobilize more effectively the resources that exist in our aged population to solve the problems of their own group?

Would it not be possible, for instance, for our society, even through governmental agencies, to provide a more adequate income to old-age-assistance beneficiaries who are willing to devote some of their time to serving others? Would it not be possible, for instance, for Jane Doe to act as nurse's aid or housekeeper for the Smith sisters while they are ill, and prevent their removal to a nursing home or other institution? Would this not be a cheaper and more satisfactory solution than the latter alternative? Might not Uncle Jim, retired carpenter, do minor home repairs for Aunt Mathilda and the Smith sisters? Father William, you recall, is in his dotage but still happiest at home. He may be rather trying to his family and they may feel the need for an elderly baby sitter at times, or even for some sort of gerontological day nursery. These are only random thoughts and they may not be practical, but it does seem possible to me that much of the manpower to do many of the things needed by the elderly is available among the elderly themselves.

There is no doubt as to the need for more activity by State and voluntary agencies in providing services to the aged. There is a need for individual and joint action by agencies concerned with health, welfare, education, employment, development, and many other fields. About half of the States now have an official agency especially concerned with the problems of the aged. It is probable that every State ought to have some such agency, and this is recommended by the Council of State Governments. It is the recommendation of that body that such an agency be without operating or service responsibilities, and that its basic functions be stimulation, advice, and coordination. One pattern might be a commission made up of private citizens appointed by the Governor which would be an advisory body to the Governor and to an interagency or interdepartmental committee also appointed by him.

It seems to me that it would be simpler to have a mixed commission or committee of private citizens and agency heads in the first place, and it would be helpful also to have membership from the legislature. It has been my observation that public bodies with such a makeup work very well in Florida. Certainly one of the things that should be stimulated first by such a commission is further study and research on the problem. We need to know more about what to do and how to do it.

Among the other things that some State agencies are doing or can do are the following:

They can develop public awareness and interest in the problems of aging.

They can discourage mandatory retirement.

They can encourage the employment of the elderly, and assist in their retraining and replacement.

They can provide special counseling services for the aged.

They can help prevent discrimination in employment on account of age alone.

They can also take the leadership in the promotion of sound retirement plans by younger people.

The adequacy of grants for old-age assistance recipients should be frequently reviewed, and improvements in provisions for medical and nursing care constantly sought. Florida has recently made provision for the hospitalization of the acutely ill of all ages, but more needs to be done for those with long-term sickness. It would be much better if this were provided on a local level by local agencies. Every avenue should be explored that offers to provide better housing for the aged. To meet this need one State requires that 5 percent of all apartments in State-aided projects be set aside for older people, and consideration is being given to State loans for nonprofit developers, and also to State guarantees of bonds for housing developments which provide for the aged.

Health agencies, of course, have a tremendous responsibility. They usually have the responsibility for the licensing of nursing homes. It is a difficult and almost impossible task to insure the maintenance of minimum standards of care and safety when adequate funds are simply not available for the payment of the costs of these. According to a joint study by personnel of the health and welfare agencies of Florida, about $150 per month is the minimum needed to purchase the nursing-home care that is required for an elderly person. How, then, can this be attained for welfare recipients whose monthly income may be only $60 per month? Some counties are making supplementary payments to nursing homes in order to assure minimum standards of care. This practice should be extended and other avenues for solving this problem explored.

The Florida State Board of Health and its affiliated county health departments are also carrying on and steadily extending health programs for the control of chronic diseases, such as heart disease, cancer, diabetes, malnutrition, mental illness, and tuberculosis. While these diseases are by no means confined to elderly persons, they are certainly of vital importance to them. To a large extent they are all geriatric programs, although it would not be desirable or practicable to limit them to the aged. They give promise of better health to the aged of the future.

The Florida State Board of Health also has a new and unique program for the hospitalization of the acutely ill, other than welfare recipients; and this program is coordinated not only with that of the department of public welfare, but with county hospitalization plans throughout the State. It was in fact developed as a program for aiding the counties to care for their own needy sick. Studies need to be made as to how to take care of the chronically ill, and it is hoped that local governmental bodies will take more responsibility in this area.

The State board of health also has active plans for the promotion and doing of research not only in the field of geriatrics but in all fields of health. An active research coordinator is already at work, and committees have been appointed to aid him. Consultants from various parts of the country have visited Florida to help us plan an active research program. Major attention will be given to the chronic diseases and to other geriatric problems. The 1955 legislature in Florida established in the State board of health a council on research and training in mental health and appropriated funds to be spent upon the advice of this council. Dr. Kleemeier has the honor of being the chairman of this council, and his interest in the field of gerontology assures us that the problems of the aged will not be neglected. Despite these activities I must confess that even in my own agency our efforts are pitifully inadequate. We are determined, however, to do better in the future, and we are confident that our sister State agencies share this determination. I am sure, though, that we would all welcome a coordinating agency devoted exclusively to the problems of the aged, just as we welcome, and are proud of, this forum that is provided here by the University of Florida for the sharing of our knowledge as well as of our aspirations for more knowledge.

Florida has had unusually happy relationships between its official and voluntary agencies. This has been true to my personal knowledge in the field of health. There has been no such thing here as overlapping or duplication of services; or lack of contact or coordination. Many official agencies, or subdivisions of them, can in fact trace their parentage to a voluntary health agency. This is true of our cancer and tuberculosis programs in the State board of health. On the other hand, we in the official agencies have sometimes had a hand in the organization of voluntary agencies, and we certainly are consistent supporters and participants in their work. The Florida Tuberculosis and Health Association, the Florida Heart As-

sociation, the Florida Mental Health Association, and the Florida division of the American Cancer Society all have a tremendous interest in the problems of the aged, and also a willingness and determination to help work them out. The State board of health has in the past worked closely with these organizations in the areas of their special interests, and they have so divided up the work to be done that there has been no conflict of interest and no funds unnecessarily spent in duplicating the work of each other. The new council on aging shows great promise in the field of gerontology in Florida, and could very well develop the kind of coordination in the work of various voluntary agencies having an interest in gerontology that a State commission could do for the official agencies. It is my belief that the primary function of a voluntary agency lies not in the field of direct services but in public education, promotion, stimulation, legislation, and support of official agencies. All official and voluntary agencies must, however, join hands to secure the maximum of coordination of effort so that no dollar of funds from any source is wasted, and so that no erg of potential energy that may be devoted to the solution of our problems is wasted.

Also we need to join together for the purpose of mobilizing the communities throughout the State, because that is where the actual work needs to be done. We must not forget, though, to enlist the support of and make use of the specialized knowledge of our professional organizations. Our physicians, nurses, social workers, psychologists, and other groups must be asked for advice and assistance early and often. They must be asked for help not only as individuals but through their professional societies. It has been my experience that when this is done the returns are bountiful. Also our church, fraternal, and civic organizations need to be more fully mobilized, and through these processes we can gain the support of the citizens of the State for the development and carrying out of plans that should help to improve the lot of that most deserving but least privileged group of American citizens—the aged.

Our generation is deeply in debt to the one that just precedes us. We have the means, and we have the obligation, to pay this debt by doing all that is within our power to restore the dignity and serenity to the declining years of our older citizens which are their birthright. I am sure that the devoted purpose of every participant in this conference is to help all the aged people, in this country of ours and in this great State of ours, to pass their declining years in that state of peace and tranquillity which was so beautifully described by the poet William Wordsworth in his own declining years:

"The innocent brightness of a newborn day
is lovely yet:
The clouds that gather round the setting
sun
Do take a sober coloring from an eye
That hath kept watch o'er man's mortality;
Another race hath been, and other palms
are won.
Thanks to the human heart by which we
live,
Thanks to its tenderness, its joys, and
fears,
To me the meanest flower that blows can
give
Thoughts that do often lie too deep for
tears."

Section 315 of the Federal Communications Act

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. AVERY. Mr. Speaker, the following is an editorial given by Mr. Thad M. Sandstrom, general manager, WIBW Radio and WIBW-TV, Topeka, Kans., regarding section 315 of the Federal Communications Act, the so-called equal time provision.

Mr. Sandstrum is highly respected in the radio and television industry. He has many years of experience. In my opinion, his comments merit the close attention and consideration of all Members of Congress. The editorial follows:

Good evening. My name is Thad M. Sandstrom. I am general manager of WIBW Radio and WIBW-TV. I am appearing on television to state an editorial opinion of these stations.

Today I want to visit with you a few moments about a subject of vital concern to the radio and television stations in the United States and a matter which we believe should be of vital concern to you as radio and television listeners. It pertains to legislation currently pending before the Congress of the United States concerning a section of the rules of the Federal Communication Commission popularly known as section 315. This is the so-called equal time provision of the rules and regulations of the Federal Communication Commission which governs political broadcasts on radio and television stations throughout the United States.

The FCC rules say in so many words that if a radio or television station grants time to a candidate for political office, then equal facilities must be made available to his opponent. For example, if we grant 30 minutes of free time to the Republican candidate for Governor of Kansas, then under the FCC rules, we must also grant 30 minutes of free time to the Democratic candidate for Governor. I don't believe any broadcaster quarrels with this part of section 315. We believe broadcasters have a record of fairness—that outstanding public service programs such as "face the Nation," "Meet the Press," "Capitol Cloakroom," and other public service features—have a longstanding record of giving fair treatment to candidates from both major parties and to points of view of opposing sides. Section 315 relates not only to free time, but also to paid time—that is to say, if a Republican candidate for Governor is charged $100 for a 30-minute broadcast at 8 o'clock in the evening, then a broadcast for the Democratic candidate for Governor also must be charged at the rate of $100. Broadcasters find no fault with this particular item either.

The matter came to a head a few weeks ago in a case revolving around a man by the name of Lar Daly, a self-announced candidate for mayor of Chicago, on the tickets of both the Republican and Democratic Parties. Everyone knew he had not a chance to win, but nonetheless he was a candidate for office and was seeking to win the election. To quote from an editorial in the New York Times of Sunday, June 21, "One of the current nightmares of the radio and television industry is the Lar Daly case. Daly, a perennial splinter group candidate for office in Chicago, demanded equal broadcast time last winter after a Chicago television station showed Mayor Richard Daily, a candidate for renomination, welcoming the President of Argentina and supporting a March of Dimes campaign. The Federal Communications Commission held that under section 315 of the Federal Communications Act, Daly was entitled to the free time.

"Last week, the FCC affirmed its original decision. It held that under section 315 as now written, it had no choice but to interpret any appearance of a political candidate on radio or TV as use of the station. But in hearings on the issue last week before the Senate Commerce Committee, John C. Doerfer, Chairman of the FCC, suggested that the dilemma could be resolved by exempting newscasts and special events—such as political conventions from the equal time ruling. Congress is expected to make some change along those lines."

If this ruling is allowed to stay in effect, we doubt seriously if radio and television stations will be able to do an adequate job of reporting the next presidential election. It amounts to this—if we are to give time to the candidates of either of the major parties, then we would be forced to give time, equal time, on newscasts, on public forum programs, etc., to candidates from all sorts of parties. In 1952, for example, no less than 18 political parties had presidential candidates. When our station carried the acceptance speeches of General Eisenhower and Gov. Adlai Stevenson, and later the dramatic meeting of General Eisenhower and Senator NIXON immediately after the Nixon fund episode, we thereby placed ourselves under an obligation to give equal time to such candidates as Eric Haus, Ferrel Dobbs, Henry Jowaski, Don DuMont, Homer A. Tomlinson, Fred C. Proll, Edward Longstreet Boden, and Eileen Linia W. Jensen. Have you ever heard of them? They were all nonimated for the presidency by one party or another in 1952, and under section 315, were entitled to as much time free as Eisenhower and Stevenson. In 1956, there were again 18 political parties with presidential candidates. They included the New Party, the For America Party, the Mississippi Black and Tan Grand Old Party, and the American Third Party. The minority-party candidates got only 410,000 of the 62 million votes cast. One of these minor parties, the American Party, got 483 votes and one, the Christian Nationalist, was reported to have received 8 votes.

Yet, under section 315, the rules under which we of radio and television operate, we were not permitted to distinguish between Stevenson and Jensen, between the Democratic Party and the Christian Nationalist.

May I make one further quote from Dr. Frank Stanton's testimony before the committee considering this legislation. Dr. Stanton is president of CBS, Inc. Quote: "For all practical purposes, the Lar Daly decision makes it mathematically impossible for radio and television to report any political campaign in its own way and take advantage of its own technical capabilities. For example, during the 1956 presidential election campaign, the CBS Television Network devoted about 20 percent of its news time to the presidential and vice presidential candidates of two major parties. Some

time on virtually every newscast from Labor Day to election day was devoted to the campaign. And most of this 20 percent was devoted not to reports of what was said, but rather to film showing the major candidates in the course of their campaigns. Under the Lar Daly decision, we would be required to give equivalent time almost certainly on these regular newscasts to all presidential and vice presidential candidates of all parties who ask for it. There were as I have noted and as near as we can calculate, presidential and vice presidential candidates of no less than 18 parties in 1956. To furnish them all with time equivalent to that which we gave in 1956 to the Democratic and Republican presidential and vice presidential candidates would have required us to give time to total substantially more than all time spent by all our television newscasts on all the news, and of course there would be no time left for any other news." Dr. Stanton says in conclusion, "Simple mathematics establishes that we have no choice but to turn our microphones and cameras away from all candidates during campaign periods."

It seems to WIBW radio and TV that this is a matter that affects every listener and viewer of our station. If you want to see news about important happenings on the political front; if you want an opportunity to see major candidates for yourself and make your mind up as to whether or not you wish to vote for this candidate or that candidate, then there must be some relief from section 315 of the Federal Communication Commission rules and regulations. You can help by writing a card or letter to Congressman WILLIAM H. AVERY or Congressman EDWARD REES, Senator FRANK CARLSON, or Senator ANDREW SCHOEPPEL, telling them that you believe there should be a change in section 315, that you believe the radio and television stations today are responsible and deserve the right to report news as they see fit. We assure you that if the rules pertaining to section 315 are modified that we at WIBW radio and WIBW–TV shall continue to treat news fairly as we have in the past.

Majority Leader Johnson Chooses Achievement as Democratic Goal

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. BROOKS of Texas. Mr. Speaker, we are all familiar with the constructive record of three successive Democratic Congresses which have served this country and our people back home well and faithfully even under the present Republican administration.

The American people have consistently expressed decisive approval of the Democratic Party's foresight and hard work in Congress in putting the interests of our country first. Ours is a record we can be proud of and ours are leaders we can support wholeheartedly.

As an example of the gratitude and appreciation of Americans for the achievements of the Democratic Party and the sound goals of our leaders, I would call to the attention of the Democratic Members of the House and Senate the following editorial from the June 25, 1959, Beaumont (Tex.) Enterprise commending Senate Majority Leader LYNDON JOHNSON's leadership in the advancement of a constructive legislative program:

GOOD FOR SENATOR JOHNSON

The American people should feel grateful to Senate Majority Leader LYNDON B. JOHNSON for offering anew to cooperate with President Eisenhower on the advancement of a constructive legislative program.

"If we have a choice between political issues and achievement, we will choose achievement," said the Texas lawmaker.

It is the sort of statement that grows out of statesmanship.

Furthermore, it gives evidence of keen political perception and an awareness that obstructionist tactics in Congress can do little good to either Mr. JOHNSON or the Democratic Party; in fact, that they might harm both immeasurably.

This is especially true in light of the fact that pollsters report a new firming of the Chief Executive's popularity. And the mounting evidence that the balanced budget campaign of the White House is getting support from the public.

Aside from the fact that Senator JOHNSON has little truck with the obstructionist in Government, one must recognize at all times the Texans' amazing ability to find the pulse of the people.

It makes him something of a political genius.

Lowenstein Writes Letter on Textile Problems

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. HUDDLESTON. Mr. Speaker, I have just received a letter from Mr. Leon Lowenstein, who is an outstanding figure on the American textile manufacturing scene. Mr. Lowenstein, in his capacity as executive chairman of the board of M. Lowenstein & Sons, Inc., has first-hand knowledge of how excessive amount of foreign textile imports are affecting various areas in our Nation, for his firm operates mills in several sections. One of these is located in Huntsville, Ala., and, with its 143,816 spindles, employs 1,250 people.

Mr. Lowenstein has just written a letter to Mr. Robert Jackson, executive vice president of the American Cotton Manufacturers Institute, Inc., and, believing this letter, outlining the problems of the domestic textile industry, will be of interest to my colleagues, I wish to insert it in the RECORD under leave heretofore granted:

M. LOWENSTEIN & SONS, INC.,
New York, N.Y., July 14, 1959.

Mr. ROBERT C. JACKSON,
Executive Vice President, the American Cotton Manufacturers Institute, Inc., Washington, D.C.

DEAR BOB: There isn't a day that goes by that I don't get at least half a dozen telephone calls from somebody regarding imports. Some of our customers, in fact a good many of them, are getting very scared, especially when they read (in the Daily News Record of July 6) that "Spain is offering worsteds, ginghams below Japan price." I imagine you read that article.

I hear from every quarter that these large buyers of soft goods are opening offices all over. I heard from a large millman (I am not going to mention his name but he is well known to you) that he was contemplating putting up a building alongside of the mill he has on cottons, and when I say large mill I mean one that would hold about 100,000 spindles. I understand he is now running 5 days but he also made the statement, in his own language, "the hell with it, I am going to run 6." Are the mills in the South going to go the way of the mills in the East?

I now see an article by Jacob S. Potofsky, president of the Amalgamated Workers of America, which appeared in the Daily News Record of Wednesday, July 8. It bears the caption, "Potofsky Hits Retailers Aiding Japan Imports." What is happening? You know, in my book it is much easier to stop something before it happens than to stop something that has already happened.

I understand that as of the present time there are no quotas for any foreign countries. I am told, and I am not so sure about this, that the only country the United States has any understanding with is Japan, which has a voluntary quota.

This leaves everything in the wide open spaces in countries like Hong Kong, India, Spain, Italy. How long is it going to be before we will hear about Russia? I understand they bought $5 million of textile machinery, all new, for quick shipment. There is no question about it; a lot of other industries are going to be affected, if not already affected. I am talking about automobiles, etc.

Now let's go into this cotton area. There is going to be more and more cotton all over the world, and America has to meet this cotton competitive price. I claim that any manufacturer in any foreign country, whether he uses American cotton or cotton grown in any other country of the world, should be required to pay a compensating duty on the cotton content of the article that comes into this country. As an example, if a yard of goods comes in weighing half a pound, whatever discount we give the foreign manufacturer to buy our cloth should be added on as a tax. That's the least that textile mills in this country can expect. The same should also apply to garment manufacturers. This gives the manufacturer in foreign countries one edge, and that is labor. That should be plenty for them; and then, of course, to offset the influx, even this with one edge there should be quotas, and proper ones.

Washington talks about small business. Irrespective of what happens in this textile business regarding importation of foreign goods, the small independent mill will be the first one to be put out of business. I read in the various papers what Washington continually wants to do for the small businessman. Lending him money isn't going to do any good if he is going to lose money on his operation, because this only puts him in a worse position.

Now, as to Mr. Potofsky's remarks, I have written letters on this subject to people in industries outside of the industries that are now being affected directly. If, for example, an automobile company in Michigan that has 5,000 employees decides to increase its imports from its own plants abroad, and then lets out 1,000 of its Michigan employees, while it may give work to people abroad, those 1,000 employees in Michigan have lost their jobs and have lost their purchasing power. The retailing organizations in the community in Michigan will not have the dollars to draw on for their sales, and will, of necessity, have to cut down on their purchases. This, in turn, will affect, say, a textile manufacturer in Pennsylvania. Of neces-

sity, those two will have to reduce their labor force. This whole thing snowballs.

Why am I writing you all of the above? I know this is nothing new to you, but it alerts you and tells you how some of the people that I meet with feel about this whole situation, and it is action that we need.

You can use this letter as you see fit.

As ever, with best wishes,

Sincerely yours,

LEON LOWENSTEIN.

Straight From the Shoulder

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. SIKES. Mr. Speaker, I would like to call attention to the following editorial by Ben Field which appeared in the July 7, 1959, issue of the Orlando Star and which I feel will prove of interest to my colleagues:

STRAIGHT FROM THE SHOULDER

If we had more jurists such as Judge Dozier DeVane this country would be safe, at least from deteriorating from within. But unfortunately we have too many of the other ilk—men in key positions of Government who are setting themselves above the Congress and the Constitution—the Justices of the U.S. Supreme Court.

Judge DeVane told Orlandoans in a recent address here that if something was not done soon to stop the trend in the manner in which the Supreme Court is arriving at its decisions, the Nation will soon be ruled by a judicial oligarchy.

What the judge was really saying was that the "nine old men," though their age average has been lowered some by younger men, are making the laws of the land, when all the Constitution intended for them to do was to interpret them.

Judge DeVane asked that the people demand a constitutional amendment to correct the inroads the Court is making on the Congress and the Constitution. Here said there is now an amendment before the House, introduced by Representative SIKES, of Florida, to correct abuse, but that it takes a long time to get a constitutional amendment through Congress and on the ballot to be voted on by the people, or to have the necessary number of legislatures adopt it to make it law.

Most folks in the South look upon the decision that struck down segregation in the schools as being the Court's most damaging decision to this part of the country. But Judge DeVane says that to him this decision created only trifling damage compared to the decision which ruled children in the public schools could not be required to salute the American flag and swear allegiance to the Republic for which it stands. The other most damaging decision was that which ruled out any mention of God in the classrooms.

The judge rightly said that only under God can this Nation endure.

What we need is more jurists who will speak out as Judge DeVane has on several occasions. He is no alarmist. He was named to the Federal court for the north district of Florida. He knows his law and our Constitution.

He is one of a group of justices and jurists over the Nation who have condemned the procedure by which the Supreme Court is reaching its decisions, as a procedure which, if not changed, will mean that future generations in the United States will be ruled by the men sitting on the court benches instead of by the elected officials of the people in the Congress.

Such a government would be anything but American.

It's the People's Veto

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. David Lawrence appeared in the July 20 number of U.S. News & World Report.

Mr. Lawrence, with his usual perspicacity, brings out some interesting points on the President's vetoes and veto power. First, the President is the only elected official in the United States who is elected by all the people, and for that reason his veto is, most probably, far more representative of the people than any acts of the Congress.

The article follows:

IT'S THE PEOPLE'S VETO

(By David Lawrence)

Political discussion lately has centered on the presidential veto. The Democratic national chairman has urged members of his party in Congress to exercise their power to force vetoes on the theory that it is politically advantageous to do so. President Eisenhower, on the other hand, has been accused of using his authority to negate the will of Congress, and there have been denunciations of this as "government by veto."

What we are witnessing today is the strange phenomenon of irresponsible government because there exists in both Houses of Congress a two-thirds majority which is opposite to the party in control of the executive branch of the Government. There have been instances where, even when the same party controlled the White House and two-thirds of both Houses of Congress, a presidential veto has been overridden. This is a reflection of public opinion—it is, in a sense, the people's veto of a presidential action.

In the 1937 battle between President Roosevelt and Congress on legislation to increase the membership of the Supreme Court from 9 to 15 Justices, he could not muster even a 51-percent majority, though the Democrats actually had elected in 1936 more than two-thirds of both Houses. The people said, "No."

The truth is, as Woodrow Wilson wrote in his book on "Constitutional Government" 5 years before he became President, the Chief Executive alone is in a position to represent the national interest, and he can derive substantial power and prestige from his hold on public opinion. This is why there is a fallacy in the oft-repeated comment that a President in his second term is a "lame duck" and that the Constitution should not have been amended to prohibit more than two terms in the Presidency.

This amendment was adopted in 1947 to some extent on the theory that a President leads by reason of the patronage or favors he can dispense and that, if eligible continually for reelection, he could win votes in Congress by virtually bribing Members with promises of presidential beneficence. But this assumes that an unpopular President could thwart the public will. It ignores the fact that every 2 years all Members of the House, along with a third of the Senate, must go before the electorate.

A President is as strong as the public opinion that he is able to mobilize. Mr. Eisenhower is in a powerful position today precisely because he is not a candidate for another term. The country feels he is not politically ambitious, and he has announced that he will not attempt to dictate the nominee of the 1960 Republican National Convention.

Whatever influence Mr. Eisenhower has over his own party or over the members of the Democratic Party in Congress comes from his accurate sensing of the national will. He himself, in discussing this point at last week's press conference, said:

"I am trying to do what will, I believe, be good for the country, and I don't enjoy vetoing bills. I don't believe that there is any validity in such expressions as 'government by veto.'

"I am part of the process of legislation and when I am the only official, along with the Vice President, who is voted into office by all the people, I think I have got a special responsibility to all the people. So, I try to tell them and explain to them what I am doing. If they approve, that ought to have some effect."

The argument is sometimes made that a majority of the people are in favor of the Democratic Party because in the 1958 election Democrats carried both the House and the Senate overwhelmingly. It is pointed out that even in 1956, when President Eisenhower was reelected, the Democrats actually polled more votes for Congress than did the Republicans. The figures, however, present a statistical paradox. For, actually, the votes for Congress are cast in individual districts or States, and, where one congressional candidate is acknowledged to have preponderant support, many citizens do not take the trouble to vote.

Recently another paradox has been noted in the Gallup polls. They show Mr. Eisenhower to have made a gain in popularity from 52 to 62 percent since last year's congressional elections. But the pollsters still find that more people label themselves as Democrats than as Republicans.

This has little bearing on what the Nation wants at any particular moment by way of legislation or action by the Executive. Each proposal or national policy has to be judged on its merits. If the President vetoes a bill and public opinion generally is on his side, it would not be good politics for members of the opposite party or of his own party to override the veto.

The President is elected by all the people. He is not supposed to bow to sectional or pressure groups.

Mr. Eisenhower is singularly free from political entanglements. He has no political ambition. He has only a little more than 18 months to serve. If he refuses to sign a bill, it's because he thinks that is what the people want. This is indeed a people's veto.

Housing Bill Veto

EXTENSION OF REMARKS

OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. BURDICK. Mr. Speaker, the urban renewal agency of the city of Fargo, N. Dak., by resolution has requested the Congress to override the President's veto

of the 1959 housing bill. This legislation was of vital importance to Fargo and other cities throughout the Nation. I shall vote to override the veto if given the opportunity.

Under unanimous consent, I include this resolution, adopted July 9, 1959, in the RECORD:

RESOLUTION RECOMMENDING THAT THE CONGRESS OF THE UNITED STATES OVERRIDE THE PRESIDENT'S VETO OF THE HOUSING BILL

Whereas it has been called to our attention that the President of the United States recently vetoed the 1959 housing bill passed by the Congress of the United States; and

Whereas it is our understanding that the bill vetoed by the President was a compromise bill; and

Whereas this commission is of the opinion that the federally aided urban renewal program is of vital importance to the cities throughout the United States; and

Whereas at the present time hundreds of applications are being held by the Federal Government pending favorable action toward the adoption of a new housing bill that will provide funds for urban renewal; and

Whereas municipalities in the State of North Dakota together with the city of Fargo are interested in participating in the federally aided urban renewal program; and

Whereas this commission is unanimously of the opinion that the citizens of the city of Fargo are benefiting from the carrying out of the North Dakota R–1 urban renewal project: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Fargo Urban Renewal Agency, That we do hereby recommend to the Senators and Congressmen from the State of North Dakota and to the entire Congress of the United States that they override the President's veto of the 1959 housing bill; and be it further

Resolved, That this board of commissioners does hereby recommend to the board of commissioners of the city of Fargo, that they adopt a similar resolution; and be it further

Resolved by the Board of Commissioners of the City of Fargo Urban Renewal Agency, That we do hereby direct the executive director to forward copies of this resolution to the North Dakota congressional Representatives and to the board of commissioners of the city of Fargo.

A Great American Tradition, the Timp Hike

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. KING of Utah. Mr. Speaker, thousands of Utahans and other Americans visited the slopes and trails of Utah's Mount Timpanogos on the weekend just past.

This famous peak, the highest in the mountain-bound congressional district which I represent, is in a sense the Nation's most challenging and alluring mountain. Among the thousands who gathered Friday and Saturday on its slopes, hundreds conquered its 12,000-foot summit, played on its tiny glacier, drank the icy, sun-pure water from its many waterfalls, and breathed the enchanting aroma from its myriad bloom of delicately colored flowers.

These climbers were participants in the 48th annual Timp Hike, which has become one of the outstanding traditions of mountain recreation in America. To my knowledge, this hike is the largest annual organized hike in America.

The tradition began in 1912 when Prof. Eugene L. Roberts, a Brigham Young University coach, led a small party of hikers to the Timpanogos summit. The peak had been conquered by many climbers, of course, but this was the first party to propose the hike as an annual pilgrimage. The tradition has continued for 48 years—through two world wars, through mountain storms, and through rubber and gasoline rationing.

Accurate records have been kept on the climbers reaching the summit in recent years. They show the hike has become a national and international attraction. For the past 10 years no fewer than 22 States and 5 foreign countries have been represented each year.

The success of the program seems to have three cornerstones. The first and most important, of course, is the natural enchantment of the mountain itself. Its jagged, massive crest looms above the two most heavily populated valleys of my district. Timpanogos is 30 miles south of Salt Lake City at the south end of Salt Lake Valley and 10 miles north of Provo on the north side end of Utah Valley. The climbers find a great variety of minerals, plants, and animal life on its slopes. Cottontail and jackrabbits and many birds inhabit the lower mountain. On the higher reaches, the deer, mouse chipmunk, packrat, gopher, ground squirrel, marmot, and badger roam.

To the botanist, the mountain is one of nature's finest laboratories. Its range of elevation embraces every Merriam-type zone except the Sonoran zone. The rocky summit juts above the timberline which, at northern Utah's latitude, is 10,000 feet. The growing season on the mountain is short, and the flowers bloom in brilliant hues. The bright colors attract insects and speed the pollination process. In mid-July, when the hike usually takes place, the slopes bloom with one of Utah's most beautiful flowers, the primrose.

If the trees near the timberline are not entirely covered by the heavy snows, they are frozen for many months of the year. It is not unusual to find trees on Timpanogos which, judged to be 50 years old, stand only 6 inches tall.

The value of the mountain as a natural laboratory led the Brigham Young University to establish a summer school at Aspen Grove, the camp on its northeast base, where the main hike originates.

A second cornerstone in the tradition is the history and legend of the mountain. The name has an Indian origin. To the Indians, the word "Timp" meant stony, and the word "nogos" meant river. Timpanogos got its name, "Stony River," from the Provo River, which courses its southeast slopes. The stream is one of the outstanding fishing streams of the intermountain West.

Father Escalante, travelling the Utah Valley in the year this Nation declared its independence, mentioned in his notes that the Indians called the river and the mountain by the name "Timpanogos."

The most famous story of the Timpanogos legend, "Utahna and Red Eagle," was written by Coach Eugene L. Roberts—who became better known to Utahans and westerners as "Timpanogos" Roberts—in a booklet entitled "Timpanogos" published in 1922, on the 10th anniversary of the hike, by the Brigham Young University, the Provo Chamber of Commerce, and the American Fork Commercial Club.

Community cooperation has been another cornerstone of the tradition. With the strong support of every community in northern Utah County, the Brigham Young University, now the largest church-operated university in America, and the Provo Chamber of Commerce have remained the principal sponsors of the hike.

Constant attention to safety has also contributed to its success. For this year's hike, a Salt Lake County organization joined the Utah County sponsors, and assumed responsibility for the safety precautions and rescue operations on the hike. This organization, the Salt Lake County Sheriff's Rescue Posse, headed by Captain C. W. Brady, maintained radio communications and first-aid stations on the trails. Despite the growing numbers of climbers who participate, accidents have been rare.

The recent statistics show the hikers average 19 to 20 years in age—19.95 for the men and 19.61 for the fairer sex. Children as young as 4 years of age have reached the summit with their parents, and climbers as old as 79 have reached it. But the hike officials have discouraged the participation of persons at either age extreme.

Coach Roberts was inspired to organize the annual hike by his experience as a missionary to Switzerland for the Church of Jesus Christ of Latter-day Saints. This experience gave him a keen interest in mountain climbing, and he transferred that interest to the great peak which dominates Utah Valley upon his return. He continued to lead the annual climb himself until 1927, when he left Brigham Young University to accept a professorship at the University of Southern California. Upon his departure, Dr. J. C. Hart, now chairman of the Department of Physical Education for Men, assumed direction of the hike, and continues to direct it today.

In 1930, "Summit Club" badges were offered for the first time. They have become the traditional reward for the climbers who reach the summit. The Summit Club membership in the early 1930's ran a few hundred annually. Last year 2,025 hikers claimed their badges.

A small glacier, a remnant of the ponderous ice age giants which once blanketed most of the continent, caps the popular approach to the summit. A slide down the glacier is the climax of the event for many climbers.

The U.S. Forest Service has made an important contribution to the hike tradition. It has helped BYU students, and others, build and maintain the trails. It has built and maintained ex-

cellent comfort facilities for campers and hikers at Aspen Grove.

It seems certain that the Timp hike, now nearly 50 years old, will make an even greater contribution to American recreation in another half century. It is my wish that each of my colleagues might one day visit this famous mountain and perhaps make the hike. The beauty of Timpanogos, however, is wrapped up in no one event and no single season. It probably draws more visitors in autumn than in any other season. It wears a majestic robe of brilliant leaves through early and late autumn. In winter and spring its canyons are havens for skiiers, skaters and other winter sports enthusiasts, and in summer, they are havens for picknickers as well as hikers. But I have stressed the hike because it somehow, to me, embodies the spirit which is America—the spirit of the continuous upward climb, a spirit born of freedom and challenge. I find the same feeling in the words of Dr. C. J. Hart, who said, in a recent communication to me:

We who have to do with the Timpanogos hike firmly believe that everyone should stand on a high peak at least once each year and view the handiwork of mother nature. We say, let this mountain top be Timpanogos, the wonder mountain. We firmly believe the Timpanogos hike is America's greatest community climb.

Powerplants on the Trinity River in Northern California

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. UTT. Mr. Speaker, within the next week we will largely determine the issue of whether the Federal Government or the Pacific Gas & Electric Co. is to construct and operate the power plants on the Trinity River in northern California. The Senate-House conferees on the public works appropriations bill will decide if funds shall be spent by the Government on the generators, and the House Interior Subcommittee on Irrigation and Reclamation will decide if the company's proposal to build and run them itself will be accepted.

The issue resolves itself down to the elementary question, Should the Government decrease the Treasury by $60 million, or should we permit the company to spend its own $60 million for construction, pay $4.6 million a year for the use of the falling-water and pay $83 million in Federal taxes?

"Economy with a capital E is the outstanding advantage in the United States—P.G. & E. partnership plan for the huge Trinity River reclamation program which has been recommended to Congress for approval by Secretary Fred Seaton," states the Sanger (Calif.) Herald. "In offering to build the power generating and distribution facilities of the Trinity River project, the P.G. & E. will be saving taxpayers in California and elsewhere many millions of dollars. The utility will, in addition, be helping California to solve one of its greatest problems—developing of adequate supplies of agricultural and domestic water," reads an editorial from the San Jose (Calif.) Mercury.

The basic economic consideration governing the issue, as stated accurately by the Santa Rosa (Calif.) Press Democrat, is that, "P.G. & E., not the Nation's taxpayers, would pay the $60 million cost of installing the generators. It would pay $4,500,000 a year to the Government for use of the falling water to drive the generators. It would pay Federal and State taxes on its property investment." The Chico (Calif.) Enterprise-Record points out that, "the public power advocates object to that plan, primarily because it would mean that the preference customers would not be able to get power cheaper than the rest of us. We believe the basic principle involved here is this: Preference customers, such as the Sacramento, Redding, and Roseville City power districts, add up to about 7 percent of the population of the service area. The remaining 93 percent of the people," continues the Enterprise-Record, "are just simple citizens and taxpayers like those of us in Chico and do not rate as preference customers. Thus, does it make sense that 93 percent of us should be taxed to build the power facilities so that 7 percent can buy power cheaper? We don't think so. We think that setup would be nothing more than 93 percent of us paying part of the electricity bill for the other 7 percent." In the case at hand, this statement cannot be controverted.

The San Juan (Calif.) Mission News sums up the question more than adequately in concluding:

Throughout the Nation there are independent utility companies doing the same thing, providing power and gas to customers, and paying taxes. Regulated, taxpaying private enterprise can and will undertake any feasible job, no matter how big or costly, and can and will do the job cheaper than Government can. Why any Congressman or Senator will favor socialism over capitalism is far beyond our understanding.

Bridging the Wide Missouri

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. BURDICK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution adopted by the Linton Civic Club of Linton, N. Dak., pointing out the necessity of a bridge across the Missouri River:

Whereas public interest has been directed to the necessity of a bridge across the Missouri River somewhere between Mobridge, S. Dak., and Bismarck, N. Dak.; and

Whereas two bridgees across the Missouri in South Dakota have been declared surplus since they had to be replaced by longer bridges because of Oahe Reservoir, and that these bridges have been suggested for relocation upstream from Mobridge, S. Dak.; and

Whereas the distance between Mobridge, S. Dak., and Bismarck, N. Dak., is approximately 140 road miles, and that a point on the Missouri in Emmons County west of the city of Linton would be approximately halfway between Mobridge and Bismarck, and that the stretch between these two cities is the longest stretch on the Missouri River without a bridge in either North or South Dakota, and that a public free bridge between these two points would be for the benefit and convenience of the public: Now, therefore, be it

Resolved by the Linton Civic Club, representing the merchants and professional men of the city of Linton, N. Dak., That we go on record urging and requesting the Federal Government in cooperation with the State of North Dakota, to construct a bridge across the Missouri River at some point in Emmons County west of Linton, N. Dak.; be it further

Resolved, That copies of this resolution be forwarded to the State highway commissioner, U.S. Representatives DON L. SHORT and QUENTIN BURDICK, and U.S. Senators MILTON R. YOUNG and WILLIAM LANGER.

PETER A. HORNER,
President.
PETER A. KRAFT,
Secretary.

More Farm Production Means Lower Income

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. SMITH of Iowa. Mr. Speaker, one of the leading farm newspapers for as long as I can remember has been the Wallaces Farmer, which is published in Des Moines, Iowa, in the congressional district I have the pleasure to represent in Congress. This farm magazine has printed many articles which analyze farm problems, but one which is especially well written is the one by Al Bull appearing in the July 18, 1959, issue. With controls on corn production abandoned under the new Benson corn program, corn production zoomed upward, and now the Agriculture Department admits that the Commodity Credit Corporation, at the end of this year, will have more corn than wheat; yet, farmers working harder and feeding more of that corn to convert it into protein products receive less income than if they had let some of the corn rot or never had produced it at all. I hope my fellow Members of Congress will read and absorb the contents of the following article:

MORE FARM PRODUCTION MEANS LOWER INCOME—ECONOMISTS CALL IT INELASTIC DEMAND—THAT'S WHY PRICES DROP SO FAST WHEN A FEW EXTRA HOGS ARE MARKETED

(By Al Bull)

More pigs mean lower prices. This is the same with most industries turning out products for sale.

In agriculture an increase in supply of food items drops prices so much that total income is less than from the original smaller

supply. When this happens, demand is called inelastic.

Here's a simple example:

Suppose you are making a product and that you can sell 100 units for a dollar each. If you make 110 of these units, you must cut the price to 80 cents to sell the larger output: Output 100, 110; price $1, 80 cents; income $100, $88.

Gross income is less from the 110 units than from 100 units. A 10-percent increase in supply decreased price by 20 percent.

An extreme example, some folks will say. Not so. Let's look at hogs.

Here are USDA figures for 1954 through 1956:

Year	Million head slaughtered	Average price per 100 pounds	Income from hogs (billion)
1954	66.0	$21.60	$3.5
1955	75.4	15.00	2.7
1956	77.8	14.40	2.6

If you want to do some figuring, the price drops here are about in line with the simple example given above.

Most other agricultural products not under price support can supply similar case histories. Eggs, for example, are in big supply right now—and prices are down sharply.

Broiler production under integration zoomed in recent years. And prices nosedived. This increased-production low-price route is the usual one for sections of agriculture moving under integration.

Expanding markets faster than population growth within the United States is extremely difficult. Desire for food is limited by the capacity of the stomach—which is largely inelastic.

Two factors do tend to stretch farm markets a little each year. One is rising per capita incomes. The other is a growing population.

Population has been increasing by 1½ to 2 percent a year. That's a help, but no complete solution. The same crop acres now in production will be able to supply the food for the 230 million people expected by 1975, according to USDA estimates.

The climbing income level is of limited help, too. Most folks are already eating about all they really want. So they have a choice of how to spend the extra cash.

Choices include a second car or television set, a boat, better quality food, more built-in food services, and more restaurant meals.

This gives a clue as to why agricultural demands are inelastic while demand for autos or television sets may not be.

If prices dropped low enough, you might buy a second television set or a second car.

But no matter how low prices get, you're not likely to eat four eggs for breakfast instead of two. Or to start eating a second breakfast every morning.

Desire for food is limited by the capacity of the stomach, while desire for services, better clothes, improved housing, and the like seems almost endless.

Most of the expenditures for food go toward improved quality or added services. Perhaps the homemaker buys a cake instead of a cake mix.

U.S. consumers find themselves in an enviable position. They are supplied with more food than they can eat. And money enough to buy pretty much what they choose. Food takes a smaller percentage of their income than in the past.

Most nations of the world would gladly trade their food problems for the one we face.

A little study of inelastic demand is rewarding. History shows that it also works in reverse.

That is, a decrease in supply increases prices enough so that total income is greater than from a larger crop.

If enough resources can be transferred from agriculture to other industries, output will be reduced. Then agricultural income will rise.

It isn't easy to get inelastic demand working in the price-raising direction. We have more production facilities than we currently need. They are controlled by millions of operators making independent decisions. An individual decision has no measurable effect.

With this situation, most folks tend to do what is best for them as individuals. Often this is contrary to the best interest of the industry.

The inelastic demand situation we face indicates one thing. We can't produce ourselves to riches. Adequate incomes to farm people can come only by balancing our production with demand in some way.

With adequate guidance, probably from government, decisions could be lined up in the direction of lower production and higher incomes.

Protection of Union Rights as Well as Protection From Union Wrongs

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. PELLY. Mr. Speaker, like other Members of Congress who have had no active part in the redrafting of the Senate version of the labor-management reform bill, I am somewhat at a disadvantage in answering mail and discussing this important legislation.

I do hope, however, in the very near future to have an opportunity to study the final draft when the committee completes its work. Certainly the need of corrective legislation continues to be pointed up by the McClellan committee hearings. In the public interest Congress should enact a bill before adjournment.

Meanwhile, I am getting phone calls, telegrams, and mail asking where I stand on the bill, and while, of course, the circumstances make any such declaration in detail impossible, I want to state my general views as nearly as I can at this time.

Last year I supported the Kennedy-Ives bill. My fear was, and still is, that we will fail to enact a law. I do not hope for one that will please everyone, but it seems to me it is extremely important before the subject gets cold to get a law on the statute books.

I hope after the usual compromise of conflicting viewpoints that Congress enacts a reasonable yet effective bill. I do not favor unnecessarily restrictive provisions, but it is essential to include accountability of union finances and protection of rank and file members from usurpation of their rights by their officials and officers. I am opposed to too much Government control, but rather am convinced the secret ballot and democratic procedure will cure most evils.

My preference is for reasonable penalties for errors and infringement of lawful requirements so as not to discourage ordinary members from holding union office. Also I would not require unions to accept all applications for membership such as Communists or crooks.

Now as to the much-advertised sections covering secondary boycotts and picketing, likewise as to the hot cargo provision, I would want to distinguish clearly in the language what effect any such bans or restrictions would contain. No one will be for blackmail but there must be careful protection of innocent parties in labor disputes so as not to curb legitimate union functions. Frankly, when the House considers each amendment I shall try to put each proposal to a test. If a provision would jeopardize a proper union function it should be defeated. If it strikes at corruption without impeding or diminishing established rights it should be supported. Also I might add in all cases the police responsibilities of the Government and protection of its facilities and services should be upheld as against special interests including union interests.

The members of unions have the most at stake in freeing their organizations from any racketeers, and I am confident existing improper situations can be cured. I favor a law without too much regimentation and redtape. But when I say—as a have said—I favor a stiff bill, I mean a law with a strong measure of protection of union rights as well as protection from union wrongs.

Let's pass a bill to eliminate crooks, but I intend to make sure that the long range result of my vote will not do violence to the union movement in which I believe.

Automobile Accidents Costly

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. ROBERTS. Mr. Speaker, the terrible toll of human lives on the highways is, of course, the paramount reason for my interest in legislation promoting traffic safety. Another consideration, also important, is that of the cost of these accidents.

Under unanimous consent I ask for the following editorial, taken from the Anniston (Ala.) Star, to be inserted in the RECORD:

ACCIDENTS ARE COSTLY

The killing of 310 persons on the highways over the Memorial Day weekend had State enforcement authorities cracking down over the Fourth of July weekend.

In Massachusetts, for example, there was a policeman on duty for every 2 miles of highway, plus 1,000 marked police cars and 500 unmarked patrol vehicles.

The crackdown paid off to the extent that the death toll in traffic last weekend was held to 276, as against the National Safety Council's prediction of 350.

Strict law enforcement is one obvious answer to highway deaths.

Another involves manufacturing standards, and these appropriately are being looked into further at this time by the House Inter-

state Commerce subcommittee on health and safety, which is headed by Congressman KENNETH ROBERTS.

If the auto makers are reluctant to incorporate additional safety features in new cars because of the cost, it would be well for them to consider the terrible toll that automobile accidents take in material wealth, as well as in lives.

In 1940 the cost of accidents was estimated at $1.6 billion; last year it was $5.4 billion.

This means that motorists would have been able to pay in excess of $1,000 more for every new car they bought in 1958, if they had not been saddled with the bill for millions of accidents.

Cities, Towns, People Seek Uncle Sam's Aid as Easy Solution to Their Problems

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. BETTS. Mr. Speaker, the following article which appeared in the July 15, 1959 issue of the Wall Street Journal points up the difficulty in reducing Federal spending. In a clear manner and with appropriate examples it portrays how local communities have lost the urge to solve their own problems by following the currently popular pastime of asking help from Washington for every type of local project.

The author of the article refers repeatedly to the fact that much of this problem was exposed by questions asked by the gentleman from New Jersey [Mr. WIDNALL] in a Banking and Currency Committee meeting. Mr. WIDNALL should be complimented for the searching manner in which he brought to light the eagerness of local officials to run to Washington, instead of trying to solve their own problems. Those of us who are interested in reducing Federal spending and preserving government at the local level are indebted to him for his timely contribution.

The article follows:

CITIES, TOWNS, PEOPLE SEEK UNCLE SAM'S AID AS EASY SOLUTION TO THEIR PROBLEM

(By Paul Duke)

WASHINGTON.—Mayor Robert Egan of Flint, Mich., plopped a hefty briefcase on the table and opened up his big bag of troubles to congressional gaze. Flint, he proceeded to say, urgently needed help to finance water and sewage projects.

Mr. Egan had come to Washington to tell members of a House Banking Subcommittee he was all in favor of a proposed $1 billion low-interest-rate Federal loan program for public health projects. But Representative WIDNALL, a New Jersey Republican, was troubled by the mayor's testimony. Why, asked Mr. WIDNALL, was Flint running to Uncle Sam when the city already enjoyed an excellent credit rating and had no trouble selling bonds for municipal improvements? Why should the Government borrow money at more than 4 percent and then lend it to Flint at a cheaper rate?

Mr. Egan didn't lack an answer. "I am merely looking for an easy solution to the question," he said simply.

The reply spelled out the obvious. The search for an easy solution brings thousands of local government leaders, businessmen, union officials and assorted aid-seekers to the U.S. Capital every year. This parade points up a vast illusion abroad in the land—the illusion that Federal funds are somehow free funds. As Mr. WIDNALL put it: "There seems to be a tendency on the part of a lot of people to feel that when something is financed by the Federal Government it doesn't cost them anything."

But the problem goes deeper. The never-ending march on Washington is one form of response to the complexities and pressures spawned by rapid changes in American economic life today. In a nation which prides itself on its supposedly competitive society, business and farm groups frequently come hat in hand, pleading for Federal subsidies or controls or protection.

THE EASY WAY

Then there are the public officials who come seeking Federal assistance—the representatives of cities, counties, towns and hamlets. Their reasons are frequently complex: Sometimes it may be because of a sharp dwindling of local tax sources or because those sources are being taxed to the saturation point; at other times it may be because of a lack of political courage and a refusal to face up to local responsibility. Thus, officials of a conservative-minded community frequently find it more expedient to ask Federal help than to face up to the politically dangerous task of increasing local taxes or cutting back services.

The logical next step would be for the localities to turn to the States. But they, too, have shortages of adequate revenue sources and are torn by diverse political pressures. Most State legislatures still have a rural complexion that tends to make them conservative. As a result, local officials frequently feel impelled to turn to Washington when State governments give them the cold shoulder.

An eastern Democratic Congressman notes that State legislatures are under strong pressures from well-organized groups opposed to tax increases or additional State help to communities. "When a legislature buckles to these pressures, there's nothing for a mayor or councilman to do but take the train to Washington," he adds. "The result is a sort of natural alliance between the Federal Government and the localities."

The subject of State responsibility was brought into the banking panel's hearing when Herbert Bingham, of the Tennessee Municipal League, was testifying. Mr. WIDNALL again applied the needle and asked why Tennessee wasn't helping its towns and cities finance their water and sewerage needs. "They can finance things cheaper than the Federal Government—why don't they do it?" he jabbed.

Mr. Bingham reckoned he would have to give "a brutal answer to a brutal problem." State government, he said, is "basically an irresponsible level of government in this country." Not only do the States shirk their own responsibilities, but "they will not even provide authority for local governments to solve their own problems," Mr. Bingham declared in referring to State constitutional limitations on bonded indebtedness which communities may incur. "The States have not stepped forward with an adequate program in the highway field, the hospital field, the unemployment field, or any field you want to mention."

Harold K. Schone, director of public works in Oakland County, Mich., contended States have too many problems of their own to worry about bailing out localities. As for seeking State help, Mr. Schone took the view "there's no sense in walking up a blind alley."

As a result of all this turning to Washington, one fact stands out sharp and clear: The Federal Government's contribution to total government expenditures has been steadily spiraling. Fifty years ago less than one-third of all governmental expenditures were made at the Federal level and two-thirds by the States and localities. Now, this ratio is roughly reversed. The defense effort is a major reason for the change, of course. But domestic programs have been burgeoning, too. Federal aid to State and local governments now averages almost 20 percent of general State outlays.

BACK TO THE STATES

In recent years there have been various proposals to turn back some Federal functions and tax sources to the States—notably proposals fathered by the Eisenhower administration. The Joint Federal-State Action Committee has recommended that water pollution and vocational education programs be relinquished by the Federal Government. In return for assuming command of these activities, the States would receive up to about $150 million a year of the revenue from the tax on local telephone service levied by the Federal Government.

But the President's proposal is not likely to get anywhere. In fact, congressional Democrats are driving to double the $50 million-a-year Federal water pollution program rather than gradually abandon it as recommended by President Eisenhower. The Democrats advance a simple argument for doing so: The Federal program is working; and there is no assurance the States, whose record in clearing up rivers and streams is unimpressive, would continue the progress.

As the Federal Government widens its scope of operations, cries for economy tend to ring out louder—but often accompanied by a lower-pitched but.

A Midwest Democratic Congressman tells about the political wheelhorse back in his home district who keeps a steady bombardment of letters and telegrams uring support for a flock of spending proposals. Then the other day I picked up the paped and damned if he dasn't making the fieriest speech you ever saw denouncing Federal spending.

A Virginia conservative hears a lot of griping about spending in one particularly conservative stronghold of his district. Yet this same area is benefiting from sizable Federal aid for airports, water pollution work, highways, and Post Office and National Guard armory construction. Nobody was griping about these.

Similarly, business groups denounce increased Federal outlays for such things as public works projects. Yet delegations from local chambers of commerce stream into town to plead for money for dams and reclamation projects in their backyards. James K. Vardaman, former member of the Federal Reserve Board, recently told a Georgia audience he had yet to find one wholly unselfish organization, be it political, labor, industry, military, agriculture or social.

The Banking subcommittee hearings ran the customary gamut of witnesses. Local government, labor, hospital and housing groups lined up in favor of the legislation to provide expanded aid for local water, sewer, hospital or nursing home construction. Business and financial representatives attacked the bill—except for one manufacturer. His product: Sewer pipe.

SHARP DISAGREEMENT

The testimony threw a lot of illumination on Federal spending; most everybody agreed that increased construction of local public works was worthless. Some witnesses, indeed, said that more local governments, like people, should stand on their own feet. And when Spencer Smith, economics professor at the University of Maryland, said: "All economics can be summed up in the fact that there is no such thing as a free lunch," he spoke truths all the other witnesses, including Mayor Egan of Flint, doubtless would readily admit.

But the testimony also showed that one reason for the great growth of Federal aid comes because people with problems think that the easy solution is to make believe the lunch is free.

High Time for Action

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in Il Progresso on Sunday, July 12, 1959, and commend it to the attention of my colleagues.

The editorial follows:

HIGH TIME FOR ACTION

For more than a year and a half there has been an ever increasing torrent of abuse and vilification directed against Americans of Italian origin, who comprise one of the most important segments of American life. A systematic campaign of defamation has been given wide circulation through slanted articles in nationwide newspaper chains and magazines, and books, which become "best-sellers" through the artful drum-beating of modern press-agentry. But the most frequent offenders are television and motion pictures through gangster portrayals on their screens, using Italian names for the evil characters or what are easily recognized as "Italian types".

One need only turn his TV dial and lo and behold, there is one of those blood-curdling sagas in which the unsavory villain is pictured as a hoodlum with "Italian" features.

Many years ago Il Progresso spearheaded a drive to eliminate the racial identification, in news items and stories, of elements caught in the toils of the law. That campaign was widely commended by public officials, editors and publishers who agreed that the sins of the few should not be visited on the many; and for years no accused or convicted person was identified, in the public prints, as to race or color.

What has happened to change all this? In November of 1957 a group of Americans of Italian descent met in a small New York State village called Apalachin. Some of them had criminal records. The purpose of their meeting has never been explained. But if they were meeting for some nefarious undertaking, we not only do not condone them, but we denounce them and their ilk, for this tiny group of 60 furnished the pretext for bringing discredit and contempt on more than 12 million loyal, law-abiding, decent Americans of Italian origin who daily make their valuable contribution to the enrichment of our country in every field of human endeavor.

Since that day, sensation-seeking organs spawned the specter of a sinister international organization of criminals, presumably composed exclusively of men of Italian or Sicilian extraction, which they call the maffia. And they have been making a roman holiday of the terroristic activities of these men and their henchmen, attributing to them infiltration into and control of many legitimate businesses and undertakings, including labor unions. And in passing they mention Italian products and Italian communities which defer to the maffia.

If this crime syndicate exists in fact, the conclusion is inescapable that all law-enforcement authorities, city, State, and Federal, have broken down. We cannot conceive of the disintegration of the FBI, the Treasury and Immigration Departments, and we resent this inference, as much as we deplore the insinuations against our people.

Like ourselves, many social, civic and fraternal organizations, as well as many individuals prominent in industry, in commerce, in civil service and in the Judiciary, have openly decried the patently unjust association of all Americans of Italian heritage with the criminal acts of the few.

In this connection we are happy to note that two U.S. Senators, HUGH SCOTT of Pennsylvania, and KENNETH B. KEATING, of New York, have taken up the cudgels against the defamation of our ethnic group and have urged a national investigation. In letters to Attorney General William P. Rogers and Secretary of the Treasury Robert B. Anderson, the two Senators ask a full report on the alleged existence of a nationwide organization of criminals; what is being done to eliminate such a conspiracy if it exists; and if no conspiracy exists, a statement to that effect. They also ask for a statement of policy of both Departments of Government to protect the civil rights of people mistakenly identified with criminal acts, and instruction to Federal agents to beware of defamatory public statements about any minority group.

The letters go even further, when they point out that "the most serious of all have been the statements issued by some law enforcement officers and Senate investigating teams" which tend to associate all Americans of Italian lineage with the unholy delegates of crime and vice. The letters also state: "This is as heartless as it is untrue".

We most heartily endorse the position of Senators SCOTT and KEATING. It is high time for action. We have been patient too long. We are aroused as never before and we want an end to the ill-founded, vague condemnation of a fine, loyal and industrious people who—since the discovery of America by one of their forebears—have given it their full measure of devotion.

Home Rule

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 15, 1959

Mr. LINDSAY. Mr. Speaker, the New York Times recently ran an excellent editorial on the subject of home rule for the District of Columbia. It is my feeling that the Congress should act favorably on the administration's bill for home rule during this session. I am inserting this editorial in the RECORD for perusal by my colleagues, as follows:

[From the New York Times, July 17, 1959]

ARE WASHINGTONIANS PEOPLE?

For the fifth time the Senate has voted to give home rule to the District of Columbia. Under a bill hopefully passed on Wednesday the District could elect a mayor, a city council, and a nonvoting delegate to the House of Representatives. Thus its people would be almost as well off as the people of Alaska were during their territorial days. It is curious to recall that the Washingtonians were actually given more leeway a century or more ago than they now possess. As far back as 1802 they elected their own city council. In 1820 they elected their own mayor, and as late as 1874 they elected a Delegate to the House of Representatives and the members of a two-chamber municipal legislative assembly.

Under the present scheme, which has been operating since 1878, the President appoints three Comimssioners to run the city. Curiously enough, two of these are required to be legal residents of Washington for 5 years prior to their appointment—thus they spring full-panoplied from being what we might call wards of the Government to being themselves in a governing position.

This situation seems silly enough. What it implies is that except for a number of Federal officeholders who maintain legal residence elsewhere the people who really and truly live inside the District are treated as though they were Indians on reservations, criminals, or legally insane. This situation presumably would not continue if it were not for the opposition of some southern members of the lower House of Congress who are afraid that if the Negro majority of the District could vote it might not vote their way.

Nevertheless, it is considered certain that if the bill gets on the floor of the House, it will pass. Even then democracy could not run riot. The citizens of Washington still couldn't help elect the eminent citizen who is to be their White House neighbor after the next election.

Morbid Streak in Humanity Seeks Thrill From Tragedy

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. SCHENCK. Mr. Speaker, as a member of the Health and Safety Subcommittee of the Interstate and Foreign Commerce Committee, I have been deeply concerned with problems of air and highway safety. Recently another aspect of this general subject came to national attention in the action of a huge crowd at Idlewild Airport on July 12. This mob blocked normal rescue operations and created additional hazards far beyond the extremely dangerous situation faced by those in the plane and those engaged in safety operations on the ground.

The CAB and the FAA are investigating the mechanical failure of the plane, but I hope that their investigations will also lead to suitable legislation, if need be, to prevent recurrence of the interference with rescue operations.

My good friend, Mr. James E. Fain, executive editor of the Dayton Daily News, vividly describes the situation in his column of July 16. His words are so allied with the objectives of our committee that, under unanimous consent, I place them in the RECORD at this point:

[From the Dayton Daily News, July 16, 1959]

MORBID STREAK IN HUMANITY SEEKS THRILL FROM TRAGEDY

(By James E. Fain)

The mob that overran Idlewild Airport Sunday night to watch a stricken jet airliner come to earth needed no introduction to any newsman who ever has covered a disaster.

The bug-eyed curious cluster like ants to a dead thing whenever spectacular tragedy is in the wind. Cars converge from miles around. People climb fences, stride through muddy fields, shove into almost uncontrollable mobs.

When possible, police set up fire lines, holding out the throng. In large areas, such as Idlewild near New York City, this is not always possible. The straining mob breaks

through, impeding rescue work, creating safety hazards, representing man at just about his ugliest.

Years ago, as a young reporter covering a coroner's inquest after a particularly seamy sex murder, I had a first, unforgettable brush with this sort of morbid curiosity.

A young woman, clasping the hand of a little girl of 5 or 6, came up and asked, almost breathlessly: "Will they let us see the body now?"

"No," I lied, without really knowing.

"Never mind, darling," she told the child. "We'll come back later."

The jet pilot over New York Sunday jockeyed his plane down safely, no thanks to the thousands of idle spectators who jammed Idlewild during the 4 hours he was circling overhead to burn up fuel.

Minus two wheels which had slipped off his landing gear during takeoff, he gentled the big airplane into a smooth landing on a runway that had been covered with foamite to reduce the danger of fire.

The pilot was livid with rage at the crowd and at airport officials who had been unable to hold out the curious. Who could deny him the right? Not just his life but the more than 100 in his charge were at stake.

Someday we will grow up enough to stay away when we cannot help. Meantime, we have a good bit to be ashamed of.

Address of Welcome to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of welcome to the 46th national convention of the National Rivers and Harbors Congress by Col. Frank H. Collins, which I believe will be of interest to my colleagues:

ADDRESS OF WELCOME TO THE NATIONAL RIVERS AND HARBORS CONGRESS BY COL. FRANK H. COLLINS, CHAIRMAN, RIVER AND HARBOR COMMITTEE, WASHINGTON BOARD OF TRADE, MAY 14, 1959

Mr. President, fellow delegates, and guests, on behalf of the Washington Board of Trade and the river and harbor committee of that organization, it is my pleasure to extend a most hearty welcome to all in attendance at this 46th national convention of the National Rivers and Harbors Congress here in the Nation's Capital.

We occupants of this greatest occupied territory in the United States of America are quite accustomed to receiving and entertaining national conventions of many organizations throughout the year. Such gatherings not only assist materially in bolstering the always uncertain finances of the District of Columbia, but also make it possible to we nonvoting taxpayers to make new acquaintances and to renew old friendships with contented citizens from all the free States of the Union.

Your convention here today is of particular importance and interest to the Washington Board of Trade and the Potomac River Port Association. We both have a recognized and distinctive mutual objective, namely, the expanding of internal water facilities and resources development.

We here in the greater Washington district are primarily concerned with the expanding of such development in every way—on the most historical river in the country—the Potomac.

It may interest you to know—that our greater metropolitan area—is the only such community in the entire United States—located on tidewater—that does not enjoy major navigation seaborne services. We are now working to obtain that objective.

Many years ago—I was second clerk on the Mississippi River Packet—*Dubuque*—of the old Diamond Jo Line, running between New Orleans and St. Paul. Since then—it has been my opportunity to observe the rapid development of river traffic on the Mississippi—Missouri and Ohio here in the States—as well as the Thames in England—the Clyde and Forth in Scotland—the Rhine and Elbe in Germany—the Seine in France—the Danube in Austria—the Nile in Egypt—the Congo in Central Africa—the Ganges in India and the Plata and Amazon in South America.

Frankly—I doubt if we Americans have taken the same advantages of our great natural water resources as have the peoples of other countries.

Water was the first means of transportation—but it was rapidly succeeded by the railroads—highways and now airways. However, the last score of years has seen many great water developments on our larger rivers—as well as the Houston Ship Canal—the inland ports of New Orleans and Stockton, Calif.—the Illinois-Michigan Canal—and now the opening of the St. Lawrence Seaway next month—has made an ocean port of every city on the Great Lakes.

But there are still many problems and projects—including irrigation and reclamation—industrial water use desaltation pollution abatement—conservation of wildlife and recreation—all of which are of vital and potent interest to this Congress.

You have gathered here the top assembly—that is available—of experience—knowledge—enthusiasm and initiative for our one objective—which, coupled with precision patriotism for progress—will make this convention an outstanding success for the cause to which it is dedicated.

May I assure you again—of the full support and cooperation of the Washington Board of Trade.

And may I recall the famous poem, "The Rhyme of the Ancient Mariner," and paraphrase it in this manner:

"Water, water everywhere—but not a drop to drink . . .
Water, water everywhere—to use—if only we would think."

Mrs. F. T. Raiford

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. ROBERTS. Mr. Speaker, in the CONGRESSIONAL RECORD of July 16, 1959, I called attention of the House to the death of Mrs. F. T. Raiford, cofounder and publisher of the Selma (Ala.) Times-Journal.

Under leave to extend my remarks, I wish to add two other fine editorials which pay tribute to this outstanding southern lady.

The editorials referred to follow:

[From the Birmingham News]

MRS. F. T. RAIFORD

The death early Saturday of Mrs. F. T. Raiford, 83-year-old publisher of the Selma Times-Journal takes from the newspaper business and the Selma community not only a first-rate hand in journalism but a wonderfully warm and understanding human being.

Mrs. Raiford long has been unique in her capacity for and devotion to a business which is largely dominated by men. With her husband she entered newspapering in 1914 with purchase of the old Selma Times. From a beginning with a single linotype machine for typesetting and a flatbed press that had to be fed by hand, Mrs. Raiford and her husband developed one of the State's more enterprising publications. Mrs. Raiford long served as business manager as the paper expanded with acquisition of the Journal, her husband serving as editor. On the death of her husband Mrs. Raiford became pulisher and general manager.

She was a careful worker and put out her paper with thoroughness. But her interests were far from being confined to publishing. She participated in numerous civic activities and served as a director with the Selma Chamber of Commerce.

Her interests were virtually unlimited, and she showed a warmly humble capacity for enjoyment, for an example, of sports. She kept a box at all times at the Selma ball park and it was a rare Auburn or Alabama football game that she missed.

Eddie Gilmore, the widely known Selma boy who became one of the Nation's top foreign corerspondents—and who once was a carrier for the Selma Times—wrote from London: "Tonight here in London I think about my childhood, my young manhood, and my early middle age, so excuse me for shedding a sentimental tear for one of the greatest women I have ever known—Mary Raiford."

The tribute was fitting, Mary Howard Raiford was one of Alabamas' rare citizens who lived fully and always with a deep sense of professional responsibility.

[From the Talladega Daily Home]

ALABAMA LOSES A LEADER

News of the death of Mrs. F. T. Raiford, publisher of the Selma Times-Journal, brought to the Daily Home the sadness inevitable on the passing of an old and valued friend.

But there was more to it than that.

Mrs. Raiford and Ed Field, the Times-Journal editor, formed a combination which spoke consistently and clearly for the best in Alabama and the South.

With moderation, with tolerance and with understanding, they made the Selma daily an instrument for good whose voice was heard throughout the State and beyond.

For the likes of Mrs. Raiford and those associated with her there could never be such a thing as a Pulitzer prize, for she wasn't the kind to play her heritage false in seeking approbation easily won nowadays for the turning of a coat.

Rather, she stood magnificently true to those things which formed her—and in the standing left a challenge as an example the rest of us would do well to emulate.

So far as we know, Mrs. Raiford was the State's only woman publisher of a daily newspaper.

As such, she was a credit to womanhood and to her profession. She will be missed, not only now at the time of her death, but down through the years of difficulty ahead for all southerners.

Results of Questionnaire by Young Republican Club

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the results of a questionnaire sent out by the First Assembly District Young Republican Club, of Brooklyn, Kings County, N.Y. I believe it most interesting to see the trend of thinking of this organization of young Republicans:

Below you will find the results of the last questionnaire that we sent out to our membership which now totals over 100. The questions were prepared by the American Civil Liberties Union but were processed and tabulated under the supervision of Larry Calia, our first vice president, with the aid of Michael Gilmartin, chairman of the procedural committee, and Joe O'Connor, acting chairman of the national affairs committee. Please take note that a score of 75 percent qualifies one to be a member of the American Civil Liberties Union. Our club would not qualify as our overall score is 65 percent.

1. Government employees accused of disloyalty should have the right to know the sources of information against them and to cross-examine their accusers. Yes, 60 percent; no, 40 percent.

2. Police and other censors should be allowed to ban books and movies such as "Ten North Frederick" or "Baby Doll." Yes, 33 percent; no, 67 percent.

3. Personal ability alone should determine employment regardless of applicant's race, religion, or national origin. Yes, 88 percent; no, 12 percent.

4. The teaching of sectarian religion should be permitted in public schools. Yes, 7 percent; no, 93 percent.

5. The character of a soldier's Army discharge should be based solely on his active duty record, rather than on his preinduction political association. Yes, 62 percent; no, 38 percent.

6. State universities are justified in using a quota system to limit enrollment by members of certain racial and religious groups. Yes, 33 percent; no, 67 percent.

7. Gerald L. K. Smith and William Z. Foster should have the same right to public speches as other political leaders. Yes, 45 percent; no, 55 percent.

8. Trade unions are entitled to restrict their membership on the basis of color, religion, or national origin. Yes, 15 percent; no, 85 percent.

9. Any private individual should have the right to criticize any government or government official anywhere in the world. Yes, 60 percent; no, 40 percent.

10. Police officials should have the right to listen in on private phone conversations. Yes, 70 percent; no, 30 percent.

11. Employers should be permitted to state their views regarding labor unions to their workers. Yes, 100 percent.

12. Movies, plays, and books should be suppressed if they present an offensive characterization of a particular racial or religious group. Yes, 20 percent; no, 80 percent.

13. Everyone who claims the privilege against self-incrimination when asked if he is a Communist must be one. Yes, 47 percent; no, 53 percent.

14. Labor's right to picket includes the right to deny access to struck plants by force of numbers. Yes, 7 percent; no, 93 percent.

15. Segregation in public schools violates the equal protection of the laws guaranteed to all Americans by the 14th amendment. Yes, 75 percent; no, 25 percent.

16. Everyone has the right to leave any country, including his own, and to return to his own country. Yes, 25 percent; no, 75 percent.

17. Congress should investigate political beliefs and associations in order to determine whether they are un-American. Yes, 92 percent; no, 8 percent.

18. The post office is justified in refusing to deliver unidentified foreign material to certain addresses. Yes, 91 percent; no, 9 percent.

19. Test of Government employees' loyalty should be confined to sensitive positions involving military, atomic, or international affairs. Yes, 0 percent; no, 100 percent.

20. Public school and college teachers should be required to sign a special non-Communist loyalty oath. Yes, 85 percent; no, 15 percent.

C. RAYMOND RADIGAN,
President.

Time To Stop Defamation of Millions of Americans

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. ANFUSO. Mr. Speaker, Americans of Italian descent are very much incensed over the recent campaign of abuse which is being directed against them because of a few criminals who have besmirched the good name of the Italian community in this country. A whole community numbering some 12 million people of Italian origin is being blamed for the sins committed by a few. This is not in the tradition of American justice and American principles of fair play.

Organizations of American citizens of Italian descent, the Italian-American press in this country, and many distinguished citizens are now conducting a countercampaign to remove this stigma which has been placed on such a large group of decent, hard-working and loyal Americans. To associate them with the criminal acts of the few, even if only by inference, in itself constitutes a crime of no mean dimensions.

I should like to quote just a few brief sentences from an editorial in the Italian-language newspaper Il Progresso of July 12, 1959, which states:

A systematic campaign of defamation has been given wide circulation through slanted articles in nationwide newspaper chains and magazines, and books which become best-sellers through the artful drumbeating of modern press-agentry. But the most frequent offenders are television and motion pictures through gangster portrayals on their screens, using Italian names for the evil characters or what are easily recognized as Italian types.

One need only turn his TV dial and, lo and behold, there is one of those blood-curdling sagas in which the unsavory villain is pictured as a hoodlum with Italian features. * * *

It is high time for action. We have been patient too long. We are aroused as never before and we want an end to the ill founded, vague condemnation of a fine, loyal, and industrious people who—since the discovery of America by one of their forbears—have given it their full measure of devotion.

Mr. Speaker, may I add at this point that the newspaper Il Progresso has over the many decades of its existence rendered great services to immigrants from Italy in helping them become integrated in this country and in familiarizing them with the American way of life and the American concept of freedom and democracy. In fact, it can be truly said that this newspaper has helped raise several generations of devoted Americans. Today, it is in the forefront of the campaign to defend the good name of the Italian community in this country, the immigrants and the children of immigrants, against those who are casting aspersions on all Italian-Americans. For this service, it deserves our special recognition and deep appreciation.

I have forwarded a letter to the Attorney General of the United States in which I call his attention to this "campaign of defamation" against a whole people. In my letter, I have urged the Attorney General to utilize his authority "to undertake an early investigation of this situation" so that the slanderers are silenced. I am inserting the text of my letter into the RECORD and call on my friends and colleagues in the House to write similar letters expressing their opposition to these defamatory practices and calling for an investigation and verification of the facts.

The letter to the Attorney General reads as follows:

Hon. WILLIAM P. ROGERS,
The Attorney General,
Department of Justice,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: I am writing you concerning the increasing campaign of defamation which is being directed in recent months against a loyal, industrious, and law-abiding group—Americans of Italian descent.

It is estimated that there are some 12 million Americans who trace their origin to immigrants or children of immigrants from Italy. There is no need for me to elaborate on the contributions of this group over the decades—in fact, over the centuries—to the upbuilding of America, the enrichment of its culture, and the development of every phase of human endeavor in our great country. That is all a matter of historical record, as well as of facts in our own day.

And yet, because of the deplorable crimes and sins committed by a few who happen to be of Italian origin, we tolerate the torrent of abuse and outright condemnation of an entire group numbering into the millions. The different media of public information, such as the press, periodicals, movies, radio, television, novels, and the like, have succeeded in establishing in the public's mind certain criminal stereotypes which portray a whole community as steeped in crime.

The sins of the few are blamed on the entire Italian community in this country. I wonder if the spreading of such falsehoods and calumnies is not equally criminal?

I believe the time has come to put a stop to this wholesale vilification, and the way to do so is to undertake an investigation of the nature and extent of such crimes committed by persons of Italian origin, their comparison with crimes committed by other groups, the existence of nationwide criminal organiza-

tions, etc. It is time that we should have the true facts.

I urge you to utilize your good offices and the authority invested in you as head of the U.S. Department of Justice to designate the proper officials to undertake an early investigation of this situation. Your affirmative response to this request will be applauded by the millions of Americans of Italian descent who are most anxious that the true facts are established and that the slanderers are to be silenced. Your refusal to take action or your continued silence in the matter will be interpreted as condoning this deplorable situation.

I shall appreciate hearing from you in the matter at your earliest convenience.

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

Resolution of Pan American Airways Executive Council

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. WAINWRIGHT. Mr. Speaker, the lack of control during the emergency landing of flight 102 of the Pan American Airlines the other week brings to mind a pressing problem. If more efficient ground control is not effected, the present system might well be the cause of a serious accident involving the lives of possibly hundreds of people. Perhaps most indicative of this need is a newly issued resolution of the Pan American Airways executive council. I include the resolution, which follows:

RESOLUTION OF PAN AMERICAN AIRWAYS MASTER EXECUTIVE COUNCIL, JULY 14, 1959, WASHINGTON, D.C.

Whereas the pilots of Pan American Airways and the representatives of those pilots, the master executive council, have reviewed and considered the events associated with the complete breakdown of the airport security and ground control safety procedures during the emergency landing of PAA flight 102, July 11, 1959, at Idlewild International Airport; and

Whereas the complete loss of control permitted thousands of curious people to place themselves in extreme danger along the runway selected for the emergency landfng; and

Whereas the inability of the civil authorities to control the public and thereby insure to the crew and passengers of the flight, the full availability of existing safety equipment and procedures; and

Whereas there is no existing assurance that would prevent a similar Roman holiday from developing during any future emergency; and

Whereas the Air Line Pilots Association has endeavored for years to obtain from the Federal, State, and municipal authorities the installation of modern equipment, trained personnel, and procedures to establish and maintain the necessary level of safety in crash rescue and firefighting installations at the civil airports: Therefore be it

Resolved, That this master executive council, the highest governing body of the pilots of Pan American Airways, as represented by the Air Line Pilots Association, International, strongly recommends that the pilots of Pan American Airways will in the future utilize their command authority to proceed during such emergencies, to the best available air base where security control, modern equipment and crash- and fire-fighting techniques are constantly available for the protection of military or civilian personnel; and, be it further

Resolved, That the officials of Pan American Airways Corp. and the Federal Aviation Agency be requested by the Air Line Pilots Association to immediately initiate negotiations with the U.S. Air Force and Federal authorities to establish the required military-civil liaison and emergency procedures that are necessary to make the military facilities available to protect the lives of the air-traveling public, when, in the judgment of the pilot in command, it is necessary to utilize the military facilities to insure the highest possible level of safety.

Illegal Narcotics Traffic

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. HOSMER. Mr. Speaker, narcotics trafficked illegally constitute one of the most baffling and serious problems facing the country. Facts, figures, and details of the menace are currently being publicized in the Los Angeles Times in a series of excellent articles written by Mr. Gene Sherman. The public service being performed by the Times and Mr. Sherman by this series of features deserves commendation here in the Congress.

Southern California is one of the Nation's narcotics black spots. In part this is due to a lenient tendency by some judges in the area when confronted with narcotics offenders. In part it is due to decisions by the State's higher courts which have thrown roadblocks in the way of narcotics violation prosecutions and which call for State legislation to correct. In a major sense, however, this area's plaguing narcotics dilemma stems from the proximity of the Mexican border.

My own studies of southern California illegal narcotics traffic over the past 10 years invariably lead to the border stations at Tia Juana, Mexicali, and similar towns. Five years ago, I introduced and vigorously pursued legislation to close this border to unescorted minors. Facts and statistics showed hundreds of teenaged addictions first were acquired during visits to Mexican border towns and thereafter fed by the flow of narcotics from our sister Republic to the south.

Recognizing the problem, but pleading the necessity of cooperation with Mexican officials not only on narcotics traffic control, but many other international criminal operations, our State Department repeatedly stated closing the border would make such cooperative efforts between the two countries difficult, if not impossible. As an alternative, additional customs and immigration personnel were assigned along the border and the activities of U.S. narcotics agents in conjunction with State and local police and sheriff's squads were beefed-up.

For a time the border traffic slowed down. But eager pushers and the sizable, efficient production and wholesale distributors of illegal narcotics behind them have found new ways and means to circumvent border interception.

U.S. Narcotics Commissioner Harry J. Anslinger has again and again emphasized the similarity between illegal narcotics traffic and the proverbial feather pillow. Let the pillow be broken and it is almost a physical impossibility to collect together the wind-strewn feathers. Let the wholesale narcotics package be broken down into thousands of capsules of heroin and their interception and destruction becomes almost impossible.

This points to action by the Mexican Government toward destruction of the illegal plantations and narcotics refining plants that are know to exist below the border. This means just one thing: pressure through our State Department for the action by Mexican officials which they can and should take. Our California colleague, Representative JOE HOLT, has obtained commitment by the State Department for Ambasador Robert Hill in Mexico City to initiate talks to that end. The results of these talks are anxiously awaited not only by those of us in Congress, who have long been aware of the problem and demanding its solution, but by every parent in the country who knows his own child may be the next victim of the illegal narcotics trafficker.

Price Reduction To Meet Competition

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, earlier this year much time in the House was spent berating the Tennessee Valley Authority for purchasing a generator from another country at a lower price than that submitted by domestic manufacturers.

I noted an interesting footnote to this discussion in an editorial in the New York Times last Thursday, July 16, and a story on July 17. On page 27, with the other business news, comes the information that Westinghouse Electric is going to cut the price of steam turbine generators to meet the earlier slashes of General Electric. It is interesting and pleasing to see that price competition is being accepted by these companies. This is far superior to the alternative demand that we put quotas, embargoes, or tariffs upon oversea producers to protect artificially high prices of American producers.

The editorial and article follow:

[From the New York Times, July 16, 1959]

ON THE INFLATION FRONT

One of the giants of American industry has just administered some of its prices

downward. The General Electric Co. has announced on successive days reductions in prices of its turbines, both large and small.

In a nation that had become used to the ratchet movement of heavy industry prices—up, steady, up again and never down—this is to be heartily welcomed. Furthermore, the General Electric Co.'s announcements, both in what those announcements say and what they do not say, contain some hints of better days to come on the inflation front.

First, the company said the price reductions were made possible by improved manufacturing processes that have cut costs. There would be nothing unusual about this except that it has not been happening enough in the economy as a whole in the postwar period. Improved efficiency has all too often been eaten up in higher wage and other costs, with prices the same or even rising.

Second, in its announcement on the big turbines the company said it would modify the escalator clause in its contracts—a clause under which customers have been required to pay more than the originally agreed price if a certain index of costs rose.

The change is aimed to help sales, but it also may represent a shrewd hunch on the part of General Electric that costs in the future may be a lot more stable than in the past.

Finally, what the announcements did not say was that foreign competition is a large element in the decision, at least for the big turbines. The revival of Western Europe is producing a benefit that Americans had perhaps not foreseen—the infusion of an extra element of competition in parts of American industry that have been to some extent immune during most of the postwar period.

In a sense, we as consumers are getting our Marshall plan money back.

[From the New York Times, July 17, 1959]

TURBINE TAGS CUT BY WESTINGHOUSE—COMPANY REVERSES EARLIER STAND TO MEET SLASHES OF GENERAL ELECTRIC

The Westinghouse Electric Corp. has joined the growing price war in the steam turbine generator field.

This reversal of a company statement on Wednesday was made at a press conference yesterday at Lester, Pa., where the company unveiled its new production concept aimed at raising output of large turbines by one-third. The company told the gathering that it planned to spend more than $25 million to expand and modernize facilities for the manufacture of turbines, generators, large motors and related heavy apparatus.

Of the total outlay, $21 million will be spent at the Lester plant, just outside Philadelphia; $3 million at East Pittsburgh and $1 million at Sunnyvale, Calif. The heart of the Lester project will be adoption of a new engineering concept—"the development of 'precngineered' basic components for steam turbines that can be manufactured in many duplicate sets and assembled like building blocks in almost any combination."

REMAINS COMPETITIVE

The Westinghouse announcement said that the price cuts were being made on large turbines to meet the earlier slashes by the General Electric Co. L. M. Elkner, manager of the company's large and medium turbine department, said:

"We are meeting price adjustments G.E. has made. We will remain competitive."

A day earlier he denied that Westinghouse contemplated any involvement with G.E. or other manufacturers in any "white sale," such as occurred several years ago. He said at that time that G.E.'s action would "have the result of firming up prices of these large sizes (of turbine generators)."

Meanwhile, G.E. announced yesterday that it had been awarded contracts for a 300,000 kilowatt unit by the Florida Power & Light Co., and a $14 million contract for 10 87,500 kilovolt-ampere generators from the Wanapum Dam project of Public Utility District 2 of Nebraska. In both cases G.E. was underbid by foreign competitors. Company spokesmen said they had received the contracts despite this when the utilities assessed all phases of delivery and service.

Anti-Inflation Fighters

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. BOSCH. Mr. Speaker, the problem of inflation is one of the most serious problems facing this Nation today. Only through an awakened public opinion can we stem the tide of runaway inflation—the people can only be awakened when they fully understand the problem.

Fortunately, we have in the Borough of Queens, N.Y., an energetic, alert chamber of commerce, and the officers and members of the chamber are doing something to educate the people not only of Queens but elsewhere on the consequences of inflation. I want to take this opportunity to commend the officers of the Chamber of Commerce of the Borough of Queens on the campaign to enroll anti-inflation fighters which commences on Thursday, July 23, 1959.

Under leave to extend my remarks, I include the chamber's press release which explains their campaign:

The Queens Chamber of Commerce, voice of Queens business and industry, today (July 23) launched a boroughwide campaign to enroll anti-inflation fighters in a phone-or-write assault on Congress to insure a worth-more dollar through reduced Federal spending and a balanced budget.

Chamber President Ira H. Genet, of Douglaston, announced inauguration of the broad chamber program in conjunction with its distribution of a special booklet by author-publisher Thomas G. Sabin, of Jackson Heights, entitled "Let's Quit Kidding About Inflation."

The 16-page booklet, authored by Sabin to dramatize the chamber's anti-inflation campaign, is the sixth in a yearly series on vital issues using the "baby appeal," a series with distribution by some 3,000 business organizations and boasting a readership of more than 10 million people.

In addition to the saturation distribution of its stop-inflation booklets in Queens, according to President Genet, the chamber has sent copies to chambers of commerce throughout New York State and key chambers in every State in the United States.

President Eisenhower, Vice President Nixon who heads a special anti-inflation committee, and key congressional leaders including Senators Lyndon B. Johnson, of Texas, and Harry F. Byrd, of Virginia, also received the chamber's package appeal to halt inflation. Other recipients included Governor Rockefeller, Lt. Gov. Malcolm Wilson, State Senate Majority Leader Walter J. Mahoney, Senate Minority Leader Joseph Zaretski, State Assembly Speaker Joseph F. Carlino, Assembly Minority Leader Anthony J. Travia, Mayor Wagner, and Comptroller Gerosa.

The chamber appealed locally to Queens business and industry, some 150 civic organizations, fraternal, service, and professional groups, key civic leaders, and 31 Queens lawmakers.

Principal feature of the chamber appeal—embodied in the Sabin booklet socking readers with facts about Federal overspending, taxes, debt, deadly wage-price spiral, etc.—is its plea to anti-inflation fighters to:

Write (no postcards, please) or, still better, phone your U.S. Senator and your Congressman.

For the convenience of "phone your Congressman" anti-inflation fighters in the Borough of Queens, the chamber gives specific instructions on the procedure for phoning two U.S. Senators and five Congressmen representing Queens.

The chamber lists the Washington, D.C., telephone and extension numbers of the seven lawmakers, emphasizing that the charge of 80 cents for 3 minutes could be the most valuable 3 minutes of your day or your future.

Included with the chamber's anti-inflation material is the "Queens Legislative Family," a pamphlet listing Queens lawmakers, with their Washington, D.C., and home addresses.

"We are using this baby-appeal booklet," President Genet declared in his accompanying letter, "to arouse the people to the dangers of inflation. I strongly urge you to support us in this important campaign by starting one of your own.

"The method is simple. Begin by placing your order for these compelling booklets. Spread their factual story among your friends, relatives, fellow workers, employees, etc. Write and/or telephone your U.S. Senator and Congressman.

"Advise your representatives in Washington to vote against all nondefense appropriations that call for Federal spending in excess of Federal income. Urge them to work for a balanced Federal budget.

"Remember, there is no way for anyone to beat inflation. To survive inflation, we must stop it. You cannot afford to lose this anti-inflation campaign. On its success may rest the future of America."

Stressing that the chamber's all-out drive against inflation is "nonpartisan and directed toward anyone who will heed our advice and act," President Genet declared:

"President Eisenhower, Vice President NIXON, and responsible Democratic and Republican Senators and Congressmen are alarmed over the inflation crisis in this country. Something must be done to halt inflationary forces. And we can't accomplish it by sanctioning spending sprees by the Federal Government.

"That's where the people back home come in. It's up to them to let their Senators and Congressmen know exactly how they feel about inflation which is robbing them of a decent, comfortable living. It's up to them to demand a worth-more dollar.

"They should advise their representatives to help stop inflation. And if their representatives fail to carry out their wishes, they do not truly represent their constituents and are ripe for replacement. And the time to do something is right now."

Lawmakers representing the Borough of Queens with its April 1, 1959, population of 1,935,849, according to Queens chamber estimates, are: U.S. Senators JACOB K. JAVITS, of Manhattan, and KENNETH B. KEATING, of Rochester, N.Y.; and Congressmen SEYMOUR HALPERN, of Forest Hills; ALBERT H. BOSCH, of Woodhaven; LESTER HOLTZMAN, of Rego Park; JAMES J. DELANEY, of Long Island City; and EMANUEL CELLER, of Brooklyn, who represents 32 election districts in the Rockaways.

Wildcatter Benedum Has 90th Birthday

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. FULTON. Mr. Speaker, on Thursday, July 16, 1959, Mike Benedum, of Pittsburgh, the famous oil wildcatter, celebrated his 90th birthday. Mike Benedum is an outstanding civic leader in the tri-State area: western Pennsylvania, eastern Ohio, and northern West Virginia. He has led a full and interesting life and continues his activities in business and civic affairs. On his 90th birthday we are all proud to recognize and honor such an exceptional citizen. I am pleased to be counted among his many friends.

Under leave to extend my remarks in the RECORD, I submit the following accounts from the Pittsburgh newspapers of Mr. Benedum on his 90th birthday:

[From the Pittsburgh Press, July 16, 1959]

WILDCATTER BENEDUM HAS 90TH BIRTHDAY

Oilman Michael L. Benedum celebrated his 90th birthday at his home today, insisting that "the zest of wildcatting is as strong in me today at four score and 10 as it was 50 years ago."

Confined to his home on Woodland Road, East End, for the past several months, Mr. Benedum was joined on this observance by 10 close associates in his oil empire.

His nephew, Paul G. Benedum, and the nephew's wife and son attended a family luncheon.

Congratulatory messages arrived by the hundreds. Among the well-wishers were President Eisenhower, Vice President RICHARD NIXON, and leaders of the oil industry.

Philosophizing a bit, Mr. Benedum said he faces "the reality that the twilight gathers about me.

"I am not afraid of death because I have not been afraid of life. Indeed, I would not be honest if I did not admit that the invisible has a great deal of fascination for me * * *. After all, the great unknown is the wildcatter's field of operation."

[From the Pittsburgh Post-Gazette, July 17, 1959]

OIL KING BENEDUM 90 YEARS OLD—HIS WILDCATTING ZEST STRONG AS FIVE DECADES AGO

(By Herbert Stein)

Michael Late Benedum, whose wildcat oil explorations have brought him between $75 million and $100 million, observed his 90th birthday here yesterday by mentally exploring the lure of probing the earth, the inevitability of man's reaching outer space, and why he does not fear death.

"I am not afraid of death because I have not been afraid of life," he said.

At 90, Mr. Benedum said, he faces the reality that the "twilight gathers about me" but he added that was neither a pleasant nor a foreboding state of mind.

SPENDS DAY ON PORCH

"Indeed, I would not be honest if I did not admit that the invisible has a great deal of fascination for me," he said. "Perhaps this is a natural instinct in one whose entire adult life has been devoted to exploration of one facet of the unknown in our own material development."

Mr. Benedum, who is credited with discovering more oil than any other human, spent much of the day sitting on the porch of his home, the former Greystone estate, Woodland Road, at Fifth and Highland Avenues, reading about 1,000 letters and telegrams of greeting.

His greeters included President Eisenhower, Vice President NIXON, Senators, Representatives, Governors, industrialists, labor leaders and, according to an aid, "lots of people he doesn't even know who said they've heard of him and wanted to wish him well."

Late in the morning 10 of his closest business associates joined him for a chat. His nephew, Paul G. Benedum, the younger Benedum's wife and son, Paul G., Jr., ate lunch with him.

PARADE AT BIRTHPLACE

At his birthplace, Bridgeport, W. Va., however, there was a parade, band concert, water show, and grand birthday ball—all at a civic center built on a $2 million gift from Mr. Benedum.

The oil king himself observed that the great unknown is the wildcatter's field of operation.

"The great risks are his companions and the sealed book of nature is the oyster shell he is determined to pry open," he said.

There is an intangible reward even in following one dry hole after another, he declared.

"My own partner of almost 50 years, the late Joe Trees, had a record of 17 consecutive dry holes when he first started to wildcat in West Virginia back in the nineties. Then he teamed up with me and our first well was a fine producer."

Mr. Benedum said he chose his partner because Mr. Trees "had the courage to face up to failure and to keep on trying" which he said is the first essential in oil wildcatting.

BRINGS OUT YELLOW

"There is nothing that will bring out the yellow in a man's backbone as quickly and as surely as a dry hole." As for himself, he said, "the zest for wildcatting is as strong in me today at 4 score and 10 as it was 50 years ago."

Mr. Benedum then expressed his views on a number of matters.

On his years: "I feel the deepest sense of gratitude that providence has permitted me * * * to have had broad and varied contacts with men and events throughout the world. I have warmed my hands before the fire of life."

On life's rewards: "The rich rewards of memory are mine and I am also blessed in the enjoyment of the priceless things of this day. Of those things, I place the highest value on my friendships."

On God: "I could not have lived nine-tenths of a century and looked upon the wonders of nature without reaching the firm conviction that the universe toils in some immense endeavor and that the mysterious energies of God labor to divine perfection."

On outer space: "The conquest of space is as inevitable as early man's conquest of rivers and mountains, and the later spanning of oceans. It is only a question of time. It is a part of the divine unfoldment of knowledge in the evolutionary scheme of things."

On life on other planets: "I am sure that if there were thought and communication among the marine life in the depths of the seas, where man cannot exist except artificially, the fish would be positive that there could be no life outside of the water."

On future challenges: "Within the 90 years that I have lived, mankind has made more progress than in all the previously recorded thousands of years in human history. And in my opinion the surface has only been scratched."

[From the Pittsburgh Sun-Telegraph, July 16, 1959]

BENEDUM READY FOR GREAT UNKNOWN—FAMED OIL WILDCATTER IS 90 TODAY

M. L. (Mike) Benedum said he faces his exploration into the great unknown with the same confidence that made him the world's greatest oil wildcatter.

He told friends on his birthday:

"At 90 years of age I face up to the reality that the twilight gathers about me. This is neither a pleasant nor a foreboding state of mind. I am not afraid of death because I have not been afraid of life.

"Indeed, I would not be honest if I did not admit that the invisible has a great deal of fascination for me. Perhaps this is a natural instinct in one whose entire adult life has been devoted to exploration of one facet of the unknown in our material development.

"After all, the great unknown is the wildcatter's field of operation. The great risks are his companions and the sealed book of nature is the oystershell he is determined to pry open."

On the same theme of the invisible, Benedum said he knew many wildcatters who ignored proven territory, to search for new fields, adding:

"While I have never gambled in the accepted sense of the word such as with cards or dice or anything of that sort, I suppose it is like the horse race bettors who always put their money on the long shots."

He said he teamed up with the late Joe C. Trees, after the latter had drilled 17 consecutive dry holes in West Virginia. Their first joint well was a producer.

Benedum said it might be asked why he chose a man with such a "dismal" record, adding:

"Actually, the 17 dry holes were the very reason I was attracted to Joe. He had demonstrated that he had the courage to face up to failure and to keep on trying. That is the first essential in wildcatting for oil. It is no place for quitters."

He smiled:

"There is nothing that will bring out the yellow in a man's backbone as quickly and as surely as a dry well.

"The oil business has changed like everything else. It has been caught up in the irresistible tide of evolution. But the zest for wildcatting is as strong in me today at four score and ten as it was 50 years ago. Once it gets into your blood, I guess, it stays with you always."

He expressed gratitude for the past, put the highest value on his friendships and concluded:

"I have warmed my hands before the fire of life."

He said he is asked what he feels the world of tomorrow will be like and declared:

"I am convinced it will be even more advanced and bizarre than the world of today would be to our grandparents. Within the 90 years that I have lived, mankind has made more progress than in all the previously recorded thousand years of human history. Yet only the surface has been scratched."

He said tomorrow's world will be far different than today and that conquest of space is as inevitable as conquest of the rivers and mountains.

Benedum received about 1,000 congratulatory messages, including greetings from President Eisenhower and Vice President NIXON. There was a family luncheon at his Woodland Road home.

Gun 'Em, Mr. Sam

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. DORN of South Carolina. Mr. Speaker, the vast majority of the people of this country and the Members of this Congress are with you in your House

leadership of our great Democratic Party. The following editorial from the Greenville (S.C.) News indicates the overwhelming sentiment for you in my area of the country:

GUN 'EM, MR. SAM

It is becoming evident from reports from Washington that a definite attempt is being made by liberal Democrats to get House Speaker SAM RAYBURN, the able and venerable Congressman from Texas.

It seems that RAYBURN who has earned the title of "Mr. Democrat" has been much too moderate in his views and actions concerning legislation threading its way through the House of Representatives. Now they are saying he's getting old and autocratic and that he's walking in the shadow of his fellew Texan, Senate Majority Leader LYNDON JOHNSON.

The talk is that his foes will start by trying to displace him in his usual role as permanent chairman of the Democratic national convention next year. After that, no doubt, pushing him out of the Speaker's chair would be comparatively easy.

All of this is somewhat reminiscent of what happened to JOE MARTIN, of Massachusetts, who served as Speaker when the Republicans were in power and who long had been the minority chief when the Democrats controlled the House.

But we hope the still redoubtable "Mr. SAM" won't settle for a Cadillac limousine and a chauffer as JOE MARTIN apparently felt he had to. We hope the not so gentle gentleman from Texas will strap on his political six-shooter and meet his enemies at "high noon."

NASA Appropriation

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, within the past few weeks, the Soviet Union has again demonstrated her successful accomplishments in space experimentation, while the United States within this same time period has suffered several missile and rocket failures. The U.S.S.R. is at present superior to us in rocket propulsion and because of this superiority, a Russian may beat our astronaut into space. It will require great expenditures of time and effort and money for us to catch up with the Russians in that respect. All of this argues powerfully against any feeling of American complacency and especially against the $68 million cut in the proposed authorization for NASA, money which is so urgently needed for our space projects.

Mr. Speaker, on July 13, Dr. T. Keith Glennan, Administrator, National Aeronautics and Space Administration, appeared before the Senate Appropriations Committee. The statement he made at that time clearly and forcefully outlines the crippling effects this reduction in appropriation would have on our space program and, in my opinion, should be read by every American. Under leave to extend my remarks in the RECORD, I therefore, include Dr. Glennan's statement, as follows:

STATEMENT BY DR. T. KEITH GLENNAN, ADMINISTRATOR, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION, BEFORE THE SENATE APPROPRIATIONS COMMITTEE, JULY 13, 1959

Mr. Chairman and members of the committee, I welcome the opportunity to appear before this committee, for the first time. I am here to discuss H.R. 7978, which is now before you. In particular, I want to discuss the crippling reductions in the budget requests of the National Aeronautics and Space Administration that are embodied in H.R. 7978. These cuts, if sustained, would have disastrous consequences, and I am impelled to point them out.

The degree of success or failure of the U.S. space effort, vis-a-vis that of the Russians, will be gravely influenced by what Congress decides in this crucial matter.

A year ago this month, the Congress passed the National Aeronautics an Space Act, unanimously in the House, overwhelmingly in the Senate. One of the chief mandates laid down in the legislation was "the preservation of the role of the United States as a leader in aeronautical and space science and technology."

During later hearings on our fiscal 1959 budget request, some Members of Congress raised serious questions about our not having requested far greater sums than we felt, after careful study, that we needed to organize NASA and initiate its programs.

What has happened since then to give anyone a sense of complacency? For I can only interpret the action of the House as an indication of a lessening in the sense of urgency which has been expressed so often on the floor and in committee.

Have we—who started serious work in the space field 6 or 7 years after the Soviets were pouring unlimited funds and their best brains into the drive for dominance in space—suddenly achieved some enormous advantage? If so, I would like to know about it. I would sleep better at night.

Or has it come about in some way that we know that the Soviet satellites and space probes, which our scientific devices have tracked and reported, were somehow gigantic hoaxes?

Gentlemen, tracking devices such as ours are not easily misled. We believe that the Russians have done exactly what they have announced they have done. And perhaps they have achieved much more that they have not revealed.

Wholesale expression of congressional support for NASA was evident until very recently. Today the situation is strangely changed. NASA is faced, not with having to decline a plethora of funds, but with the prospect that vital projects will have to be curtailed or even put on the shelf because funds for them are being denied.

I will not be challenged when I say that the United States must bend every effort to achieve a position of leadership in the space field. And we are all agreed that leadership in a race where there are only two participants cannot conceivably mean running second. I do not have to tell you that we must have the facilities to exert that leadership. Also, we must have the men, we must have the money necessary to the task.

The goal all of us seek—U.S. supremacy in space—was set by Congress last year and reaffirmed this year when Congress authorized the full NASA budget request. This authorization reflected the awareness of Congress that we cannot win the race in which we are engaged during this turning point in history should we be deprived of the all-out support of our legislators. Therefore, I request, with all the earnestness I can muster, that the cuts in the NASA budget be fully restored.

The reductions in the NASA budget total $63,225,000. They represent cuts both in the $45 million supplemental budget request for fiscal 1959 and from our $485,300,000 budget request for fiscal 1960. Actions in the House caused the reductions. First, the House Committee on Appropriations cut the combined requests by a total of $45,500,000. Second, technical points of order passed during debate in the House resulted in a further reduction of $22,725,000 in both requests.

I am urging the members of this committee to make full restoration because to sustain those cuts or to compromise them will hamstrong the U.S. space program.

Moreover, if the Congress slices an already lean NASA budget at a time when this Nation has barely begun its space effort, the world will conclude that the United States is having second thoughts about facing the Communist challenge in this field. Realistically, a research and development program of the complexity and magnitude of this one cannot be turned on and off at a moment's notice. Having made the decision to enter the race, and for many other important reasons, we must pursue with vigor an imaginative, well-planned program.

Well aware of the implications of the Russian's commanding space lead, Congress created NASA last year around the nucleus of the highly respected National Advisory Committee for Aeronautics which had been serving the military services and the aircraft industry for 43 years. Our agency became operative on October 1, 1958, 1 year after Sputnik I began beeping ominously overhead. With NACA personnel and facilities, we were off to a good—if late—start.

From the outset, both Houses of Congress have given us the strongest possible support. House and Senate Space Committees have devoted many weeks of hearings to our problems and programs. The House Committee on Science and Astronautics has heard 300 witnesses from NASA, the military services, and private industry during 70 days of hearings so far this year. The Senate Committee on Aeronautical and Space Sciences has devoted a great amount of its busy schedule to NASA's program and the Nation's space effort. In connection with our 1960 budget the committee has published technical hearings of NASA work which are the most comprehensive, understandable, and educational documents on the Federal Government's aeronautical and space activities that exist today.

Both Houses of Congress have this year overwhelmingly approved the requested authorizations for our 1959 supplemental and fiscal 1960 appropriations. Consequently, I am unable to grasp the reasons for the House cut.

As Administrator, I have resisted the temptation to indulge in Sunday supplement speculation about the coming wonders of space exploration. I have been doing my utmost to see to it that the taxpayers' money is spent wisely as we venture into this new realm and reap its benefits. I have made it a point, however, to be explicit with the Congress about the inevitable costliness of space research. Repeatedly I have stressed during congressional hearings that NASA budgets will grow in the years ahead.

At the same time, I have tried to convey my deep conviction that space research holds the promise that it may soon be paying for itself many times over in tangible economic benefits. We have every right to count on developments in satellite meteorology, communications, navigation, and geodetics that will dramatically affect the lives of all of us.

Taking these considerations into account, last year we put together a budget for fiscal 1960 which we felt would get us well into space exploration. As has been said time and time again, inventions are not conceived on schedule, and vast sums of money, spent without adequate thought and plan-

ning, particularly in the early phases of a program, may hinder rather than facilitate projects.

Because space technology is an expensive, fluid affair, it requires continuous review. Since January, when the President submitted our fiscal 1960 budget request, we have found means to get considerable more space mileage per dollar in some areas than originally had seemed possible. We have also discovered that others of our programs will cost more than our original estimates.

When we prepared our first budget estimates back in November 1958, we based our space flight program upon Juno II and Thor-Able boosters. Our studies have taught us, however, that future reliance upon these vehicles would be uneconomical, in fact, that it is almost impossible to justify their use because of their limited load-carrying capacity and lack of versatility. We will, of course, use them for special purpose tasks in connection with particular projects already underway. However, building on the technology developed out of the missile program, we have initiated development of Thor-Deltas, Vega, and Centaurs which—within 2 years—will enable us to launch much larger scientific payloads far more efficiently and cheaply.

This decision required that we pare our funds for basic research and for other activities. Subsequent studies have also indicated the need for additional tracking and data reduction installations and for the immediate modernization of existing stations. To meet this need, we have again had to trim elsewhere in the budget.

Adjustments like these are by no means unusual in a research program, particularly as we work at the frontiers of a new technology. We must deal with a new order of complexity and cost. We need to build and manage systems that are more than global in scope. Organization of the myriad components into a working whole is a staggering task.

At one and the same time, we find that advances of science generate a flood of new proposals and an unprecedented rate of obsolescence, thus making appraisal, selection, and phasing more and more difficult and complex. Direction and control of technology has become one of today's most pressing and managerial challenges.

As I brought out earlier, our present budget has no slack whatsoever. As further evidence of our tight belts, I would like to state that we do not have a single backup vehicle for any of our scientific experiments. Each must be a "one shot" affair, and if the booster malfunctions, we will simply have to lay the experiment aside.

Before spelling out for you just what this cut will mean to our program, I would like to point out that or research centers, which are deeply involved in aeronautical as well as space research, account for slightly more than $100 million of our 1960 request. Actual new money for the space field is somewhat less than $375 million. Some or all of the large budget, long leadtime items in our space program, would be affected by the House action, if sustained. Here, in brief, is what the reduction could mean to our national space program in terms of time and progress:

1. The development of the Vega rocket propulsion system might have to be drastically cut back. A key vehicle in our future plans, Vega will be capable of placing more than 5,000 pounds in an Earth orbit. It will be one of the first space vehicles capable of making extensive television surveys on the Moon's surface. It will also be used for communications satellite relay experiments and will have the capacity to launch two-man satellites. It will be our first which is capable of matching the payload lofting capability of the Soviets.

2. In addition to cutting back Vega, we might have to retard Centaur, another key space vehicle which will be able to place more than 8,000 pounds in a 300-mile orbit and should be capable of soft-landing a 730-pound scientific payload on the Moon. The Department of Defense, as well as NASA, has a strong interest in this vehicle.

3. We would have to eliminate or drastically reduce the $30 million needed for the 1½ million-pound-thrust, single-chamber engine. This is a long lead-time project to provide in about 6 years time propulsion units capable of 6 million pounds thrust. Only with this vehicle will it be possible to carry our manned expeditions to the Moon and back. The budget cut will set this back at least 1 year.

4. Among other long lead-time items on which we would have to reduce the pace is Project Rover which concerns the development of nuclear propulsion for space travel.

5. We would have to delay completing additions to our tracking and data acquisition networks.

6. Even our top-priority Project Mercury, the manned satellite project, would certainly be affected if we are to carry on with any semblance of a balanced program. This, of course, would increase the probability of the Soviets scoring still another "beat" in this aspect of space exploration.

Let me assure you that I am not crying wolf. While we have not had the time to evaluate in detail the effect of the proposed cuts, it is clear that the items enumerated would be those most likely to be affected.

A final, serious matter that I want to mention is the House action which reduced NASA's request for personnel increases and supporting costs. You will recall that when the National Advisory Committee for Aeronautics was absorbed by NASA, 7,699 employees were transferred to the new agency. Along with the transfer went NACA's heavy aeronautical research responsibilities. Since that time, only 1,269 employees have been added to carry the additional responsibilities.

Now, we have requested funds to employ an additional 1,027—a modest increase in view of NASA's mission. The House cut this number by 15 percent. These people are urgently needed to help make up the time that has already been lost. And the management—the sensible management—of a budget of the size under consideration is done by people in adequate numbers and of high quality. We have said that we propose to limit the size of our own staff in favor of contracting a substantial part of the space program. But we need men for planning, contracting, and monitoring those contracts. And we must have a sufficiently large in-house operation to assure that we have people knowledgeable in the field to provide the technical judgments necessary to the development of a sound program. Without the men to do the job, we will break our stride and fall even farther back.

The decision in this Nation's space exploration program is up to the Congress. Whatever the decision you make, we will attempt to carry it out with diligence and devoted effort.

The work we are now doing is an important instrument of international prestige. By utilizing their space exploits as an instrument of power politics, the Russians have convinced a large segment of world opinion that success or failure in these experiments is a valid measure of our scientific progress and general cultural status, as opposed to theirs. And there is no blinking the fact that the uncommitted nations are influenced by space achievement.

In conclusion I want to say that in my judgment, and in the judgment of the scientists and engineers who are with me here today, our 1959 supplemental and 1960 budgets as originally submitted are sound and conservative. They cannot be reduced without placing in jeopardy some of our most important programs.

Foreign Aid Can Be Cut Without Peril to Defense

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. DORN of South Carolina. Mr. Speaker, of course foreign aid can be cut without peril to defense. I commend to the House the following editorial by John S. Knight:

FOREIGN AID CAN BE CUT WITHOUT PERIL TO DEFENSE

Charles H. Percy, chairman of the Republican Committee on Program and Progress, is working on a statement of principles and objectives that "will help build a more dynamic America, better enabling it to meet the needs of its own people as well as discharge its responsibilities as leader of the free world."

Young Mr. Percy (40), an able and enlightened industrialist, has been amazingly successful in Republican fund-raising activities.

His new assignment, a large one, has the enthusiastic encouragement of President Eisenhower and the chairman of the Republican National Committee.

Percy has named four task forces to determine "the enduring principles by which we must guide ourselves now and in the future." Under general headings they cover "National Security and Peace," "Human Rights and Needs," the "Impact of Science and Technology," and "Economic Opportunity and Progress."

Since Percy is no orthodox practitioner of the political arts, he is seeking comment from the Nation's editors without reference to their partisan alignments.

While it is manifestly impossible to deal in a single editorial with all of the challenging subjects presented by Mr. Percy, one in particular attracted our attention.

As a subtitle under "National Security and Peace," we found that hardy perennial of the State Department thistle patch—foreign aid.

Now we all know that foreign aid is as close to President Eisenhower's heart as Mamie and the lush fairways of Augusta National.

At appropriation time, the administration always gravely warns the Congress that any reductions in foreign aid will imperil our security.

Still, cuts have been made from time to time without provoking the predicted calamities.

And a good many Americans—Democrats, Republicans and independents—are convinced that foreign aid can be reduced even more and at no substantial risk.

TEMPORARY FOREIGN AID NOW A PERMANENT POLICY

We need not remind our readers that foreign assistance began with the Marshall plan more than 10 years ago and was conceived as a temporary measure to rehabilitate Europe's wartorn economy.

Today, however, foreign aid has become a permanent arm of our foreign policy and U.S. taxpayers are subsidizing in some degree the needs of 70 other nations.

Just as a blanket indictment of foreign aid would be grossly misleading, equally untrue is the contention of Leonard J. Saccio, acting head of the International Cooperation Administration, that any changes in our present policy would be disastrous.

It is bootless to beg, as does Paul Hoffman, that the yearnings of the underdeveloped countries must be satisfied at our expense.

Or to sell foreign aid by distorting American history as did Under Secretary of State C. Douglas Dillon when he said:

"This Nation was founded, not so much for the purpose of gaining safety and material prosperity, but more to build a nation based on ideals which our founders believed ultimately would achieve worldwide acceptance."

Such a statement is, of course, the present nonsense.

The daring and resolute men who came to this country were seeking freedom from their oppressors. "Safety and material prosperity," were compelling objectives. None thought of reshaping Europe in America's new image.

It is precisely this kind of drivel that makes us suspicious of the Hoffmans, Dillons, and promoters such as Eric Johnston who are always hovering about the White House with brief cases full of pet projects for saving the world.

Johnston, the irrepressible lobbyist for the motion picture industry, sees nothing wrong in exporting Hollywood firms which pervert the picture of American life.

One such motion picture, shown in Brazil, more than offset the efforts of the U.S. Information Service to portray the United States in a favorable light.

Men, such as these, seldom speak of the alternatives by which the peoples of the underdeveloped countries could bring their own resources into play and encourage private capital investments.

They talk only of the yearnings which exist in the world, and why the United States must satisfy them at your expense.

LEADERS NOW REALIZING PUBLIC IS DISENCHANTED

Fortunately, there are a few men, in public life who realize that the long suffering American public is becoming disenchanted with satisfying foreign needs when we are unable to satisfy a good many of our own.

One such is Senator MIKE MANSFIELD, Democrat, of Montana. He sees, as Walter Lippmann says, that "if foreign aid is to remain part of our foreign policy, the program will have to be reformed."

Senator MANSFIELD wants a thoroughgoing reexamination of gifts and grants as distinguished from loans. Presently, we are subsidizing large military establishments in countries which neither require such defense forces nor can ever support them.

The practice is especially questionable in Latin America. Countries like Peru need housing but get submarines and jet planes instead.

The Mansfield amendment would, within 3 years, call for a reduction in foreign aid wherever the aid is being used to maintain an oversized military establishment. The idea is to compel the administration to reexamine, restudy and justify all of the gifts which are going into guns instead of butter.

Senator GEORGE SMATHERS, Democrat, of Florida, has suggested that Latin America could dispense with these armaments if military patrols of the Organization of American States undertook to safeguard the integrity of member states.

The proposals by these two Democratic Senators make infinitely more sense than the "don't touch, papa knows best" position of the administration.

LOANS AND GRANTS LEAD TO TROUBLE: EUGENE BLACK

On another front, let's listen to Eugene R. Black, president of the World Bank, an experienced and successful hand in the international loan field:

"When loans and grants are used, as they have been, to aid, abet and perpetuate policies in other countries which make economic growth virtually impossible, then we are asking for trouble."

Mr. Black doesn't believe, nor do we, that "you can buy people with aid." He is against political loans; building irrigation dams where the soil is unsuited to cultivation and the erection of steel mills which can stay in operation only through taxpayers' subsidies.

"The difference between effective assistance and a giveaway," says Mr. Black, "is not the difference between a loan and a grant; it is the difference between an insistence on sound financial and economic policies and no such insistence."

So we say, Mr. Percy, that your Republican task force would do well to challenge the administration's line that we shall be in dire peril unless the Congress obediently coughs up with every dollar of foreign aid that has been requested.

Time was when the Republican Party was a symbol of fiscal conservatism. The most charitable thing we can say today is that it is less reckless in its spending policies than the opposition.

If we must continue foreign aid, the program should be realistically conceived and efficiently administered.

Currently, it is neither.

Unless the foreign aid concept is radically altered, the Republicans offer nothing but an extension of previous Democratic policies.

Or, Mr. Percy, to put it another way:

On this issue alone, by what enduring principle should we vote for a Republican rather than a Democratic candidate for President in 1960?

Bring Back "Chip" Bohlen

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. MADDEN. Mr. Speaker, the Gary (Ind.) Post Tribune realizes, as set out in the following editorial, that our Government should take advantage of men who have had years of experience in dealing with Soviet double talk:

BRING BACK "CHIP" BOHLEN

Secretary of State Christian Herter says he would like to have Charles E. Bohlen back in Washington as a special consultant on Russian affairs. Some Senate Republican leaders are voicing strong opposition.

The two American diplomats probably the best informed on the Soviet Union are George F. Kennan and Bohlen. Kennan is no longer in the State Department. Bohlen is, but he is serving out his time in the Embassy in Manila and expecting to retire from the Department soon, unless he is induced to continue for a while in a Washington position.

It was costly to the State Department when it lost the services of Kennan. And it has been costly in the last few years not to have made full use of Bohlen's knowledge on Russia, instead of keeping him in the Philippines.

It doesn't make sense, when a man has become a recognized expert on a subject, for the State Department not to make use of him in that role. Assigning Bohlen to a desk in Washington will not make him the architect of our policy toward Russia, but it could keep us from making a serious error in that policy. If Herter thinks Bohlen can be of assistance to him in guiding our relations with the Soviet Union, there ought to be no question about utilizing his services.

Some Senators act as though ignorance of Russia was the prime qualification for advising on the Russian problem.

The Gordon Story

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. EDMONDSON. Mr. Speaker, on July 14, one of Oklahoma's daily newspapers carried a brief reminiscence by one of its columnists which is quite a story.

The newspaper is the Tulsa Daily World, and the columnist is a tall, soft-spoken fellow with an Irish twinkle in his eye, named Troy Gordon.

There is no need to spell out a public purpose in making the Gordon story a part of this RECORD. Every American who reads it will grow a little in spirit, in the process.

Here is the Gordon story:

ROUND THE CLOCK
(By Troy Gordon)

Thirty years ago last Sunday an 8-year-old boy fell out of a tree at Abilene, Kans. He was climbing toward a tree house and a wooden step nailed to the tree gave way.

He fell about 12 feet and landed on a concrete driveway. His right arm was fractured at the wrist and elbow—in fact, it bent backward at the elbow. All muscles, blood vessels and nerves were broken at that point, and the lower arm hung by a strip of skin.

This was followed by a long period of recovery and many operations by a Kansas City specialist attempting to rebuild the arm. The operations were fairly successful, but the arm was stiff at the elbow and wrist and he had only slight movement in his fingers.

Meanwhile, with the aid of his parents and teachers, he began learning to write left-handed, to tie his shoes, and to do the many other things a human being is called upon to do.

A cousin who was one of the stars of the Cook's Paint and Varnish basketball team sent him a basketball, and he began practicing in the backyard—shooting at a goal nailed on the tree from which he fell.

He became fairly proficient at basketball, and other sports for that matter, and he managed to make fair grades in school although he was out much of the time for surgery in Kansas City.

One day the surgeon prescribed one further operation. By this time the boy was 12 years old, and his parents decided to take him into the council which made such decisions.

"We'll go to a show while you make up your mind," his father said.

After the show the boy still wasn't ready to say, so the father, mother, and boy went to another show. After this one, the boy announced his decision.

"I don't think I ever want to go through another operation again," he said. "I'm getting along all right, and we don't know that my arm will be any better after another operation."

The parents were willing to accept that decision.

There were many key points in the boy's adolescence in which both he and his parents made crucial decisions. One came in junior high school when he wanted to go out for basketball.

"Mom," the boy said, "will you make me a glove or a stocking or something for me to wear on my right arm?"

The mother looked at him for a moment, and said, "No; I won't. If you're going out for basketball, you'll have to learn to live with your arm."

The boy went out for basketball and lettered in high school, junior college, and college.

At some point in his early teens, the boy decided to be a newspaperman. He spent hours at his dad's typewriter, learning to type with his left hand. He wrote imagined news stories and took all the journalism he could get.

In short, he became a newspaperman and enjoyed a moderate amount of success, although he wasn't any Bob Considine.

To quit beating around the bush, that boy was me. I write this, not as a bid for sympathy or praise, but because it is something I think about every time July 12 rolls around.

I write it to show that one does not have to resign himself to a limited life because of a serious injury. He can do pretty much what he pleases, if he'll make up his mind to it.

And after 30 years of living as a cripple (it's all right for me to call myself that but don't you try it—it's a cruel word), and no matter how ridiculous it may sound, I can honestly make this statement:

I am glad I feel from a tree in Abilene, Kans., July 12, 1929. I am glad of the experiences—both pleasant and unpleasant—which resulted from the accident.

It has done things for me and made me realize things which I never would have known otherwise.

And besides I am frequently flattered by little remarks which friends inadvertently drop into conversations which prove that they are not even conscious of my handicap.

There are two other things I want to say before closing this subject:

1. I wasn't really a very good basketball player—just average. But that's pretty good for a man with a stiff arm.

2. Don't ask a stranger about a handicap. It's all right for a friend to do so, but when a complete stranger brings it up, the handicapped person wants to drop through the floor. You see, you've pointed out how noticeable his handicap is.

Poison in Your Water—No. 141

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Saturday, July 11, 1959, issue of the Washington (D.C.) Post and Times Herald entitled "Radioactive Waste Contaminates River."

Of all the frightening substances which go into our waters some of the most dangerous are radioactive wastes from mines and from experimental and industrial uses of radioactive substances.

One of the most significant instances of this appeared in the case of the Animas River which has been heavily laden with radium and other atomic wastes. This article very well shows the frightening danger to our people from this sort of waste.

It is interesting to note that the President was asked about this situation at his press conference recently. He said he intended to look into the matter.

RADIOACTIVE WASTE CONTAMINATES RIVER

(By Edward Gamarekian)

During the past decade, uranium ore-processing mills in this country have been, and still are, dumping radioactive and chemical wastes into nearby rivers with no knowledge of the extent to which they are poisoning the food and water supplies of the communities downstream, and apparently little concern.

The U.S. Public Health Service has completed a $50,000 study of one of the chief offenders—the Vanadium Corp. of America's refinery at Durango, Colo.

This plant, processing 514 tons of ore when the study was underway last year (increased to 700 tons a day since then), excretes its wastes into the Animas River, which flows through southwestern Colorado into New Mexico. The 116-page report shows that 30,000 people living downstream of the mill are unknowingly ingesting radium at a rate that is several times the maximum permissible limit.

Although officials of the Atomic Energy Commission and Public Health Service who have been following the situation have kept mum on what they plan to do about it pending further study, a PHS source yesterday disclosed that the Vanadium Corp. has just agreed to take corrective action within the next 4 months.

During the 11 years that the Durango refinery has been in operation, it has been contaminating the food and water supplies of 22,000 residents of Farmington, N. Mex., 6,000 residents of Aztec, N. Mex., and approximately 2,000 people strung out along the shores of the Animas. In addition, some 26,000 acres of farmland have been irrigated with the radium-loaded river water.

Measurements of the drinking water in the two New Mexico towns have shown that none of the radium is removed by their water purifiers.

In its detailed study, the Public Health Service stated that no measurements were made of the air pollution in the vicinity of the mill or of the radiation exposure to those who worked inside. No estimates were made of the effect of the water contamination on the boys who swim and fish just below and opposite the mill.

There no longer are any fish for a long stretch downstream of the plant because chemical wastes have killed off the insects on which fish feed.

Although public health officials have privately voiced great concern over the situation, the Public Health Service did not show too much alarm in its report and said "ingestion of any particular radioisotope in amounts somewhat higher than the allowable for relatively brief periods of time may not result in undue harm. In another part of the report, however, the PHS admitted its figures might be low for some localities and pointed with apprehension to coming developments which would make the situation even worse in the near future, namely, the increase in radium concentration that would be produced by both the increase in ore tonnage and the anticipated decrease in river waterflow. The first has already happened since the preparation of the report; the second will occur when a water diversion project upstream from Durango is completed.

Examinations of the bones of radium dial painters in the past indicate that the levels of radium in the food and water along the Animas River are already high enough to bring about structural changes in the bones of the people in the area if the contamination continues. The problem has been further aggravated by the strontium 90 in the food from the nuclear bomb tests in nearby Nevada.

The number of cases of bone cancer and leukemia that will result cannot be predicted at this point with any certainty but it is extremely probable that a number of growing children in the area will be affected.

OFFICIAL NOTICE

The primary responsibility for the public's health and safety in this matter has been placed squarely on the Atomic Energy Commission by the Atomic Energy Act. The AEC has passed it on to the mill owners, however, and has done little to keep tabs on the situation.

It was not until the Public Health Service published the results of its 1958 study of the Animas River this past May that the AEC took official notice of what has been going on during the past 11 years.

On May 22, the AEC wrote to the Vanadium Corp. and asked what was being done about the contamination of the Animas and the radioactive dust in the air in and around the mills.

With regard to the disposal of wastes in the river, the AEC said:

"Your company has caused the release of radioactive material into the Animas River in concentrations in excess of those provided by (the regulations) without having demonstrated (they) are not likely to expose any individual to concentrations in excess of the limits specified."

The AEC asked for a complete statement of the steps that would be taken to bring the operation into compliance.

On June 26, the Vanadium Corp. replied that it was not qualified to make any statement on radioactivity in the food and milk that was reported by the Public Health Service. As for the contamination of the river, it went on, the PHS figures showed that the level of radium in the water supplies at Aztec and Farmington were well below the allowable limit.

"In all of these operations," the letter read, "the company must balance the benficial results to the Animas River water against the allowable expenses to the operation."

Although the figures referred to by the company supported its argument, they were taken out of context. The figures were obtained under a set of conditions which made them appear low. They were obtained, as the report pointed out, during a period when the waterflow in the river was well above average. Adjusted for average conditions and the anticipated increase in ore tonnage now reached, the report showed that the radium concentrations in the drinking water downstream of the refinery would be several times the permissible limit.

ESTIMATES LOW

If the riverflow is average during the current 12-month period, the radium in the water as it crosses the New Mexico border will be about 3.8 times the limit. If the radium and the strontium 90 in the average diet in this region is added to the amount obtained from drinking water which comes from the river, the average person will get about 4.6 times the permissible limit of radiation, according to PHS estimates.

At Aztec and Farmington, which are further downstream, the levels will be somewhat less owing to the removal of some of the radium from the water that was used for irrigation. At Aztec (population, 6,000), the radium and strontium concentrations in the average diet will be 3.2 times the permissible limit. At Farmington (population, 28,000), it will be 2.7 times the limit.

These estimates are now a little low since the Public Health Service did not adjust the radium concentrations in the food upward to account for the recent 36-percent increase in ore tonnage at the Durango mill.

A Public Health Service official said yesterday that the Vanadium Corp. has just agreed to put in settling tanks and a filter system which will remove as much as 98 percent of the radium from the river water. The equipment should be installed within 4 months, he said, at which time the PHS will send in a team for a followup study.

SOIL CONTAMINATED

No plans have been made to do anything about the radium that is already in the soil, however. Cleaning up the river will eliminate the radium from the drinking water but foods grown in the area will continue to pick up enough from the soil to give the average person 50 percent of the permissible limit of radiation, the strontium 90 bringing the total up to 72 percent of the limit.

Although the cleanup will remove most of the radium from the total diet, this much will remain for many years to come unless the farmers take steps to reduce the soil contamination. Radium has a half life of 1,620 years and strontium 90 has a half life of 27.4 years. Some may wash out of the soil but scientists estimate it will be a slow process.

In commenting on why nothing has been done in 11 years to correct matters, the Atomic Energy Commission says regulations were not set up until 1957 and points out that the investigations started shortly afterward.

The permissible limits on which the regulations are based, however, were recommended in 1953 by the National Commission on Radiation Protection.

The Public Health Service, on the other hand, states it was powerless to act until the adoption of the Water Pollution Act in 1957.

There are about 28 uranium refineries now in operation in this country, all of which are dumping wastes into nearby streams.

Captive Nations Week

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mrs. DWYER. Mr. Speaker, by designation of the President and by the unanimous authorization of the Congress, this week of July 20, has been proclaimed as Captive Nations Week.

It is fitting that we who represent the people of our country at the seat of government in an atmosphere of complete political freedom should reflect upon the fate of those people and nations who have been denied their freedom, who have lost it through subversion, or who have had it torn from them by armed might.

We have learned, Mr. Speaker, that we cannot relax in our own freedom. We have a direct and personal stake in assuring the freedom of others. The American people have recognized this obligation: through mutual security pacts with other free countries, through economic assistance to developing nations, and through military firmness in opposition to threatened aggression.

Nevertheless, it is a fact that many tragic lands have been enslaved as a result of communist aggression and treachery since World War II. Both as a practical matter and as a moral responsibility, we cannot forget these unhappy people. Whenever freedom is denied to some, it is jeopardized for all others.

On the occasion of Captive Nations Week, we can rededicate ourselves to the proposition that freedom is the right of all people and all nations, and we can renew our pledge that we shall do everything practicable to protect, assist, and recover freedom throughout the world.

Under leave to extend my remarks in the RECORD, I include the following timely editorial from the July 20 issue of the New York Times:

CAPTIVE NATIONS WEEK

President Eisenhower has proclaimed this as Captive Nations Week. He has also signed a congressional resolution calling for a similar proclamation each year until the captive nations have regained their freedom.

This problem of the captive peoples presents many difficulties and requires the close study that the President urged. It is not suggested that we should go running into an atom war to drive out the captors. While some peoples have declared that they are willing to risk annihilation for the sake of their freedom, it is not our province to make this choice on their behalf.

At the same time, we cannot be insensitive to the monstrous things that have been done to whole nations and even races in the name of a vaunted liberation. We should be callous indeed if we could forget Hungary and Tibet, North Korea, and North Vietnam, the Baltic States, and East Germany. That we endure the temporary reign of these awful tyrannies without a rush to arms does not mean that we condone them.

The real purpose of this Captive Nations Week observation, therefore, is to keep the plight of these peoples freshly in our minds. It may help them to know that we have not forgotten them. It ought to help us, in the moral sense, if we continue to remember.

Food Costs in the United States

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. LEVERING. Mr. Speaker, despite the fact that we are in a very real sense living in a subsidized society, where practically every segment of our economy is supported by Uncle Sam in some form or another, the large metropolitan newspapers appear determined to stigmatize the farmers as the only group receiving governmental assistance. The story is rarely told that dollar for dollar and item for item, the groceries we buy at the store are cheaper in the United States than in any other nation on earth. When the Queen of England came to Washington 2 years age she commented on the variety of goods in a supermarket she visited. Even Mikoyan, the No. 2 Soviet leader, visited a supermarket and gasped at the quantity and quality of food available to purchasers.

The reason why the American housewife can buy food cheaper than the shoppers anywhere else in the world is the efficiency of the farmer. Prices are not as low perhaps as they should or could be, but the cold statistics show that the average American worker has to work fewer hours each week to feed himself and family than the worker of any other country in the world.

Under leave to extend my remarks in the Appendix of the RECORD, I am delighted to include a very enlightening article written by Jay Richter which appeared in the July 1959 issue of Country Living magazine.

The article follows:

COUNTRY LIVING NEWSLETTER

(By Jay Richter)

WASHINGTON.—You'd think that America's rural citizen owed the rest of the country an apology for living, judging by the Luce talk you see these days in Time-Life-Fortune and some of the other city magazines and newspapers.

The way this standard press pap has it, the farmer and his friends are being pampered to the point where we're all about to be ruined by it.

This correspondent holds no brief for how the present crowd in Washington is running farm programs. It may be quite true, as some say, that the Department of Agriculture has never used so many dollars to do so little.

But let's not lose our heads.

U.S. farmers and their Government, working together over the years, have built a food-and-fiber production plant that is the technological marvel of the age. Our agricultural operation remains today the envy of the world, and for some needy peoples American food is about all that keeps body and soul together.

SOFT SOAP NOT REQUIRED

Our problem—what to do with too much—is the kind of trouble other nations wish they could get into.

Apologies are due to nobody in this country or elsewhere for the condition of American agriculture.

Modern American farming practices today permit a single farmworker to produce enough food for himself and 23 others—an unparalleled production efficiency ratio that has been carefully noted by Nikita Khrushchev. In a recent talk urging his countrymen to greater efforts on the farm front, the dictator of all the Russians made some comparisons.

They were odious from the Soviet point of view.

The statistics showed that in Russia it takes something like three times more labor than it does in America for a farmer to produce a given amount of food. Approximately four and one-half times as much labor is required in the Soviet as in this country to produce a bushel of grain. It takes a Russian farmer about twice the labor to turn out a bale of cotton, and two and one-half times as much to produce a hundred pounds of milk.

MORE FOOD FOR LESS WORK

Thirty years ago it took a U.S. worker about 1 hour of his labor to buy a dozen eggs whereas today he can get them for only 15 minutes of work. Eighteen minutes of work buys a pound of chuck roast that used to cost 24 minutes of labor. The amount of working time required to earn a quart of milk has been cut in half as is the case with potatoes and also bread.

The American farmer, to sum up, is producing ever-increasing amounts of food for a growing population at an ever-decreasing

cost per unit of output. He is getting these results through use of more machinery, better management, and increased yields.

That is the story we have for the Russians. The chapter and verse includes some recent developments that are eye-poppers, and which would have been impossible without rural electrification.

PUSHBUTTON FEEDING

A case in point is motor-driven conveyors that simultaneously haul grain, silage, and protein supplement from separate storage areas, mix them in proper proportions, and finally dispense the ration to livestock by auger into long feeding troughs.

Other examples include equipment that permits a farmer to feed hundreds of animals in a few minutes with the push of a button; and a new machine that automatically bales hay, then tosses the bound bale into a wagon trailing the baler.

By hooking together a number of pieces of equipment, American farmers now may plant, fertilize, and spray on a preemergence weed killer at the same time a field is plowed. It is thus possible to harvest a crop on the second trip across the field, eliminating the need for harrowing, disking, and sometimes cultivation as well.

FARM RESEARCH HELPS EVERYBODY

You are sometimes led to believe that America's pampered farmers are the sole beneficiaries of expenditures for farm research. The fact is that farm scientists work for everybody in the Nation, and frequently their findings are of direct benefit to all peoples everywhere.

Such was the case, for instance, with streptomycin, discovered in the course of soil studies at New Jersey's agricultural experiment station. This drug gave the world its first important breakthrough in the search for effective control and treatment of tuberculosis.

Another development of a similar kind was described recently by Harold E. Myers, dean of the College of Agriculture, University of Arizona.

BENEFICIARIES INCLUDE IKE, LYNDON

"Thirty years ago," Dean Myers recently told a congressional committee, "sweetclover hay fed as the principal food to cattle frequently resulted in tremendous death losses, especially at the time of dehorning and castrating. The animals bled to death. Through agricultural research, the cause of bleeding was determined.

"A chemical substance in sweetclover called 'dicoumarol' was the causative agent," Dean Myers went on. "One research scientist asked, 'If this compound kills cattle by causing them to bleed to death, why wouldn't it kill rats and mice?' Put into a food attractive to rats and mice it was found to work. * * * Someone also said, 'This compound delays clotting of blood. Blood clotting is a serious problem in humans—why not try dicoumarol in such cases?' It was found to work.

"Today, President Eisenhower, Senator LYNDON JOHNSON, and many others are living and are in fairly good health, thanks to dicoumarol and to agricultural research."

Housing Construction

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. MADDEN. Mr. Speaker, the following editorial from the Leader, an Indianapolis, Ind., newspaper, relates a few facts pertaining to the President's recent veto of the housing legislation:

WHAT THE VETO MEANS

President Eisenhower's veto of the Housing Act of 1959 has exposed the essential phoniness of his antispending, anti-inflation campaign.

The bill he vetoed was a compromise measure passed by both Houses of Congress with bipartisan support. It was designed as a moderate proposal to help meet America's critical housing needs, to enable our cities and their people to take a long forward step toward a better way of life by eradicating slums and providing decent housing for all Americans.

The veto comes on the heels of the President's request for lifting the interest rate ceiling on long-term Government bonds, a move which would force up interest rate all through the economy. The price of money and its effect on general price stability apparently does not concern the President. But the slight cost of providing decent housing for Americans is inflationary.

The net effect of the President's economic policies as revealed in the housing bill veto and the no-ceiling-on-interest-rates proposal is to build fewer houses at higher prices.

This philosophy carried over into the other areas of American economic life spells economic stagnation and a new cycle of boom and recession in the year ahead.

The President's failure to understand the problem of economic growth and his obsession with inflation and spending can only lead to more vetoes of reasonable social welfare legislation and a slackening in America's dynamic economy. It will be to the detriment of the Nation and the free world.

Massachusetts Salutes Maj. Gen. Edgar C. Erickson

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. DONOHUE. Mr. Speaker, a distinguished native of my home city of Worcester, Mass., Maj. Gen. Edgar C. Erickson, has very recently retired as head of the National Guard Bureau here in the Pentagon, after 45 years of exemplary military service.

The career of Major General Erickson provides an inspiration to those young men who are currently entering the military as their life's ambition.

He enlisted in the former H Company Wellington Rifles, 2d Massachusetts Infantry, in 1914 and rose from private to colonel in command of the 181st Infantry Regiment, 26th—Yankee—Division, Massachusetts National Guard; in this period of service, he took part in the Mexican border incident of 1916. He also served with 101st Infantry, 26th Division, in France during World War I.

In 1942, he entered upon active duty for World War II service accepting a demotion from brigadier general to colonel. During that war, he served with an Infantry unit with the Chinese Army in the Chinese Combat Command on special assignment. He was awarded the Legion of Merit, Bronze Star Medal, and was personally honored by the President of the National Government of the Republic of China.

Soon after his return from oversea duty in 1946, General Erickson received special assignment as a board member of the Army Discharge Review Board in St. Louis, Mo., and a year later was attached to the National Guard Bureau, Washington, D.C. Here he served as Acting Chief of the Army Division, National Guard Bureau, until his appointment by President Eisenhower to head the Bureau in 1953. He was reappointed to a further 4 years term, by the President, on June 24, 1957, and served in that capacity until his recent retirement.

Major General Erickson is revered and respected by everyone who ever came into contact with him; the loyalty to him by those who served in the military with him is a legend.

Quiet and unassuming, but with supreme efficiency and dedicated determination, Major General Edickson was the type of soldier who lead and taught his men by personal example. He was noted for his humanitarian understanding and unique ability to encourage the highest troop morale with the projection of strict, but tempered, discipline. Throughout his life, he has been recognized for his interest in, and contribution to, youth welfare programs, and most particularly for his sacrifices of time and energy in assisting in the rehabilitation of the unfortunate and friendless boy.

We in Massachusetts salute Major General Erickson as a great patriot, a dedicated soldier, who devoted the major part of his life in unselfish service to his country and his fellowmen.

We pray the good Lord will bless him with continuing good health through many more years of richly deserved success and enjoyment in his retirement from professional military service.

More About That Housing Veto

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 9, 1959, issue of the Milwaukie (Oreg.) Review:

IKE SLUGS OREGON AGAIN

Congress had made every effort to compromise the much-needed housing bill to the point the President would sign it. In defiance and pique the aging chief executive vetoed the bill. After all, he can't run again and the wishes and even the needs of the people can be flouted without a reckoning.

Oregon suffers most of any State by this indefensible veto. Not only are several of our cities interested deeply in urban renewal, but our basic industry is lumber. When housing slacks off, Oregon goes into its periodic tailspins. High interest rates (tight money) can plunge us downward; so can failure to keep up with national housing needs.

Partisan discipline will probably prevent the overriding of this angry veto. Every indication is that NIXON would have followed the same reactionary policy—an important fact to remember when we pick a new chief executive for the United States in 1960.

Traffic Safety Enforcement

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mrs. DWYER. Mr. Speaker, in view of Congress continuing interest in the subject of traffic safety, our colleagues will be greatly interested in the remarkable record established by the township of Cranford in Union County, N.J.

Cranford, a municipality with a population of more than 20,000 people, has reduced its traffic accident rate by 58 percent by means of intelligent, fair, and persistent enforcement of its traffic regulations.

A very cogent and frank analysis of the safety situation and of Cranford's solution to it was published in the July 17 issue of the Elizabeth Daily Journal. I recommend it highly and I include it herewith, under leave to extend my remarks in the RECORD, as follows:

CRANFORD HAS THE ANSWER

Ever since New Jersey started to get traffic religion there's been enough chest thumping going on to produce a permanent softness in the general area of the xiphoid process and heads have been bobbing like apples on Halloween. That's from taking bows. Men have viewed with alarm and called attention to results with pride, while out in Cranford they didn't do anything but saw wood.

Have you (and of course you have, because everybody ought to be talking about it) seen the new Cranford report on traffic law enforcement? Here is the answer. While other communities were talking about what had to be done and how they were going to do it, Cranford up and did it. That makes a whale of a difference in good living.

If you start to read the report with ordinary attention you'll find that Cranford has reduced its automobile accidents by 58 percent. And if you read that far how can you stop? Reduction of auto accidents is the hope of every thinking motorist and the aim of every awake town. How did they do it in Cranford? There were no mirrors involved and none of the other illusions of magic, simply the hardheaded, realistic approach to the traffic evil that can be treated correctly in only one way—that's law enforcement.

This was no invasion of home and fireside, no intrusion on the rights of motorists through traps and the old billboard trick. Police Chief Lester Powell simply deployed his university trained traffic experts to established trouble spots at periods when danger was liveliest and told them to go to work. The result was issuance of 166 more summonses for motoring violations since the first of the year than were issued over the same period last year and there were 58 percent fewer accidents; also 16 fewer arrests for drunken driving. There was one fatal accident, the first in more than a year, the victim being a pedestrian. Injuries from auto accidents were practically cut in half.

It is particularly worthy of note that in this campaign Lt. Lawrence Bonnell and his aid, Patrolman Robert Ryan, unlike procedure in so many unreasoned road campaigns, set out with only one record in mind. The numbers of summonses, the number of fines were entirely incidental to the establishment of a record for safety on the Cranford streets. It is a record toward which the erstwhile "Venice of New Jersey" is making splendid progress and a performance that will have to be imitated in almost every other town before the streets and highways become as safe as they can be.

The State and the towns are repeatedly guilty of winking at flagrant disregard for their own laws. It cannot be denied that there are two sets of conflicting laws for the private car and the public carriers on the turnpikes, parkways, and highways. There's no secret about this and it could explain laxities at local levels by police unwilling to penalize their neighbors for offenses from which carriers repeatedly are excused. Nor is the erring, often confused, stranger always afforded the same courtesy as the hometown hero.

Motor traffic control can be successful only under a single blanket code carried out with a single standard of application. Cranford appears to have laid down a challenge for the rest of us.

Panhandling Isn't the Way

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. ROBISON. Mr. Speaker, in the Appendix of July 16, under the heading "Cities Have a Responsibility, Too," I pointed out that some of the criticism voiced at the recent U.S. Conference of Mayors was not well founded because there is much that can, and should, be done at the local level regarding urban renewal.

I include an editorial from the Binghamton (N.Y.) Press of July 19, 1959, which sheds further light on this matter and which I commend to my colleagues:

PANHANDLING ISN'T THE WAY

Some 300 mayors of the Nation's major cities met in Los Angeles last week to discuss municipal problems, and they had plenty of problems to discuss, to be sure.

Difficult problems are, of course, urban renewal, municipal-suburban relationships and inadequacy of tax revenues. These are problems well known in the Triple Cities.

Reports of the Los Angeles sessions suggest that the municipal executives spend far too much time in lament over the President's veto of the housing-urban renewal bill, over diversion of Federal subsidies to supplicants other than cities, and over Federal hogging of revenues.

Any fair appraisal of the situation suggests that cities have a valid complaint. But more is to be gained from doing than from crying. The amount of Federal money that cities need is unlikely to be forthcoming. But as apart from the defeatist views of the mayors, that isn't to concede that community problems aren't susceptible to solution at the community level.

As a matter of fact many communities throughout the land are moving to meet planning, financial and other problems of urban renewal with a high degree of success.

And we are not among Binghamtonians who believe that downtown Binghamton will rot on the vine if Uncle Sam fails to pour jingle our way from his all but empty purse. The community has its Valley Development Foundation. It has its people with brains and enterprise. If need be, the Triple Cities can do as much in solution of its problems as other communities are doing.

A line from Cervantes is to the effect that no one should ever stand supplicant for things he can earn himself. First comes the will to do, then analysis and planning, and finally the doing. And it is never quite so difficult as it may have seemed.

A widely embraced view that State and Federal aid taken from the people can be returned to them grown to limitless dimensions must die in simple arithmetic. The Federal Government with its Treasury emptied by commitments and subsidies to one pressure interest and another has no largesse to dispense except at a price of inflation, which is the cruelest tax of all upon the people.

Looking to the Government to solve problems has resulted in a situation wherein the Federal Government is taking 75 cents of every tax dollar. And there is scarcely a single problem passed from the individual or the community to the Government that has been really ameliorated. Any real solution will lie only in assumption of greater local responsibility for local problems.

The Nation does not lack means to meet its problems. Billions of dollars are wasted at all levels of Government. Politics and politicians stand in the way of economies that simple logic and equity dictate.

The mayors, meeting at Los Angeles, were crybabies about diversion of tax revenues, but one and all are probably unwilling to save money locally by eliminating waste and duplication.

If Government were to get all the money it demanded, it still would never have enough. No amount of money ever satisfies the tax collectors, and it never will. A limit should be put on what crazy, irresponsible Federal Government can take of the people's substance. And there is no less a need for such a limit at the State and local level.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Missile-Satellite Diplomacy

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. JACKSON. Mr. President, in a recent address to the Missile Industry Conference here in Washington, D.C., on the subject "Missile-Satellite Diplomacy: A New Dimension of Warfare," I presented some of the considerations which had led me to propose a Government Operations Committee study of the effectiveness of our governmental machinery in the struggle with world communism, a study approved last week by the Senate.

The address emphasizes the importance of better organization and procedures to relate crucial new scientific developments to an overall national strategy. We must not miss the psychological implications of the next sputnik—whatever it may be.

I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MISSILE-SATELLITE DIPLOMACY: A NEW DIMENSION OF WARFARE

(Address by Senator HENRY M. JACKSON before the missile industry luncheon of the National Missile Industry Conference, Washington, D.C., May 26, 1959)

Mr. Chairman, I am grateful for this opportunity to participate in your national missile industry conference and to join you at this luncheon. I have great respect for the forward-looking views of your membership.

Some of us in Congress have been working for many years in the cause to which you are pledged—U.S. leadership in rocketry and astronautics. In our efforts on the Hill, we rely heavily on the help and support of members of this conference.

To obtain leadership in missile and space technology, we have to stay ahead in the race for discovery. It took Americans a long time to accept the idea of such a race.

At the end of World War II most people thought it inconceivable that any nation could ever overtake, let alone surpass us in weapons technology. After all, we had the most productive economy in all history. And we alone had the atomic bomb.

Then the facts began to speak for themselves.

The Soviets achieved the atomic bomb—only 4 years behind us. They tested their first hydrogen bomb—less than 9 months after our first full-scale hydrogen test.

Still the lesson did not sink in. As late as 1955, some of us in Congress had to write a confidential letter to the President to induce him to obtain his first full-scale briefing on the status of our ballastic missile program.

Then, 2 years later the Soviets registered a stunning scientific first, the successful testing of the intercontinental ballistic missile.

Gradually the truth penetrated. These were not isolated victories. They were all parts of a technological contest in which the stakes were getting higher with each bid.

There was a time when the A-bomb was called the absolute weapon. Then we got the H-bomb, and that became the final weapon. Then came the ICBM, and now we think of this as the ultimate weapon.

Just as surely as these so-called absolute, final, and ultimate weapons have succeeded each other every few years, new and more advanced developments will make them obsolete.

In this sort of race one can never let down one's guard. In the competition for critical new weapons this country has to do whatever is necessary to win and to hold a decisive lead.

Self-evident as this proposition is, there are still a few holdouts in high places—and very important holdouts at that.

Four months ago, the administration conceded without contest superiority in the intercontinental ballistic missile to the Soviet Union—a margin of superiority that is estimated to become as large as 3 to 1.

We gave up the race—of our own free will. We have the talent and the resources needed to win. But, we are bowing out.

This decision is wrong. Today our total military force may still be able to deter the adversary. But will we have the deterrent tomorrow? Unless this decision is reversed, we may not.

We must broaden and accelerate our ballistic missile program. We must move as rapidly as possible to the most invulnerable deterrent now in sight—that is the ballistic missile buried in the earth, the ballistic missile mounted on mobile platforms, and the ballistic missile hidden under the seven seas and under the Arctic ice.

A great many people now accept that we are in a race for discovery. It took us too long to recognize this elemental principle of survival. Now we are in a further race, and a more sophisticated one—a race for prestige.

There is more involved in wimming the races for discovery than military hardware. Certain advances impress the world not only by the menace of an overpowering weapon, but also with the scientific and industrial strength which made them possible. The discoverer thereby wields vast new diplomatic leverage.

This is especially true where the discoverer is a so-called backward nation—like the Soviet Union—expected to be the second runner, without a chance to win. In this case the element of surprise deepens the impact of the victory.

I can speak from personal experience to illustrate how little this impact has been understood.

More than 3 years ago, I warned that the Soviets were winning the race for the ballistic missile. I said we need not assume that Moscow would actually use such missiles in atomic war. Their purpose, I argued, was twofold: First, to stockpile the missile in their military arsenal; second, to bid for the imagination of peoples by showing scientific and industrial superiority to the United States—and to use the fearful new weapon for ballistic blackmail.

Do you know how the Defense Department responded to my warning? They answered: "The ballistic missile does not kill you any deader than a bomber does with an atomic bomb." That is how well the Defense Department evaluated the diplomatic implications of the most important weapon of our age.

For over 2 years now, in one crisis after another, Moscow has rattled her missiles—in Suez, Iraq, Quemoy, and now Berlin.

Military pressure on foreign governments in peacetime is nothing new. But ballistic blackmail carries a threat of a wholly new dimension—physical extinction for an entire people.

Just this month, Khrushchev set the stage for the Geneva Foreign Ministers' Conference with his favorite conversational device—bomb-dropping.

He casually informed a West German publicist that eight Soviet H-bombs could obliterate his country.

How much consideration have we given to the fact that the blackmail value of the ballistic missile will increase as the Soviets produce more of these catastrophic weapons than we do?

True, we have fallen behind in the ICBM. But it would go a long way to hold the ground if the Soviets at least knew that we were bending every effort to catch up. When Moscow feels we are not making such an effort, they exploit their advantage in a multitude of directions.

Take now the classic case of sputnik.

You remember the absurd talk the day sputnik went up: "A mere hunk of iron," we were told, "a basketball," "a bauble."

It was a bobble all right. It was our bobble; we dropped the ball. We missed the significance of the satellite as a Soviet bid to power by capturing man's imagination.

Sputnik is a vivid advertisement of enormous Soviet scientific and intellectual progress. It is the kind of advertising victory Batton, Barton, Durstine, and Osborn dream of. It is a tangible object everyone can see—dramatic proof of Russia's latest spurt of accomplishment. It is equally dramatic—equally compelling—to the most sophisticated scientist and to the most unsophisticated member of a backward nation trying to decide which side his bread is buttered on.

With sputnik, Moscow successfully struck at the heart of America's prestige—its hitherto undisputed industrial, scientific, and technical superiority.

These days we hear a lot of talk about economy in Government. I wonder how many billions of dollars worth of prestige it has cost us—because we thought orbiting a satellite was just one more technical achievement, without special significance. This is an indebtedness for which we will make payments for years to come.

If we have learned anything from the missile and satellite debacle, it should be this: The race is not only to the swift, but to the society which can organize its human and material resources to outthink, outplan, and outperform the adversary.

The Communists are skilled at organization. They view their relation to the rest of the world as one protracted conflict. They are prepared for the contest.

We need to outdo Russia in the critical new developments. Let's face it, however, we are poorly organized for the task.

Of course, better organization cannot assure success. But good organization can

help, and poor organization hurts. Basically, we need to improve our methods in three respects:

1. We have to get all of the promising developments that might affect the race for discovery and the race for prestige out on the table, where they can be recognized. We cannot rely on some modern Einstein to resort to the extraordinary expedient of writing a private letter to the President, as was the case in the initiation of the A-bomb project.

2. We have to develop techniques within our Government to encourage the exercise of inspired judgment on which developments to push. Once the technical possibility of a project is known, we cannot afford years and years of delay before starting a serious program, as happened with the H-bomb.

3. We have to know how to relate crucial new developments to overall national strategy. We cannot miss the psychological implications of the next sputnik—whatever it may be.

The truth is we have made little progress on these problems of organization. Come a crisis we may arouse ourselves to take emergency action. We appoint a science adviser to the President. Come another crisis we may arouse ourselves again. We create a National Aeronautics and Space Administration. I do not quarrel with these changes—they may be to the good—time will tell. But they are piecemeal and stopgap. At no time since World War II have we made a considered and comprehensive inquiry into the new kind of governmental techniques we need—to meet the wholly new kind of challenge.

These are among the considerations I had in mind, in initiating a broad Senate study of the effectiveness of our governmental organization in the struggle with world communism.

The study will be nonpartisan, and will be conducted by a special Government Operations Subcommittee of which I have the honor to be chairman.

We shall wrestle with this central issue of our age—Can a free society so organized itself as to recognize new problems in the world and in space—and respond, in time, with new ideas?

Unlike some problems that confront us, that of organization is within the power of Congress to tackle—and to tackle vigorously At this point in our history, I believe there is no more important contribution that the Senate could make than to help the executive branch organize our Government for survival.

In conclusion, let me say this:

If this Nation had all the time in the world to work things out, complacency might see us through. But today time is the one commodity in short supply. Our only time is the present.

The commitment to freedom is rigorous.

This Republic was not established by laggards, and laggards will not preserve it.

International Race at Laurel, Md.

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. BEALL. Mr. President, the Vice President of the United States is leaving for a visit in Russia which we all hope will be successful in every way. He is carrying with him an invitation to the Russians to take part in the Washington International Race at Laurel, Md., this fall.

Last week the Vice President joined me in receiving John D. Schapiro, president of the Laurel Race Course, who is extending through Mr. NIXON the invitation to the Russians to send their best horses to take part in this year's running of the famous Washington International. This is all part of the people-to-people program for promoting peaceful coexistence, endorsed by President Eisenhower.

Mr. President, I have prepared a statement about the Washington International, and I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INTERNATIONAL RACE, A BIT OF COEXISTENCE

(Statement by Hon. J. GLENN BEALL, of Maryland)

We recognize today that people in this country and throughout the world are deeply concerned with the problem of peace. Many vehicles have been used in efforts to promote peaceful coexistence with Soviet Russia. The people-to-people program, endorsed by President Eisenhower, has been active in the area of exchange visits on the cultural and sports level.

Last year, Soviet Russia responded to an invitation from John D. Schapiro, president of the Laurel Racecourse and sent two of its best thoroughbreds to compete in the Washington, D.C., International Race at the Laurel Racecourse. This year, Vice President NIXON, on his forthcoming visit to Russia, will carry an invitation from the Laurel Racecourse to the Russian Government to again send its best thoroughbreds to compete in the race.

From its beginning 8 years ago, the Washington International, held at Laurel, Md., has captured the imagination of racegoers from the four corners of the globe. It has blended together a sound sporting idea with modern air travel to form an international spectacle ranking with the best worldwide contests. From Dublin to Rome, from Melbourne to Malta, from New York to Los Angeles, the International is a topic of conversation among sporting people.

Contenders can be flown to Laurel in less than a day from Europe or South America. Quarantine time is a matter of a few hours. Thus, the foreign participant can be on the Laurel training track within a day and a half.

The Washington, D.C., International is an "Olympic of racing." Indeed, the race was begun with the idea in mind that the best horses of each country, meeting on the turf (which is the natural footing for thoroughbreds), and at the classic distance of a mile and a half, should have the opportunity to compete for the world championship, as in other sports. This event is an invitational affair, with both foreign and American contenders handpicked by an international committee. The entrants must be winners of important races and possess outstanding records.

In the seven previous editions of the Washington, D.C., International, the theme has run to color, surprises, and excitement—a race to kindle the imagination and create racing history on a scale heretofore unknown. In 1954, the Queen of England was invited to send her horse Landau to Laurel, and Her Majesty accepted, marking the first time that the colors of the Royal Family had ever appeared outside Great Britain. In succeeding years, the President of Ireland, Sir Winston Churchill, and Prince Aly Khan, Pakistan Ambassador to the United Nations, have entered horses in the race. Among other countries represented have been Argentina, Australia, Canada, Chile, England, France, Ireland, Sweden, West Germany, and Venezuela. Last year, the U.S.S.R. sent two of its best thoroughbreds to compete in the International. One prominent newspaperman said: "The field may be comprised of equine royalty indeed, but on their backs will be their betters. The Laurel race wins the all-time blue ribbon for rider talent because there is doubt that such riding skill was ever assembled in one race before."

No greater tribute could be given the Washington, D.C., International than when a worldwide committee of horsemen rated it with the King George VI and Queen Elizabeth stakes at Ascot and the Arc de Triomphe at Longchamps as one of the best races in the international field. It is clear that the Washington International has the magnetism, dignity, and essence of a true thoroughbred classic. Each year the magnitude and significance of this race has increased, and the eighth running on November 11 of this year should add to its ever-growing luster. I hope the Russians will tell our Vice President that they will again accept the invitation.

Ninety-eighth Anniversary of First Battle of Manassas

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a very eloquent speech made by Representative WILLIAM JENNINGS BRYAN DORN, of South Carolina, on the occasion of commemorating the 98th anniversary of the Battle of Manassas in Virginia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF CONGRESSMAN WILLIAM JENNINGS BRYAN DORN, DEMOCRAT, OF SOUTH CAROLINA, COMMEMORATING 98TH ANNIVERSARY OF THE FIRST BATTLE OF MANASSAS, MANASSAS NATIONAL BATTLEFIELD PARK, MANASSAS, VA.

President Martin, you and the District of Columbia division, United Daughters of the Confederacy are to be commended for observing the anniversary of this great battle. In your ceremony today, you are remembering deeds of gallantry and heroism all Americans can point to with pride. I congratulate you Sons of the Confederacy, Children of the Confederacy, and the Southern Relief Society for joining the United Daughters to commemorate this 98th anniversary of the First Battle of Manassas.

Mr. Jones, thank you for your very kind introduction. The people of America are indebted to you for your excellent work on the life of Col. John S. Mosby, "The Gray Ghost." As we approach the centennial of that tragic era, your books will contribute greatly to the proper evaluation of that important episode in our history. Your writings will be an inspiration to the youth of our land, both North and South.

I am flattered and honored by the presence of Judge and Mrs. Howard Smith. My friends, Congressman SMITH, is standing like a stonewall for constitutional government. General Jackson said of Robert E. Lee, "I would follow him blindfolded." Judge SMITH, we would follow you blindfolded in the cause of State rights.

Madam President, I dedicate my remarks to the memory of my grandfather, George E. Dorn, a 19-year-old volunteer who fought here with the famed Hampton Legion. This hill to me is hallowed ground. Indeed, all Virginia soil is sacred to me. I am sure that my grandfather never dreamed that I would be here today in this capacity to pay homage to those men and the leaders whom he followed and whom he loved. Manassas was a bloody milestone that had to be passed in the progress and unity of our country. Americans everywhere are rightly proud of the courage and heroic deeds displayed by our forefathers on this field. It is up to us, the living, to pass on to future generations the story of Bull Run. It is proper that we place wreaths today on the monuments to three men whose names will live forever in the saga of this conflict. The names of Gen. Stonewall Jackson of Virginia, Gen. Barnard E. Bee of South Carolina, and Gen. Francis Bartow of Georgia will always be associated with the deeds of valor on this field.

Gen. Stonewall Jackson was not only a great Virginian, but a great American. He was probably the greatest field commander the English-speaking peoples of the world have produced up to this hour. It was my privilege on May 19, 1957, to attend the unveiling of the bronze bust of General Jackson in the Hall of Fame for Great Americans at New York University. The Honorable Wilber Brucker, Secretary of the Army, who delivered the principal address, said "Stonewall Jackson possessed every attribute which makes for success in war or peace."

Field Marshall Viscount Woosley, Commander in Chief of the British Army said, "The fame of Stonewall Jackson is no longer the exclusive property of Virginia and the South. It has become the birthright of every man privileged to call himself an American." Earl Frederick S. R. Roberts said of Jackson: "As a campaigner in the field, he never had a superior. In some respects, I doubt whether he ever had an equal." Von Moltke, the great German field marshall, said Jackson's valley campaign was without a rival in the world's history.

I am particularly happy to represent in the Congress that section of South Carolina which gave to the Nation Gen. Barnard E. Bee. General Bee was born near Pendleton, S.C., graduated from West Point and served with honor and distinction in the Army of the United States. With secession, he cast his lot with the South. General Bee fought valiantly here on this hill. He rallied his broken regiments time and time again. Finally he fell mortally wounded while rallying his men with the cry "Rally around the Virginians. There stands Jackson like a stone wall." General Jackson, from that day forward, has been known to the world as Stonewall Jackson.

Gen. Francis Bartow was a native of Georgia, a prominent lawyer in Savannah, member of the Georgia Legislature and member of the Confederate Provisional Congress. His Oglethorpe infantry was the first in the South to offer its services to the Confederate government. General Bartow gave his life here in the desperate fighting as the battle neared its climax.

The bodies of General Bee, General Bartow, and Lt. Col. B. J. Johnson, of the Hampton Legion, were removed to Richmond where they lay in state with a guard of honor. The wife of the president, Mrs. Jefferson Davis, broke the sad news to Mrs. Bartow of her husband's death on the field. The bodies of these three intrepid leaders were later returned to their native States for burial. The remains of General Bee lie today in St. Paul's Episcopal churchyard at Pendleton, S.C. This churchyard is the resting place of many famous Americans. Among them are Mrs. John C. Calhoun, Wm. H. Trescott, Thomas G. Clemson, and Rev. Jasper Adams, founder of Hobart College, Geneva, N.Y.

The First Battle of Manassas was the greatest battle ever fought in the Western Hemisphere up to that time. The U.S. Army under General McDowell was seeking to crush the Confederate Army here and clear the way to the Confederate capitol at Richmond. This Federal army fought valiantly and its efforts on the morning of July 21 were crowned with great success. The Confederate Army, under the command of General Beauregard and Joseph E. Johnston, was being driven from the field in disorder and undoubtedly would have been defeated but for the supreme sacrifice of General Bee, General Bartow, Colonel Johnson, and their devoted men. On the afternoon of the 21st, the battle reached a climax here on Henry House Hill. The victorious Federals were halted and the Confederates, in a great countercharge, drove them from the field. The Federal Army was routed and retreated to Washington in the utmost disorder and confusion. General Jackson and Colonel Wade Hampton were wounded, Jackson only slightly, but their gallantry and leadership contributed immeasurably to the success of the Confederates.

Wade Hampton had no previous military experience. From his baptism of fire here on this field he rose to the rank of lieutenant general and was commander in chief of cavalry of the army of northern Virginia. Following the war Hampton became Governor and U.S. Senator from South Carolina. He rendered the United States great service during the crises of 1876 by preventing bloodshed and further civil strife.

The American people are rightly proud of the heroism and sacrifice of the men and women who fought in this War Between the American States. I am glad that the Congress has created the Centennial Commission to properly commemorate, beginning with 1961, the 4 years of this conflict. The Commission is headed by my distinguished friend, Gen. U. S. Grant III. Your own able Hon. WILLIAM E. TUCK is a member and Vice President of the Commission. Thus the youth of our country will become even more familiar and proud of these traditions and heritages.

In the Revolutionary War, the American Colonies fought to be a free and independent nation. They revolted against the autocratic power of George III. Our Founding Fathers fought for free local government, dignity of the individual, and for States rights. Their successful struggle resulted in independence, our Constitution, the Bill of Rights, and a representative form of government. To many southerners, the war for southern independence in 1861–65 was a renewal of the Revolutionary War. They felt it was a continuation of the ageless struggle for freedom against totalitarianism and centralized power. The South in this war fought against what they believed to be an unwarranted usurpation of States rights and individual liberty by a powerful Federal Government.

The Confederate soldier faced overwhelming odds for 4 long years because he believed in the principles of States rights and free local government. The Confederate soldiers sacrificed everything—their homes, their lives, and their fortunes in an all-out effort against a strong central government. These men were dedicated men, courageous, independent, and self-reliant. They suffered untold hardships. They often went hungry, ragged, and barefooted. They suffered through the heat and dust of summer and the cold of winter. They endured these hardships because their firesides and homes were at stake. To them, a principle was involved, a basic and fundamental principle of government and political philosophy.

This struggle for freedom is a never-ending one. Liberty is something that has to be won, defended, and fought for over and over again. "Eternal vigilance is, indeed, the price of liberty." The fundamental principles of government as enunciated by our Founding Fathers and dignity of the individual never change. They will be the same throughout eternity.

In America and in the free world today we see a renewal on a large scale of the never-ending struggle against centralization and federalism. The same fundamental issues are involved in our country today that confronted the people of Sparta and Athens in ancient Greece. They are the same issues discussed in the Roman Senate and paramount in the Magna Carta.

This great struggle today against the forces of totalitarianism is not a sectional fight between the North and the South. It is an ideological struggle between those on one hand who believe in a strong national socialistic state and those who believe in States rights and maximum individual liberty. At stake today is trial by jury, freedom of worship, freedom of the press, the time-honored principles and ideals so paramount in previous revolutions and struggles for freedom.

We must fight today by peaceful methods just as valiantly as our forefathers fought in the Revolution and our grandfathers fought in the cause of the Confederacy. The fate of the entire free world rests on the outcome of our efforts. Federal encroachment for a while was creeping and stealthy. It was often intangible and little noticed by the average citizen, but today it is open and is moving at a fantastic pace.

Here in the United States the so-called home of the free the departments and agencies of the Federal Government are writing most of the legislation and are making rules and regulations with the full force and intent of law. The direct representatives of the people are being bypassed and subjected to propaganda by these ever-growing agencies of the Federal Government. The taxpayers' money is being spent to propagandize him of the glory of the welfare state. The American citizen is being subjected to a barrage of Government propaganda. Everyone is being promised an easy life. The people are being led into a socialistic pit of no return. The moral character of our people is being undermined by excessive taxation to support this Federal army of national and international spenders—professional spenders who have often done nothing in 20 years but spend the tax money extorted from the once sovereign American citizen.

In the name of fighting communism, the Federal Government is adopting socialistic and communistic methods. This centralized authority is pretending to stop a disease by spreading more of that disease—the plague of international socialism—while wasting billions of dollars abroad. In a futile effort to stop communism, we are adopting Marxist doctrines through the backdoor here at home. We are subjecting our people to unprecedented regimentation. The pseudo-liberals and Fascists in our own country have joined hands with the internationalists. They are even rolling out the red carpet for the bloody exponents of communistic atheism. They lend prestige and dignity to the soiled hands of those who liquidated the freedom fighters of Hungary. The high-sounding slogans and the four freedoms of World Wars I and II have been forgotten. Totalitarianism is on the march all over the

world. The United States is joining this totalitarian hayride. Mikoyan, Kozlov, Castro, and Sukarno are being welcomed with open arms as heroes. Our people are being brainwashed as individuals and collectively as a nation. If we are to halt the onward march of autocracy, we must fight as never before. Our fight must not be with bombs and bullets in this enlightened age. It must, however, be a revolution against complacency and indifference. It must be a renewal of our faith in the Constitution, in the Bill of Rights and in the free enterprise system.

Our fight to preserve freedom must not be sectional and cannot be limited to the United States. International communism and international autocracy must be fought with international freedom. However, our first effort must be right here in the United States. Our fight today must be waged on the political front with the ballots of an aroused people. The battleground will be the precinct meeting, the party primaries, the political conventions, and the national elections of 1960. All of us cannot work in the scientific laboratories or fly into space, but we can vote. We must rescue both American political parties from the federalists and exponents of socialistic welfare.

We can and must elect a Congress pledged to the Constitution of the United States, a Congress with fiscal responsibility, a Congress dedicated to preserving liberty, a minimum of taxation and government.

We can only curb the Supreme Court and prevent it from establishing a dictatorship by a political reawakening. We must have a Supreme Court who will protect our basic liberties, uphold the sanctity of our homes, save the American people from seditionists, espionage agents, and criminals; a Supreme Court that will fight with loyalty, patriotism, and love of country rather than those self-seeking proponents of un-American ideologies.

We must elect a President of the United States who is thoroughly American, one who is dedicated to the Constitution as written, one who will support the 10th amendment to the Constitution, a patriot who will lead the United States forward to a new era of governmental subservience to the individual citizen; a President whose first allegiance will be to enhance the national glory of the United States of America above all other governments on earth.

Crimes against the American people and our sacred heritages are being committed in the name of bipartisanship. There are no real issues between the great political parties or between the many political aspirants to the Presidency. We must advance candidates in the race for the Presidency who will pledge a return to constitutional government, States rights and local control of our schools; men who will take the dollar signs from international relations and substitute our time-honored slogan "millions for defense but not one cent for tribute". We cannot buy with money the friendship, patriotism and cooperation of other nations. My friends, money cannot buy real courage or determination such as that exhibited on this great battlefield. Foreign aid is an insult to nations abroad and a mockery to the American people. The Kremlin definitely favors this foreign policy of wasting our sustenance all over the world. They hope America will go financially bankrupt through our idealistic and wild spending schemes. The election of 1960 might well be our last opportunity in free elections to return sanity to our Government. It may well be our last opportunity to save the American people from a socialistic, sociological Supreme Court; to curb an empire building federal bureaucracy. It may well be our last opportunity to save our people from a Federal gestapo and save them from the crushing burden of unbearable taxation. We must examine, before it is too late, our international commitments, secret negotiations and phony summit conferences.

Federal aid to education must be rejected in any and every form. Federal aid to education is an octopus in disguise. With Federal aid eventually will come Federal control of education and the youth of our country. This is a familiar road followed by Hitler, Mussolini, Goebbels and Stalin. Every dictator since the beginning of time has seen the absolute necessity of controlling education to further his dictatorial ambitions. They were as afraid of locally controlled education as they were of the plague. If we are to remain a free nation, we must preserve local control of our schools.

Every American State in this Union today is in better financial condition than the Federal Government. Any community that builds its own schools and solves its own educational problems will grow morally and spiritually. Local government will be strengthened. Our people will have more pride in themselves and confidence in their ability to solve their own problems. This, in turn, will strengthen the Republic. Federal aid to education would strike the final blow to the United States as we know it today. Our country is great today because of its different sections, because of its different people, and because of its differences of opinion, and even diverse political philosophy. If the United States ever begins to look, act and think in a single pattern, then we will cease to be a great Nation. The American body politic will become a rubberstamp without will power or courage—a rubberstamp to be used by the Washington autocracy to further its own ambitions. My admonition today to you, my fellow countrymen, is to oppose with united effort this latest civil rights legislation, Federal aid to education, this stupendous budget and Federal encroachment.

Our struggle today is greater, more far-reaching, and more important than that waged by the Founding Fathers. If we lose America and the free world, we will be plunged backward into medieval tyranny. We should zealously guard freedom of speech, trial by jury, freedom of choice, freedom of the press, and our religious liberty. To preserve these basic freedoms guaranteed to us in the Bill of Rights, we must save our Constitution as written by the Founding Fathers of this Republic. If our Constitution is to be amended, we should amend it the legal way as provided for in the Constitution itself. To save this great document, we must first preserve the integrity and sovereignty of the several States. States' rights will preserve individual rights and individual dignity.

We, in the South, have been plagued for generations by a negative psychology. I see signs of our beloved Southland going today from the negative to the positive. We are on the offensive. We know that the freedom of our sons and daughters depends upon the outcome of our battle today. The destiny of the United States itself hangs in the balance. The southern people fought for the South in the War Between the States. The southern people today are fighting for America.

We in the South are in the forefront in this desperate struggle today to preserve not just the southern way of life, but to preserve the principles enunciated in the Declaration of Independence, the Constitution, the Bill of Rights. We are fighting not just for the South, but for every single one of the American States that flourished under that Constitution. Yes, this fight goes beyond the borders of the South, the Middle West, or the Union. It extends and beckons to the whole free world. Our fight is the battle of free peoples everywhere—Europe, Asia, the Philippines, and beyond the seven seas of the world. Totalitarianism, dictatorship, and centralization is on the march. This is no time for appeasement or compromise or for adopting just a little regimentation or a little centralization. We must draw the line. The die is cast. We must save all of our freedoms or lose all of our freedoms.

Madam President, we must fight today with the pen rather than the sword, with words, rather than bullets, with ballot, rather than roaring artillery.

A movement is underway to give you a political choice in 1960. Candidates will be offered within and possibly without the Democratic and Republican Parties who will have the courage to support the Constitution of the United States as written—men who will curb inflation and prevent national bankruptcy; men who can and will put Russia on the defensive; men who will not dignify the atheistic and bloody Khrushchev and Kozlov by conferences and love feasts; men who have the oldtime courage and moral character of George Washington and Stonewall Jackson.

The great State of Virginia under the leadership of its Washingtons and its Jeffersons amazed the world at the time of the Revolution. They struck fear into the heart of the tyrant and shook the theory of the divine right of kings. In their great struggle for independence under Generals Lee and Jackson, Virginia won the respect and admiration of the entire world. In your superb efforts today against centralization and socialist autocracy, Virginia again is in the forefront. You are fighting for the people of the United States—North, South, East and West.

We must stand firm against the conformists, the one-worlders and exponents of national brainwash. I am glad today that Virginia is in disagreement with the pseudo-liberals, the fascists and the collectivists. I am glad you believe the jet age can go hand in hand with freedom. I am glad you believe social justice and a better standard of living does not mean the surrender of States' rights and individual liberty. Atomic science does not lessen the need for States' rights and free local government. The threat of communism should be no argument to abandon local control of schools.

General Lee rallied the South Carolinians to the support of the Virginians under Stonewall Jackson. I can assure you that the South Carolinians of today are behind you in your heroic efforts to stand like a stone wall against nationalization and unconstitutional Federal control.

Wheat Legislation

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent letter to the New York Times by the majority whip of the House, the Honorable CARL ALBERT, of Oklahoma. In the letter Representative ALBERT discusses the wheat bill which the President vetoed and, I think, places the facts on the line for all to see.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 10, 1959]

WHEAT LEGISLATION UPHELD—VETOED BILL SAID TO REDUCE COSTS, REVERSE SURPLUS BUILDUP

To the EDITOR OF THE NEW YORK TIMES:

Bernard Baruch once said, "Every man has a right to his opinion but no man has a right to be wrong in his facts." That sums up my reaction to your June 27 editorial on the President's veto of the wheat bill.

Leaders of wheat legislation accepted compromise after compromise in an effort to get acceptable legislation that would reverse the recent buildup in Government surpluses in wheat, reduce the Government's skyrocketing costs for the program and prevent a sharp decline in wheat producers' income.

The bill passed by Congress would have achieved these objectives. If allowed to become law, wheat program costs would have been reduced an estimated $260 million a year. Present surpluses would have been drawn down at the rate of 100 million bushels or more a year. These are not my conclusions, but are opinions expressed by competent, impartial, agricultural economists.

CORRECTING EXCESSES

Let no one blame Congress further for the excessive Government cost and excessive stocks of wheat. Congress passed legislation which, if signed by the President, would have corrected these excesses. And Congress would have passed wheat legislation even more satisfactory to the administration if the Secretary of Agriculture had not been more interested in abolishing farm price-support programs than in correcting their weaknesses.

I respectfully urge you to consider that we have today the Benson program—not the farm program which was in effect prior to 1953.

At the beginning of 1953 we had a farm program under which for 11 consecutive years farm prices generally had averaged 100 percent of parity or higher. The Commodity Credit Corporation price-support program for 20 years had cost only $1.064 billion, and this included subsidies during the war years. Programs for the 90 percent of parity-supported basic crops actually showed a 20-year profit to the Government of $13 million.

In contrast, during the last 6 years net farm income has been almost $20 billion less than in the previous 6 years. CCC losses on price supports in these 6 years have been five times the total of the previous 20 years. CCC commodities in inventory and on loan have increased from $2.452 billion on January 1, 1953, to $8.716 billion on January 1, 1959. Expenditures of the Department of Agriculture have skyrocketed from $1.8 billion in 1952 to around $7 billion for fiscal 1959.

PER CAPITA INCOME

People on farms now have per capita incomes of only one-half the incomes of nonfarm people. Farmworkers receive hourly one-third the average wage of factory workers. Average farm prices in 1958 were down 13 percent from 1952. In contrast, the hourly earnings of industrial workers in 1958 were up 28 percent from 1952 and corporation dividend payments in 1958 were up 37 percent since 1952.

Your editorial is eminently right in condemning the farm program as now being operated. No one can defend it.

But we must have a farm program. We cannot tell the farmer to find his solutions only in the raw competition of the marketplaces, usually in auction markets, while other areas of our economy rely upon Government protections, or upon concentrations of economic power, to assure reasonable levels of wages or profits.

The Government has given labor the minimum wage and the collective bargaining law. It has given industry the corporate structure, the tariff, and the many statutes that soften the perils of unregulated, unrestrained competitive enterprise. How, then, can the modern, highly mechanized farmer survive, ever selling in a free market and buying in a protected market?

We must have a farm program and it must be fair to consumers as well as to farmers. The Times would merit the gratitude of consumers and taxpayers, as well of farmers, if it would encourage sound policies.

CARL ALBERT,
Member of Congress, Third District, Oklahoma.

WASHINGTON, *July 2, 1959.*

Soil Conservation

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. MUNDT. Mr. President, the July issue of the Journal on Soil and Water Conservation, the official publication of the Soil Conservation Society of America, contains an exceptionally fine article written by John T. Loucks, area conservationist, of Rapid City, S. Dak. He ably comments on the variety of problems faced in conserving the soil and water of our plains, our farmlands, and our natural mountain forests. Appropriately, Mr. Loucks makes reference to the 14th Annual Soil Conservation Society Convention which will convene in Rapid City on August 25. Postmaster General Summerfield has designated that day for the release of the soil conservation commemorative stamp from Rapid City, S. Dak.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH DAKOTA VIGNETTES

(By John T. Loucks)

RAPID CITY.—This is the once wild land of the Sioux and Cheyennes, the skilled hunters and the proud, courageous fighting men. Dakota is an Indian word meaning friend.

It is the land of the Black Hills, a 125-mile-long platter of rocks and trees, which to the red men was sacred land.

Across this land ranged the vast herds of bison—which got to be called buffalo—and the antelope and deer, feeding on the rich, strength-giving vegetation of the highly fertile plains.

Across this land roamed the Indian nomads, traveling light and living on the wild game. They built homes of skins stretched on the long lengths of the lodgepole pine, and their trailers were two poles, called a travois, dragging behind a wiry pony.

It is the land of Wild Bill Hickok, who was holding aces and eights when he died, and of Calamity Jane and the other stalwarts who may have been gilded more by fiction and fancy than by fact.

In the plains the native grasses important to South Dakota stockmen are western wheatgrass, gramagrass, big and little bluestem, green needlegrass, needle and thread grass, blue and sideoats grama and the colorful buffalograss.

In the higher hills, the useful species are little bluestem, Richardson and Columbia needlegrass, mountain ricegrass and prairie dew seed. Where the bluestems are overused, Kentucky blugrass takes over as an invader.

Windbreaks are a major conservation measure throughout South Dakota's northern plains. Varieties best adapted are cottonwood, Chinese and American elm, green ash, Russian olive, lilac, Nanking and sand cherry, plum and redcedar. The windbreaks may vary from one to a score of rows. Clean cultivation, to save on moisture, is important. Much of the fruit produced in windbreaks is canned or made into delicious preserves.

The Black Hills National Forest is 80 percent ponderosa pine, 5 percent white spruce; the balance is aspen, paper birch, with bur oak at the lower elevations.

Foresters say the ponderosa pine in this forest has the most rapid rate of reproduction of all the ponderosa forests. This is because rain usually comes in a pattern favorable to the germination of seeds.

The forest supports a rapidly growing pulpwood industry. A Wisconsin mill last year took 20,000 cords. Sawmills are thriving. Milled lumber is sold as far away as Iowa.

The porcupine is a principal troublemaker in the Black Hills forest. He climbs the tall pines and girdles them. Porcupines do not increase in numbers rapidly, but a kindly attitude toward these bark-loving creatures protects them. Settlers held they represented a square and timely meal for a man lost in the woods. There seems to be no report of anyone lost having dined on porcupine in recent years.

By the time lumbering became active in the hills, barring the logging operations of the miners, the idea of harvesting instead of mining lumber was coming into being. The hills was one of the pioneer areas in this conservation method of woodland use.

Farmers and ranchers have built 90,000 stockwater dams in South Dakota. They have used about all the available sites and still they need more water. This is why the dugout has been coming into widespread use in the State as a water-conservation practice. Dugouts are scooped-out water holes in flattish land, sometimes with diversions to guide water into them. Many a stockman has found his stock dams and dugouts moneysavers in dry years.

If you are lucky you'll run into a honey-haired bundle of conservation spirit and energy named Martha Smith. She hails from Fairburn community 25 miles south of Rapid City.

Martha Smith came home on furlough as an Army nurse one day and found her home village in a predicament. The water wells were playing out. A look-round showed the trouble—sink holes were robbing the groundwater supply that was supported by French Creek. An unrelenting campaign produced a $40,000 State appropriation to mend the trouble. A pipeline from French Creek across a fissured area was a part of the repair work.

The Custer County Soil Conservation District dedicated its annual report to Conservationist Martha Smith.

The White River Badlands of South Dakota are a fascinating area for geological study. Millions of years ago this was the home of rhinoceroses, crocodiles, and turtles, herds of ancestral horses that had several toes, small humpless camels, and deer. There were large trees and expanses of savannah and marshland.

Then the earth shrugged and its surface wrinkled and folded. Wind and water ero-

sion played their part. Now from the jagged spires and ridges one can read an absorbing story of the earth and life forms that lived here, by turning up their fossilized bones.

The Indians later called this weird land "Mako Sica," their term for Badlands. The French trappers gave it a like name: "Mauvaises Terres."

The Badlands were homesteaded in settlement days. Much of the area is grassland and some of the ranches still have good-sized herds. The Badlands National Monument was established January 25, 1939. It is 60 miles long and up to 15 miles wide.

The late Frank Lloyd Wright, world-famous architect, once stated that the Dakota Badlands were a place of great inspiration to him in his work—that here was a myriad of forms and countless color combinations.

Postmaster George Lampert of Rapid City reports requests by the pouchful have been pouring in for the new commemorative soil conservation stamp which will be inaugurated the first day of the SCSA convention. The post office will do a rushing business at stamp windows that day. Two special Washington representatives of the Post Office Department will be on hand, and Postmaster Lampert expects to add 100 extra employees for the rush.

Don't fail to send in that official first-day cover which has been distributed to each SCSA member. Its philatelic value will increase with the years. Send it to Rapid City.

Court of Claims Decision in Dixon-Yates Claim

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. PROXMIRE. Mr. President, the Milwaukee Journal, a paper which has established throughout the country a magnificent reputation of integrity and insistence on honesty in Government, has recently published an editorial on the Dixon-Yates issue, in which it discussed the recent decision of the Court of Claims, by a 3-to-2 vote, in which it held that the Government must pay $1,867,000 to the Dixon-Yates combine.

As the Milwaukee Journal points out, it was a case of Mr. Wenzell working for the Budget Bureau and at the same time representing the First Boston Corp. as the financial agent for Dixon-Yates. The editorial asks, "If that is not a conflict of interest, what does the term mean?"

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT WAS CONFLICT OF INTEREST

By a 3-to-2 vote the U.S. Court of Claims has ruled that the Government must pay $1,867,000 to the Dixon-Yates combine because it canceled its controversial power contract.

Whether or not the money is properly owed Dixon-Yates is certainly a matter of opinion, and the court has delivered its opinion. Certainly the administration pushed hard to get the contract and curb the Tennessee Valley Authority. And certainly Dixon-Yates was put to some sizable expense before the contract was canceled.

But one aspect of the majority opinion of the court is open to question. The majority said that there was not the slightest conflict of interest in the position of Adolphe H. Wenzell in the contract negotiations.

Such a finding is strange indeed. Wenzell worked for the Budget Bureau on the Dixon-Yates matter at the same time that he was a paid official of the First Boston Corp. And the First Boston Corp. was the financial agent for Dixon-Yates. Here was a case of wearing two hats. Wenzell was serving two parties to a deal simultaneously.

If that isn't conflict of interest, what does the term mean?

Federal-State Relationships

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. BARTLETT. Mr. President, on previous occasions I have expressed my concern about Federal-State relationships. Two such occasions concerned litigation in the State of New York, in which the defendants, Arabian American Oil Co. (Aramco) and the State Commission Against Discrimination contended that the application of New York's antidiscrimination law to Aramco would affect adversely U.S. interests in the near east. The defendants argued that the Department of State concurred in this contention, notwithstanding the fact that the legal issue was whether Aramco's hiring practices within the city of New York—not in the Near East—should be exempt from the New York law.

New York Supreme Court Judge Epstein, after a thorough reading of all the documentation, including my correspondence with the Department of State on this matter, has decided that Aramco should comply with the New York antidiscrimination law, notwithstanding the desire of the Saudi Arabian Government that Aramco employ no persons of the Jewish faith. Judge Epstein found that the contention that "the security of the United States is involved" was an arrogation of "the function of the State Department of the United States which has made no such declaration." He concluded that the Department of State has taken no position regarding the hiring practices of Aramco within the State of New York. Mr. President, I ask unanimous consent that the opinion by Judge Epstein be printed in the RECORD.

There being no objection, the decision was ordered to be printed in the RECORD, as follows:

SUPREME COURT, NEW YORK COUNTY SPECIAL TERM, PART I—IN THE MATTER OF THE APPLICATION OF THE AMERICAN JEWISH CONGRESS, A MEMBERSHIP CORPORATION, PETITIONER, FOR AN ORDER PURSUANT TO ARTICLE 78 OF THE CIVIL PRACTICE ACT, AGAINST ELMER A. CARTER, J. EDWARD CONWAY, JOHN A. DAVIS, MARY LOUISE NICE, AND BERNARD KATZEN, CONSTITUTING THE STATE COMMISSION AGAINST DISCRIMINATION, AND ARABIAN-AMERICAN OIL CO., A DELAWARE CORPORATION, RESPONDENTS

Judge Epstein: This is an application for an order under article 78 of the Civil Practice Act to annul the determinations of November 10, 1958, and March 26, 1959, by Commissioner Elmer A. Carter of the State Commission Against Discrimination and to direct said commission to take appropriate action to credit the charges of the complaint in American Jewish Congress against Arabian-American Oil Co. (Case No. C-4296-56). Petitioner charged Arabian-American Oil Co. (Aramco) with violation of section 296, subdivision (1)(a) and (1)(c) of the Executive Law of New York State, known as the Law Against Discrimination. Petitioner is recognized by the commission as coming within the reasonable scope of a person authorized to register a complaint under section 296, subdivision (1)(c). Adhering to his prior determinations, Respondent Carter on March 26, 1959, dismissed the petition of the American Jewish Congress relative to its charges of Aramco's violations of both spirit and letter of the State's antidiscrimination law. Respondent commission voted to permit Aramco to inquire into the religion of job applicants as a "bona fide occupational qualification" and further to authorize Aramco to have applicants for employment fill out a visa application for travel in Saudi Arabia containing an inquiry into the applicant's religion. Commissioner Caroline Simon, now secretary of state of New York, dissented, stating forthrightly that "our basic documents of freedom * * * are never to be subordinated to immediate business gain." Her position was that there was no State Department policy which would dictate the subversion of this salutary New York State law to an internal policy of Saudi Arabia motivated by Arab hatred of Israel.

Under date of June 15, 1959, Assistant Secretary of State William B. Macomber wrote to U.S. Senator E. L. BARTLETT, of Alaska, regarding this very issue:

"We assure you that the Department does not intend to inject itself in any way into the proceedings of a State court; at the same time, the Department does have an obligation, when requested to do so, to provide State authorities with information respecting the policies of other governments and of our own in foreign lands."

There is not the slightest doubt that nowhere in the history and origin of the statute under consideration is there the slightest authority for the determination by respondent that the religion of an applicant for employment is or can ever be regarded as a bona fide occupational qualification. Any such holding would undermine the very foundation of our American concept of liberty and the constitutional safeguards of that liberty. The only cases where such inquiry is upheld are those where failure to permit such might interfere with the functioning of a religious organization (see remarks of Hon. Charles Tuttle in hearings, pp. 349, 350, 670). Respondent Commission has refused to permit a help-wanted advertisement calling for a "colored worker" on the asserted ground that color was a bona fide occupa-

tional qualification for a position as a social worker (Report on Progress, 1948, p. 73). The only departure from that sound principle is the Aramco ruling by which this Commission of the State of New York flouts the principles of our Founding Fathers.

The record here under review reveals that the King of Saudi Arabia not only prohibits employment of Jews in Arabia, but also strenuously objects to the employment of Jews in any part of Aramco's operation" (testimony of Field Representative Anderson, pp. 3–4). Aramco cannot by virtue of its contract even purchase electrical equipment from Philco, a domestic corporation, because of its Jewish management. These are undisputed facts. This court does not pretend to assert that Saudi Arabia may not do as it pleases with regard to whom it will employ within the borders of Saudi Arabia. Nor does this court pretend to say that Aramco may not hire whom it pleases to conform to its Arab master's voice. What this court does say is that Aramco cannot defy the declared public policy of New York State and violate its statute within New York State, no matter what the King of Saudi Arabia says. New York State is not a province of Saudi Arabia, nor is the constitution and statute of New York State to be cast aside to protect the oil profits of Aramco. Nor will the fact, if it be such, that the employment is for possible service in Saudi Arabia permit the subversion of our State law aimed to preserve our democratic heritages. The Senate of the United States on July 26, 1956, adopted Senate Resolution 323, which reads in part:

"Whereas it is a primary principle of our Nation that there shall be no distinction among U.S. citizens based on their individual religious affiliations and since any attempt by foreign nations to create such distinction among our citizens in the granting of personal or commercial access or any other rights otherwise available to U.S. citizens generally is inconsistent with our principles: Now, therefore, be it

"*Resolved*, That it is the sense of the Senate that it regards any such distinctions directed against United States citizens as incompatible with the relations that should exist among friendly nations, and that in all negotiations between the United States and any foreign state every reasonable effort should be made to maintain this principle."

That declaration of noble foreign policy remains today. The State Department has not sought to override the Senate of the United States and Aramco can not pretend that the State Department has done so. Aramco's witness before this Commission (Mr. Barry) frankly admitted that Aramco's employees had to submit "to this kind of interrogation with regard to their religion." Aramco has divided its employees into five categories, the lowest of which encompasses those in positions of limited promotion opportunities and who can not go to Saudi Arabia. It is a matter of record in these proceedings that out of some 887 employees on Aramco's New York payroll, few, if any, Jews are employed. If, as perhaps correctly claimed by Aramco, this must result from the necessity of possible employment in Saudi Arabia, the answer of New York State is simply—Go elsewhere to serve your Arab master—but not in New York State. Commissioner Carter admits that Aramco's policy "would appear to be contrary to the provisions of the New York law against discrimination and the rulings of the Commission." However, he seeks an escape for Aramco in the "bona fide occupational qualification" which the history of this statute reveals finds no possible application to a religious qualification for employment in Saudi Arabia. It is interesting to find that the Urban League of Greater New York and the National Association for the Advancement of Colored People are on record in this proceeding for the petitioner and against the decision of the respondent commission.

If, as claimed by Aramco, a change in employment policy would obstruct American foreign policy in the Near East; or if the enforcement if the public policy of New York State would embarrass the State Department in the Near East, then it should be said that the honor of American citizenship, if it remains for New York State to uphold it, will survive Aramco's fall from Arab grace. It is the holding of this court that an administrative ruling which runs afoul of the constitution and the law must be set aside. Also, there is no longer any doubt that a dismissal of a complaint may be reviewed in an article 78 proceeding (*Matter of Jeanpierre* v. *Arbury*, (4 NY 2d 238); *Matter of Guardian Life Ins. Co.* v. *Bohlinger* (308 N.Y. 174); *Matter of Stork Restaurant* v. *Boland* (282 N.Y. 256, 274). The ruling of Commissioner Carter is unsupported by the evidence and violates the principles of the very law under whose mandate the Commissioner purported to act. This statute is protected under the 10th amendment of the U.S. Constitution (*Railway Mail Association* v. *Corsi*, 326 U.S. 88). There is no treaty, nor any Federal statute which stands in the path of enforcing the provisions of New York State's law against discrimination in employment. Informal statements of State Department underlings cannot override State laws. No foreign nation may dictate the nonenforcement of a valid State law, at least not in New York State. An engineer who is Jewish is no less an engineer by being so—and no cavalier attempt to classify him as not having a bona fide qualification because he is Jewish will be countenanced by this court. Any such holding—and the decision of Commissioner Carter is just that—destroys the safeguards of the first and fifth amendments of the Constitution of the United States. It is abhorrent to the public policy of New York State also. The Commissioner's determination also fails to meet the standard of a proper administrative decision. There is no factual basis set forth, based on the record (*Matter of Barry* v. *O'Connell*, 303 N.Y. 46); *Matter of N.Y. Water Service Corp.* v. *Water Power and Control Commission*, 283 N.Y. 23). A letter from Aramco that no applicant for domestic employment is requested to fill out an application for a Saudi Arabian visa is hardly a basis for the decision reached in this case. The record, however, even destroys this conclusion of the Commissioner (items 22 and 23). The action of the Commissioner is arbitrary, capricious and without basis in fact or law. It runs counter to sound public policy of New York State and of the United States (*U.S.* v. *Pink*, 315 U.S. 203, 230).

There is no treaty; there is no compact; there is no agreement between the United States and Saudi Arabia relating to the entry of Jews into Saudi Arabia. Aramco's contract with the Government of Saudi Arabia cannot be given the status of a treaty of the United States and not even Aramco dares make any such assertion. That was clearly decided by the International Court of Justice in the Anglo-Iranian Oil Co. case (Report of International Court of Justice for 1952, p. 193). Aramco has, for reasons best known to itself, not made its contract with Saudi Arabia a part of the record. No such private contract can override the public policy or prevent the enforcement of the New York Law Against Discrimination. When Commissioner Carter declares that American interests in the Near East "outweigh the abstract vindication of State sovereignty" he makes the Commission for which he speaks the vassal of a foreign potentate. When Commissioner Carter seeks to justify his dismissal of petitioner's case on a claim that "the security of the United States is involved" (Second determination, p. 9), he arrogates to himself the function of the State Department of the United States which has made no such declaration. The film of oil which blurs the vision of Aramco has apparently affected the Respondent Commission in this case. The discrimination practiced by Aramco in New York State must cease and it is the duty of the Respondent Commission to see that it does. No treaty or statute will stand which impairs the freedom of one group of citizens because of religious affiliation. The free exercise of religion is thereby destroyed. Any such provision would clearly violate the Federal Constitution (first and fifth amendments). Surely, the Commissioner Respondent cannot do what a Federal treaty or statute would be unable to achieve (*United Public Workers* v. *Mitchell*, 330 U.S. 75, 100).

In summary—petitioner does not question the authority of Saudi Arabia to decide that no Jews shall enter that country—the Commissioner may not, however, place the policy of Saudi Arabia above the law and public policy of New York State. No agency of New York State may subordinate the law of this State to the dictates of a foreign state which violates our own public policy. There is nothing in *Salimoff* v. *Standard Oil Co.* (262 N.Y. 220, 224), nor in *Kleve* v. *Basler L. V. Gesellschaft* (182 Misc. 776), to the contrary. If, as this Commission has held, "color" is not a "bona fide occupational qualification" (Report on Progress, 1948, p. 73), then surely in 1959 "religion" cannot be so regarded, Saudi Arabia and Aramco to the contrary notwithstanding.

This court accorded respondent Commission until July 14 at its request to confer with the U.S. State Department. On July 14 respondent advises that, after conferring with the State Department, it has "nothing to add to the record."

The determination of the Commissioner is annulled and the matter is remitted to the Commission for action not inconsistent with this opinion.

Address by Winston K. Pendleton, Rotary Club Governor for Eastern Virginia

---

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. HOLLAND. Mr. President, the members of the Alexandria (Va.) Rotary Club last week were privileged to hear an address by the newly elected Rotary governor for eastern Virginia, Winston K. Pendleton. Mr. Pendleton is a long-time friend of mine. He is a past president of the Eustis (Fla.) Rotary Club, and is at present a member of the Falls Church (Va.) Rotary Club.

Rotary International is one of the great international service organizations. Its members are business and professional men who have dedicated themselves to the ideal of "Service Above Self." They have done a great work toward advancing international understanding, good will, and peace.

I feel that this address by Mr. Pendleton has in it a message which every

Senator and every reader of the CONGRESSIONAL RECORD will be glad to receive. I ask unanimous consent to have Mr. Pendleton's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY WINSTON K. PENDLETON, GOVERNOR, DISTRICT 760, ROTARY INTERNATIONAL, 2541 MILITARY ROAD, ARLINGTON, VA.

I want to thank everybody for being so kind and generous to me. I have never seen a friendlier group of men in my life than I have met here today. My only regret is that I won't have time to meet each of you and to become personally acquainted.

From the sample of hospitality I have seen and felt today, I have the impression that it would be mighty easy to get acquainted in the Alexandria Rotary Club.

And of course, that is the first step in the object of Rotary—"The development of acquaintance as an opportunity for service." That's what makes Rotary so wonderful. This idea of getting acquainted before we do anything else.

That is a logical way to begin any sort of relationship. That is the first step toward building a lasting friendship.

The new president of Rotary International, Harold Thomas, of New Zealand, has a word for it. He calls it building bridges of friendship.

Yes, when you are getting acquainted with the man next to you, you are building a bridge of friendship. And when you visit some other Rotary Club to make up your attendance, you are traveling over a bridge of friendship that was built before you by other Rotarians.

President Harold's message this year to all Rotarians around the world is simply this: he wants us to work hard at putting just a little more into this business of making friends. He is asking us to vitalize and personalize our work in Rotary so that we can build better bridges of friendship.

Ever since Paul Harris and his three dedicated friends met in Chicago and formed the first Rotary Club, building bridges of friendship has been a prime purpose of our great organization. When we contemplate our heritage we see how that ever-widening circle of Rotarians has spread and spread until today those bridges are truly international.

The first gap that Rotary bridged was the gap that had always separated business and friendship. What was a new idea in 1905, is today the accepted way of doing business in America. Do business with your friends.

The man who isn't friendly with his customers today doesn't get much repeat business—and Rotary started the idea.

A few generations ago the motto of business was dog eat dog—let the buyer beware. Now, throughout the world, business is done on a friendly basis—in a spirit of mutual trust and understanding.

Yes, in 1905 the idea of friendship in business was born.

And a few years later, the idea was expanded. And Rotary got a slogan—Service Above Self—suggested by a Rotarian from Minneapolis—Frank Collins. And suddenly Rotary had a purpose—a sense of purpose and direction. And today, that sense of purpose and direction is needed more than ever, because we live in a critical age. We live in a dramatic age. Nothing is done casually any more. Even the little boy who wants his mother to take him to the store. He no longer says, "Mamma, take me to the store." No, today, he rushes in like a whirlwind and shouts, "OK, Mom, let's blast off."

Everything is dramatic. In the wee space of our lifetime we have seen our world suddenly compressed from mysterious unknown distances down to the size of a neighborhood. We travel today in 9 hours the voyage that it took Columbus 9 weeks to make.

Old Andrew Jackson fought the battle of New Orleans 2 weeks after the War of 1812 had ended—because he hadn't received the news. Last week I sat in my living room and watched a prizefight taking place in California. What an age. What dramatic changes. But, dramatic changes bring dramatic problems.

Today, we are face to face with the desperate need for greater understanding between the people of the world. We need to build more and better bridges of friendship.

The fellowship and understanding and friendliness within the Alexandria Rotary Club is wonderful. But your destiny in Rotary lies beyond the city limits of Alexandria. This old world needs to wake and see a lot of new bridges of international friendship under construction.

If we agree that this is so, then we must agree that it is a job for Rotary. Because building bridges of friendship is our business. That's what we have been doing for 54 years. We're experts at it. We know the secret.

Rotary deals with people—not politics. Rotary is strong because our bridges of friendship are built between man and man—not between government and government; between businessman and businessman—not politician and politician.

Rotary reaches beyond the mechanics of the conference table. It embeds itself within the hearts and minds of men. Yes, our business is building bridges of friendship. We are members of the only truly international organization in the world dedicated to that purpose. Today as we look about us—as we look into that small neighborhood that we call the world—we see the need for the very thing that we have to offer—friendship with people, based on the ideal of service.

And what are we going to do about it? What should we do?

The fourth step in the object of Rotary says that we are dedicated to the advancement of international understanding, good will and peace through a world fellowship of business and professional men united in the ideal of service.

If that is what we are here for—let's get on with the job. We must plan beyond club service—service to ourselves. We must see beyond vocational service—service to our own business. We must work beyond community service—beyond the confines of Alexandria. We must work and live and breathe and dedicate our efforts toward that fourth evenue of Rotary service.

One of the great examples of how Rotary has helped build permanent International Bridges of Friendship lies in the story of the border dispute between Ecuador and Peru. Those two countries had been fighting for 150 years over the boundary line. They had fought three wars and were getting set for another one, when a Rotarian stepped in.

He thought the problem called for a bit of Service Above Self. He took it up with Rotary International The President of Rotary appointed three Rotarians to look into the trouble. They met in a neutral country and in four-and-a-half days came up with a solution which was agreed upon by the two countries.

Maybe we should have a summit meeting after all—but maybe it should be made up of business men—ordinary business men—instead of politicians. Rotary should take a hand in showing how to strengthen our International Bridges of Friendship. And we had better get on with the job before it's too late. I think that should be Rotary's big purpose.

This is a bold concept. In some parts of the United States today I might be criticized for advocating greater international friendship. But, I'm on safe ground here today. I'm in Virginia. I'm standing on the very ground that gave birth to the boldest and most courageous idea the world has ever seen. It was here, in Virginia, that liberty found its spark of life—a spark that grew into a flame—a flame that still burns in the heart of every loyal American.

Isn't this the time for a bold new idea? Isn't this the place—here in Virginia? And aren't we the men—the men of Rotary? Is any idea too bold for us? I don't think so. Then, how do we do it? How? Rotary doesn't tell us how to do anything. The ways are as varied as your imagination.

The first step is to recognize that the task has to be done. Next, we must realize that the principles of Rotary—if properly applied—can change the world. Then, we can begin to figure how to do it. To do it will take imagination and ingenuity, patience and understanding, boldness and courage—and, above all, determination.

What can one Rotarian do? I do not know. I only know this—that Patrick Henry was only one man. Thomas Jefferson was only one man. I only know that when George Washington traveled down the roads of Virginia it took only one horse to hold him up—because George Washington was only one man.

I do not mean to say that each of us is a George Washington or a Thomas Jefferson. I am sure that no one of us can furnish the answer to the complex problem facing the world around us. But every one of us can answer this question: "Am I going to be a part of the problem—or a part of the answer?" There is an objective here for each of us.

I hope each of us will go away today with the determination to vitalize and personalize our contributions to Rotary. Let us work at this idea of service above self with a sense of urgency, enthusiasm, faith, confidence, and eagerness. For this is Rotary at its best.

This is the time for a look around us—not hurried, not with smugness, not terrified either, but a clear look, inspired with vigor and courage and enlightened by wisdom. Yes; this is the hour for greatness—and there is no more fitting place to find that greatness than in the historic State of Virginia and in the city of Alexandria—and among the men of Rotary.

It isn't a job for one man—it is a job for all of us. Your contribution may be small, but it can be made in the spirit of the man who wrote these words: "I am only one, but I am one. I cannot do everything, but I can do something. And, by the grace of God, what I can do—I will do."

Project Hope

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine editorial from the Milwaukee Journal entitled "Project Hope," which discusses an unusual, remarkable, foreign-aid program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROJECT HOPE

Project Hope, only a dream last February, is fast shaping up to carry medical and

nursing skills of Americans to the underdeveloped areas of southeast Asia.

Using the *Consolation*, an 800-bed Navy hospital ship now in mothballs, Project Hope will carry teams of doctors and nurses whose aim will be not only to treat those in need of medical attention but to teach medical people.

The *Consolation* will tie up in Asian harbors and open 422 of its beds to serious medical cases. In addition, a 500-bed mobile unit will tour on shore bringing help to those in need. First call is expected to be in Indonesian waters. Indonesian doctors will be invited to board the boat or to join the mobile unit to learn American techniques. In addition, teams of five to seven physicians and two or three nurses will be flown from the ship to inland areas in need of medical service and training.

There will be a permanent 10- to 15-man staff aboard the *Consolation*. But rotating teams of physicians will be flown in groups of 35 to join the ship every 4 months.

This imaginative plan to bring direct help to south Asia has attracted widespread interest. More than 1,000 doctors and nurses have applied for places in this people-to-people medical program. And, say the sponsors, they are of high quality. Some outstanding doctors have offered to join for a month at their own expense.

The project needs $1,500,000 to pay its way. Already $700,000 has been raised by public subscription, and at the rate contributions are coming in the goal will be met by October. Sailing has been tentatively set for January 22.

Dr. William B. Walsh, a Washington internist who heads Project Hope, believes that the program's reception so far opens the possibility of making it permanent. He says that some of us hope to build this into a $20 million foundation in 3 years.

Here is one of the most stirring aid programs yet conceived. It will deal directly with people, bringing them help and mercy. And it will be subsidized by Government only to the extent of the use of a Navy ship now in mothballs. What more meaningful way could there be for showing America's friendship and concern for the needy areas of the world?

Details of Johnston-Neuberger Bill To Provide Health Insurance Program for Employees of the Federal Government

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. NEUBERGER. Mr. President, one of the most encouraging and farsighted actions of the Senate during recent years was the passage on July 16, by the overwhelming margin of 81 to 4, of the first bill ever passed to provide health insurance benefits and programs for Federal employees. This measure is S. 2162, which was drafted by my subcommittee, and was reported favorably by the full Senate Post Office and Civil Service Committee, headed by the distinguished senior Senator from South Carolina [Mr. JOHNSTON].

In the Washington Post and Times Herald of July 19, 1959, Mr. Jerry Kluttz has written a thorough analysis of the Federal employees health insurance bill, in the form of answers to key questions. I am proud to be one of the authors of the Johnston-Neuberger bill, Mr. President; and I hope for its early passage by the House of Representatives and signature by President Eisenhower.

I ask unanimous consent that the article by Jerry Kluttz be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERE ARE DETAILS OF HEALTH PROPOSAL

(By Jerry Kluttz)

Answers to a few of your questions on the Senate-approved Johnson-Neuberger bill to insure you and your dependents against health costs:

Where both the husband and wife are employees, each may participate separately and pay the maximum rate of $1.75 every 2 weeks. If there are dependent and unmarried children under 19, one spouse may enroll for family coverage.

Employees who are injured on the job and who are paid compensation could get coverage under the bill. Survivors of employees who are killed on the job also could come in under the measure.

Coverage would be voluntary with the employee, who would have a choice of two governmentwide plans, one offered by Blue Cross-Blue Shield and the other by commercial insurance companies.

Members of national employee unions could participate in approved health plans offered by those organizations and the Government would pay part of the cost. Also, Uncle Sam would pay part of the cost of employee members of prepayment plans, such as Group Health here.

The bill would have the Government and the employee share costs, generally, on a 50–50 basis. The Eisenhower administration is insisting that the employee pay two-thirds of the cost.

Benefits: Most of the questions have to do with benefits and they're most difficult to answer. In fact, most of them can't be answered specifically until the Civil Service Commission enters into agreements with Blue Cross-Blue Shield and the insurance concerns. CSC would have a degree of flexibility in negotiating the contracts.

However, the plan to be proposed by the "Blues" would provide for the full cost of 120-day hospitalization on a nationwide basis in a semiprivate room for each continuous illness.

Surgical benefits would vary sharply. Blue Shield has offered to pay full surgical fees for employees whose salaries are up to $6,000. However, it would include only about half those employees, as its coverage isn't nationwide.

The other employees would be paid flat amounts, depending on their types of operations, and the sums may or may not pay their surgical costs.

Those employees paid more than $6,000 would also be paid set amounts for surgical costs under the Blue Shield proposal. They'd have to pay any excess out of their own pockets.

The Johnston-Neuberger bill provides for both basic and major medical coverage. Unfortunately, it isn't possible to state clearly where one ends and the other starts.

No dollar limits are written into the bill but it does give CSC the authority to fix maximum benefits that can be paid employees, annual as well as lifetime.

In addition, CSC could negotiate contracts to provide both deductions (amounts to be paid by employees before benefits could be paid), and coinsurance (a device under which the employee would pay a certain percentage of costs).

The bill would limit cases of tuberculosis, nervous and mental conditions to 30 days of general hospital care. It explained that "longer treatment appears to call for a special type of hospital."

Fixed amounts would be paid in normal maternity cases. The bill says these amounts "should cover most, if not all, of the expenses of normal delivery" for employees in the lower grades.

In-hospital dental care is covered by the bill.

An example is cited of a heart patient who spent 180 days in a hospital at an overall cost of $5,500, including doctor bills, tests, special nurses, etc. The Johnston-Neuberger bill would pay $5,120 of the cost, $3,820 by basic benefits and $1,300 from the major medical provision.

Another case cited is that of a 4-year-old child with nephrosis who was in a hospital 32 days, plus heavy home costs for drugs, doctor's visits, etc. The patient, it said, would pay only $380 of the $3,054 over-all cost.

The measure, however, isn't clear on benefits to be paid to employees and dependents who are treated at home. It says CSC, to the "extent practicable, reasonable, and desirable" should provide a scale of benefits.

New Mess in Capital

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. BUSH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "New Mess in Capital—Farm Problem Called Most Critical Facing United States," written by Mr. Roscoe Drummond.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 18, 1959]

NEW MESS IN CAPITAL—FARM PROBLEM CALLED MOST CRITICAL FACING UNITED STATES

(By Roscoe Drummond)

This 86th Congress has yet to get up a real head of steam to deal with the most critical perilous, unresolved domestic problem facing the United States.

I refer to the absolute necessity of doing something constructive and soon to put the present unworkable farm program on a realistic basis and to avert—before it is too late to prevent disaster for everybody, including the farmers—a breakdown of the whole price-support house of cards.

There is no doubt in my mind that Senate Democratic Leader LYNDON JOHNSON wants this Congress to produce a good budget of responsible, needed legislation. But if the farm issue is neglected, palliated, or postponed, he will have fallen dangerously short of his goal.

President Eisenhower has said that if Congress does not pass an adequate mutual security program—and every current sign is that it will not do so but instead cut off its arms and legs to the tune of about $1.5 billion—he wold call a special session. That is a brave and sound idea, but if Congress does not do something to repair the mess in agriculture, then a special session to do so this fall is equally urgent.

In many ways the Nation's lagging defense program and the massive, unworkable, mounting farm subsidy could well be looked at together.

The fact is that we are not spending enough on defense and are spending too much on an agricultural program which isn't doing the job—and every month is getting worse.

From Henry Wallace to Ezra Benson, every Secretary of Agriculture, with the single exception of Charles Brannan, agrees that mandatory, high, rigid price supports are incompatible with the facts of modern agriculture.

The present level of price supports inevitably encourages, lures, and pays more farmers to grow more produce which cannot be sold in the markets and which the Government (which means all of us) buys at fixed prices. And we spend $1 billion a year just to handle and store the surplus.

Under the "soil bank" plan the Government pays farmers to take acreage out of production. But does this reduce overproduction? Does this cut down the growing of crops which can't be sold anywhere but to the Government? Does this curtail the massive farm subsidy?

The answer is "no" to every one of these questions. The reason is that American farmers are so efficient, scientific, so skillful, that every time they reduce acreage they find ways of producing more on fewer acres in order to take advantage of the Government's high, fixed price supports. One single fact illustrates how this is possible. In 1940 each farm worker could produce enough to meet the needs of 10.7 persons. Today, through scientific advances, he can produce enough to meet the needs of 25 persons. Average productivity of U.S. farmers has increased more since 1940 than in the previous 120 years.

And where is this scientific skill plus mandatory high fixed price supports taking us? Well, hold on to your seats, because here is where we are heading; the Government has a current investment in farm surpluses of $8.8 billion and if something solid isn't done to rectify the policy and reverse the trend, we will have $12 billion invested in these surpluses by 1963. And by June, 1961, the yearly cost of just storing these surpluses will be $1.4 billion or the staggering sum of $3.8 million per day.

Housing Legislation

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. FULBRIGHT. Mr. President, on July 16, 1959, the Young Democratic Club of the District of Columbia unanimously passed a resolution endorsing the position of the Congress on housing legislation. In my opinion, this resolution expresses quite clearly the position of those of us who have worked for over 2 years to obtain a decent housing bill which could be approved by the President. I congratulate these young people for their alertness, initiative, and good judgment, and I ask that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Democratic Congress has recognized that housing and urban renewal are not only vital programs in meeting the basic needs of this country, but also major forces in our healthy economy; and

Whereas the Democratic Congress has attempted to meet these needs in the spirit of reasonableness faced with the inadequate proposals of the administration; but

Whereas in a special message to Congress presented on July 7, 1959, President Eisenhower returned without approval, S. 57, the Housing Act of 1959, constituting a veto; and

Whereas the President's sharply worded veto message, which charged S. 57 with being "so excessive in the spending it proposes, and so defective in other respects, that it would do far more damage than good"; and

Whereas the result of the President's action is to block any further efforts to rid our cities of blight, or to build homes for elderly at rents they can afford; and

Whereas with the proper cooperation between the executive and legislative branches of the Government, a suitable, adequate housing act can be worked out: Be it therefore

Resolved, That the Young Democratic Club of the District of Columbia strongly urges action before this session of Congress adjourns, either through enacting this measure into law, the President's lack of approval notwithstanding, or through the enactment of another housing measure during this session of Congress.

(Unanimously passed at general membership meeting of the Young Democratic Club of the District of Columbia, July 16, 1959, as presented by Sallee Woodward.)

National Baton Twirling Week

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. PROXMIRE. Mr. President, this week is being observed as National Baton Twirling Week by a Wisconsin-headquartered organization representing the 1 million Americans who enjoy the hobby and sport of baton twirling.

The climax of this special week, designated to call the Nation's attention to the growth of baton twirling as one of our Nation's popular recreational pursuits, will be a series of contests from coast to coast and a national jamboree in South Milwaukee, Wis.

Mr. President, I ask unanimous consent that a statement prepared by the National Baton Twirling Association of Janesville, Wis., be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL BATON TWIRLING WEEK TO BE OBSERVED JULY 19 TO 26

Statement by Public Relations Division, National Baton Twirling Association, Janesville, Wis.

The Nation's estimated 1 million baton twirlers, drum majors, majorettes, and adult leaders observe National Baton Twirling Week, July 19 to 26, by launching a unique national leadership program to acquaint Americans with the many wholesome benefits derived by children through twirling.

Today, baton twirling ranks as the second largest youth movement for girls, with twirling playing an important part in parades, school events and community celebrations across the Nation. Even in crippled childrens' hospitals, twirling is being used as an effective method of therapy.

Other physical benefits realized by children through twirling, as pointed out by officials of the National Baton Twirling Association, include gracefulness, poise, ambidexterity, alertness, teamwork, leadership, and self-confidence.

Where did it all start? According to the book "Who's Who in Baton Twirling," twirling can be traced back many decades to Siam, Arabia, and the Samoan Islands where a "far cry" form of twirling was used for ceremonial dances and celebrations. Spears, knives, and guns were manipulated in a manner that resembles many of the movements found in twirling today.

The first sign of baton twirling in America was the drum major who performed feats of balancing, juggling, and dexterity with the early circus. Until 1930, twirling was practiced exclusively by men. "Later on," as one NBTA official put it, "the girls took over and literally ran the men out of the field."

During National Baton Twirling Week, a National Jamboree will be held at South Milwaukee, Wis. A series of contests will be conducted from coast to coast. Free baton lessons will be given on the local level, in most cities, by certified instructors of the National Baton Twirling Association. Names of teachers who will be giving lessons in specific areas can be had by writing NBTA National Headquarters, Janesville, Wis.

Who Represents the Interests of the Whole of Germany in Geneva?

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. YOUNG of North Dakota. Mr. President, Dr. Walter Becher, Secretary General of the Bavarian Landtag, forwarded on to me translated extracts from a quite unusual speech given by the the Deputy Minister of All-German Affairs of the German Federal Republic. This speech, which appeared in the German press, is entitled "Who Represents the Interest of the Whole of Germany in Geneva?" and it contains some very interesting and encouraging information with reference to the continued anti-Communist position taken by the people of East Germany.

The translated excerpts from the speech place particular emphasis on the failure of the Communists in East Germany to win over the youth resid-

ing in the Russian zone, and the message sought to be conveyed is that the representatives of the Bonn Government are actually the ones who do in fact represent the feelings of all the German people at Geneva.

Mr. President, I ask unanimous consent to have these remarks printed in the Appendix of the RECORD.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

WHO REPRESENTS THE INTERESTS OF THE WHOLE OF GERMANY IN GENEVA?

A PRINCIPAL QUESTION OF THE FOREIGN MINISTERS' CONFERENCE

(State Secretary Franz Thedieck of the Federal Ministry for All-German Problems made the following speech in RIAS on May 23, 1959 (from which the next two paragraphs were selected for translation):)

The reason for these tirades of hatred against the Federal Republic is to be seen mainly in the fact that the authorities in Pankow know only too well that the population of the Soviet Zone rests its hope in the delegation of the Federal Republic in Geneva. The leaders of the SED know just as well that the majority of the population they dominate—instead of governing—have a completely different opinion to their own.

THE YOUTH OPPOSING THE SED

Who represents Germany in Geneva? This question was answered in a very precise manner by the authorities in Pankow at the 6th Parliament of the FDJ (Free German Youth) in Rostock. In his statement of accounts the leader of the FDJ (Namokel) stated clearly that the Communists had not succeeded in making the youth of the Soviet Zone convinced adherents of this regime. If the supreme youth-leader of a state, which pretends to be the only representative of laborers and farmers, must admit, without restrictions, that—I quote word for word—"we have not succeeded in diminishing to a considerable degree the abyss between the most progressive part and the mass of the workers' youth," then this statement hits the same main problem at Geneva: Who represents Germany? The SED according to its own confession at the Rostock Youth Parliament has not succeeded in winning over even the workers' youth, much less other parts of the youth of Central Germany. The situation in 1959 is the same as in 1955, the year in which we were given to know many striking estimations of the SED concerning the situation of the youth in Central Germany.

On the occasion of the 25th session of the Central Committee of the SED in October 1955 the Secretary of the Central Committee, Albert Norden, just as Namokel in May 1959, had to state: "Today we often have the impression that there is on the one side the FDJ and on the other the youth, of which, however, a great part is organized in the FDJ itself." In 1955, Norden stated also: "The youth is advancing without us, that is bad." Four years later, in 1959, Namokel had to confess: "In our opinion there are many functionaries of the FDJ as well as sports organizers who do not understand that they should organize sports there, where the youth is spending its free time." In 1955 the Secretary of the Central Council of the FDJ, Steinke, demanded: "We, of the Central Council of the FDJ, must finally stop becoming enthusiastic in examples, we must get used to facing the situation as it is and to leading a true campaign for the winning over of the youth." In 1959 Namokel had once more to demand that a change in the program of the FDJ be brought about, in order to win over the whole of the youth "for the sake of socialism."

THE FLIGHT OF THE YOUNG PEOPLE FROM THE ZONE

The delegation of the Federal Republic at Geneva would be in a bad position, if it knew that only the elder generation in the Soviet Zone wished for free self-determination. If there were an abyss between the elder generation and the youth in this decisive question, then it would be fighting for a lost cause. In spite of the Nazi period and communism there is, however, in this youth a demand for free self-determination concerning their own life to a considerable degree. It is so strong that the authorities in Pankow must use the severest means of force, in order to hold this youth in check. The recent court proceedings of students held in Dresden and Gera as well as the high sentences of penal servitude, which were given there, speak for themselves. At least 56 students were sentenced to a total of 329 years of penitentiary in the course of the last decade.

For years the proportion of juveniles under 25 years compared with the total number of refugees amounts to 50 percent. That means that since 1952 over 860,000 juveniles have fled from the Soviet Zone. In 1955, on the occasion of the 25th Assembly of the Central Committee of the SED the Secretary of the Central Council of the FDJ, Steinke, dealt with the problem of the flight of the youth and had to declare: "All of these had no relation, no contact whatsoever with our state of laborers and farmers, or with the FDJ." This situation has not changed in the slightest up till now. Nevertheless Namokel announced boastfully in Rostock: "Whoever wants to solve the German problem, will have to sit down at the same table with the representatives of the German people, in order to negotiate and cannot do it over the heads of the German people." On this point we agree wholeheartedly with Namokel. Due to the fact that Ulbricht, Norden, and Namokel have stated themselves that there exists a wide abyss between the population in central Germany and its authorities, and since the population is in agreement with us on the question of free self-determination, we therefore claim for ourselves to be the spokesmen for the whole German nation at Geneva.

Oregon Dunes National Seashore Park

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. NEUBERGER. Mr. President, the Oregon Dunes national seashore area, which I have sought to have authorized as a unit of the National Park System under the provisions of S. 1526, will have far-reaching benefits for my home State of Oregon and for the Nation. The 23-mile stretch of Pacific Ocean coastline to be included in the seashore area has unique scenic beauty and unusual recreational potential. A recent editorial written by the associate publisher and executive editor of the Coos Bay (Oreg.), World, Mr. Forest W. Amsden, describes some of the real and tangible advantages of the proposal. Mr. Amsden points out that support for the project is widespread in Oregon. I ask consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the World, Coos Bay, Oreg., July 15, 1959]

DUNES PARK IS WORTHWHILE

Dispassionate observers of strident opposition to the Florence-area dunes recreation area—proposed in legislation introduced in Congress by Senator NEUBERGER—keep reporting that most of the opposition is based on lack of facts and/or misinformation. They also persist in a belief that the opposition is a small, but vocal, minority. Both observations are probably true.

There has been so much negative thinking about the Neuberger proposal that its merits have been sluiced down the drain, so far as public thought is concerned.

Basically the merits are these: The Dunes proposal will mean a growing boom in the Florence (and entire coast, for that matter) tourist economy; it will in addition mean preservation of some of the finest dunes scenery in the United States for the enjoyment and recreation of visitor and resident alike.

The publicity involved in having a national park or recreation area, along with the good management and supervision of it by a Federal agency, will bring literally thousands of new visitors to Florence every year. It will also bring new businesses and new residents. The prosperity will trickle up and down the coast.

No—this won't happen overnight. It will be a growing thing. It is well worth the investment.

We are indebted to William Tugman, editor of the Port Umpqua Courier in Reedsport, and a member of the State Parks Department advisory board, for the "official" definitions of a national park and a national recreation area.

The Florence proposal is a recreation area, although it is often referred to as a "park." There is a difference, but mislabeling has in itself brought about some of the opposition.

A national park: "* * * is a spacious land area, essentially of primitive or wilderness character which contains scenery or natural wonders, so outstanding in quality that its preservation intact has been provided for by it having been designated and set aside by the National Government for the benefit, enjoyment and inspiration of the people."

A national recreation area: "* * * is a Federal reservation established primarily to conserve and develop for public enjoyment recreational resources of national significance, including areas of scenic, natural, or historic interest and their wildlife, under a system of management to permit other forms of resources utilization not incompatible with the protection and public enjoyment of the recreation resources. In essence, it might be said that a national park is dedicated primarily to the preservation of outstanding natural features, while a national recreation area is established to conserve areas of national significance for public recreation. Property owners within the boundaries of a national park normally have the same rights and privileges as any other landowner of the State. If, however, the State has ceded to the Federal Government exclusive jurisdiction, the Government has certain additional authority. It may, for example, make and enforce special regulations concerning zoning, sanitation, etc., which are necessary for the health and safety of the public or for the protection of park values."

There has been industrial opposition to the proposed dunes recreation area on the grounds that timber within the initially proposed boundaries is privately owned, or that potential industrial water sources beneath the dunes is needed for industry. Yet such uses are not outlawed in a recreation area, and private property is not appropriated.

Further assurance of private property rights is not out of the question, perhaps even in the enabling legislation. It can be arranged, at any rate, and there is no need to blast the whole wonderful idea because of it.

As far as that goes, the boundaries proposed in the Neuberger bill are only proposals—easily amended.

Congressman CHARLES O. PORTER, after investigating at the scene, decided he still favors the park idea but will work for a somewhat smaller area to be included in the Federal recreation area.

The idea that everyone in the area is up in arms against the proposal is patently false.

Proponents may be frightened into silence, they may be so uncertain of the facts that they prefer to remain quiet—but there are proponents. And when the facts are fully understood, it is a good wager that a considerable majority of the residents will strongly favor the park idea.

Senator NEUBERGER recently sent the editor of this paper a copy of an unsigned letter he had received from a Florence man or woman in business there. The letter said most people support the park but, like himself or herself, are afraid to take a public stand because of the possibility of a hysterical boycott.

There is much heat and little light on this situation, especially from the standpoint of the opposition.

The dunes park is a good proposal, one which should be implemented as promptly as possible, whatever the amendments. The opposition to it, although vocal, is not well grounded—except in emotionalism—F.W.A.

Man for the Job

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, if the State of New Jersey has exhibited particular pride in the accomplishments of its State National Guard, a good deal of this pride can be attributed to the fact that from 1948 to 1955, the State guard was under the command of Maj. Gen. Donald Wilson McGowan.

A native of New Jersey, this career officer entered the military service at the age of 16. He saw service overseas in World War I with the 29th Division and in World War II he was in the front line of the historic invasion of Normandy. His battlefield exploits have been recognized both at home and abroad through the many high honors he has received.

And now at a critical period in the guard's history—when there are many who would curtail its strength and its duties—comes the glad news of General McGowan's nomination to be its chief. With such an eminently qualified officer at its head, the National Guard can look forward to a great and secure future. I hope and trust his nomination will be quickly confirmed.

I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial on Major General McGowan from the July 9 issue of the Trentonian.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAN FOR THE JOB

Although it has been regarded as virtually certain for some time now, the nomination of Maj. Gen. Donald Wilson McGowan to be chief of the National Guard still comes as pleasing news to his wide circle of friends in the Trenton area.

By any and all standards, General McGowan is eminently qualified to lead the guard at a time when the future of the organization is threatened to some degree by those who would curtail its strength and its duties. He is a career officer who entered the military service at the age of 16 to serve in the Mexican border campaign. He saw service overseas in World War I with the 29th Division. He joined the guard in 1925 and when war again came, he was in the front line of the historic invasion of Normandy. Later he was assigned as provost marshal of Normandy and won high honors from France and Belgium in recognition of his outstanding achievements. He also was abundantly decorated by his own country for his exploits on the battlefield.

Lately General McGowan has been Chief of the Army Division of the National Guard Bureau. He assumed that post after serving from 1948 to 1955 as the New Jersey guard's commander.

The President's appointee to this position of high responsibility is well known around Trenton. Back in the days before World War II, his was a familiar name in the activities of the old 112th Field Artillery Battalion which was stationed at Eggerts Crossing. Indeed, he and Mrs. McGowan maintain a permanent residence on Eggerts Crossing Road. When war came in 1941, he was assigned to command the 102d Cavalry and led that organization on to the beaches of Normandy.

But all New Jersey has a claim on General McGowan. In addition to have commanded the State's guard, he is a native of Orange. Thus he is assured of multitudinous good wishes from the Garden State. It is to be hoped that the nomination of this outstanding National Guard officer will be promptly confirmed.

If We Can't Beat This, We Are Lost

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. THURMOND. Mr. President, the current steel strike has come to be a matter of primary concern to the public. This strike has raised questions in the public's mind concerning the adequacy of laws to protect the public's interest in questions which arise in disputes between management and labor.

A most provocative editorial on this subject entitled "If We Can't Beat This, We Are Lost," appeared in the July 17 issue of the Greenville News, a newspaper published in Greenville, S.C. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF WE CAN'T BEAT THIS, WE ARE LOST

Many steelworkers, perhaps a majority of them (who knows?) are not in favor of the strike which has been ordered by their union. Like most Americans, they have debts and are living on current earnings.

Even more of their wives are against the strike, for they are the home managers and can see slim days ahead, a reduction in the standard of living and the piling up of more debts that higher pay, if the union wins it, will be a long time wiping out.

Yet the workers go along. Why?

It is one of the most alarming aspects of modern American life and the biggest reason why crooked labor leaders have been able to win power and keep it.

One of the striking steelworkers put it into these words:

"Well, I'd rather see them continue to negotiate. But I'll go along with him (President David J. McDonald of the United Steelworkers who, as much as anything else, is trying to consolidate his position by winning wage increases and higher fringe benefits) all the way. I'm letting him do the thinking."

The worker thus puts his fate and, perhaps, that of the Nation, in the hands of a union leader.

"I'm letting him do the thinking."

Those words may well be the epitaph of real freedom in the United States.

This ties in completely, and with alarming implications, with other news events of the last few days relating to unions and their leaders.

In an especially arrogant way during final hearings before Senator MCCLELLAN'S rackets investigating committee, President James R. Hoffa of the Teamsters Union once more gave Congress the back of his hand. He was more than defiant; he was downright contemptuous. His behavior was that of a man who was sure he was above the law (and who doubts it anymore?) and was confident that the men who have the power to make laws wouldn't dare to use it against him.

Hoffa was questioned about alleged misdeeds, which should send him to jail if he is guilty. He brushed the charges aside with statements to the effect that he just didn't remember (he's done that before, too), that the affairs in question had been handled by underlings and the Senators should ask them.

Then, when the underlings were called to the witness stand, he openly directed them to "take the fifth," that is to refuse to answer on grounds that their testimony might incriminate them. It was an especially crude and rude method of denying the Senators information to which they, the union members, and the public are entitled.

How long will Congress and the public put up with this sort of thing?

Indefinitely, it seems.

The Senate some weeks ago passed a watered down union reform bill. Most of those who voted for it said it was better than nothing. But businessmen have taken a second look at it and concluded that it is worse than no bill at all.

They contend that, while it has some good points relating to the handling of union funds and the conduct of union elections, other provisions would weaken the existing laws to such an extent that, overall, the power of the union leaders would be increased in some areas more than it would be limited in others.

And that is how the matter stands today. It is most unlikely that any sort of union-curbing bill will be passed this year; if any is, it probably will be innocuous.

Meanwhile, men like James R. Hoffa can almost literally spit in the eye of Congress and the public. They are free to put together labor monopolies far more fearsome and dangerous than the business monopolies the antitrust laws are intended to prevent or break up. They are free to call crippling strikes and their members follow them blindly without stopping to weigh the consequences.

If this is the best we can do, then we are a sick nation.

How United States Lives: Stage Version

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. FULBRIGHT. Mr. President, on July 20, the Washington Post carried a column by Miss Malvina Lindsay entitled "How United States Lives."

This article is one of the most penetrating and intelligent analysis of the confusing situation regarding our Moscow Fair that I have seen. I recommend it to the attention of my colleagues.

I ask unanimous consent to insert it in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW UNITED STATES LIVES: STAGE VERSION

(By Malvina Lindsay)

In a big country of diverse people, all having the right of free speech, a chorus of dissent is inevitable over every exhibit sent abroad to mirror American life. That is especially true if the exhibit goes to the Soviet Union.

But one does not have to be a fogy, a superpatriot, an ignoramus, or a chronic carper to wonder why these exhibits so often reveal a vulnerability to charges of phoniness or superficiality. Their reported exaggerations cause vague concern to many Americans.

One wonders if these exaggerations are not rooted in the general craze for showmanship, for attention getting, that pervades many areas of American life, and if they are not part of the whole over dramatic, over glossed picture of the United States that movies, magazine advertisements and some tourists present abroad.

This country also—like the Soviet Union—may be trying in its exhibits to picture social progress and material prosperity to which it aspires but has not yet attained. American viewers of the Soviet exhibition in New York have been quick to spot its weaknesses, such as the lack of price tags on articles. And persons who have been to the Soviet Union point out that the house furnishings and clothing shown are available to but few Russians. The general criticism is that the exhibition shows Russia as it would like to be rather than as it is.

But if they are not fooling us, why should we expect to fool them? One criticism of the fashion editors who saw the dry run fashion presentation for the American exhibition in Moscow, opening next Saturday, was that the greater part of the clothes were beyond the budget of the average woman. Also in two scenes, now removed, an attempt was made to present racial integration as having extended far beyond its present state. These scenes, while attention getting, only served unhappily to arouse racist groups and to add fuel to the racial controversy.

Also the reported emphasis in the American fashion show on feminine trousers, including fitted pants, may well reinforce foreign stereotypes of the American woman as an aggressive matriarch or as an exhibitionist of the type that parades in foreign capitals in shorts or slacks to a chorus of foreign criticism.

The ubiquitous fashion show in this country is to many women just what its name implies—a show. They expect it to be dramatic, glamorous, out of this world. But those staging the fashion exhibit to be sent to Moscow insist it is a presentation of real life clothes. Hence more realism is expected of it. Fortunately the artificial glamour girl models have been weeded out in favor of more natural looking ones.

The $13,000 average American home with its $5,000 furnishings sent to the Moscow exhibition would be less vulnerable to doubt if it were made clear to Russian viewers just how it would be financed here on the installment plan and by help of long-term Government loans.

Any country naturally tries to touch up the picture of itself presented to other countries. But the American picture has become so superslick as to cause much surprise, also disillusionment, when the real thing is encountered. Foreign visitors inevitably comment on how different American life is from what they expected. Many are agreeably surprised at its depth and substance. But many are disappointed that "Paradise" has grubby corners.

The latter reaction has been recently expressed by some forthright members of the Dutch trailer caravan that since April has toured 9,000 miles in this country. These visitors say they had a "great misconception" of the United States because it had been glamorized by Hollywood. They expected "it to be a fairyland" but found it "not as clean and beautiful as was thought." They were especially surprised by the slums, dirt, and messiness of cities.

Every Eden disappoints its visitors to some extent. But no country has had to live up to so much in foreign expectations as the United States. The Madison Avenue presentation of its culture has become a liability. The production should be toned down or the reality brought up.

New Jersey Has Long Fair Season

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. WILLIAMS of New Jersey. Mr. President, occasionally visitors to New Jersey are puzzled when they see, from their automobile windows, the great industrial plants which line many of the highways in that State.

They may even ask: "Why is this called the Garden State?"

To those who have visited many other areas of the State, the answer is obvious. From the great dairy industry of the north to the varied vegetable fields of central and south Jersey, the Garden State offers many beautiful views of farms at their finest.

One of the happiest expressions of our interest in New Jersey farms are our State fairs. To many thousands of people yearly, these fairs are fascinating and enjoyable occasions.

An editorial from the New Brunswick Home News of July 18 expresses some of that enjoyment. And, so does the message of the State secretary of agriculture, Mr. Phillip Alampi, who wrote it for a publication of the New Jersey Association of Agricultural Fairs. The association, which has Mr. Donald C. Bain as president, also offers a booklet which lists the fairs and gives further information.

I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial from the New Brunswick Home News, the message from Mr. Phillip Alampi, and for those who may have an opportunity to be in the vicinity, a list of the New Jersey agricultural fairs to be held this summer:

There being no objection, the editorial, message, and list were ordered to be printed in the RECORD, as follows:

[From the New Brunswick (N.J.) Home News, July 18, 1959]

NEW JERSEY HAS LONG FAIR SEASON

New Jersey's fair season opened today with the Monmouth County 4–H Fair at the Freehold Raceway. From now on, in practically every county, the State's annual round of exhibiting, midway excitement, and pageantry will get into full swing until it gradually builds up to the last and biggest—the New Jersey State Fair—in Trenton, the last weekend in September.

Fairs have been farm festooned in this State since 1781 when the New Jersey Society for Promoting Agriculture, Commerce, and Arts was organized in Middlebush. Though quietly at work just about the year around, the society's bigtime events were the annual State fairs, held intermittently until around the 1840's. With the acquisition of a permanent site at what is now Weequahic Park in Newark, the fairs became a regular event from 1866 until 1899. The longevity of New Jersey's county fairs is shown by the fact that the Flemington Fair is over a century old.

It is significant that the twin county fairs are being held at approximately the same time. Middlesex County's 5-day annual event at Dunhams Corner, East Brunswick, will convene on August 11 and continue through August 15, while slated for August 13–15 is the Somerset County 4–H Fair at Far Hills.

With 20 fairs scheduled for New Jersey this season, those who like such events could be like Sir Walter Scott's last minstrel who is pictured flying "lightly from fair to fair."

THE GARDEN STATE ON PARADE

A great many people are aware that New Jersey is known far and wide as the Garden State. There is good reason for this familiar designation. In spite of being a small State, New Jersey is important agriculturally and leads most areas in the production of a number of vegetable crops. It has long had the highest gross income per acre of any State.

Fairs are an ideal place and a captivating method of emphasizing the fine achievements of our Garden State. But more, they have helped to develop an awareness of the close relationship and interdependency that exists between industry and agriculture. Progress in the accomplishments of both agriculture and industry is well demonstrated at these traditional enterprises.

Our agricultural fairs afford a holiday occasion to which are added some splendid opportunities to view this progress at first hand. You are cordially invited to spend a day at the fair of your choice.

PHILLIP ALAMPI,
Secretary of Agriculture.

CHRONOLOGICAL LIST, NEW JERSEY AGRICULTURAL FAIRS, 1959

July 23–25: Burlington County Farm Fair, Lumberton.

July 23–25: Cape May County 4–H Fair, Cape May Courthouse.

August 4–8: Cumberland County Fair, Bridgeton.
August 4–8: Sussex County Farm and Horse Show, Branchville.
August 5–6: Ocean County Fair, Ocean County Park, Lakewood.
August 6–7: Gloucester County 4–H Fair, Delsea Drive, Clayton.
August 6–8: Passaic County 4–H Fair, Wayne Township Grange Hall, Preakness.
August 11–12: Essex County 4–H Fair, Township School, Caldwell Township.
August 11–15: Middlesex County Fair, Dunham's Corner.
August 12–15: Warren County Farmers' Fair, Uniontown.
August 13–14: Salem County 4–H Fair, Cowtown.
August 13–15: Somerset County 4–H Fair, Far Hills.
August 14–15: Camden County 4–H Fair, Camden County Farm, Lakeland.
August 14–15: Mercer County Farmers' Picnic and 4–H Show, Artillery Armory, Eggerts Road, Trenton.
August 17–22: Morris County Fair, Troy Hills.
August 19–22: Atlantic County 4–H Fair, Route 50, Mays Landing-Egg Harbor Road.
September 1–7: Flemington Fair, Flemington.
September 20–27: New Jersey State Fair, Trenton.

The Supreme Court and Its Critics

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. NEUBERGER. Mr. President, certain recent decisions by the Supreme Court have stimulated violent attacks on that institution and its present members. While criticism aimed at the merits of these opinions undoubtedly serves the democratic process, the vituperative nature of this assailment can only be construed as an attempt to vilify Justices sitting on the Court and to destroy respect for this branch of our Government.

In the Washington Post and Times Herald of July 19, Charles S. Rhyne, former president of the American Bar Association, presents a cogent censure of such activities and the attitude which they represent. Mr. Rhyne states:

It is possible that the public may be misled by current criticism revolving around the Supreme Court. Too often this criticism goes beyond fair comment on decisions and disparages individual judges, thus striking at the standing of the institution itself.

Public confidence in this Court and in all courts is vital to a proper functioning of our system of government. This kind of criticism may be impairing that confidence, thereby destroying one of the three vital elements of our three-part system of government.

In fact, the Court is doing an excellent job and the great majority of lawyers are of that opinion. In the past 2 years during extensive traveling, I have talked with thousands of lawyers. Undoubtedly, some lawyers will dispute my conclusion, but most of them will agree with it.

Mr. Rhyne points out that the public and the legal profession may disagree with particular decisions and question the reasoning applied by the Court. "But," he declares, "it is extremely serious that personal insults are now hurled at members of the Court in place of criticism directed at their decisions." He states:

Disagreement is a sure sign of intellectual activity—the freedom of thought which is essential to democracy. But when the disagreement runs rampant in the form of malicious charges directed toward undermining and smearing the opponent, there is cause for freedom-loving men to become alarmed. For this type of attack cares little for the virtue of truth.

He notes that:

Never a decade has passed that some great controversial economic, political or moral issue has not been resolved. Time has proved many of the decisions to be not only correct but brilliant. Others were later seen to be shortsighted or shallow and were overruled. But would we have it otherwise?

Would it be better to have a board of nine pacifiers who would concede some basic value here and withhold a little justice there in an effort to appease, say, 90 percent of the public?

Mr. Rhyne's answer to this question is a resounding "No."

The job of the Supreme Court is to make decisions. None can be popular with all segments of society. Democracy dictates that there will be criticism. But degradation, defamation, and debasement have no place in this process.

Mr. President, I ask unanimous consent that Mr. Rhyne's excellent article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 19, 1959]

COURT CRITICS STRIKE AT AMERICA'S VITALS

(By Charles S. Rhyne)

It is possible that the public may be misled by current criticism revolving around the Supreme Court. Too often this criticism goes beyond fair comment on decisions and disparages individual judges, thus striking at the standing of the institution itself.

Public confidence in this Court and in all courts is vital to a proper functioning of our system of government. This kind of criticism may be impairing that confidence, thereby destroying one of the three vital elements of our three-part system of government.

In fact, the Court is doing an excellent job and the great majority of lawyers are of that opinion. In the past 2 years during extensive traveling, I have talked with thousands of lawyers. Undoubtedly, some lawyers will dispute my conclusion, but most of them will agree with it.

THEY CAN'T TALK BACK

Our governmental system is erected on three separate branches: the executive, the legislative, and the judicial. The system depends upon each serving as a check on the others. They create a balance of power as insurance that absolute power to form a tyranny will not vest in any one branch. If any one of the three is weakened or destroyed, the system is weakened or destroyed.

Judges of our courts speak publicly only in the discharge of their judicial function. They must bear criticism, even irresponsible and vicious criticism, in silence. These men have given up the right to criticize in order that the rest of us might be secure in that right.

We of the bar have no such restraint upon us. It is, therefore, up to us, the members of the bar, to speak up in defense of our courts as an institution of government. We cannot be content merely to note the comforting fact that an institution which has survived the petulance and displeasure of a Jefferson, a Jackson, and two Roosevelts—to say nothing of the tirades of lesser men—almost certainly has the strength and vitality to survive present attacks.

THE FINAL SAFEGUARD

We as a people boast of rights and liberties, but rights are as nothing without redress and protection in the courts. Chief Justice Marshall truly said:

"The judicial department comes home in its effects to every man's fireside; it passes upon his property, his reputation, his life, his all."

Whenever we stop and think, we must recognize that not one of our priceless freedoms—speech, religion, press, even criticism of government—would be safe without the final safeguard of the courts.

Under our system, the role of the courts is to decide justiciable disputes between man and man and man and government. No better institution has yet been conceived of by the mind of man for peaceful settlement of such disputes. Today in all civilized nations, disputes are decided in the court's under the rule of law, which is an application of reason and fairness as developed by the wisdom of the ages.

HUNDREDS OF REVERSALS

Although an aura of mystery surrounds our courts, they are fundamentally a human institution. Judges are human beings subject to all the frailties of the rest of us. They make mistakes—constantly. Many hundreds of cases are reversed yearly.

We have 50 State supreme courts, 11 Federal courts of appeals and a much larger number of other State appellate courts which review the decisions of and reverse the errors of thousands of lower courts. The Supreme Court of the United States sits on top of this hierarchy and is required to review the alleged errors of Federal courts and in some cases the alleged errors of State courts.

Some 1,300 cases a year are considered by the Supreme Court, of which about 100 are heard orally and decided by written opinion. The Supreme Court does not have complete freedom in selecting cases; it must consider those which litigants bring before it.

The cases which percolate to the top usually involve issues of great moment. There are no easy cases in the Supreme Court.

A PARAMOUNT FUNCTION

To function properly, any government, any business, any family requires that decisions be made. Oftentimes decisions are wrong, and upon reconsideration in the light of experience they are changed. But without decisions, progress is stymied and any institution stagnates and dies from inaction. So it is not as important that decisions be right as it is that decisions be made.

Our system is not perfect; after thousands of years we are still trying to perfect our society. Take traffic law and traffic courts, for instance. If we waited until they were perfect before we allowed traffic to move, no traffic would ever move on our streets.

So why do we expect our Supreme Court to be perfect? It was not designed to be perfect, it never has been and it never will be. But having said all that, I hasten to say that as an institution it is the closest to perfection yet devised by man for the type of function it is required to perform to keep our system of Government operating properly.

Sir Winston Churchill has called it the most esteemed judicial tribunal in the world. And it is.

Justices of the Supreme Court of the United States, and other judges, are men, not gods or even supermen. They react to human motivations. They have families and human worries, prejudices, experiences, tempers, peeves, sympathy, antipathy, compassion, sorrows, and all the other human attributes that the rest of us have.

Some are conservative, some are liberal, depending upon the definitions one applies—and again they are no different in that respect from the rest of us.

Yet when one stands up before the black-robed Justices of the Supreme Court, he would be inhuman if he did not feel a sense of almost awe. I have appeared in many courts and before hundreds of audiences, yet I still almost lost my tongue as I face the Supreme Court. When these very human judges meet as a tribunal, they meet in an atmosphere of greatness.

Lawyers vigorously argue both sides of every case in the Supreme Court. So close are many questions that the Justices split over the decisions. Sometimes they divide five to four. Again I insist that it is more important that we get a decision than that it be one which 100 percent or even 90 percent or 50 percent of our people agree is correct.

We are going through a period of transition. No matter how decided, the segregation cases and the internal-security cases would offend the views and sensibilities of some of our people. Yet these decisions must be made or our system breaks down.

Few people could be in more disagreement with a decision than Abraham Lincoln was with that returning Dred Scott to slavery. His advice on that occasion should be pondered by us all:

"We know the Court that made it has often overruled its own decisions and we shall do what we can to have it overrule this. We offer no resistance to it."

That was the position of a man willing to shelve his personal disappointment rather than lead an attack, as he said, against "our whole Republican system of government—a blow which if successful would place all our rights and liberties at the mercy of passion, anarchy, and violence."

This must be the position of our legal profession and the public. We may state why we believe particular decisions to be erroneous. We may endeavor to have them overruled. But we must not disparage the status of our courts as an institution of government by blanket attacks upon the courts, or even a particular court.

Thus, it is not at all disturbing that large numbers of intelligent persons should disagree with the legal reasoning of the Court, the authorities cited, or lack of them, or the ultimate decision. But it is extremely serious that personal insults are now hurled at members of the Court in place of criticism directed at their decisions.

Disagreement is a sure sign of intellectual activity—the freedom of thought which is essential to democracy. But when the disagreement runs rampant in the form of malicious charges directed toward undermining and smearing the opponent, there is cause for freedom-loving men to become alarmed. For this type of attack cares little for the virtue of truth.

In the decisions of the Supreme Court, one can trace most of the significant social, political and economic trends and developments of our Nation.

The Court began its role as a resolver of great national issues in the classic case of *Marbury* v. *Madison*. The majority opinion by Chief Justice John Marshall stated that conflict between a Federal statute and the Constitution must be resolved in favor of the Constitution, the supreme law of the land. Although this declaration was actually mere dictum, it was widely accepted as controlling on the power of the Court to rule on the validity of Federal statutes.

Opponents lashed out at the language of the opinion. Many eminent men, among them President Jefferson, were extremely critical. They took the position that each branch of the Government had the exclusive power to pass on its own authority. Rational grounds were advanced for this argument.

Certainly many persons must have considered the decision to be a violent misuse of judicial authority. Yet now we look upon *Marbury* v. *Madison* as the very cornerstone of constitutional law. Without this review of the constitutionality of Federal legislation, the basic rights and freedoms we prize would be unprotected. The "gross usurpation of 1803" is the "genius of John Marshall" today.

Never a decade has passed that some great controversial economic, political, or moral issue has not been resolved. Time has proved many of the decisions to be not only correct but brilliant. Others were later seen to be shortsighted or shallow and were overruled. But would we have it otherwise?

Would it be better to have a board of nine pacifiers who would concede some basic value here and withhold a little justice there is an effort to appease, say, 90 percent of the public?

There is certainly nothing wrong with responsible criticism of judicial decisions. Many great advances in our jurisprudence have stemmed from such reasoned criticism by lawyers and scholars. As Justice David Brewer said in 1898:

"It is a mistake to suppose that the Supreme Court is either honored or helped by being spoken of as beyond criticism."

But there is a vast difference between criticism stemming from constructive analysis of particular decisions and the uniformed, misleading statements and insults which are sometimes hurled currently.

The Kind of Slap That Is Needed

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. THURMOND. Mr. President, the newspapers of the country continue to call editorially for the correction of Supreme Court decisions which thwart the intent of Congress and the best interest of the Nation. In doing so, they not only reflect the desires of the people of the United States but emphasize the problem to those who are not fully informed on their loss of rights through court action. Such an editorial, and a very able one at that, entitled, "The Kind of Slap That Is Needed," appeared in the State, a newspaper published in Columbia, S.C., on Thursday, July 9. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE KIND OF SLAP THAT IS NEEDED

The House, after a few hours of bitter debate, has again voted its disapproval of the behavior of the Supreme Court.

The Congressmen voted 262 to 138 to correct a situation growing out of the Supreme Court's action in the Mallory case. The court freed Mallory, under a death sentence in a District of Columbia court after confessing to criminal assault, because there had been a few hours delay in his arraignment following arrest.

The bill passed by the House would reverse the effect of this ruling, and allow use of confessions obtained under similar conditions—i.e., confessions could not be thrown out because of a few hours delay between arrest and arraignment.

Senators will now have an opportunity to help correct a situation which amazed and appalled judges and lawyers throughout the country. Liberals are, of course, crying about this as a threat to civil liberties—neglecting the fact that Mallory has been in trouble repeatedly since his release. It seems he has been disturbing the civil rights and liberties of several people.

It is hoped the Senate will follow the lead of the House and act affirmatively. The Court needs to be put back into its constitutional place.

Tribute to the Composer, Ernest Bloch

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. NEUBERGER. Mr. President, one of the great and gifted composers of our era was the late Ernest Bloch, who died last week in Portland, Oreg. Oregon was his adopted State, and he loved its majestic seacoast, where he planted his flowers and was inspired by the foaming Pacific. On July 19, 1959, the Washington Post and Times Herald paid eloquent tribute to this talented man. I ask unanimous consent that the editorial, entitled "Ernest Bloch," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, July 19, 1959]

ERNEST BLOCH

The death of Ernest Bloch reminds us again how rich in song this era has been, whatever its failings in so many other respects. No century which has seen such major figures as Stravinsky, Bartok, Prokofiev, Schoenberg, Strauss, and Sibelius—to name a few—need apologize for the quality of its music. Mr. Bloch, who died on Wednesday at 79, was not only an important composer, but a creator whose works reflected many of the prevailing musical currents of his time. Although he remained aloof from musical fads and cliques, his works based on Jewish liturgy sprang from the same quest for ethnic and nationalistic melody as did the Hungarian music of Bartok.

Like Sibelius and Strauss, Ernest Bloch could compose works of post-Wagnerian lushness, such as "Schelomo," his much-admired rhapsody for cello and orchestra. His "Concerto Grosso" suggested the same revived interest in 18th century music that animates so much of Stravinsky's work. He was at home with the dissonant and experimental, and his pupils included such major contemporary talents as Roger Sessions, Randall Thompson, and Douglas Moore. The Swiss-born composer spent much of his life here, and although only the future

can take full measure of his contribution, this country was assuredly the richer for his presence and the world will be poorer for his loss.

The Summit

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. THURMOND. Mr. President, the question of a summit conference is much in the minds of the public of this country and indeed all the countries of the world at the present time. Much has been said both pro and con concerning such a conference. A most provocative article entitled "The Summit," written by Gen. Charles A. Willoughby appeared in the July issue of the American Mercury. While I do not agree with all that General Willoughby has said in this article, I do feel that it is such an interesting article that it should be widely read and studied by the Members of Congress and the American public. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SUMMIT

(By Gen. Charles A. Willoughby)

PART I. A DEMILITARIZED MID-EUROPEAN BUFFER ZONE

Khrushchev's drive for a summit meeting has succeeded, with Macmillan acting as the honest broker. Russian declarations, however, show no palpable concessions—indeed, they were more conciliatory in 1952.

The intrinsic value of summit meetings can be ascertained by simple, historical recollections. In the last 25 years, the United States has had 3,400 meetings with the Communists, including Teheran, Yalta, Potsdam, Panmunjom, and Geneva. The negotiators spoke 106 million words (about 700 volumes in print). These talkfests led to 52 major agreements—and Soviet Russia has broken 50 of them. It is almost boring to quote Lenin: "Promises are like piecrusts—made to be broken."

The Communist philosophy of diplomatic negotiations was stated in 1931 by Dmitri Manuilski who, at one time, presided over the U.N. Security Council—telltale index of the quality of that overrated body. Manuilski's timetable is interesting: "War to the hilt between communism and capitalism is inevitable. Today, we are not strong enough. Our time will come in 20 or 30 years (i.e., in 1951 or in 1961). The bourgeoisie will have to be put to sleep. So we will launch the most spectacular peace movement on record. The capitalists, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends." We suppose this cold-blooded forecast has escaped men like Cyrus Eaton and his Pugwash coterie of tax-exempt brainwashers.

The Russians precipitated the Berlin crisis for well-known, well-defined objectives in the framework of their ruthless but brilliant strategy; conversely, a study of cause and effect will place responsibility for a critical situation almost entirely on the West: (1) panicky demobilization in 1945 while Russia armed to the teeth; (2) fatuous reliance on a supposedly exclusive deterrent; (3) failure of Western Europe to maintain even peacetime armaments; (4) silence of NATO commanders on a visibly weakening shield.

Against this background of military fumbling, the Russians seek to retain the loot acquired with the help of Hitler, plus the loot handed over to them at Yalta and Potsdam. They want acceptance of the status quo at the highest level—the summit. Behind this acquiescence, the Russians anticipate even more important gains: the resulting collapse of resistance by captive millions whose only hope has been the West.

The smiling farce of hobnobbing with the Kremlin, as at Geneva, reverberates from Warsaw to Sinkiang. England, which precipitated World War II over the Polish corridor (loot of Versailles), acquiesced in the Russian seizure of eastern Poland. Russia, in turn, assuaged the Poles by throwing them the consolation of East Germany from the Oder-Neisse line.

The Czechs went unchallenged in the brutal expulsion of 3 million Sudeten Germans in 1948 and the confiscation of every stick and stone of Sudeten properties. Poles and Czechs are proposed as members of the meetings. The division of Germany (and of Korea) is expected to be legalized and become permanent.

The summit is expected to devise some sort of face-saving formula. Fantastic as the cynical conditions of the Kremlin appear, there is plenty of support for them by the habitual appeasers in New York, Washington, London, and even in Bonn; viz: Germany: Carlo Schmidt, Debates in the Bundestag; "Disengagement"; England: Denis Healey, Labor Party, "European Neutral Belt"; United States: Professor Brecht in American Political Science Review, "Cordon Sanitaire."

There were other proposals by the Belgian Van Zeeland, the British Eden and Liddell Hart, the American Kennan, the Hungarian refugee Auer, and others. Their proposals are variations of the same theme—the formation of a mid-European buffer zone, a neutralized central Europe. Macmillan has carried this scheme (among other proposals) to Washington. These proposals are based on the naive theory that current international tensions can be relaxed by reciprocal disarmament (disengagement) along a mid-European corridor or buffer-zone. The fallacy lies in ignoring the fact that these tensions have been largely generated by the Russians, themselves.

These proposals, dating back to the 1950's, are a repetition of the "cordon sanitaire" which the ebullient victors of Versailles attempted to build around Bolshevik Russia—except that the Russians have developed this time a sort of satellite "cordon" in reverse.

The Kremlin often picks up gems of Western thought and improves upon them. The Russian variant involves the neutralization of Germany; i.e., Germany's eventual withdrawal from the North Atlantic Treaty Organization and the perpetuation of a divided Germany (and a divided Korea). We expect some sort of package "deal," along similar lines, in the forthcoming summit deliberations.

Over recent years, there have been four or five proposals for a demilitarized mid-European zone, viz; the Pfleiderer plan 1952, Map 1: the first Eden plan, 1955, map 2; the second Eden plan, 1955, map 3; the Bulganin plan, 1956, map 4; the Rapacki plan, 1957, maps 4 and 5. [Maps not printed in the RECORD.]

At first glance these plans appear deceptively alike, which normally would afford a promising start for diplomatic action. However, there are critical differences—in the "line of departure" or "basis" and in the width of the zone. Eden and Pfleiderer (maps 1 and 2) [not printed in the RECORD] initially fixed the "basis" along the current provisional Potsdam division between West and East Germany.

Eden and General Heusinger (speaking for Adenauer) then proposed a modified "basis" (map 3) [not printed in the RECORD], the prewar German-Polish border, on the assumption that the eventual reunification of Germany would be within the old German borders. Somehow, the Oder-Neisse line crept into this scheme and raised a specter that has haunted the West ever since—and may become the single, crucial issue of the summit meeting. That line spells the occupation and retention, under Polish control, of a substantial area of East Germany, territory in German hands for centuries.

The width of the proposed zones became a factor of immediate tactical significance: it varied from 150–300 miles initially, which was a concession to conventional, obsolescent infantry but rather pointless with jet-propelled aviation or mid-range ballistic missiles. Then Bulganin came up with something rather startling. He enlarged the disengagement zone to 1,000 miles.

The buffer zone proposals were initially intramural and intergovernmental but they were tossed around violently by the tides of public opinion. The fellow-traveling scientists moved in to flash the specter of nuclear fallout, carefully masking the fact that Russia was exploding the "dirtiest" bombs in the world. It was inescapable that the West would come to grips with the problem since they are directly under the Russian guns.

More exposed than any other nation, German authorities were quoted: "It is possible that a demilitarized zone in central Europe will again be presented to the interested powers. Indeed, it has been under study (by Germany) since 1953." This was a reference to General Heusinger's views.

The German studies were predicated uniformly on the prewar frontiers of a reunited Germany. The zone ran from the North Sea to the Adriatic. It was linked to a favorite theme of Adenauer, the European Defense Community (EDC) a fairly practical inter-European security system. EDC was promptly torpedoed by Mendes-France with the assistance of the solid voting bloc of the French Communist Party. Europe lost valuable years of potential preparedness through that maneuver.

Rapacki, the Polish Foreign Minister (under instructions from Moscow) expanded on Bulganin with a neutralization plan of his own that would pull interior countries from both the Warsaw and NATO pacts, suggesting vaguely a "neutral third force," wedged between Russia and the West, atom free and with a progressive thinning out of conventional forces.

PART II. NATO AND A MID-EUROPEAN BUFFER ZONE

We have traced certain proposals for a mid-European buffer zone from Pfleiderer (1952) to Bulganin-Rapacki (1956–57); hence, the Berlin crisis did not precipitate an unknown dilemma. It has been in the making for a long time; it is covered by a phony label, "disengagement"; and it runs through the evasive verbiage of the current Washington conferences.

The tongue-in-cheek quality of the Bulganin proposals would disengage (i.e. demilitarize) all of Germany, the Benelux countries and almost half of France. It would push (disengage) the present American garrisons in Germany to a line roughly west of Paris (where they are probably not wanted) while leaving the bulk of Russian troops in the eastern half of pre-Stalin Poland with normal Russian border garrisons stationed in the Minsk-Pinsk-Kiev triangle ready to march, with 50 to 60 divisions.

It could be argued that the displaced divisions of the North Atlantic Treaty Organization are free to countermarch from new garrisons in Western Europe or wherever ultimate buffer zones are permitted by the Russians. The catch is that we will have to accept abandonment of the enormously costly American installations in Germany—airfields, barracks, depots and warehouses—that have been built since 1945 at a cost running into billions of dollars.

The real purpose in all Russian proposals—indeed the essence of their calculated foreign policy, is the ultimate retention of their war loot since 1939, the Baltic countries, a mutilated Poland, a divided Germany etc. They demand the acceptance of the status quo. They seek the legalization of tht Potsdam territorial crimes (equally chargeable to the Allies) in a form of political genocide that drove millions from their homes and properties, which had been in their possession for centuries. This is the "cancer" of Europe, from which it has ailed since Versailles (1918), and American intervention in Europe created the conditions for the bacteria to flourish.

Disengagement and demilitarized buffer zones are no remedy. They are a psychological hoax, a military-political sham. They would separate the contending forces by a few hundred miles—a matter of 3 or 4 truck-days for motorized and armored units, a matter of minutes for midrange ballistic missiles from present Russian and Czech bases (the threat of which urged Macmillan on his road to appeasement), a matter of hours for a a thorough raking-over of jet-propelled aircraft. General De Gaulle has commented wryly on schemes of disengagement in the era of intercontinental missiles, "that he would not be satisfied until the Russians disengaged as far eastward as the Urals."

We accept, of course, the fact that retaliatory action is still possible for the West through the highly efficient SAC and that a balance of nuclear terror is still within our hands—and will be for some time to come. But what an index of statesmanship, after expenditures of $50 billion on mutual security and an annual budget of around $70 billion. The cynical, hardheaded Russians naturally count on the humanitarian feelings of America to prevent or delay the nuclear destruction of French, British or German areas, though the Russian satellites in Warsaw, Prague and Budapest will be equally vulnerable.

While it is too late to cry over spilled milk, as regards the immediacy of the Berlin ultimatum, the weakness of NATO in conventional armies ought to be exposed relentlessly and something done about it, instead of the one-shot gamble on nuclear deterrents. We have said before that the balance of nuclear terror must be paralleled by an appropriate balance of conventional forces with special emphasis on the crucial front: Denmark-Switzerland. The weakness of the NATO shield is a constant bait for the Russians to get tough. The story is plain to see in a comparison of military performance, over the years, viz:

The weakening shield of NATO

	1928	1950	1956	1959	Remarks
Benelux	18	3.0	4	4	(1)
United States of America	12	5.0	5	5	(2)
Great Britain	23	4.5	4	3	(3)
France	30	6.0	2	2	(4)
Germany	10	----------	3	7	(5)
Aggregate	93	18.5	18	21	(6)
Russia-central Europe	105	65.0	65	65	(7)
Russia, overall	105	195.0	175	175	(8)

The column, 1928, is significant as a yardstick of normal military capacity, the product of European annual conscription operating without American foreign aid. Emphasis is on the countries immediately adjacent to the crucial NATO front: Denmark-Berlin-Switzerland (see map 5) [not printed in the RECORD], the front where basic issues may force actual fighting—not the spurious fronts of an evasive neutralism, as in India, Yugoslavia or Indonesia. There are certain collateral factors that have a bearing on this historical tabulation, listed under "remarks" viz:

1. The heart of Benelux is the Netherlands. This faithful wartime Ally has been dispossessed from Indonesia (1948) and is still plagued with wholesale confiscation of private properties (1959). The instrument of expropriation was developed by the United Nations, the United States collaborating (1947). The Communist parallel is found in the barbarous expulsion of 3 million Sudeten Germans from Czechoslovakia (1948).

2. Since 1945, the American contingents have been the mainstay of NATO conventional defenses along the decisive front: Denmark-Berlin-Switzerland. Casual mention should be made of the presence of 100,000 women and children, dependents of these armed forces. They ought to be withdrawn from a dangerous trap.

3. Great Britain is reducing progressively, as the welfare State cannot support the armed services. Incidentally, the present precarious situation is the result of World War I and II, largely brought about by British diplomatic maneuvers and intrigues; they triggered World War I through the creation of the Entente Cordinale; they precipitated World War II by backing the Poles on the Corridor, a creation of Versailles, 1918.

4. France has been compelled to withdraw her best divisions for employment in Algiers—a war largely engineered by Russia, utilizing Mediterranean stooges like Nasser of Egypt.

5. Germany has increased her NATO contributions from zero to currently 7 divisions and will increase to 12 divisions. Currently the New York brainwashers are distributing anti-German literary and theatrical material dating back to the Hitler period.)

6. NATO commanders Ridgeway, Eisenhower, Gruenther, and Norstad have made successive estimates of required strength to balance the visibly growing Russian forces. They considered 90 divisions necessary in 1950, about what the Europeans turned out in 1928; thereafter, they scaled down their estimates to 65, 45—and now 30—divisions, though the Russian threat is no less in 1959 than it was in 1949. Until recently, largely due to increased German contributions, NATO never produced more than 18 conventional divisions in central Europe at a cumulative aggregate cost (foreign aid-mutual security) of approximately $14 billion, or $770 million annually; this amounts to a unit cost per division of $77 million each year. In the Mediterranean sector, mutual security is less expensive: Greece, Turkey, Italy and Spain have turned out a division for $12.8 million of annual foreign aid; Korea and Formosa have cut this to $8.7 million per division.

7. Russia, the archenemy, the scourge of the West, uniformly maintains superior conventional strength. On the crucial NATO front, the Russians maintain 22 divisions (East Germany); 8 divisions (Poland); 25 divisions in the Minsk-Pinsk-Kiev triangle. Satellite divisions like the Czechs (12 armor divisions) are considered reliable; indeed, this showpiece of Wilsonian diplomacy (1918) has turned into the most rabid Communist (sic) of them all. The East German Vo-Pos (10 divisions) are probably uncertain. Nevertheless, Russia has the potential of 55 to 75 ready divisions, challenging 21 NATO units in a ratio of 3 to 1, a ratio considered technically sufficient for a Blitz offensive. These facts have induced Eisenhower finally to admit (1959) that ground forces are inadequate. He must have known the obvious as early as 1950 while he was still NATO commander; it was an inescapable development coincidental with the Russians' obtaining our nuclear secrets through a British-American-Canadian spy ring.

8. The Russian standing Army, on the conscript pattern, is reported at 175 divisions; it could be stronger. Annual reserves are available to double the current figure within 30 to 60 days. In a central geographical setting, Russia can reinforce any specific front, from Turkey to North Korea, from the Baltic to the Persian Gulf. It should be remembered that Mongolian units appeared in the Hungarian crisis. In the wake of that crisis, Russian reinforcements came in via Czechoslovakia: five Soviet divisions remained there for some time: one armored division, in Moravia, two armed divisions, and two in Slovakia.

These valid considerations have been brushed aside for years in a myopic reliance on the exclusive deterrent, the nuclear bomb, airborne or missile-carried. Today, the Russians are at least equivalent (if not superior) in nuclear armament, deterrent or retaliatory. Where do we go from here?

In the NATO palaver in Washington, it is blandly assumed that the Russians will not use their deterrent. Are we to credit Khrushchev with a greater moral or humanitarian sense than Truman who did not hesitate, in his day, to launch this satanic weapon—and tipped his hand prematurely?

Can NATO afford to fight?

A One-Way Street

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sacramento (Calif.) Bee of July 7, 1959, entitled "One-Way Street."

This editorial, in my view, is a timely and pointed reminder that the Russian propaganda mills are continually at work seeking advantage over the Western democracies, and particularly the United States, in every field of human endeavor. The cultural exchange of ideas is currently one of Khrushchev's favorite publicity vehicles.

Like Soviet trade, Soviet culture can be, and is, turned on at will for political purposes. This is something the Vice President and other visiting American officials might well remember during their upcoming visit to Russia's national

exhibit, which will open in Moscow July 25.

The editorial follows:

A ONE-WAY STREET

While President Dwight D. Eisenhower was on hand to pay his respects to the Russian Cultural and Scientific Exhibition the Russian press is rolling out a dirty rug of half truth and falsehoods to herald the American National Exhibition which will open in Moscow July 25.

Russia's newspapers have been going all out to vilify the United States with accounts of unemployed queued up waiting for handouts. Russians are being told only the American rich can get higher education. And Russia's Pravda leaped upon an Associated Press picture showing a desolate woman, babe in arms, and four bedraggled children standing in front of a striking Kentucky coal miner's pathetic shack.

The dregs of American life have been scavenged in an obvious effort to convince the Russian people that America's $5 million exhibit is a gross counterfeit of life in this Nation. Obviously this sort of thing is a travesty of the cultural exchange idea to which Russian Boss Nikita Khrushchev has given ardent lipservice.

Some may say the United States should be careful about displaying its seamy side. But therein lies its strength. So long as there is a shack left in which Americans live it should be a fair subject for the American press. And it should continue to be until all of them are eradicated.

It is too bad Pravda does not picture the crowded homes of Moscow and the forced labor and secret police methods of Russia.

What's Right With Railroad Labor?

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address which I delivered on July 20, 1959, at the 37th convention of the Brotherhood of Locomotive Firemen & Enginemen, in St. Paul, Minn., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT'S RIGHT WITH RAILROAD LABOR?

(By Senator HUBERT H. HUMPHREY, Democrat, Minnesota, at the 37th Convention of the Brotherhood of Locomotive Firemen & Enginemen, St. Paul, Minn., Monday, July 20, 1959)

A little less than a month ago, I spoke in the U.S. Senate on "What's Right with American Labor?". Some of you have been kind enough to express your hearty approval of that speech and to tell me that you thought it had been helpful to the cause of the American labor movement.

I hope that has been the case. What helps the American labor movement helps not only organized labor but all Americans—farmers, unorganized workers, even business itself.

As I told the Senate, I am proud to be considered a friend of labor. I am proud of my friends in the labor movement, and I am proud, too, of the kind of people who stand with me as friends of organized labor.

It is too easy to forget, when headlines in the press are focused on the doings of the small number of corrupt elements which have wormed into certain parts of the labor movement, that the friends of labor are, after all, the overwhelming majority of the American people, who know that a strong and honest labor movement is an essential part of a democratic society.

I was prompted to make my Senate speech because for 2 years now we have been hearing a great deal about what's wrong with the American labor movement. It is in the nature of news that it singles out, and thus overemphasizes, the negative and the sensational.

But I strongly believe that the public should also have the full story of the American labor movement, and not merely that of a small group of gangsters and racketeers. And so I undertook to try to describe the positive side of American labor by pointing out what decent, honest, devoted trade unionists are doing day by day for their fellow workers, their communities, and their country, as well as for the cause of freedom throughout the world.

Today, I want to narrow my topic just a bit. I want to discuss briefly with you "What's Right with Railroad Labor?" I am prompted to select this topic because I am fully aware that, over the last year, the railroad workers of this Nation have been made the target for one of the most unfounded and expensive propaganda attacks that the "perfume and soap" boys of Madison Avenue have ever launched against any part of the American labor movement.

All of you in this room know—because your union is a primary target of that attack—that I am referring to the campaign to picture railroad labor as greatly overpaid and unproductive "featherbedding."

Well, what's the real truth behind this propaganda campaign?

The real truth is contained in official Government figures—figures which show that despite the fastest-rising productivity in America, railroad wages have lagged behind those in other industries.

Now, of course, this is by no means the complete picture about railroad union work rules. I am happy to note that in his opening remarks to this convention, President Gilbert declared that in your forthcoming negotiations with the railroads your work rules must be revised and modernized to reflect the locomotive firemen's current contribution to the industry.

That is a positive approach, and it puts the subject of work rules where it properly belongs—in the arena of collective bargaining, where experience has shown reasonable men of good will can always work out the fairest and most mutually satisfactory arrangements.

I must confess that I have been somewhat dumbfounded that the railroad managements today should be proposing that a Presidential Commission should settle this matter.

For railroad management to call upon the Government to step in to settle an issue, even before any honest effort has been made to reach an agreement at the bargaining table is somewhat mystifying to me. It is completely at variance with all the protestations of the railroad industry against Government interference and meddling in its affairs.

In any event, millions of dollars have been spent in an effort to convince the public that railroad workers deserve the reproachful epithet of "featherbedders." Well, as far as I'm concerned, if there are any feathers connected with railroading today, they're the horsefeathers in this campaign against labor.

So the first thing I want to say about what is right about railroad labor is that it has been responsible labor, realizing that its own advances can be made only with the advance of the railroad industry and our Nation itself.

This is in the tradition of the American labor movement as a whole, but responsibility has been particularly a dominant characteristic of the railroad unions and their leaders. This is obvious when you examine the history of railroad labor and note its readiness to bind itself to a complex legal procedure of Government mediation before it can exercise labor's sacred right to strike. The Railway Labor Act, which your unions helped to draft, has been pointed to by many experts in the field of labor-management relations as one of our most enlightened labor laws.

Unquestionably, this law imposes a great deal of self-restraint upon your actions when labor disputes arise, and it is a real tribute to railroad labor that it has recognized its peculiar responsibilities as servants of the Nation's transportation needs and has abided by this law and its admittedly cumbersome delays.

The second thing I want to say about what is right with railroad labor and that is that it has proved itself today to be probably the most productive of any group of workers in the world. Its gains in productivity in recent years have outstripped those of the workers in any other industry.

That's what official figures of the Bureau of Labor Statistics tell us, and I might add that those figures were supplied to the Bureau by railroad management itself.

Actually, the output of railroad workers has been increasing at a rate approximately twice as fast as that of the entire nonagricultural part of the American economy. That's some "featherbedding," let me tell you. Railroad workers in this respect surely have set an example which management should hold up as a goal for the workers of all other industries.

Still another thing that railroad labor can be proud of is the unceasing fight it is waging to keep our railroad transportation system strong in order that it will always be ready to meet the national defense, as well as peacetime, needs of the Nation.

In this respect, railroad labor has exhibited enlightened self-interest at its best, for I have noted that on several occasions the railroad unions took their stand in support of management-sponsored legislation even though management, at the same time, was bitterly opposing legislative measures sought by the brotherhoods for the benefit of railroad employees.

In the present session of Congress, I have been particularly impressed by the efforts of the railroad legislative representatives to secure the enactment of measures designed to relieve the current freight car shortage, as well as their efforts to protect the public from the unjustified abandonment of passenger train service.

I am sorry to say that many railroads have taken advantage of the new law enacted last year which permits them to terminate passenger service virtually whenever they like. One Federal judge has called this law a strange dismaying law since it places in the hands of the railroads themselves the right to determine the extent to which they will serve the public by providing passenger train service.

Now, please don't misunderstand me. I regard myself also as a friend of the railroad industry, and I acknowledge that I voted for the Transportation Act of 1958 which was intended to help the railroads and make them stronger.

But such a situation as I have just described in regard to the elimination of passenger trains is clearly intolerable. To rectify this situation, a bipartisan group of Senators has introduced a bill which would again protect the public by requiring the

railroads, before they could take off trains, to prove that there no longer was a genuine need for these trains they propose to eliminate. I want you to know this measure has my wholehearted support.

Another thing that is right about railroad labor is its concern about railroad safety and its determination to do all in its power to halt the steady rise in railroad accidents.

Almost from the very beginning of the railroads, rail management seems to have been afflicted with a peculiar blindness in regard to accidents. I am sorry to say that the efforts of the Railway Labor Executive Association to establish a joint labor-management committee on safety were turned down by railroad management. It seems to me that by this action the railroads clearly are inviting Congress to enact new laws to force them to meet their obligations in this regard.

I am happy to see that the railroad unions, recognizing their responsibility in this area, have not been deterred by management's indifference on this issue and have set up a Committee on Safety in the RLEA.

I believe in this objective, and I will support the railroad safety measures which are endorsed by railroad labor. They are necessary in the public's, as well as the workers', interests.

Before I leave this subject of safety, I want to comment about one of the railroads' featherbedding charges which concerns the members of this orgnization directly. I refer, of course, to the claim by railroad management that firemen who tend fires no longer are necessary on modern, high-powered diesel locomotives.

What management is doing is to exploit and misuse a label that is not well suited to modern day railroading, in an effort to make the public believe it's the men and not the label who are outdated.

Admittedly, the locomative fireman, today, tends no fires. A better way of describing them would be to call them skilled diesel helpers—or, to use a term the public understands—a sort of copilot. In a sense, the fireman is another set of eyes and ears for the engineer. His duties are those of safety lookout, assistance and trainee to the engineer, and supervisor of the production of power. In performing each of these functions the fireman still remains one of the most valuable safety elements available to the railroads.

Hardly a week passes but what the newspapers report how some accident has been averted because a locomotive fireman, as copilot, has spotted some danger ahead not seen by the engineer from his vantage point on the other side of the cab, and has brought the train to a halt to avert calamity. Locomotive firemen, sitting on the left side of the cab and calling out wayside signals and speed zones, spotting obstructions on the track or hot journal boxes and other dangerous conditions, are literally one-half of the vision that guides and directs the movement of mile-long trains hurtling at ever-increasing speeds through the blackness of night or the blind spots caused by track curvature and grade throughout 24 hours a day.

Is such a man needed? Well, I suggest that every person in America be asked this question: How would you like to ride on an airplane today without a copilot? How would you like to ride a train, knowing that because the fireman had been eliminated, every time it swung around a curve to the left at speeds of 60 to 100 miles an hour it was going around that curve absolutely blind? The fact is that the airlines are now adding still a third man to insure greater safety.

And I needn't remind you that the number of lives at stake on a train is many times that on an airplane.

I want to assure you that so long as I am in the Senate I will do everything in my power to see that a copilot is maintained in the cab of every locomotive in order that the public—and the railroad companies as well—will have the protection they deserve.

Finally, and in summary, what is right about railroad labor is that it has a strong solidarity with the rest of the American labor movement and typifies the best of all the things I have said about organized labor as a whole.

Because from the outset railroad workers were able to organize strong and responsible unions in their industry well in advance of the workers in most other forms of employment, the railroad brotherhoods have been able to contribute strong leadership and significant aid to other workers in building the labor movement as a whole.

Fortunately, from the very beginning, the leaders of railroad labor have been men of integrity, and railroad labor organizations have always been clean organizations. Today, after nearly 2 years of the searching investigation of American labor organizations, not a trace of corruption has been found in any of the 23 standard railroad labor organizations affiliated with the RLEA. Even railroad management, despite its other attacks upon your unions, has had to acknowledge publicly that this is the case.

Railroad labor is clean, because railroad workers have built strong, democratic organizations, and they are determined to keep them that way.

Because the railroad unions were built and run to reflect the democratic faith of the railroad men and women who comprise them, they typify all that is right about American labor. So if I were to tell you all that is right about railroad labor, I would have to also repeat all the things I said in my June 24 speech in the Senate.

Time will not permit such repetition. But everything I said about the great contribution to our society of trade unions can be said with underscoring when it is applied to railroad labor unions like your own. You have not only brought dignity and security to workers in your industry, but you have fought for the general welfare of all Americans, to aid small business and farmers, to promote civil liberties, to advance the interests of all of our citizens.

You have joined the international labor movement in exerting a constructive democratic influence upon workers in other lands. Through the participation of the RLEA in the International Transport Workers Federation, you have helped extend the benefits of democratic trade unionism to workers in the transportation industry throughout the world, and in doing so you have done as much as any segment of the American labor movement to stem the tide of Communist tyranny and aggression.

What's right about railroad labor is that it is enlisted in a cause which is right, and it is fighting for that cause in the right way—the democratic way. That's about the highest tribute I know that can be paid to any man or group of men.

Farm Products in International Economic Programs

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. CARLSON. Mr. President, the International Economic Policy Association held a panel discussion on Tuesday, June 30. The subject used by the panel for discussion was "Using Farm Products in International Economic Programs." One of the participants in the discussion was Mr. H. Robert Diercks, vice president of the grain division of Cargill, Inc.

Mr. Diercks, personally, and the Cargill firm for many years have been outstanding handlers and exporters of grain. Mr. Diercks' many years of experience in this field qualifies him to speak authoritatively on this subject.

I ask unanimous consent that the discussion by Mr. Diercks be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

USING FARM PRODUCTS IN INTERNATIONAL ECONOMIC PROGRAMS

(By H. Robert Diercks, vice president, Cargill, Inc., Conference on U.S. Economy and International Relations, Washington, D.C., June 30, 1959)

I intend to use my allotted minutes first to sketch the mechanics under which U.S. grain is now exported and, second, to point out what I believe to be a grave fallacy in the government-to-government approach to international grain trading. I will be especially critical of barter, as it is employed today, as it has been employed in the past, and as it may be increasingly employed in the future.

As a spokesman for a major U.S. corporation engaged in the handling, processing, and merchandising of grains, my first interest necessarily is with the commercial impact of U.S. trade programs rather than with their significance as political tools. My greatest knowledge is of the procurement of grain in the countryside, its movement to terminal collection points, its conditioning and storage while awaiting consumer demand, its value as established by cash and futures markets, its dependence on skilled grain merchants and experienced transportation experts for efficient movement, and finally its sale by the grain trade to one or another of thousands of domestic or foreign consumers or processors.

I am not expert in evaluating the consequences to peoples overseas of U.S. grain programs, yet certain expressions of the International Economic Policy Association, our host here today, seem to me altogether reasonable. This group suggests that peaceful and productive nations can best be evolved, and the appeal of communism can best be resisted, by development and strengthening of broadly based, actively engaged, property-owning commercial classes overseas. To that end it suggests we discourage, or at least do nothing to encourage, government ownership of plants, distribution networks, and raw materials, or other government involvement in commercial enterprise, as not conducive to individual development.

I am convinced these are desirable goals. I am also convinced that if they are desirable when applied to other countries, they are every bit as desirable when applied here at home.

As to accomplishment of these goals overseas, worthwhile evaluations would better come from my copanelists, Senators HUMPHREY, CARLSON, or WILEY, than from me. In discussing the goals and their achievement here at home, however, I feel no need to defer.

The ideal situation for international trade is, of course, one of completely free interchange in which the sellers sell and the buyers buy independently, in large volume and each according to his need. It is also

a situation in which there is no participation or interference whatever by government. We in the United States recognize, however, that under our present crop-support program this is impossible in the trading of grains, for domestic grain prices are supported well above prices in the world markets. When prices here at home fall below government loan levels, grain is not, for the most part, sold in the free market, but instead is defaulted to the Government. If any particular grain, burdened by its inflated price, is to be exported, it must be offered at a reduced price competitive with similar grain from other countries, and our Government must absorb the difference. Thus, all rules of free trade to the contrary, our Government must involve itself at least to the extent of paying export subsidies if so much as a single bushel is to leave our shores. This role can be dominating and destructive, and has often been so. Or, if undertaken with wisdom and discretion, it can minimize damage to the economy and can allow grain trading to approximate, at least, the free and competitive ideal.

Programs for export of farm commodities, if they are to be wise programs, must recognize a number of obvious, but basic, truths. They must recognize that Government ownership of grain, except for some reasonable reserve for emergency use, is both abnormal and in the long run undesirable. They must recognize that Government merchandising or other disposal of grain is necessarily in competition with private grain merchandising efforts, is debilitating to the private economy, and should be at least minimized and at best eliminated. They must recognize that if the dual aims of export programs are to export large amounts of grain and to stimulate the economies involved, these aims can best be accomplished within the established, self-regulating channels of normal commerce.

These simple truths, I am sorry to say, went almost wholly unrecognized by U.S. grain export planners prior to 1956. The goal, up to that time, was neither to constructively increase grain exports nor to broaden and extend patterns of normal trading, but instead was to decrease the size of Government surplus stocks by channeling them at almost any cost into export. The advantage of this approach is that it is simple, easy to understand and, amazingly enough, politically palatable. Then as now, if Government ownership and storage of grain surpluses is burdensome and costly to the taxpayer—and certainly it is—let the Government sell it, swap it, or give it away, and there's an end to it. Export totals can then be shown as proof positive that something is being done. No need to mention that this something is grossly distorting to free grain marketing machinery here at home and is calculated to estrange the governments and citizens of grain exporting nations abroad.

Nevertheless, prior to 1956 it was the case that export demand, whether great or small, exerted absolutely no stimulation on free gain markets within the U.S. and not only failed to bring higher prices to farmers, but actively resulted in a tendency to price depression. Farmers faced a situation in which every bushel of grain exported from surplus stocks, no matter how well it looked as a statistic, was a bushel that would not be exported from current farm production. Thus free market prices remained below the loan and for every bushel exported at least one bushel—and probably more than one—was forthwith defaulted to the government and added to the stockpile.

At the same time, in order to control and administer all phases of export activities, our administrators deemed it necessary to bypass almost completely the marketing machinery of the private grain trade. The cost-saving efficiencies of competitive handling and transportation were lost. The cash and futures markets at grain exchanges in Chicago, Minneapolis, Kansas City, and elsewhere were not utilized. The merchandising experts of the trade, familiar as they were with oversea markets and availability of low-cost ocean shipping, were either transferred to other jobs or turned out of the industry altogether. Grain firms, instead of accomplishing the entire movement from countryside to foreign consumer, were permitted only to purchase grain from government stocks at seaboard and, after no more than a slight flurry of paper-shuffling, to ship it to the foreign buyer. The necessary subsidy was not paid directly to anyone, but was absorbed by government in the low price set for sale to exporters.

This picture of grain export, you understand, is not a picture of things as they are today. It is now understood by most knowledgeable persons in government that the effect of exporting exclusively from government stocks is more harmful than beneficial. It is also understood, at least in those circles familiar with business operation, that there is no surer way of perpetuating forever a costly farm program than to allow government to take over piecemeal the various functions of grain handling—among them the export function—and to allow the appropriate private machinery to grow rusty and useless.

At present, though very appreciable quantities of grain are still being exported from Government stockpiles, by far the largest part is drawn from the free market. The change, which I have mentioned as beginning in the fall of 1956, was introduced by Commodity Credit Corporation's subsidy-in-kind program for wheat, officially known as GR-345. This program, urgently requested by the private grain trade, formulated by CCC and vigorously endorsed by Senator HUMPHREY, of Minnesota, was a major step in returning wheat export to traditional channels. To satisfy orders from foreign buyers, grain firms were once again able to go to the countryside, bid for free market stocks, pay a considerably more healthy price, move in the most economical and expeditious way to an exporting coast and load on vessels. Only at this point in the marketing chain does government come into the picture, to reimburse the exporter for the difference between the high price at which he buys his supplies and the low world-price at which he must sell them. Under the old system, as I have noted, the subsidy was built in at the outset. Under the new, the Government hands over to the exporter certificates, called scrip, equal in value to the price difference and redeemable only in grain from Government stocks. Thus total exports of wheat, which on an average is supported at about one-third more than the world price, are drawn roughly two-thirds from the free market and one-third, as subsidy, from surplus stockpiles. This is a long way from a perfect situation, but certainly it is an enormous improvement.

Roughly a year ago the subsidy-in-kind technique was embodied in a similar, but considerably simpler, subsidy-in-kind program for the coarse grains, namely corn, oats, barley, rye, and grain sorghums. The mechanics of the new program, especially in the awarding of subsidies, were much less time- and effort-consuming than those still in effect for wheat. Also improved was the relative impact of the program on the free market, for on an average the coarse grains are supported at levels less out-of-line with world markets. Thus the proportion drawn directly from the farm is greater, and the part taken from Government stocks is less, than under the wheat plan.

Even so, though present subsidy programs for wheat and coarse grains have brought us closer to a free market approximation than for many years, there still remains a considerable amount of export that bypasses commercial channels almost entirely, and is not felt at all in farm prices. In simplest form, it is fair to say that whatever exports are actually sold, and paid for with money, be it free dollars, dollars loaned to foreign governments or local currencies guaranteed under title I of Public Law 480 or by the International Cooperation Administration, those exports move through one or the other of the subsidy-in-kind programs. Whatever exports are not paid for, however—namely grain received as subsidy, grain bartered for strategic materials, or grain given as emergency grants to foreign countries or as donations to U.S. or U.N. relief agencies—those exports continue to come entirely from Government stocks, continue to depress the free market, continue to bypass the commercial trade and continue to do considerably more domestic harm than good.

In this category barter is, in my opinion, the least desirable and the most dangerous. To be sure, it is possessed of the political advantages I mentioned earlier. Taxpayers are told we have grain we want to get rid of and other nations have metals, industrial diamonds, etc., needed to supply our strategic stockpiles. It then seems reasonable that a simple swap will serve both needs, leave everyone happy and cause all things to work out.

But, at the risk of defacing this beautifully simple picture, I maintain that it all works out about as disadvantageously to domestic and world economies as can be imagined. Barter, to all intents and purposes, is government-to-government trading in pure form. It could not be further removed from free and competitive trading by commercial interests. As a technique it is, in my opinion, a throwback to the national merchantilism of 200 and 300 years ago.

I've described how barter, like any export from Government stocks alone, bypasses both the workings of the private trade and the market place of the farmer. Exporting firms do play a role in locating and setting up workable barter contracts and in accomplishing final dockside loadings, but the role is slight and the privilege painful. My own firm, like many others, participates in barter only because we feel we must. In this instance our business is exporting grain, and we could not survive for long if we refused exporting opportunities, however distasteful they may be. But these opportunities are frustrating and destructive, not only to us but to every participant.

In the first place CCC, which has acquired considerable knowledge of grain in the past 30 years, finds itself in the market for ferrochrome, manganese, diamonds, and other commodities far outside its experience. Foreign merchants of these materials, who would much prefer to sell for cash and be done with it, automatically boost their prices to levels that would not be considered by private importers in this country. Our own grain companies, who if anything know less about strategic materials than does CCC, find themselves trying to organize one-way, two-way and sometimes even four- and five-way barters that ultimately will enable them to export a few cargoes of grain. The oversea recipient of the grain, in order to be compensated for the time-consuming burden of getting himself involved in the contract, will not purchase at the world market price, but insists upon—and receives—a liberal discount from our Government.

Unlike a simple sale, achieved spontaneously and on short notice within the sensitive structure of supply and demand, barter negotiations and arrangements are certain

to continue for weeks and may last for many months. Throughout the strategic material is overpriced, the grain is underpriced, and neither the countries nor the industries concerned are the better for it. If there is a more difficult way of getting rid of a bushel of grain and acquiring a pound of tin, I hope I never learn it.

I would not pretend to evaluate the importance of America's strategic stockpiles, or to join without further knowledge those critics who maintain we now have infinitely more strategic materials than we need. It is the case, however, that under barter arrangement we lump together and treat as one two entirely separate commercial needs.

The reasonable approach, it seems to me, is to separate the diamonds from the grain and consider each on its own merits. Thus if our Government decides it has particular strategic needs, let it buy outright whatever is necessary and deduct the purchase from the appropriate budget. In the same way, if Congress and the public decide that increased support of grain exports is desirable, let additional funds be loaned to foreign countries or additional amounts of foreign currency be guaranteed under Public Law 480 or ICA. Purchases would then come from the free market and would move tranquilly through commercial channels. Government stockpiles would be reduced in part by direct removal through subsidies and in larger part by reduction of annual takeover from farmers. More would be accomplished than is done under the barter system and with far less distress to the grain economy.

I say more would be accomplished. Yet some will tell you no, that barter results in greater total exports than could take place otherwise. They admit that in years past this might not have been so, for countless examples show that bartered grain has invaded cash markets serviced by ourselves and friendly grain-producing nations. But, they will say, Government today requires proof of additionality, that is, proof that the barter will be in addition to rather than instead of, before it grants contract approval.

But additionality, in my opinion, cannot be proved. It cannot be proved because it does not exist. Assume, for example, that France has ferrochrome admissible to our strategic stockpile and a barter is arranged to exchange U.S. soybeans. The question of additionality is answered by a statement from the French importer that he will accept an offer of soybeans from Manchuria if the barter is not approved. We call this sufficient proof, and the contract is undertaken. But what becomes of the Manchurian beans? They do not disappear. They are not magically removed from the scene. Instead, they will be offered to Holland, or West Germany, or Belgium, or some other customer of the free world, and they will be offered at a price sufficiently attractive to be sold, in competition with sales by ourselves.

Additionality is also shown on the basis of past export records. That is, if Canada, for example, last year sold so many bushels of a certain grain to England, we will hold off on approval of barter until the same total is achieved this year, then will proceed to barter with England on the assumtpion that it is in addition to Canada's market and in no way harmful. But what if England's requirements have increased in the meanwhile, as grain consumption is increasing throughout the world? Should not Canada expect to share in the increase? Does not our barter make this impossible? Where is the so-called additionality?

I do not believe that the question of additionality is quite so unprovable when grain from Government stocks is used not for barter, but instead to fill disaster relief needs or to supply grain to relief organizations. This grain does bypass the domestic free market, however, and to that extent is not reflected in farm prices. On the face of it, it would seem that this could be avoided in the same way as the barter bypass. That is, why not fill disaster relief needs by supplying emergency loans to be used for purchase of grain in the normal way? Similarly, why not make money grants to relief agencies—the Red Cross, the Catholic Welfare agency, and others—that result in subsequent free purchases of grain?

At the moment, as I have said, the portion of total U.S. exports accounted for by barter and donation is not great, though in wheat, at least, it has increased steadily in the last five years. But as domestic surplus grows, the likelihood of increased government financing of exports would seem to grow with it. This means larger budgets, higher taxes and increasing risks of attack from irate voters. The temptation to increase barter and other government - to - government schemes will undoubtedly be great. The taxpayer is unlikely to notice that bartering a dollar's worth of grain is just as costly as appropriating a dollar to guarantee an outright foreign purchase. But to the extent that the taxpayer is deceived, to the extent that legislators refuse to admit that a dollar is a dollar, no matter how it is spent, and to the extent that barter rather than normal trade is expanded, to that extent we will pay for our shortsightedness many times over in constriction of our free economy, expansion of a governmental grain industry and defection from our ideal of what a healthily economic nation and world should be.

If, on the other hand, it is decided to eliminate barter and to make use, instead, of title I or Public Law 480 or of ICA to expand export through commercial channels, this decision should be spelled out clearly in legislation and in CCC directives. At present, in the wording of Public Law 480 and dozens of other laws concerned with grain merchandising, there is to be found only weak and permissive language that makes a token gesture toward the maintenance of private merchandising machinery. For example, "facilities of the trade will be used as far as practicable," or "commodities may be sold through private channels." This phrasing leaves the decision as to whether or not entirely in the hands of government administrators, as though their convenience and whim were the ultimate goal. If we decide finally that grain should proceed through commercial channels, and if we wish to encourage private investment abroad, such wishy-washy wording should be changed from "may" to "must," and the phrase "as far as practicable" be stricken entirely. Provision should be made for policing, to be sure, for the public must be protected. But here as elsewhere, one does not solve the problems of traffic by erecting roadblocks or by destroying the highway.

Ladies and Current Events

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Ladies and Current Events," written by Dr. and Mrs. George S. Reuter, Jr.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LADIES AND CURRENT EVENTS

(By Dr. and Mrs. George S. Reuter, Jr.)

Current events tell of many problems in the world today. Some of these go back in history, while others are new. Fortunately there are some ladies who are making our civilization a better place to live in. In order to appreciate the present, several factors must be considered. These factors should be as positive as humanly reflected by mankind.

The importance of God must be accepted per se. It was William Penn who said: "Men must be governed by God or they will be ruled by tyrants." This is certainly true whether the ruler is a man or a woman.

The second consideration should be a right attitude toward humanity. Dr. Bob Jones, Jr. recently expressed this idea for both men and women:

"If with pleasure you are viewing
Any work a man is doing
If you like him, or you love him
Tell him now.

"Don't withhold your approbation
Till the preacher makes oration,
And he lies with snowy lilies
On his brow.

"For no matter how you shout it,
He won't really care about it,
He won't know how many teardrops
You have shed.

"If you think some praise is due him
Now's the time to slip it to him,
For he cannot read his tombstone
When he's dead."

The third consideration should go a step further than praise for today, by relating the idea to the philosophy of what guides noble ladies. This is expressed under the heading "I Know Something Good About You":

"Wouldn't this old world be better,
If the folks we met would say,
'I know something good about you.'
And then treat us just that way?

"Wouldn't it be fine and dandy,
If each handclasp, warm and true,
Carried with it this assurance,
'I know something good about you.'

"Wouldn't life be lots more happy,
If the good that's in us all
Were the only thing about us
That folks bothered to recall?

"Wouldn't life be lots more happy,
If we praised the good we see?
For there's such a lot of goodness
In the worst of you and me.

"Wouldn't it be nice to practice
That fine way of thinking, too?
You know something good about me?
I know something good about you."

While divine leadership, right attitudes, and good philosophy are important considerations, there are other factors too. History is the fourth consideration. Woodrow Wilson said: "The Constitution is not honored by blind worship. The more open-eyed we become, as a Nation, to its defects, and the prompter we grow in applying with the unhesitating courage of conviction all thoroughly tested or well-considered expedients necessary to make self-government among us a straight-forward thing of simple method, single, unstinted power, and clear responsibility, the nearer will we approach to the sound sense and practical genius of the great and honorable statesmen of 1787."

More recently another great American, Thomas K. Finletter, noted: "The question

* * * is whether means, that is the procedures of our Government, are adequate in relation to its objectives, or its ends. The usual pattern has been long periods of negative government interlarded with short periods of strong action * * * The irregular flow of power endangers representative government in the United States. * * * You cannot have a government capable of handling the most difficult problems that peacetime democracy has ever faced with the two main parts of it at each other's throats. * * * A government of fits and starts is no longer good enough for our purposes."

The fifth consideration should be economics. It was Dr. Robert M. Hutchins who recently said: "Our real problems are also concealed from us by our current remarkable prosperity, which results in part from the production of arms that we do not expect to use and in part from our new way of getting rich, which is to buy things from one another that we do not want at prices we cannot pay on terms we cannot meet because of advertising we do not believe."

The Public Affairs Institute further noted: "In the last 12 years three recessions have cost us $113 billion in direct losses and about $300 billion in retarded economic progress. No single person, no business, no public or private institution in America avoided a share of these losses." These are factors that all citizens must face.

Some teach that our leaders in economics are inferior, but there is no reason to believe this. This may be seen in the life of the late John Maynard Keynes: "His genius was manifested in his weighty contributions to the principles of economic science; in his power of securing public interest in the practical application of economics on critical occasions; and, not least, in his attractive prose style * * * to find an economist of comparable influence one would have to go back to Adam Smith."

The sixth, and major consideration in this article, is the influence of ladies in current affairs. Queen Elizabeth II visited Chicago in 1959, and it was a great event. However, the royal lady to contribute the most to world affairs in our time is Queen Frederika of Greece. This royal lady from Hanover was born April 18, 1917, and married King Paul I on January 9, 1938. This union brought three fine children (Princess Sophia, Crown Prince Constantine, and Princess Irene). King Paul almost married a commoner, and no historian knows how much the world would have lost. His queen is now beloved around the world.

Another great lady is described in the recent book "For Conscience' Sake," as follows: "I believe the answer is that a properly disciplined wife often becomes a better wife again than one who hasn't been married before. From a personal standpoint, I can testify, that no man, royal or otherwise, ever had a more wonderful wife than I do. She bore three fine sons to her first husband and he later died. We were married and she has brought much light into my life. I would put her up against any queen who ever lived as to beauty, charm, goodness, companionship, and Christian virtues." While this wonderful lady's name remains unknown to the reader of this article, she must be truly great.

Miss Hazel McCulloch of State Teachers College, Minot, N. Dak., is another rare gem. She started when the college began in 1912 and retired in 1959. We know she has no peer in that State. Not only has she been a dedicated teacher, but she is also a great leader in public affairs. She is the outstanding authority in North Dakota concerning the life of Theodore Roosevelt.

Still another precious gem is Miss Lena A. Hults of the American Federation of Teachers. The organization started on May 9, 1916, and she began on August 18, 1919. When she started, her office was in one room of the home of Secretary-Treasurer Freeland G. Stecker. There are other charming ladies of long service with the American Federation of Teachers too. These are Catherine McGourty, Bernice Blanchard, and Marie Rogers.

The American Federation of Teachers has had the following secretary-treasurers: F. G. Stecker (1916–25), Florence C. Hanson (1926–34), George Davis (1935–36), Irvin R. Kuenzli (1936–53), Clinton Fair (1957), and Paul D. Ward (1958–).

The presidents of this organization have been: Charles B. Stillman (1916–22), Florence Rood (1923–24), Mary C. Barker (1925–30), Henry R. Linville (1931–33), Raymond F. Lowry (1934–35), Jerome C. Davis (1936–38), George S. Counts (1939–41), John M. Fewkes (1942), Joseph F. Landis (1943–47), John M. Ekland (1948–51), and Carl J. Megel (1952–).

Miss Hults, the office manager, has served under each secretary-treasurer and president in an outstanding way. Yes, she is the dean of the organization.

There are some evil men and women. Father James Keller recently said: "Less than 1 percent of humanity is causing most of the world's troubles." Then there is the story of the evil woman:

"Rockabye baby
Up on a writ
Monday to Friday, mother's unfit.
As the week ends, she rises in virtue,
Saturdays, Sundays,
Mother won't hurt you."

Queen Frederika, Mrs. X, Miss McCulloch, and Miss Hults represent the very best in life. These are the kind of people who inspired Blanche Dyer Ballagh to write "Aspiration":

"Give me grace for today
To strew love along the way,
Like rose petals falling,
Winging beauty's array.

"Give me hope for today
To guide those in dismay,
Like dewdrops sparkling
In the sun-kissed spray.

"Give me courage for today
To speak kind words to allay
The burdens of sorrow
Leading someone astray.

"Give me wisdom for today
To help a brother, I pray,
Who at life's crossroads
Cannot find his way."

There might have been an age when the philosophy of the Vikings was proper, but now ladies deserve more status. Of course, there is the exception, as expressed by Playhouse 90 on Thursday, June 25, 1959, in the production "Second Happiest Day," but we hope it will always remain as a rare condition. If the world will follow the noble examples of the four ladies cited, then ladies and current events will be very important in world affairs.

On Dealing With Mr. K.

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. HUMPHREY. Mr. President, for a long time the West, and particularly the United States, will be negotiating with Mr. Khrushchev. I can say from personal experience that Mr. Khrushchev is a brilliant and tough-minded man, and we shall need all the diplomatic skill we can muster in order to deal effectively with him. We shall also have to negotiate from a position of strength.

In this connection, Mr. President, I should like to call to the attention of my colleagues in the Senate a most thoughtful, recent comment by Mr. Walter Lippmann. I ask unanimous consent to insert in the Appendix of the RECORD Mr. Lippmann's column, "On Dealing With Mr. K.," which appeared in the July 16, 1959, issue of the Washington Post and Times Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, July 16, 1959]

ON DEALING WITH MR. K

(By Walter Lippmann)

In our dealings with Mr. Khrushchev the best rule to bear in mind is that in action he is a hard boiled and calculating realist playing without sentimentality the game of power politics. By tradition and conviction he is, of course, a Leninist. But he is of another generation, and where Lenin taught that a Communist revolution would triumph only after a cataclysm of world war, Mr. K. believes that it will triumph eventually not by war but by the example and impact of the growth of Communist states.

The aim of his foreign policy is, therefore, to avoid war, which would arrest the growth of the Communist states, and to promote the influence of the Soviet Union by a foreign policy based on measures short of war. The calculation of these measures is done in terms, not of ideology, but of the balances of power politics.

For this reason the Western statesman who is most likely to impress Mr. K. and even to do business with him is one who is competent and willing to talk to him in terms of the balance of power. If, therefore, the President when he sees Mr. K. talks about our moral and religious ideals, he will get nowhere. In fact, he will probably rekindle the suspicions of Mr. K., who is quite incapable of believing that great states ever act on anything but their interests, as rightly or wrongly they conceive their interests, and within the limits of their power.

If, on the other hand, the President talks to Mr. K. as an old soldier who knows what the last war was, who realizes what a next war would be like, there is a good chance that they would have a meeting of minds. There is no telling how far they could go toward agreement. For there has never been enough realistic talk between men in both countries who are at the top and who actually know the facts about the situation of military and economic power.

By the same token, visits like that of Mr. Mikoyan and Mr. Kozlov, though of some value, are not of any decisive importance. In these visits there is plenty of hustle and bustle and almost no real talking. The same could be true of the forthcoming visit of the Vice President to Moscow. It will not be important if, as on his other voyages abroad, Mr. NIXON acts as if he could build up the influence of the United States abroad by behaving as if he were running for office at home.

Mr. NIXON's visit will be taken in Moscow as a recognition that we regard the U.S.S.R. as an equal power. But whether it will mean more than that will depend on whether Mr. NIXON and Dr. Eisenhower can find in their

own private talks with Mr. K. a basis for useful talks later on by the President himself.

Much has been said in connection with the Berlin affair about the need to convince Mr. K. that the allies are united and are not bluffing. This is certainly desirable. Indeed, it is imperative. But if it is to be done, it must be done in language that Mr. K. understands.

The language he understands is the language of the measure and calculation of military and economic power. In these terms, he almost surely believes us when we say that we will fight back if he allows West Berlin to be blockaded. The West is capable of fighting back and, though it would hate to have to do it, it is irretrievably committed. On the other hand, when Dr. Adenauer says, as he did until recently, that we cannot allow East German officials to operate the control points on the access routes, Mr. K. knows that the West will never go to war about that. Nor will it go to war if he makes a separate peace treaty with East Germany. Nor will it go to war about measures which are short of war. To talk as if the West would go to war under these conditions is in fact to be bluffing.

The moral of this is, I believe, that we shall do better the more concrete and specific and candid we are about what we will and can insist upon and about what we are willing to compromise. In allied quarters there is considerable grumbling about the concessions which we have already made. We have made concessions. But we have conceded nothing that the West has ever been prepared to go to war about. What has been happening is that our original position is being whittled down to the hard core which the realities of power will support. What they will not support will be regarded as bluff no matter how vehemently we assert it.

The Western tactic in Geneva could, but for Dr. Adenauer, have been reversed. We might have started out with a plan for the provisional status of West Berlin, which included the concessions we have made, and was designed to reconcile the security of West Berlin with the Soviet demand and the Soviet need for a greater acceptance, to use Governor Harriman's word, of East Germany. We could then have stood by this plan, negotiating only on details, with a reasonable hope that the Russians would rather have the plan than take the risks of any alternative open to them.

In this tactic we would have made our necessary and inevitable concessions at the outset. Thus, we would have avoided the unpleasant and somewhat embarrassing effect of having those concessions squeezed out of us.

The Advance Fee Racket in Real Estate and Business Loans

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. LANGER. Mr. President, for the past several years I have received letters from constituents in North Dakota who have written me that they have been swindled by agents from outside of the State who claim that they can sell businesses in North Dakota to clients in other parts of the country and charge an added fee.

It turned out that these people of North Dakota did not receive any success in getting their businesses sold although they had paid a subsequent advance fee. We have taken this matter up with the U.S. attorney and the Post Office and learned that this was a problem in other parts of the country also.

Mr. President, that is why I am very happy to note an advance release of July 19, 1959, in which Postmaster General Arthur E. Summerfield noted a major breakthrough had been accomplished in cracking the $50 million advance fee racket in real estate and business loans, victimizing thousands of Americans trying to sell their small businesses or obtain additional working capital.

Mr. President, I ask unanimous consent that this release be printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

MAJOR BREAKTHROUGH

A major breakthrough has been accomplished in cracking the $50 million advance-fee racket in real estate and business loans, victimizing thousands of Americans trying to sell their small businesses or obtain additional working capital, Postmaster General Arthur E. Summerfield reported today.

Reports from Chief Postal Inspector David H. Stephens show that in the first two cases tried in the Federal courts, Postal Inspectors in cooperation with U.S. Attorneys have established that these racketeers can be prosecuted successfully under the mail fraud statute.

This action follows a nationwide, coordinated investigative program initiated last fall under the joint direction of Chief Inspector Stephens and the Criminal Division, Department of Justice.

The "advance fee" swindle defied prosecution prior to recent cases. The racket is described by many authorities as the biggest and most vicious confidence game of recent years because of the huge "take" and its many victims—persons who can least afford it—operators of small lunch rooms, delicatessens, shoe repair shops, barber shops, and the like.

It has been of such serious proportions that the activity was recently investigated by the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations, Mr. Summerfield noted.

By using fast-talking salesmen, impressive looking brochures, and similar props, the advance fee fraud promoters convince persons anxious to sell property or in need of a businese loan, that they have buyers or know the sources where loans can be obtained. The fees range from $100 to $10,000, obtained under the impression that if the promoters do not sell the business or obtain the loan, the victim's fee will be refunded in full. Actually, all that is promised in the routine contract—in small print—is that the promoters will perform an advertising service.

This they accomplish with glossy, impressive looking catalogs and similar brochures mailed to some legitimate real estate brokers or lending institutions, which seldom produce actual buys or loans. By this device, Mr. Summerfield explained, they have been able to stay within the letter of the law—or at least they thought so until postal inspectors entered the picture.

Chief Inspector Stephens reports that the two cases brought to trial in the districts of North Dakota and Iowa, in which it has been established that the promoters can be prosecuted on the basis of intent to defraud—even though they lived up to the letter of the contract—resulted in the conviction of 13 persons with prison terms imposed ranging from 18 months to 5 years.

In addition to recent successful prosecutions, Mr. Summerfield commented that postal inspectors are pressing the investigations of remaining big operators in the racket, which to date has led to the arrest or indictment of 18 others. At present there are approximately 100 investigations of the advance fee racket underway by postal inspectors throughout the Nation.

Acceptance of a fee in connection with sale of businesses or securing loans has, of course, been a legitimate operation of some reputable firms over the years, inspectors note, and none of the current advance fee investigations involve firms of this type. However, persons who are approached with an advance fee proposition to sell their business or obtain a loan should investigate carefully with authorities and responsible organizations such as the Better Business Bureau before paying a fee.

Indiana University Foreign Language Training

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. WAMPLER. Mr. Speaker, I am quite pleased to see come to a mutually favorable resolution what could have been an embarrassing situation between the Air Force and Indiana University.

The Air Force, along with the other branches of the Department of Defense, has for some time been in the process of formulating plans for the establishment, if not further expansion, of foreign language training facilities for the Armed Forces.

To this end, a verbal agreement was entered into between the Air Force and Indiana University for the foreign language training of military personnel.

After the university had expended considerable funds and effort in anticipation of fulfilling the agreement, it became known that the Air Force was actively considering cancellation of the proposal.

However, I have learned that the Air Force has now contracted for Indiana University's foreign language training facilities for the academic year 1960, and that there is a possibility that the contract may be extended for another year.

I include in the RECORD at this point a copy of a resolution bearing on the matter which was adopted by the Indiana Legislative Advisory Commission, which by law speaks for the Indiana Legislature when it is not in session.

The effective efforts of the speaker of the Indiana House of Representatives, Birch E. Bayh, Jr., I consider exceptionally praiseworthy:

RESOLUTION RELATING TO THE PROPOSED CANCELLATION BY THE AIR FORCE OF A VERBAL AGREEMENT WITH INDIANA UNIVERSITY FOR FOREIGN LANGUAGE TRAINING OF MILITARY PERSONNEL

Whereas the Indiana Legislative Advisory Commission is charged by law with the re-

sponsibility of speaking for the legislature when it is not in session, which is now the case; and

Whereas correspondence between the Honorable CARL VINSON, chairman, Committee on Armed Services, House of Representatives, and Mr. Charles C. Finucane, Department of Defense, reveals the fact that pursuant to negotiations by the Air Force with Indiana University for language training, the latter has committed considerable time, effort and money in preparation for the Air Force training. Be it

Resolved by the Indiana Legislative Advisory Commission—

1. That all persons and departments concerned in this matter are hereby memoralized to proceed with the establishment of foreign language facilities for military personnel at Indiana University;

2. That the secretary of the Indiana Legislative Advisory Commission is hereby instructed to send copies of this resolution to Hon. Dwight D. Eisenhower, President of the United States; Hon. Carl Vinson, chairman, Committee on Armed Services, House of Representatives; Mr. Charles C. Finucane, Department of Defense; the Indiana delegation in Congress; Mr. J. A. Franklin, vice president and treasurer, Indiana University.

Adopted by the Indiana Legislative Advisory Commission, July 14, 1959.

The Library of Congress

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. McDOWELL. Mr. Speaker, the American Library Association, meeting in Washington, D.C., in its 78th annual conference, adopted a resolution urging that the Congress take immediate action looking toward badly needed facilities for the Library of Congress.

I include the text of this resolution as part of my remarks:

AMERICAN LIBRARY ASSOCIATION,
Chicago, July 13, 1959.

To the Members of the U.S. Congress:

On behalf of the officers and members of the American Library Association, I am sending you the enclosed resolution on the requested appropriation of $75,000 for the making of plans and estimates for an urgently needed building for the Library of Congress.

This resolution was adopted by the association at its recently concluded 78th annual conference in Washington, D.C. We respectfully request your favorable consideration.

Sincerely yours,

DAVID H. CLIFT,
Executive Director.

RESOLUTION ADOPTED BY THE AMERICAN LIBRARY ASSOCIATION AT ITS 78TH ANNUAL CONFERENCE, WASHINGTON, D.C., JUNE 26, 1959

The American Library Association, meeting in its 78th annual conference in Washington, D.C., June 26, 1959, notes with keen interest House Joint Resolution 352, introduced by Representative BURLESON, chairman of the Joint Committee on the Library, and Senate Joint Resolution 97, introduced by Senator GREEN, vice chairman, to authorize an appropriation of $75,000 for making plans and estimates for an urgently needed building for the Library of Congress.

The association urges that Congress take immediate action on this joint resolution which would provide for new facilities for the Library of Congress which, in addition to serving Congress, serves also as a great national library, complementing the resources of libraries throughout the country.

This resolution to be sent to every Member of the U.S. Congress at the earliest possible date.

Adopted June 26, 1959.

Congratulations to the Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. BARR. Mr. Speaker, today the House passed the first large appropriation bill which I could really understand. We passed the Atomic Energy Commission appropriation bill for fiscal 1960 appropriating $2,374,114,000 to the Atomic Energy Commission for their operating expenses in fiscal 1960. We appropriated $255 million for plant acquisition and construction. This total appropriation was $58,186,000 less than the President requested.

The Atomic Energy Commission is the only one of the big spending bureaus, departments or commissions that has picked up the recommendations of the Hoover Commission and the American Institute of Certified Public Accountants and placed its bookkeeping on a cost accounting basis. A good part of the credit for this achievement should go to one of the early commissioners, Mr. Paul Green, of the Business School of the University of Illinois—our sister State. Under Mr. Green's prodding the Atomic Energy Commission set up its books the way any intelligent businessman would start his accounting procedures.

The results of Mr. Green's farsightedness and the reasonable and intelligent attitude of the Atomic Energy Commission has been that when they come to this Congress for an appropriation, their requests for money are backed up by accurate statistics and facts from a good accounting system. There is no guesswork involved upon the part of the Atomic Energy Commission. The Appropriations Committee, plus the average Member of Congress, has a true picture of what the Commission has on hand, what it intends to spend the next year, and what its program will be for the following years. This is what I mean by an understandable appropriation bill.

The Hoover Commission made one further recommendation, which as enacted into law in the 85th Congress, and that recommendation and that law set up what is called the accrued expenditure method of accounting. This system of course is common to every businessman in my congressional district, but it is a revolution for the United States. So far there has been no effort to put into effect the provisions of this law. Even the Atomic Energy Commission was blocked from using this enlightened piece of legislation. While I congratulate the Atomic Energy Commission on coming to this Congress with figures based on a cost-accounting system, I recommend that they complete the recommendations of the Hoover Commission and come to this Congress next year with absolutely reliable statistics based on cost accounting and expense accrual.

The average Member of this Congress can talk himself blue in the face about budget-busting and saving money, but none of us can speak with real authority until we have the facts. The facts can only come from modern and up-to-date accounting.

Road Materials From Soft Coal

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 21, 1959

Mr. RANDOLPH. Mr. President, when a product—even in the research stage—gives promise of being helpful in improving the durability of highways and airstrips, and, at the same time, holds forth the prospect of providing a substantial new market for coal, West Virginians are doubly interested.

Last Friday an article was published in the daily newspaper of my home city of Elkins which refreshed my memory concerning a sequence of communications which began by letter on June 1, 1959 to the Honorable Patrick C. Graney, West Virginia State Road Commissioner, at Charleston, in which I stated:

As a member of the Subcommittee on Roads of the Senate Committee on Public Works interested in the advancement of highway maintenance and construction, and as a West Virginian desirous of seeing everything possible done to bolster the coal industry and provide distressed areas of our State and others with greater employment, I call attention to apparent progress in the research and development center of the Curtiss-Wrighth Corp. which has been made known to me.

I refer to the fact that (it) claims to have developed and extensively tested in its research laboratories an improved coal based binder for hot-mix, hot-lay bituminous concrete highway and airport surfaces. It is my understanding that the Curtiss-Wright firm desires to share and has offered to share this process with the State Road Commission of West Virginia for road-testing purposes, and I urge consideration of these offers.

In making this recommendation, I am not advocating utilization of any particular firm's commercial product because the new Curtiss-Wright binder for highways is reportedly from a process in the research and development stage which is still under investigation, and, therefore, is not on the commercial market.

But any item such as the Curtiss-Wright binder material discovery which has possibilities of providing new uses for bituminous coal and improved road binding and surfacing should be advocated by those of

us interested in bolstering coal production, increasing employment, and providing better highways. It apparently has other important potential applications which conceivably could bring a real improvements to the West Virginia economy.

I am further informed that the discoverers of the product also assure that it will not require any changes in present equipment used in preparing or using blacktop paving materials because it can be combined in existing hot mix batch plants, and in actual road construction or resurfacing will be handled in the same equipment used by State and local road departments and blacktop paving contractors.

Your comments on the suggestion that this new product of coal research be given road tests in West Virginia, the No. 1 bituminous coal-producing State, would be appreciated.

A copy of the letter quoted above likewise was sent to Commissioner Ellis L. Armstrong of the Bureau of Public Roads, U.S. Department of Commerce.

In the order listed, Mr. President, I ask unanimous consent that the replies received from Commissioner Graney, dated June 12, 1959, and from Commissioner Armstrong, dated June 15, 1959, be published in the Appendix of the RECORD, along with the news story to which I referred earlier, being a United Press International dispatch by Carlo J. Salzano, under the headline, "Make Road Materials From Soft Coal Derivatives Is Object of New Plant," as published in the Friday, July 17, 1959 issue of the Elkins Inter-Mountain.

There being no objection, the letters and newspaper article were ordered to be printed in the RECORD, as follows:

THE STATE ROAD COMMISSION
OF WEST VIRGINIA,
Charleston, June 12, 1959.

Hon. JENNINGS RANDOLPH,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR RANDOLPH: I was very happy to receive your letter of June 1, 1959, and to learn of your interest in the Curtiss-Wright technique proposed by Curtiss-Wright Corp. for the utilization of bituminous coal for highway paving.

We have been investigating this process since it was first announced, in view of the interesting possibilities presented both from the standpoint of the West Virginia coal industry and the improvement of highway pavements.

Immediately upon learning of the new process, we got in touch with the Curtiss-Wright Corp. and have had several conversations with their representative. Arrangements are now being made for an inspection visit by members of our staff to the Curtiss-Wright laboratories at Quehanna, Pa. In addition, we have discussed this new development with the commissioner and chief engineer of the Kentucky Highway Department in order to insure that we keep abreast of and take advantage of the experimental work in connection with this process which is being considered by the Kentucky Highway Department.

At the present time the process is still in a more or less exeprimental phase, no highway service tests having yet been accomplished. Also, there is not yet any experience data from which to estimate the economic benefits which may be derived from the process. However, we intend to follow up this development closely to insure that we overlook no opportunities for improving highway pavements and the increased utilization of West Virginia coal.

As our investigation proceeds, I will be extremely happy to keep you informed upon its progress. Again let me express my appreciation for your interest in this matter.

Sincerely yours,

PATRICK C. GRANEY,
Commissioner.

DEPARTMENT OF COMMERCE,
BUREAU OF PUBLIC ROADS,
Washington, June 15, 1959.

Hon. JENNINGS RANDOLPH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR RANDOLPH: This acknowledges receipt of a copy of your letter of June 1 to the Honorable Patrick C. Graney, Commissioner, West Virginia State Roads Commission, concerning the Curtiss-Wright Corp. road binder.

You may be interested in knowing that members of the staffs of our Offices of Research and Engineering recently visited the Curtiss-Wright Research and Development Center at Quehanna, Pa., to determine the current status of the development work on this new product.

Our representatives find that at present only laboratory research has been conducted. These results indicate that continued research on the material both in the laboratory and in field experiments along the lines suggested by you is definitely warranted and should be encouraged.

Field research programs are being considered in Pennsylvania and Kentucky in which test sections of pavement containing the Curtiss-Wright binder will be constructed and their performance compared with pavements containing other binders now in general use.

Our representatives learned that the State of West Virginia has been apprised of this development and has shown some interest.

Sincerely yours,

ELLIS L. ARMSTRONG,
Commissioner of Public Roads.

[From the Elkins Inter-Mountain, July 17, 1959]

MATERIAL IN EXPERIMENTAL STAGE—MAKE ROAD MATERIALS FROM SOFT COAL DERIVATIVES IS OBJECT OF NEW PLANT

(By Carlo J. Salzano)

CHARLESTON, W. VA.—Deputy State Road Commissioner George E. White, Jr., said today the commission is considering establishing a plant in West Virginia that makes roadbuilding material from soft coal derivatives.

The material, still in the experimental stage, is made through a process developed by Curtiss-Wright Corp., Woodridge, N.Y.

Pennsylvania and Kentucky have contracted with Curtiss-Wright for construction of experimental plants and use of the binder on various highways for testing purposes.

White said the commission plans to obtain some of the binder for limited testing in the Mountain State while considering establishing an experimental plant.

He said results of the Kentucky experiments were being watched closed by the State road commission.

A Curtiss-Wright representative, G. Frederick Brackett, visited Gov. Cecil H. Underwood Thursday after talking with White and Road Commissioner Patrick C. Graney. Underwood was pictured as vitally interested but said the decision on setting up a pilot plant in West Virginia rested with the road commission.

As for the cost of the binder on a commercial basis, Brackett said it could not be determined at this time. But he ventured that it would be competitive with asphalt although four times better in quality.

Brackett added a highway constructed of the new coal-containing binder would require much less maintenance and would have better resistance to skidding than asphalt.

The Federal Government also is studying the material for possible use on the Interstate Highway System, he said.

Brackett estimated it would take about 2,200 tons of coal to make enough binder for 1 mile of highway 20 feet in width. He could not estimate the cost of a pilot plant in West Virginia but said that Kentucky's contract called for a $200,000 facility which included technical help from Curtiss-Wright.

Mr. RANDOLPH. Mr. President, it is gratifying to read the dispatch from Charleston which indicates that the West Virginia State Road Commission has reached the point of giving consideration to the establishment of a plant in the State to produce test quantities of the material discovered by the Curtiss-Wright Corp.

It is feasible that the No. 1 coal-producing State should be in the vanguard of those providing actual road tests of the suitability of this new product. This point was, of course, the central theme of my June 1, 1959, communication to Commissioner Graney as quoted in my remarks above.

Court Critics Strike at America's Vitals

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. COHELAN. Mr. Speaker, under permission to extend remarks in the RECORD, I submit an article by Charles S. Rhyne, president of the American Bar Association in 1957–58, which was published in the July 19 edition of the Washington Post. Mr. Rhyne makes the all-important distinction between "fair comment on decision" of the U.S. Supreme Court and recent attempts to disparage individual Supreme Court Justices themselves and says of the latter:

This kind of criticism may be imparing that (public) confidence, thereby destroying one of the three vital elements of our three-part system of Government.

The article follows:

COURT CRITICS STRIKE AT AMERICA'S VITALS

(By Charles S. Rhyne)

It is possible that the public may be misled by current criticism revolving around the Supreme Court. Too often this criticism goes beyond fair comment on decisions and disparages individual judges, thus striking at the standing of the institution itself.

Public confidence in this Court and in all courts is vital to a proper functioning of our system of government. This kind of criticism may be impairing that confidence thereby destroying one of the three vital elements of our three-part system of Government.

In fact, the Court is doing an excellent job and the great majority of lawyers are of that opinion. In the past two years during

extensive traveling, I have talked with thousands of lawyers. Undoubtedly, some lawyers will dispute my conclusion, but most of them will agree with it.

THEY CAN'T TALK BACK

Our governmental system is erected on three separate branches: The executive, the legislative, and the judicial. The system depends upon each serving as a check on the others. They create a balance of power as insurance that absolute power to form a tyranny will not vest in any one branch. If any one of the three is weakened or destroyed, the system is weakened or destroyed.

Judges of our courts speak publicly only in the discharge of their judicial function. They must bear criticism, even irresponsible and vicious criticism, in silence. These men have given up the right to criticize in order that the rest of us might be secure in that right.

We of the bar have no such restraint upon us. It is, therefore, up to us, the members of the bar, to speak up in defense of our courts as an institution of government. We cannot be content merely to note the comforting fact that an institution which has survived the petulance and displeasure of a Jefferson, a Jackson, and two Roosevelts—to say nothing of the tirades of lesser men—almost certainly has the strength and vitality to survive present attacks.

THE FINAL SAFEGUARD

We as a people boast of rights and liberties, but rights are as nothing without redress and protection in the court. Chief Justice Marshall truly said:

"The judicial department comes home in its effects to every man's fireside; it passes upon his property, his reputation, his life, his all."

Whenever we stop and think, we must recognize that not one of our priceless freedoms—speech, religion, press, even criticism of government—would be safe without the final safeguard of the courts.

Under our system, the role of the courts is to decide justiciable disputes between man and man and man and government. No better institution has yet been conceived of by the mind of man for peaceful settlement of such disputes. Today in all civilized nations, disputes are decided in the courts under the rule of law, which is an application of reason and fairness as developed by the wisdom of the ages.

HUNDREDS OF REVERSALS

Although an aura of mystery surrounds our courts, they are fundamentally a human institution. Judges are human beings subject to all the frailties of the rest of us. They make mistakes—constantly. Many hundreds of cases are reversed yearly.

We have 50 State supreme courts, 11 Federal courts of appeals and a much larger number of other State appellate courts which review the decisions of and reverse the errors of thousands of lower courts. The Supreme Court of the United States sits on top of this hierarchy and is required to review the alleged errors of Federal courts and in some cases the alleged errors of State courts.

Some 1,300 cases a year are considered by the Supreme Court, of which about 100 are heard orally and decided by written opinion. The Supreme Court does not have complete freedom in selecting cases; it must consider those which litigants bring before it.

The cases which percolate to the top usually involve issues of great moment. There are no easy cases in the Supreme Court.

A PARAMOUNT FUNCTION

To function properly, any government, any business, any family requires that decisions be made. Oftentimes decisions are wrong, and upon reconsideration in the light of experience they are changed. But without decisions, progress is stymied and any institution stagnates and dies from inaction. So it is not as important that decisions be right as it is that decisions be made.

Our system is not perfect; after thousands of years we are still trying to perfect our society. Take traffic law and traffic courts, for instance. If we waited until they were perfect before we allowed traffic to move, no traffic would ever move on our streets.

So why do we expect our Supreme Court to be perfect? It was not designed to be perfect, it never has been and it never will be. But having said all that, I hasten to say that as an institution it is the closest to perfection yet devised by man for the type of function it is required to perform to keep our system of government operating properly.

Sir Winston Churchill has called it the "most esteemed judicial tribunal in the world." And it is.

Justices of the Supreme Court of the United States, and other judges, are men, not gods or even supermen. They react to human motivations. They have families and human worries, prejudices, experiences, tempers, peeves, sympathy, antipathy, compassion, sorrows and all the other human attributes that the rest of us have.

Some are conservative, some are liberal, depending upon the definitions one applies—and again they are no different in that respect from the rest of us.

Yet when one stands up before the black-robed Justices of the Supreme Court, he would be inhuman if he did not feel a sense of almost awe. I have appeared in many courts and before hundreds of audiences, yet I still almost lose my tongue as I face the Supreme Court. When these very human judges meet as a tribunal, they meet in an atmosphere of greatness.

Lawyers vigorously argue both sides of every case in the Supreme Court. So close are many questions that the Justices split over the decisions. Sometimes they divide five to four. Again I insist that it is more important that we get a decision than that it be one which 100 percent or even 90 percent or 50 percent of our people agree is correct.

We are going through a period of transition. No matter how decided, the segregation cases and the internal security cases would offend the views and sensibilities of some of our people. Yet these decisions must be made or our system breaks down.

Few people could be in more disagreement with a decision than Abraham Lincoln was with that returning Dred Scott to slavery. His advice on that occasion should be pondered by us all:

"We know the Court that made it has often overruled its own decisions and we shall do what we can to have it overrule this. We offer no resistance to it."

That was the position of a man willing to shelve his personal disappointment rather than lead an attack, as he said, against "our whole Republican system of government—a blow which if successful would place all our rights and liberties at the mercy of passion, anarchy and violence."

This must be the position of our legal profession and the public. We may state why we believe particular decisions to be erroneous. We may endeavor to have them overruled. But we must not disparage the status of our courts as an institution of government by blanket attacks upon the courts, or even a particular court.

Thus, it is not at all disturbing that large numbers of intelligent persons should disagree with the legal reasoning of the Court, the authorities cited, or lack of them, or the ultimate decision. But it is extremely serious that personal insults are now hurled at members of the Court in place of criticism directed at their decisions.

Disagreement is a sure sign of intellectual activity—the freedom of thought which is essential to democracy. But when the disagreement runs rampant in the form of malicious charges directed toward undermining and smearing the opponent, there is cause for freedom-loving men to become alarmed. For this type of attack cares little for the virtue of truth.

In the decisions of the Supreme Court, one can trace most of the significant social, political, and economic trends and developments of our Nation.

The Court began its role as a resolver of great national issues in the classic case of *Marbury* v. *Madison*. The majority opinion by Chief Justice John Marshall stated that conflict between a Federal statute and the Constitution must be resolved in favor of the Constitution, the supreme law of the land. Although this declaration was actually mere dictum, it was widely accepted as controlling on the power of the Court to rule on the validity of Federal statutes.

Opponents lashed out at the language of the opinion. Many eminent men, among them President Jefferson, were extremely critical. They took the position that each branch of the Government had the exclusive power to pass on its own authority. Rational grounds were advanced for this argument.

Certainly many persons must have considered the decision to be a violent misuse of judicial authority. Yet now we look upon *Marbury* v. *Madison* as the very cornerstone of constitutional law. Without this review of the constitutionality of Federal legislation, the basic rights and freedoms we prize would be unprotected. The "gross usurpation of 1803" is the "genius of John Marshall" today.

Never a decade has passed that some great controversial economic, political, or moral issue has not been resolved. Time has proved many of the decisions to be not only correct but brilliant. Others were later seen to be shortsighted or shallow and were overruled. But would we have it otherwise?

Would it be better to have a board of nine pacifiers who would concede some basic value here and withhold a little justice there in an effort to appease, say, 90 percent of the public?

There is certainly nothing wrong with responsible criticism of judicial decisions. Many great advances in our jurisprudence have stemmed from such reasoned criticism by lawyers and scholars. As Justice David Brewer said in 1898:

"It is a mistake to suppose that the Supreme Court is either honored or helped by being spoken of as beyond criticism."

But there is a vast difference between criticism stemming from constructive analysis of particular decisions and the uninformed, misleading statements and insults which are sometimes hurled currently.

Butler's Majority

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 17, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks from the Rock Hill Herald, Rock Hill, S.C., of July 14, 1959:

BUTLER'S MAJORITY

Despite his being under fire from practically all sides, Democratic National Chairman Paul M. Butler says he will continue to express "what I feel to be the majority point of view."

Since Butler's views have alienated the South, the Southwest, and the Catholics, it would be interesting to know what he considers to be a majority.

If he keeps going, it looks like the majority is going to be Republican.

Oceanographic Research

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. JACKSON. Mr. President, despite the fact that this Nation is a major maritime country, our understanding of the ocean is still primitive. We have roughly accurate maps for only about 2 percent of the deep sea floor. The advent of nuclear-missile firing submarines and the prospect of nuclear commercial transport underline the need for a bold program of oceanographic research, capitalizing on the most expert talent our Nation can provide.

In this connection, I wish to bring to the attention of the Senate the informative and interesting article from Time magazine, June 6, 1959, entitled "Ocean Frontier." This article serves as an excellent introduction to the need for an expanded national oceanographic program.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OCEAN FRONTIER

In the uneasy years before the start of World War II, a Navy destroyer nosed through the warm waters off Guantánamo, Cuba. An experimental sonar gadget pinged steadily. It had worked perfectly on other occasions. But here in the Tropics, it saw targets that were not there. It missed targets that were there. The best Navy brains were baffled. So an officer was dispatched to the Woods Hole Oceanographic Institution on the shoulder of Cape Cod.

Down from Woods Hole came the United States's only full-fledged oceanographic vessel, the trim ketch *Atlantis*. Led by a tall, smiling young Harvard professor with the wonderful name of Columbus O'Donnell Iselin II, Woods Hole's oceanographers began dunking thermometers in the water, quickly spotted the Navy's trouble. It was just a question of temperatures, they explained. Tropical sun had heated the water to a depth of 50 feet. The sound waves were bent by this temperature gradient, hiding a sub as effectively as if it were behind a hill. Equipped with a gadget of Woods Hole's devising, a bathythermograph, many a U.S. sub saved itself during World War II by finding a temperature "hill" in the ocean and slipping behind it.

WARTIME ROMANCE

This momentous incident began a wartime romance between the U.S. Navy and oceanographers, whom most Government officials had until then considered a curious tribe of men messing about with sounding leads and little bottles of water samples. In the next few years, oceanographers at Woods Hole and its Pacific counterpart, the Scripps Institution of Oceanography at La Jolla, Calif., trained hundreds of Navy officers—instructing sub men in how to use the sea's geography and mobile anatomy for concealment, teaching destroyer men how to trail their quarry through the sea's jungles.

Oceanographers mapped currents, furnished charts to air-rescue ships looking for downed airmen. Others analyzed the waves coming ashore at La Jolla and at Martha's Vineyard, Mass., were able to predict surf conditions for the landings on Sicily and Normandy. By studying the biology of barnacles, they produced a new, plastic antifouling paint that cut the Navy's fuel bill 10 percent.

NEW FRONTIER

With the ocean now transformed from a barrier to a new and menacing frontier from which guided missiles could be launched upon U.S. cities, the Navy's concern with oceanography has expanded. That concern has brought U.S. oceanographers money, men, and resources they never dreamed of before the war, made their specialty perhaps the fastest-growing science in the world. The oceanographic fleet has grown to 12 ocean-going vessels backed by a swarm of small craft and expanding shore establishments full of expensive apparatus. The Russians have proved equally alert to the ocean's dangers and possibilities, have 14 fulltime oceanographic vessels roaming the seas.

What's more, other scientists have abruptly rediscovered the ocean. Geographers and geophysicists now realize that most of the world's surface lies beneath the ocean, and can now recite glibly the truism that the bottom of the ocean is not as well known as the near side of the moon. Discoveries follow every voyage. Under the Pacific oceanographers have found dep trenches, at least one of them big enough to contain seven Grand Canyons, and a 1,000-mile range of high mountains that no one knew existed until just 1 year ago.

Above its still mysterious floor, the ocean is not homogeneous but is a vast, intricate structure of separate and distinct layers, each with its own character and individuality. In some places the layers curl up and mix; in other places they do not. Through the layers mighty rivers stream on largely unknown courses, often flowing in opposite directions close to one another. Exploration of this huge anatomy is just beginning. Realizing ever more clearly that most weather originates over the oceans, meteorologists are studying its mighty motions as the key to the world's climate. A change in the direction of the flow of an ocean current can change the weather for an area miles inland, shift the course of hurricanes, bring drought to fertile lands or rains to arid deserts. The ocean as a whole is a huge heat-exchange engine carrying heat from the boilers of the Tropics to the condensers of the poles.

In a world going through the throes of a population explosion, earth scientists have rediscovered the sea, remember that the ocean contains the bulk of the earth's life, and that it is probably capable of producing more food than all of the earth's land. Says one oceanographer: "The ocean represents an inner space as important as outer space, but different."

CURIOSITY AND AVOCATION

The man who best exemplifies the growth of U.S. oceanography into a major science is Columbus O'Donnell Iselin II himself. Since the prewar days when he solved the Navy's temperature problems off Guantánamo, he has been long-time director of Woods Hole, seen its full-time staff grow from a prewar 24 to the present 300, its fleet from 1 ship to 5, is now its senior oceanographer.

Born in 1904 to a New York socialite family of Swiss origin, Columbus came to his specialty by a combination of inheritance and intellectual curiosity. The family vocation was banking, but its avocation was sailing. His great-uncle, C. Oliver Iselin, was four times a defender of the America's Cup—"He could afford it—he married two rich women," says Columbus. His father, Lewis Iselin, sailed less gaudily but no less enthusiastically, racing Star boats on Long Island Sound.

At the family's summer home in New Rochelle, N.Y., Columbus learned from the family carpenter how to use tools, built his first boat—called the *Sponge*, because it leaked—at the age of 11. When he was in prep school he was spending school vacations sailing in waters as dangerous as the Bay of Fundy.

When he entered Harvard in 1922, he concentrated at first on mathematics because he thought it had something to do with the banking business. But the sea was in his blood, and in his junior year he discovered Prof. Henry Bigelow who was then officially a zoologist but whose real interest was oceanography. Columbus gave up all thought of banking. He ordered the schooner *Chance* built in Nova Scotia, on graduation set off in her for the icy coast of Labrador with a crew of college students on his first oceanographic trip. The student-scientists fraternized with Eskimos, exploded firecrackers in one another's beds, and otherwise acted their ages, but the *Chance*, loaded with real scientific apparatus, came back with useful data on the Laborador current that chills the New England coast as far south as Cape Cod.

REPORT FOR $3 MILLION

Iselin's demonstration that the little *Chance* (length, 72 ft.; displacement, 37 tons) could do serious scientific work was useful to Professor Bigelow, who was writing a report on oceanography for the National Academy of Sciences. Relieved to find that very large yearly sums for big vessels were not necessary, the Rockefeller Foundation gave Bigelow $3 million to outfit and endow an oceanographic institute. Bigelow set up his institute in Woods Hole—a small town on a narrow strait ("The Hole") connecting Buzzards Bay with Vineyard Sound. The ocean is always a presence there, flowing around the town and through its small, snug harbors. Gray fog often drifts through the town, smelling of the sea, and sometimes hurricanes slam ashore. No better place exists to keep an oceanographer pleasantly mindful of his business.

Iselin helped Bigelow plan the *Atlantis*, which is still the only U.S. vessel to be designed as an oceanographic ship. The *Atlantis* was built in Copenhagen, and Iselin sailed her back to Woods Hole as her first skipper.

RUGGED SCIENCE

A steel-hulled, 142-foot ketch (tall mainmast forward, shorter mizzenmast aft) with berths for 9 scientists and a crew of 17, the *Atlantis* was still a very small ship to cope for months with the North Atlantic in all its ferocious moods. She had a rather feeble engine, but sails were her main reliance. Such a laboratory makes oceanography a

rugged science. While the little ship rolls and pitches, the scientists work round the clock, snatching bits of food and sleep during quiet intervals in their experiments. Dress is informal. In the Tropics, oceanographers favor ragged shorts or underdrawers; on North Atlantic cruises the men are generally cold and wet, and during the first week at sea most of them get seasick. "The best seagoing oceanographers," says Iselin, "are the result of picking over a lot of stomachs."

For the next 10 years Iselin sailed with the *Atlantis*, crisscrossing the Atlantic and doing an oceanographer's chores—trailing thermometers at varying depths, testing water for density and salinity. In 1940 he became director of Woods Hole, saw U.S. oceanography transformed into a naval auxiliary. For some reason, neither the German nor the Japanese navies ever got in touch with their oceanographers, who were excellent. "This made a hell of a difference in World War II," says Iselin.

GOLDEN AGE

War's end marked the beginning of the golden age of U.S. oceanography. For the first time in its life, Woods Hole had enough money. More Navy millions went to California's Scripps Institution of Oceanography, which matches Woods Hole in growth, and claims, with California confidence, the whole Pacific Ocean as its domain. Dr. Roger Revelle, director of Scripps, is an enormous man (6 ft. 4 in.) who looks as if he were specially designed, both physically and temperamentally, to study the Pacific Ocean. He asks such large questions as: "Where did the sea water come from? Are the oceans growing or diminishing? Are the continents growing?" He believes that study of the oceans, including their floors, their arcs of islands and their plunging deeps, will answer all these questions.

The war contributed more than money. War-developed sonar made depth measurements far more sensitive, giving oceanographers a more accurate look at the ocean's bottom than they had ever had before. The new loran, which can fix a ship's position within a quarter of a mile in daylight, night, or in the thickest fog, enabled a far more detailed and accurate study of ocean currents, and oceanographers launched zealously into new studies with their new tools.

ARTERY AND STABILIZER

Ocean currents are of interest not just to navigators. They are the arteries of the ocean; they carry warm and cold water around the earth; they churn up and interchange cold bottom water for warm surface water. The so-called deep water—comprising about 90 percent of all the ocean's water—hovers around 40° F., and acts as a huge stabilizer of the atmosphere's temperature. If, through some imbalance of nature, the earth received an extra 1 percent of heat in the course of a year, it would, applied to the air alone, raise the atmosphere's temperature an intolerable 27° F. The same amount of heat would raise the deepwater's temperature only 0.02° F. "Therefore we think that its circulation, or the rate at which its water is brought up to and taken down from the surface, profoundly affects the climate," explains Revelle.

Classic example of just how much difference a change in current can make occurs on the coast of Peru, which owes its cool, foggy but almost rainless climate to the cold Peru Current sweeping up from Antarctica. Once in every 10 years or so, a current of warm water called El Niño (because it appears near Christmas, the birthday of El Niño, the Christ child) creeps stealthily down the coast. With it come tropical rains and disaster. Floods roar through dry valleys. Buildings not designed for rain leak or collapse. Worst of all, the warm water, which is only 100 feet deep, drives cold-water fish below the surface, Peru's famous guano birds, which feed on the fish, starve by the million, heaping the beaches with their corpses.

DEEP AND NARROW

Before the war, even such well-known currents had not been thoroughly mapped in detail. For Woods Hole oceanographers, the first order of business was a new study of the great Gulf Stream, which exports tropical water to northern Europe. With the aid of loran, the new *Atlantis* surveys proved that it is not a wide, steady stream, but a jet that whips from side to side over hundreds of miles and sometimes curls into eddies. It may run fast or slow or backward, and only the general sum of its motion carries warm water to Europe.

But the major discovery of postwar oceanographers was that huge currents flow far below the surface, often these currents move faster than their surface counterparts. One such discovery come in 1951, when the U.S. Fish and Wildlife Service sent a ship west of the Galapagos Islands to experiment with a Japanese technique of fishing for deep-swimming tuna. The scientists were surprised to see the fish lines drifting eastward while their ship was carried westward on the well-known equatorial surface current. The next year the Service's Townsend Cromwell established the reason, a hitherto unsuspected current, deep below the surface current and moving in the opposite direction. Later investigation revealed that the Cromwell Current is a tremendous thing. It is 250 miles wide, at least 3,500 miles long. Three hundred feet below the surface, its high-speed core flows eastward at up to 3 knots, carrying 1,000 times as much water as the Mississippi.

Years of patient measurements of water temperature, salinity, and density have begun to pay off by providing oceanography with a substructure of theory. Doubting the conventional view that ocean currents are simply streams of water pushed around by prevailing winds, Henry Stommel of Woods Hole analyzed thousands of such observations, predicted that a current would be found flowing under the Gulf Stream in the opposite direction. In 1957 the *Atlantis* and the British oceanographic ship *Discovery II* went looking for this current. Their tool was an ingenious buoy invented by British Oceanographer John C. Swallow, which sinks slowly until it reaches a level where the sea water, compressed by the weight of water above it, has the same density as the buoy. There, the Swallow buoy hangs and drifts with the deep-down water, broadcasting strong pings of ultra-sound that can be heard by listening ships on the surface. Dumped into the Gulf Stream, the Swallow buoys proved that Stommel's theory was exactly right. About 8,000 feet under the famed stream is a counter Gulf Stream carrying cold water southward at one-third of a knot.

NO QUIET PLACE

This discovery gave a wholly new look to theories about the circulation of the Atlantic. The long established notion of nearly stagnant ocean depths is now doubtful. Photographs taken of the bottom show ripple marks much like those caused by tidal currents on bathing beaches. Ocean basins with ripple marks on their bottoms must have been stirred by currents at some time in their past, and they may be stirred still.

The problem is not just academic. If the oceans are to be used for the disposal of radioactive wastes, oceanographers must find stagnant basins where wastes can be dumped with assurance that they will stay out of circulation until their activity has been stilled by time. Warns Iselin: "If you louse up the ocean with atomic waste, you louse it up for thousands of years. The British pump stuff into the Irish Sea, which can take a lot. But one day * * *."

NEW ICE AGE

Oceanographers believe that man is approaching the point where he can try large-scale experiments on the ocean. Not all of them like this prospect; they feel that tinkering with the ocean without sufficient knowledge may be extremely dangerous. They are aghast at the project much discussed by the Russians, of using atomic energy to clear the Arctic Ocean of ice to help Siberian sea transport. Dr. Maurice Ewing, of Columbia University's Lamont Geological Observatory believes that the Northern Hemisphere's comparative freedom from continental glaciers is due to Arctic ice. Winds blowing off the Arctic Ocean are now dry, but if the ice were removed, they would become moist, dropping snow on nearby lands. The snow would pack into ice, and glaciers would start creeping south. Once the process was started, it might be impossible to stop before icecaps covered large parts of Europe and the United States.

Another risky experiment with the oceans may have already been tried inadvertently. The temperature of the earth's surface depends to a considerable extent on the atmosphere's small content of carbon dioxide (about 0.03 percent), which permits short-wave sunlight to pass but impedes the escape of longer heat waves into space—the so-called "greenhouse" effect. Since 1860 modern man's furnaces and auto exhausts have spewed out 360 billion tons of carbon dioxide. Warne Revelle: "By 2005 we will have added to the atmosphere some 1,700 billion tons of carbon dioxide—about 70 percent of the amount now present in the atmosphere. We believe that most of this will be absorbed by the ocean, but this means that the carbon dioxide in the atmosphere, if nothing else happens, will increase about 20 percent."

Result could be that air temperature would increase by 1° to 2° C. "Southern California might dry up completely if the temperature rose in the way we think it might—making it an impossible place to live, rather than almost impossible the way it is now." The ocean will also grow warmer, and will be forced to release dissolved carbon dioxide to the atmosphere. This will increase the "greenhouse" effect. At some point in this chain reaction, the Antarctic icecap will melt, adding enough water to the ocean to drown nearly all of the earth's great cities.

No one can estimate for sure the ocean's ability to absorb CO_2. But man's future may depend on it. Concludes Revelle: "Man is moving and shaking the great globe itself in spite of himself. We may be disastrously changing the climate."

SWARM IN SUNLIGHT

With their mounting knowledge, oceanographers are talking with new confidence of the ocean as a source of food. Life began in the sea, and most of its lives there still, grazing on the microscopic plants that swarm in the sunlit upper waters. At the end of a long food chain (diatoms, protozoa, tiny crustaceans, little fish, etc.), are the fish, lobsters, shrimps, and whales that are hunted by humans. Says Iselin: "We are not harvesting the seas. We are just hunting—catching something here and there."

Oceanographers are helping the hunters by plotting the trials fish follow, which are

mostly determined by shifting ocean currents and the consequent shift in water temperatures. But they are also thinking about the possibility of fertilizing the ocean. Some parts of it are naturally rich and boiling with life. The water of breaking waves in such areas is green and turbid because it is full of miscroscopic plants and animals grazing on them. But large parts of the ocean are deserts with hardly any life. Their breaking waves are sapphire blue, the color of clear and lifeless water. Fish migrate away like cattle from a grazed-out range.

In fertile parts of the sea, the surface water is kept supplied with nutrients by some sort of upwelling that brings rich bottom water to the surface. In far northern and far southern parts of the ocean, the surface water gets so cold and heavy in winter that it sinks and is replaced by bottom water that contains plant nutrients. Currents carry these nutrients to other seas, e.g., the Labrador Current off the Newfoundland banks, the Peru Current off the coast of South America, and produce rich fishing grounds.

Unless they are fertilized by currents from colder areas, tropical seas are largely sterile. Since the richest harvests of the sea derive from bottom water rising to the surface, oceanographers have long had the notion of creating artificial upwelling in sterile parts of the ocean. One possibility is a nuclear reactor sitting on the bottom and slightly warming the water around it. The warmed water will rise, carrying nutrients to the surface and turning clear water, admired only by tourists, into rich, turbid pastures. Another way would be to pump deep water into some closed area, such as a Pacific atoll, to make a kind of concentrated fish farm.

SERPENTS IN THE DEPTHS?

Despite the new outburst of exploration, many mysteries remain. The creatures that live in the depths of the ocean are still only slightly known, and they may include the famed sea serpents of salty folklore. Sea-serpent sightings have diminished of late, but Revelle thinks this may be because fast, noisy, modern ships make poor platforms for serpent sighting. Sperm whales dive for gigantic squid up to 50 feet long that live at great depths and have never been captured by man. Why should not the squid have companions down there?

Chief sea-serpent man is Biologist John D. Isaacs, who is working out ways to catch the inhabitants of the depths of the ocean. One under study is a disk several hundred feet in diameter, with floats around the edge and ballast in the center. When it reaches a predetermined depth, the ballast will be detached, and the floats will pull the net upward. As it rises, it will inflate with water just as a parachute inflates with air, scooping up any giant squid and sea serpents on the way.

FOSSIL VOLCANOES

Geologists and oceanographers who look to the ocean's bottom have found that the ocean is a gigantic museum, where geological specimens are preserved like flies in amber. Among the most interesting of these geological specimens are the guyots, the flat-topped extinct volcanoes that dot the Pacific floor. How did they get down there, the oceanographer asks. Did their weight force them into the earth's crust, like corks pushed into putty? Did the ocean increase in volume and rise above them?

A recent discovery is evidence that an enormous volcanic eruption may have darkened the sky when man was in his stone-chipping stage. Cruising down the west coast of South America, Lamont's *Vema* discovered a layer of clean white volcanic ash up to 12 inches thick. Other explorations have found layers of similar ash in many parts of the Pacific and Atlantic. Dr. Ewing suspects that all the ash came from a series of stupendous eruptions along the spine of the Andes, estimates the date as 68,000 years ago. It must have been a black time for paleolithic man.

MYSTERIOUS TRENCHES

An ocean-bottom problem that fascinates all oceanographers is the origin of the deep troughs that are found mostly in the Pacific. The deepest ones, e.g., the Tonga Trench, the Marianas Trench, have narrow V bottoms that are clear of sediment. They are uneasy parts of the earth's crust. Deep-focus earthquakes rumble out of them, and generally volcanoes spout nearby.

Dr. Revelle suspects that the trenches may be part of the mechanism by which continents grow. The first step, he thinks is for a slow current in the earth's plastic mantle to start flowing horizontally and then curve downward (see diagram). Where it makes the dive, it drags down a strip of the crust, forming a V-bottomed trench which after many millions of years fills with sediment. Eventually the downward current in the mantle stops flowing. Since the mantle rock at its sides is heavier, it moves in, forcing upward the dragged-down crust and the sediments in the trough. Final result is that the former trench pokes above the sea, appearing as an arc of islands set with volcanoes, like Japan, or a curving shore of young mountains, like California.

Only a small part of the ocean bed is yet known in any detail. Recent surveys have shown that large areas of the bottom are covered thickly with rounded, blackish nodules that have grown as crusts around some nucleus, sometimes a shark's tooth. They are mostly iron and manganese oxides, but they often contain considerable amounts of copper, nickel and cobalt. "The amounts are absolutely staggering," says Dr. Henry Menard of Scripps. One 10-million-square-mile area in the Pacific, he estimates, has nodules worth hundreds of thousands of dollars per square mile.

NEW IMPROVEMENTS

Today oceanography is working to perfect its tools. There are intelligent buoys, which can be anchored at sea, and queried by radio for oceanographic and meteorological data. Other buoys sink to the bottom, where they can record currents, take pictures of their surroundings. They will be brought to the surface months later by a small charge of TNT exploded near by, which triggers their ballast-release mechanism.

Columbus Iselin's pet gadget is a monstrous underwater noisemaker developed at Woods Hole. Ordinary echo-sounding devices for exploring the bottom use relatively feeble waves of ultrasound whose delicate echoes are apt to get lost in background noise. Another common system is to explode TNT and pick up the echoes of the powerful shock waves that it sends to the bottom. But explosions are cumbersome, expensive, and dangerous.

The "Imp" (for impulse generator) is a massive steel casting with two flexible hoses for high-pressure hydraulic fluid sticking out of one end. At the other end is a metal diaphragm about 8 inches in diameter. Inside are extremely powerful springs, cocked by hydraulic pressure. When the springs are released, an internal hammer hits the diaphragm and a single, enormously powerful pulse of energy strikes through the water. The Imp now at Woods Hole gives a shock equivalent to the explosion of a good-sized block of TNT, and Imps several hundred times as powerful are a possibility. They can be suspended under a ship or built into its hull, sending down waves that will strike through the bottom sediments far into the rock beneath.

PISTOLS AND TROLLEY CARS

Iselin has not forgotten that his money comes chiefly from the Navy. Though he does not say so out loud, it is obvious that a device like Imp, which simulates the effect of a controlled explosion, could be far more effective against subs than present electronic devices for echo ranging. Says Iselin: "We know that sound pushed out by explosives can go, at some levels, for thousands of miles. There isn't an ocean in the world big enough to lose the sound of a pistol fired at the right depth." He is fully conscious of what such an improvement could mean for U.S. security. "If Mr. Eisenhower could say to Khrushchev, 'We can see every one of your submarinese in the seas around us,' we would be in a far better cold-war position today." Iselin is unimpressed with present nuclear subs. The powerplants are too noisy. "Going to war in a nuclear sub is like going duck hunting in a trolley car," he says.

Oceanographers are also busy producing detailed maps of new currents, temperature gradients and the topography of the ocean floor, so that a U.S. submarine, submerged for days, can have an accurate idea of where it is when it launches its missiles. "Any future war at sea will be one between Indians and city boys," he explains. "We want to be sure our boys become the Indians. They can learn to take advantage of the terrain they live in." Even study of waves can prove useful. "On an aircraft carrier, the system now is for a guy to stand at the end of a flight deck. He feels the rhythm of the waves through the crepe soles of his shoes, and lets the plane land or waves it off depending on the feeling he gets underfoot. A machine could do this far better, perhaps also introduce balancing stability effects to make more landings possible."

Today U.S. oceanographers have a wary eye on the Russians, some of whose vessels are far in advance of anything the United States has at sea. Partly because of this pressure, U.S. legislators did not flinch at a report by the National Academy of Sciences recommending an appropriation of $58 million for oceanography for 1960, and there is a good prospect it will be voted.

But like all true scientists, oceanographers are only incidentally interested in the military overtones of their science. They hope that knowledge of the oceans will lead to knowledge of the earth, then of the solar system and the Milky Way galaxy. It may help answer such questions as: Why are we here? Where did we come from? Where are we going? "Adolescents ask these questions," says Revelle, "but grown men do not. It is not because they are unimportant questions, but because grown men have given up." The oceanographers have not given up.

Or, in the words of Columbus Iselin: "The cold war and the scientific effort run parallel much of the time. They're both geared toward our learning more. Each has a different motivation. One is survival, and the other is curiosity."

Equality in Bank Taxation

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Journal of Commerce on Tuesday, July 14, 1959:

EQUALITY IN BANK TAXATION

It is regrettable that a major split has developed between savings and commercial bankers on the issue of unequal taxation of

these two segments of banking. This split, climaxing a long smoldering feud, promises to lead to resignations of savings institutions from the American Bankers Association and a consequent closer alignment between savings banks, savings and loan associations and perhaps credit unions for a new internecine war in the banking field.

For a great many years, commercial banks, struggling to build up capital funds out of the narrow margin of earnings left after expenses and taxes, have been galled by the fact that mutual institutions have been building up their reserves and surplus without payment of income tax. Even when mutual institutions were made subject to the Federal income tax, earnings in excess of expenses and payments to depositors could be added to reserves without payment of tax if the ratio of surplus and reserves to deposits was less than 12 percent.

Since very few institutions have a surplus and reserve ratio of more than 12 percent, mutual thrift institutions in effect have generally not paid income taxes. One effect of this has been that they have been able to pay higher rates of return on savings. Another is that they have retained their earnings above expenses and interest in full to permit rapid growth of deposits.

The American Bankers Association and other commercial bank groups have united in support of the Mason bill, the latest of a series of proposals designed to tax retained earnings of mutual thrift institutions.

Since this proposal could result in disallowance in some cases of the deduction of a part of the interest return paid on savings, it sets a precedent that could prove mischievous.

But more important than the details of the Mason bill or other proposals to achieve bank tax equality is the need for formulation of a national policy as regards bank taxation that would be both equitable and economically sound.

Mutual thrift institutions have a favored position under the tax law because it is a cardinal objective of national policy to foster thrift. More savings are urgently required to finance economic growth and to lessen the threat of inflation.

Commercial banks, as well as savings banks and savings and loan associations, are major thrift institutions. Hence, a strong case exists for extending to them any favorable tax provisions that apply to mutual thrift institutions. This is already done in the case of the savings and loan associations that flourish on the Pacific coast which pay a limited dividend on investment shares, so that the rest of the earnings belong to the founders' shares that are now being acquired by holding companies.

The grievance of the commercial banks has a real basis, especially for the many institutions that are eager to build up their savings deposits. But the solution is not to be found in tax legislation that undermines and weakens the mutual thrift institutions.

A sensible and economically sound solution would be to permit commercial banks to set aside special reserves or surplus for their savings deposits out of tax-free income left after paying expenses and interest on these deposits.

Commercial banks would then be placed on a plane of equality with the mutual thrift institutions. They could build up surplus and reserves, to margin the expansion of their savings deposits, out of earnings that are not taxed, up to amounts that would be specified in the law or regulations.

The Federal Government collects its taxes on the interest received by savings depositors. Any loss of tax revenues on the additions made by savings institutions to reserves and surplus is a small price to pay for maintaining the strength of these institutions and stimulating personal savings.

So much for the real issues and what might be done to solve them. Meanwhile we cannot help noting that the Mason bill is a bad one and shows every sign of haste and lack of study in the drafting. It should never have been endorsed in its present form by an organization as important as the American Bankers Association.

You don't solve inequalities, in taxes or in anything else, by creating new ones.

Drop by Drop, They're Giving Me Life

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. FOLEY. Mr. Speaker, rarely does documentary reporting have such a personal meaning that its message is universal. When such reports are made, they merit special attention. A few weeks ago, such a personal report was made by an old and good friend of mine. Leo Paulin, of Bethesda, is a friend of thousands in the Sixth District of Maryland. His Paulin Publishing Co. has conceived and sponsored many charitable enterprises. Inestimable good has resulted from his efforts. His public spirit was most recently displayed, while stricken with a serious illness, by reporting the need for blood donors. Because of its timeliness and importance, his report deserves inclusion in the CONGRESSIONAL RECORD.

DROP BY DROP THEY'RE GIVING ME LIFE
(By Leo Paulin)

SUBURBAN HOSPITAL, July 2, 2:30 p.m.—Normally when I write I'm pecking away at a loyal Royal. But I am not typing this piece. I'm on my back dictating from a hospital bed.

Suspended from a metal pole some 3 feet over the head of my bed is a pint of blood. Drop by drop, the blood flows through a plastic tube into my veins via a 3-inch needle. Drop by drop, they're giving me life. I don't know whose blood it is that is now flowing in my veins, but to that unknown donor I'm forever grateful.

I came to Suburban last Saturday because I was losing tremendous quantities of blood. Late Saturday afternoon, I had passed the safety stage—I lost consciousness.

It's a very pleasant experience, losing consciousness. Things don't go black; they just softly disappear. It's a real peaceful sensation. It's peaceful when you go under and peaceful when you come out.

In a matter of minutes after my return to the world of the living, I got my first blood transfusion, the first of my life.

During my lifetime I have given blood many times, and through the pages of the Advertisers I have passed on appeals from the Red Cross for blood donors. I never really appreciated either act until now when I find myself on the receiving end.

Unfortunately, hospitals can't buy blood at a supermarket, or at a corner drug store (even at Discount Drug). Hospitals have to depend upon those of you in good health, with compassion in your hearts, to fill the hospital blood needs.

And believe me, those needs are great. Yesterday, here at Suburban, the blood bank issued 22 pints of the precious fluid. Only one pint was replaced.

In my own case, the good Samaritans whom I herewith proudly name replaced my take from the bank: Dick Kraft, Mary Caldwell, Harry Monroe, John Mattina, Dick Graham, Joe Fortuna and Warren Castell.

But what about those 22 pints yesterday? Only one was replaced. Who's going to replac the other 21 pints?

Suburban Hospital is trying to build its own blood bank. Will you call Suburban today (Oliver 6–6000) and make an appointment to share a pint of your life with another human?

As I lie here dictating this, I am trembling slightly, not because it hurts, and not because of fear. I am trembling at the thought of my plight, if there was no blood in that bottle over my head to give me life.

The Steel Strike—a Causative Analysis

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. MOORHEAD. Mr. Speaker, the steel strike is everybody's business because every additional day it is in progress its impact will reach out to touch more and more citizens like the expanding ripples from a stone cast upon the waters.

Today it is the worker in an industrial center like my city, Pittsburgh, who is feeling the strike. In time it will affect every citizen of the United States.

An enlightened public opinion will be a powerful force in helping to bring about a fair and just settlement.

Thus, the strike's causes, like its effects, are matters upon which as much light as possible should be shed.

We have heard many reasons advanced to explain the cause of the strike.

One such explanation is contained in the following article by Mr. Max Lerner which appeared last Wednesday, July 15, in the New York Post.

In the belief that the public will be best served in this public matter by having the benefit of many points of view, I insert Mr. Lerner's article in the RECORD and commend it to my colleagues.

Get ready for an onslaught of editorials from most of the papers, deploring the steel strike and hoping piously that each side will put the public interest ahead of its own. But this is one time when the formula makes precious little sense. If this strike proves costly to everyone, as it is bound to be, the responsibility must rest with the steel industry executives who sit in the seats of the mighty, and who feel secure enough to take on the Steelworkers Union in the kind of showdown fight the industry has had only once in more than a quarter century.

Whatever else one may think about Dave McDonald and his outlook, I don't see how anyone can deny the earnestness with which he tried to get a settlement that would avoid a strike. The one thing he could not offer was unconditional surrender—yet that was exactly what the industry negotiators demanded when they insisted on a wage freeze. When finally the steel executives—under Administration proddings that were too little and too late—did agree to discuss a wage increase, they tied it again to an impossible

condition—unconditional union surrender on the question of local job practices.

All great strikes are greatly wasteful, and generally they end up with each side worse off than it was at the start. Most of them are avoidable. But some take place because one of the parties in effect wills it, by taking a position so rigid that the strike becomes inevitable. This was one.

I know, of course, that the steel companies have been playing up their position as one of anti-inflation statesmanship. The top negotiator for the corporations, R. Conrad Cooper, says they cannot "in good conscience be party to another round of the inflationary spiral." Usually when someone puts his hand on his heart and swears "in good conscience," you suspect that he has not been on speaking terms with his conscience for some time. Cooper is in a good position, however, because the Administration has been making such a palaver over the inflation danger for months, and a large section of the press has joined it.

Thus President Eisenhower and Vice President Nixon have created the perfect climate of opinion for the intransigence of Mr. Cooper and his corporate colleagues. There is some evidence that they may have felt very uncomfortable about it. They suggested (so the report goes) that the skies would not fall if the steel industry made a package wage offer which it could absorb out of its very substantial profits without passing it on to the buyers of steel. But all that Cooper needed to do was to look virtuous, talk of principle, and quote to them their own warnings about inflation disaster. They had built a gallows and strung a noose, to catch the Democrats—and now they were themselves caught in it, at least in their usefulness as mediators. It didn't do any good for Nixon and Labor Secretary Mitchell to say (through President Eisenhower) that agreement could be reached even at the last minute. McDonald, for the union, offered to sit on indefinitely at the negotiation table, but what use was his willingness when the corporate heads felt so sure?

They were sure of the inflation weapon, they were sure because they had built up a considerable steel reserve which should last them for some time, they were sure because they do not regard McDonald as a dangerous opponent. In a sense the steel barons are the bellwether for the rest of the industrial power elite, whose labor bargaining in the future will largely be shaped by what happens in steel. They would obviously rather have a showdown with McDonald than, for example, with Walter Reuther.

A book with an interesting theme has just been published—"Image of America," by a French Dominican priest, R. L. Bruckberger. He celebrates the whole American economy as an effective and clinching answer to the Marxist theories. What we have, he says, is not capitalism: In fact, it is anticapitalist, and he cites Henry Carey, Henry Ford, and Samuel Gompers as proof that we have shaped a "third way" answer to the problem of economic organization and economic justice.

He has a whole chapter on American labor, called, "Samuel Gompers and Lenin," in which he shows that the American trade union movement cares far more about the workers than do the so-called proletarian leaders of the Communists.

The book is getting a big play, and Americans of substance are so busy patting themselves on the back for their wisdom and genius that they can't keep their eyes looking straightforwardly at the steel industry and what is happening there. The fact, if you read what has been happening with a cold eye, is that the steel corporation leaders are applying the Marxist principle of the class war to their workers. But this is not a class war from the bottom up, forced on employers by revolutionary working-class leaders. It is class war from the top down.

If you read the history of the steel industry, you will find that from the first blast furnaces but a century ago, until 1936 and the CIO, the steel barons like Carnegie, Frick, and Gary waged a class war. They broke the unions, they used spies and Pinkertons, they sewed up their company towns against union meetings, they kept a 12-hour day until 1923—20 years after other industries had abandoned it.

Since 1936, when Myron Taylor and John L. Lewis reached the first great steel agreement without violence, the industry has been the scene of orderly bargaining. Do the present events mean that Mr. Cooper and and his comrades want to go back to the days of Homestead and the class war?

No Money Tree in Washington

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. SPRINGER. Mr. Speaker, I append herewith a very cogent editorial from the Decatur Herald, Decatur, Ill., of Saturday, July 18, "No Money Tree in Washington." How true most of us are finding it in Washington now. The people back home understand that nothing from Washington is free:

NO MONEY TREE IN WASHINGTON

Regarding the Federal Government as the source from which all financial blessings flow has become an occupational disease with many municipal and State officials, even those who cherish local autonomy and resent Federal intervention.

Mayor Robert Egan, of the expanding city of Flint, Mich., went to Washington to tell members of the House Banking Committee of the city's urgent need for help to finance water and sewage projects.

It would be just fine, he said, if Congress would pass a proposed $1 billion, low-interest rate Federal loan program for public health projects.

However, Representative WILLIAM B. WIDNALL, Republican of New Jersey, after listening to the mayor's testimony, asked why the city didn't borrow money on its own when it had an excellent credit rating and had no trouble selling bonds for municipal improvements. Why should the Government borrow money at more than 4 percent he asked, and then lend it to Flint at a cheaper rate?

The mayor replied "I am merely looking for an easy solution to the question." His frankness perhaps should be appreciated. This is not to single out the city of Flint which has a good record of civic progress financed by its own endeavors. But as Mr. WIDNALL put it: "There seems to be a tendency on the part of a lot of people to feel that when something is financed by the Federal Government, it doesn't cost them anything."

Fifty years ago less than one-third of all governmental expenditures were made at the Federal level and two-thirds by the States and localities. Now, this ratio is just about reversed.

One of the reasons for the decline of the authority of State and local governments, much lamented by many who seek Federal grants, is undoubtedly this very fact. If the Federal Government disburses two-thirds of the public funds, it is not unreasonable to expect that the Federal Government will exert at least two-thirds control over how the money is to be spent.

In many cases, the Federal Government is best equipped to do the job—defense, multi-State water resource development and interstate highway development, to mention a few.

But anyone who thinks he gets these services free should be investigated by the Internal Revenue Service because he apparently isn't paying his income tax.

Mailing List Brokers Pledge Fight Against Misuse of Lists by Peddlers of Pornography

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mrs. GRANAHAN. Mr. Speaker, in the hearings and investigations of the Postal Operations Subcommittee of the Committee on Post Office and Civil Service into the vast flood of pornography being distributed by mail, we quickly determined that many of the young victims of this vicious racket received the material through the mail after having been placed on the mailing lists of presumably legitimate mail order firms. It therefore was obvious that the smut publishers were buying or renting all sorts of mailing lists, and particularly those containing the names of youngsters.

Under the circumstances, I am pleased and delighted to have received a letter from the president of the National Council of Mailing List Brokers outlining the vigorous opposition of that industry to the misuse of mailing lists by having them fall into the hands of publishers and distributors of obscene material.

I congratulate the organization for taking this position and I hope their members will carry through and devise tighter controls over the use of the mailing lists which they control. The letter to me, which I think will be of interest to all Members concerned over the pornography problem, is as follows:

NATIONAL COUNCIL OF
MAILING LIST BROKERS,
New York, N.Y., July 15, 1959.

The Honorable KATHRYN E. GRANAHAN,
Chairman, House of Representatives Subcommittee on Postal Operations of the Committee on Post Office and Civil Service, Washington, D.C.

MADAM CHAIRMAN: We want to congratulate you, the other members of the subcommittee, Postmaster General Summerfield, General Counsel Warburton, and Chief Inspector Stephens for bringing this whole subject of pornography out into the open and for your strenuous attack upon this evil.

On Wednesday, July 8, a member of the National Council of Mailing List Brokers called on Chief Inspector Stephens in an effort to gain an understanding of the pornography problem. Mr. Stephens was very courteous and helpful in explaining the problem to him, and showed him an exhibit of pornography that has been gathered under Postmaster General Summerfield's direction.

The council member was so shocked at this exhibit that an emergency meeting of the Council of Mailing List Brokers was called for the following day to decide on how we might support the campaign against pornography.

The National Council of Mailing List Brokers was organized in 1943 for the purpose of improving the ethical standards for the trading in mailing lists between owners and users. The members of the council handle the vast majority of mailing list rentals in the United States. Over the years the council has been a major factor in the improvement of the ethics and integrity of list handling. The council has constantly striven for high standards in direct mail, and every member has always refused to accept orders for mailings which he considered off color.

The distribution of such lewd and obscene material has a debilitating effect upon family life in the entire country. The availability of this vicious material to children undoubtedly contributes to the growth of juvenile delinquency. Every citizen, every businessman should cooperate with all levels of government to the end that pornography be stamped out.

Your subcommittee may be certain that we will do collectively what individual members of the National Council of Mailing List Brokers have done in the past: make every effort to intercept and stop the dissemination through the mails of any pornographic matter.

Feel free, Madam Chairman, to call upon us at any time if you have any suggestions as to how we might further assist your committee in its task of eliminating the distribution of pornography.

Respectfully yours,

FELIX R. TYROLER,
President.

EDITH DREY,
Chairman.

ARTHUR MARTIN KARL,
Chairman, Postal Committee.

A Report on Inside Information of Communist China

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a translation made by Stephen C. Y. Pan, Ph.D., of New York City, of a report on the inside information in Communist China, given by Cheng Chu-Yuen, an expert on Communist China's economy, at a recent meeting of the Sino-American Amity of New York City, and later appearing in the China Tribune of New York City:

During the past 10 years the Chinese Communist regime has followed these four principles:

I. COLLECTIVISM OF ECONOMY

The most important practice under this principle includes concentration on (a) farm products, (b) commercial and industrial products, as well as (c) distribution of daily necessities. The first two items are used to control all the productivity and to take away all the property from each and every individual so that they all become proletarians. The last item is for the purpose of regimenting the daily life of each person so that the livelihood of each one is made to depend upon the regime.

II. TOTALITARIANISM OF THE GOVERNMENT

The most important feature under this principle is the dictatorship of the Communist Party under which the Gestapo or intelligence service effectively penetrates every corner of society so that it can report from each of the "nerve centers" in each village or farm. During the time of the so-called land reform more than 20 million people were liquidated. According to Lo Shu Ching, Chief of Communist Chinese Intelligence Service, from June 1955 to October 1957 out of a total of 18 million workers there were 165,000 reactionaries and many of the remainder were of questionable character. From this we can understand that even these Communist workers were living under conditions of terror and fear.

III. THOUGHT CONTROL

The most important methods of achieving thought control or reform of thought, include the following:

(a) Revolutionizing Chinese literature.

(b) Reform of the Chinese language and characters.

(c) Revolutionizing the school system.

(d) Reform of all religions, including the creation of new Buddhist sects, new Catholic church, new Lama groups, new Protestant sects, etc.

Recently the Communists launched on a program to rewrite the whole history of China. Traditionally, Chinese history was written according to dynasties. But they have tried to abolish all old Chinese history books and the historical methods and have introduced a new method of writing Chinese history by emphasizing revolt—calling it a landmark in Chinese history. According to the history thus rewritten, the most notorious killers in China's history have been made heroes.

IV. U.S.S.R.'S FOREIGN POLICY IS COMMUNIST CHINA'S FOREIGN POLICY

Action in line with this principle included continual launching of anti-American campaigns. For example, the Communist regime accepted Stalin's command to start the war in Korea and the war costs were borne entirely by the Chinese Communists. Even now, Soviet advisers and technicians have complete control in the army, government, schools, factories and farms. Thus, the Chinese Communist economic system has become an auxiliary of the Soviet economy.

As a result of this practice, all people on the China mainland are propertyless. There are no more landlords. No capitalists can be mentioned. Today, on the China mainland, there are only two classes: The Communist Party (the ruling class) and the rest of the people who are the controlled class.

In 1957, Mao Tse-tung started the so-called "a hundred flowers bloom at the same time." By this he meant that anyone who had a complaint or grievance could be heard. For nearly 7 months everyone was allowed to speak from his heart and make any complaint to the Communist Party. After this, he begins to purge any opposition and call such opposers antirevolutionaries or reactionaries. As a result of this purge, secretaries of the Communist Party in 13 Provinces and Governors of these Provinces were either imprisoned or killed. Supplementing this purge the Communists imposed more rigid economic regimentation and control of the people. They launched the cooperative movement in China and have recently intensified their efforts to destroy the cooperatives and substitute the commune system. The commune system by nature is more than economic—it is also political and military. That is to say, each commune in a district is really the governing power. It has ruling power and it directs the army and economic life of the people—under its jurisdiction. This commune system has enraged all the Chinese people, including many Communist Party leaders, and even Khrushchev was not too happy to see Red China more communized than the Soviet Union. Perhaps this is one reason why Mao Tse-tung has been compelled to resign as President of the People's Republic of China. Since Mao has been succeeded by Liu Shao-chi as President of the Red regime, Chu Teh succeeded Liu to be the Chairman of the People's Congress and Chou En-lai continues to be Prime Minister. It is clear that Liu Shao-chi will become the heir-apparent and Chu is the leading middle force to conciliate between the conflicting forces of Liu and Chou.

The Chinese Commune system, together with the Communist pressure on Tibet finally brought forth the revolution in Tibet in March 1959, similar to the recent Hungarian revolt. The Tibetan revolt was only temporarily crushed by the Communists—but the people's resistance in Tibet has not ceased. The Tibetan revolt—temporarily halted—has produced tremendous effects on the Chinese people on the mainland and has "opened the eyes" of the so-called neutralists, including Prime Minister Nehru of India and others in Asia and the Middle East.

The minority people in China—such as those in Inner Mongolia, Tching-hai and Southwest China—feel insecure. The people on the China mainland live under the "iron heel" and even Communist Party members feel insecure in that they may be purged or liquidated at any time. Within the Communist Party affection for the old gods has been attacked by the younger groups and by the Army. Peasant members are dissatisfied with the members who come from the urban areas. It is possible that the Army elements may cooperate with the peasant element and younger groups and the Intelligensia may join hands with the peasants against the party brass. It is hard to predict what will happen. If revolt or revolution takes place on the mainland (as it did in Hungary or Tibet) with outside help it may prove successful—but without it success would be doubtful. While the Communist regime is rotten it is the controlling machine and functions throughout all the "nerve centers" of China.

The crackup or downfall of the Communist regime depends upon the following:

1. How and when the people on the China mainland will start their revolt.

2. Whether Free China will take a bold step and give concrete and substantial help to the revolters on the China mainland by attacking the Chinese Communists along the China coast, and

3. The policy of the United States and other freedom-loving countries.

Effects of U.S. Borrowing on Little Business

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, if the Democrat majority continues in its refusal to provide the Secretary of the Treasury with the proper tools with which to manage our huge national debt the effects will be far reaching and disastrous. Harold B. Dorsey writing in the Washington Post of Monday, July 20, 1959, has called atten-

tion to the effect upon the small business community. The following is the article by Mr. Dorsey:

EFFECTS OF U.S. BORROWING ON LITTLE BUSINESS

(By Harold B. Dorsey)

Since business and financial planning must be completely realistic, it is beginning to take into consideration the practical effects of the prospect that Congress will not pass the legislation necessary to permit the Treasury Department to sell Government bonds at an interest rate in excess of 4¼ percent.

That thinking is already demonstrated by the fact that in its current refinancing of about $14 billion of maturing debt the Treasury Department has to offer an interest rate of 4¾ percent to borrow money for 12½ months, and the same rate to borrow money for 4¾ years. These interest rates are in sharp, and unusual, contrast with the fact that Government bonds now outstanding with maturities beyond 1966 afford a yield ranging 3.77 percent and 4.17 percent.

One practical effect, then, of the Treasury Department's enforced inflexibility is this evidence that the Government's expenditures for interest charges on this single piece of refinancing alone are probably going to be something like $70 million a year more than they would have been if the Treasury Department were free to tap the most advantageous credit markets. This increased expenditure for interest charges is the result of only this one piece of current Government refinancing. The interest charges on financing of the past few months probably have been unnecessarily higher and the same promises to be true of future financing.

Thus the taxpayers are being forced to pay a few hundred million dollars of unnecessary expense for interest charges because of a misunderstanding of the problem in Congress. Just why that misunderstanding should prevail is a little difficult to see. The situation is really comparatively simple. Because the interest ceiling bars the Government from the long-term credit market, it is being forced to borrow in the short-term credit market, where it is competing with the credit needs of business and individuals for the limited supply. As an understandable result, the interest rates are forced higher. Everybody would be better off—except the lenders—if some of these funds were obtained in the long-term credit markets where the interest rates are currently lower.

The business analyst must be strictly objective in his interpretation of the facts. There is little room in such interpretations for questions why Congress may be making decisions that seem to be illogical from every practical point of view. The latest indications are that Congress is not going to lift the ceiling on the interest rate of government bonds, and if those indications are to become the actuality, then the interpretation and the business planning has to be adjusted accordingly.

The small businessman in particular should start adjusting his affairs immediately. The lack of congressional action on this particular matter is threatening him with an exceedingly difficulty problem in obtaining the necessary credit to carry his seasonally higher inventories next fall and winter. As the current situation shapes up, he is probably going to find bank after bank "loaned up" and, therefore, unable to supply his credit needs.

The small businessman may not be able to carry as large an inventory as he would like, to take care of the seasonal increase in his sales. If he, therefore, has to anticipate lower sales and earnings, his capacity to provide jobs will be reduced. If he has debt maturing between now and the end of the year that under normal circumstances would be refinanced, he may be squeezed to an embarrassing extent. He will then come face to face with the fact that Congress is unnecessarily forcing the government to compete with him in his natural credit market. It will be a brutal fact the Government's credit needs will be given preference over his own.

It must be remembered that we are entering the season of rising business needs for credit with the commercial banks' ratio of loans to deposits already at a very high level. On top of that condition we now have to envisage a continued heavy demand in that same short-term credit market by the Government. The combination threatens a credit stringency of serious proportions. As usual, small business will be hurt worse than big business, but this time it should be clear that the fault is centered in the failure of Congress to understand the foregoing situation.

Some Congressmen evidently disapprove of Treasury Department and/or Federal Reserve policies. It scarcely seems fair to let that feeling create a condition which can severely hurt the affairs of many thousands of little business people. After all, neither the Federal Reserve officials nor the U.S. Government can force lenders to invest their money in long-term bonds at 4½ percent or less if they don't want to. The lack of Congressional action on this interest rate ceiling continues to force the government to absorb short-term credit that should be left available to the little businessman. He is already paying a high interest rate, but as matters stand at the moment, he is going to be lucky if he can obtain his fall and early winter credit even at a higher rate.

Up to this point, it has been my opinion that the fairly tight credit situation would not stop sound business expansion, but would only tend to curb the excessive use of credit. That opinion had been based on the presumption that Congress would enable the Government to withdraw somewhat from the short-term credit market and tap the long-term market. If that presumption is going to turn out to be erroneous, the business analyst is going to have to start worrying about the effect on the economy of the threatened financial squeeze that seems likely to be imposed on small businesses—businesses that are small individually, but collectively are an important portion of the economy.

Developments in Educational Television

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. McDOWELL. Mr. Speaker, as one who has publicly indicated himself to be among the ranks of those in favor of the establishment of educational television channels, I have been watching the newspapers and periodicals carefully for developments in the ETV field. There has been little on the subject, probably because the proponents and opponents are quietly awaiting the commencement of the study by the House Interstate and Foreign Commerce Committee which will be conducted following the adjournment of the present session of the 86th Congress, and which will aim toward isolating and clarifying the fundamental factors involved in the ETV question.

In spite of the noticeable lack of press coverage on ETV, I do have an article which appeared in a recent issue of the Du Pont Chambers Works News. The article brings to the reader's attention two very pertinent points. First, our great American industry is interested in the use of the TV media for educational purposes. Du Pont is to be one of the sponsors of NBC's "Continental Classroom" which met so much success last year. Secondly, Americans seem to be growing more and more aware of the value of ETV because "Continental Classroom" this year will become an hour-long program, twice the length of last year's series.

But, even though this is a fine series and our industry and commercial networks are to be commended for giving support to the development of educational television, this is no substitute for the establishment of noncommercial channels which operate under the direction of our State educational systems, colleges and universities or nonprofit educational organizations, and which telecast solely for the purpose of increasing the intelligence of our citizens. Commercial channels cannot broadcast educational programs in the evening when these programs would be beneficial to the greatest number of people. Since many of the TV watchers of the evening hours prefer to be entertained rather than educated, the educational programs must be relegated to the wee small hours of the morning. "Continental Classroom" will broadcast physics from 6 to 6:30 a.m. and chemistry from 6:30 to 7 a.m. Need I say that some people find it quite impossible to take education seriously at 6 in the morning? This seems to be borne out by the fact that although "Continental Classroom" was broadcast by 150 stations, and reached an estimated daily audience of 400,000 including 15,000 teachers, only 5,000 persons were enrolled for credit from the program in the 265 participating colleges and universities. Most of these 5,000 persons were teachers. It is truly unfortunate that more of the audience who sleepily watch "Continental Classroom" are not enrolled as true students of the courses offered, but this will not happen and cannot happen until noncommercial educational television channels, which are not interested in selling anything, in monopolizing an audience in the evening, or competing for popularity ratings can telecast these informative programs at hours when more people can watch them and when, I might add, these people are awake.

But, I do feel that NBC and Du Pont are taking steps which are making valuable contributions to the development of TV for educational use. I commend them for their effort and their program which will undoubtedly continue the excellent standards of the last "Continental Classroom."

The article follows:

[From the Du Pont Chambers Works News, July 1, 1959]

DU PONT WILL COSPONSOR TV CONTINENTAL CLASSROOM—EARLY MORNING CHEMISTRY COURSES TO BE TELECAST BY NBC IN FALL

"Continental Classroom," a pioneering television effort to help repair the critical national lag in qualified science instruction, expands September 28 to present a two-semester college-level course in modern chemistry, the first course to be televised in color. The Du Pont Co. will be one of the cosponsors of the daily NBC program which will also include a course in physics.

Modern chemistry, to be colorcast Monday through Friday from 6:30 to 7 a.m., e.s.t., will comprise half of the NBC network's "Continental Classroom," which will grow to a full hour in the new season. In addition to the 160-lesson lecture demonstrations course in chemistry, a course in atomic age physics will be repeated by tlevision tape recordings and kinescopes from 6 to 6:30 a.m.

Chemistry was selected as the new "Continental Classroom" offering because of the critical shortage of teachers in this field. It was the choice of the majority of the 265 colleges and universities across the country which are currently giving academic credit for the TV course in atomic age physics.

Nearly 300 colleges and universities throughout the Nation are expected to carry modern chemistry for academic credit, 35 more than the current total for atomic age physics. Each may utilize the network program at no cost and charge regular tuition fees for registrants. Each will have local autonomy in implementing the TV program with examinations, laboratory sessions, and seminars.

The American Chemical Society, NBC, and the American Association of Colleges for Teacher Education are partners in presenting modern chemistry. Providing financial backing will be E. I. du Pont de Nemours & Co., the Ford Foundation, the Bell Telephone System, General Foods Fund, International Business Machines Corp., Pittsburgh Plate Glass Foundation, Standard Oil Co. of California, and United States Steel.

Planned primarily for high-school science teachers, modern chemistry will be telecast from September 28 to May 27. In addition to teachers in service, a large audience of college students, gifted high-school pupils, chemists, chemical engineers, and others who wish to enlarge their knowledge of the field are expected to be regular viewers.

Dr. John W. Baxter, professor of chemistry at the University of Florida since 1952, will teach modern chemistry. Nobel prizewinning chemists and other outstanding scientists will be guest lecturers.

"Continental Classroom," launched October 6, 1958, has been hailed by Dr. James R. Killian, Jr., until recently special science adviser to President Eisenhower, as among the most noteworthy and important achievements of the past year in science education.

As outlined by Dr. Baxter, modern chemistry will be a study of the fundamental principles of chemistry and a survey of recent developments. Dr. Baxter is writing a special textbook to accompany the TV course. It will be available September 1, together with course outline, lesson synopses, syllabi, and assignments.

The American Chemical Society's 156 local sections, serving 86,000 member chemists and chemical engineers in 49 States, the District of Columbia, and Puerto Rico, will participate.

The 160-lesson course in atomic age physics, conducted by Dr. Harvey E. White, professor of physics at the University of California at Berkeley, has brought "Continental Classroom" nine major awards, including a Peabody Award for the best television education program. Telecast by 150 stations, it reaches an estimated daily audience of 400,000 including 15,000 teachers. Five thousand persons, most of them teachers, have been enrolled for credit with the 265 participating colleges and universities.

Ghost Plants in Packing Towns

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter from Patrick E. Gorman, international secretary-treasurer of the Amalgamated Meat Cutters and Butcher Workmen of North America, and an article entitled "Ghost Plants," written by Patrick E. Gorman and Thomas J. Lloyd, which appeared in the July 1959 issue of the Butcher Workman, official publication of the Amalgamated Meat Cutters and Butcher Workmen of North America.

AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA,
Chicago, Ill., July 17, 1959.

The Honorable MELVIN PRICE,
Member of Congress, the U.S. House of Representatives, Washington, D.C.

DEAR MR. PRICE: On behalf of our union, I want to call your attention to the enclosed article concerning the increasing plant shutdowns and unemployment in the meatpacking industry. Although there has been an upturn in employment in many other industries, job losses in meatpacking are increasing. For example, only recently Armour & Co. announced the closing of five more plants.

As the enclosed article indicates, the plant shutdowns are blasting the dreams of thousands of workers for a better standard of living and are threatening the economic life of dozens of communities. A remedy for these shutdowns must be effected.

We would appreciate hearing any comments you may have concerning the serious problem which we discuss in the article.

Sincerely yours,

PATRICK E. GORMAN.

GHOST PLANTS IN PACKING TOWNS

(By Patrick E. Gorman and Thomas J. Lloyd)

The saddest sight on the American industrial scene is a closed factory or plant. From coast to coast these sad sights are increasing. These empty buildings look like, and actually are, job morgues. Thousands of workers' jobs were destroyed when the plants closed, and most of them are closed forever.

MORE THAN ITS SHARE

The meatpacking industry has had more than its share of these graveyard plants. It is doubtful if slaughtering or production will ever resume in them again. Packing towns are becoming ghost towns. Some say that mechanization is to some extent responsible. Others blame these sad sights upon poor management. Management, very erroneously, criticizes the unions for this unhappy situation. Whatever the cause, the tycoons in the packing industry should shed a tear over their inability to cope with an industrial situation which could, and should, be remedied, thus saving the jobs of thousands upon thousands of workers who need them.

It is hard to believe that Chicago, which was once the heart of the giant meat industry, is now but a shadow of its former stature. The Swift & Co. plants which normally employed nearly 10,000 workers in Chicago, now look deserted and forlorn. In all of the Swift operations in Chicago at present, there are but slightly more than 900 still enjoying production employment with this giant concern. The ghostly atmosphere hovering about the Armour plants in Chicago is equally as pathetic. No longer does Armour slaughter or kill hogs in this once powerful metropolis of meatpacking. Wilson & Co. long since has moved out of the "Windy City," lock, stock, and barrel.

If, perchance, bad labor relations did have something to do with the situation, then there is the consoling thought that our International Union in no manner is responsible. We are proud that we have lived up to our agreements faithfully with no quickie strikes or slowdowns permitted.

Chaos, sooner or later, had to develop because only recently the shelves of our retail stores were being abundantly stocked with canned meat products labeled, "Produce of Argentina." These Argentina products came from packing plants bearing the same name as several of the large meatpackers of the United States. Recently, by Government order, all this has been remedied, at least temporarily, because of the hoof and mouth disease among cattle which is raging rampant in some South American countries.

FOREIGN MEAT

We ask the wives of our members, the next time they go to the butcher shop, to look around. What will they see? Canned hams galore from Denmark, Holland, Sweden—in fact from all countries not operating directly behind the so-called Iron Curtain. Shipload after shipload of beef from our friends in Australia are finding their way into the markets of the United States, and strangely again the same powerful names in the American meatpacking industry are operating in the land "Down Under."

It is impossible for strictly American operated meatpackers to compete with the somewhat lower quality of beef from Australia. It is dumped on the open market cheaper per pound than the American packers can produce it. There is every likelihood that our American packers who have plants in South America and other foreign countries would like to bring in more of the products produced in these foreign lands. The reason—packingplant workers in the United States are employed under good union conditions. They benefit from the American standard of living. They receive wages and working conditions better than that which is received by workers in foreign lands. If the American market can be flooded with meat from foreign countries, production here will fall off badly. If this is accomplished our unions could therefore be weakened, and a harder bargain can be exacted at the conference table.

Certainly we are proud of the wage rates we have negotiated in years gone by for the men and women in the meatpacking industry, but it has been difficult for all workers to keep pace with the high prices of all commodities.

MORE GHOST PLANTS

Now comes more ghost plants in packing towns. Armour & Co. just recently announced the closing of six more of their plants. This giant in the meatpacking industry will then have but 1,000 people in all of its Chicago operations. The jobs of 9,000 formerly employed by Armour & Co. here are in job morgues, never, except by miracle, to be revived.

NO HELP NEEDED

Two thousand Chicago packinghouse workers in this latest Armour layoff will be

walking the streets going from employment gate to employment gate of industries in which they are not experienced, and the probability is that they will face the heartbreaking sign, "No help nedeed." Other Armour plants which will close, according to their statement, will be at Columbus, Ohio; East St. Louis, Ill. (with some 1,500 employees); Fargo, N. Dak.; Denver, Colo.; and Tifton, Ga. Previous to this announcement, Armour abandoned its plant at Atlanta, Ga. Armour may also abandon their plants in Kansas City and St. Joseph, Mo.—not only abandon them, but demolish them. If this is done, it is probable that they will build a new plant, to take the place of the two old plants, somewhere in between Kansas City and St. Joseph.

DREAMS DESTROYED

In the meantime, the ranks of the unemployed in the meatpacking industry, as a result of the closing of all these plants which should be operating, will look back upon these ghostly morgues with heavy hearts. These were the places in which they earned their livelihoods. From these plants, paying good wages, they had hoped they could send their children to college. Gone are the hopes that they could buy their own homes not too far away from packing town.

All of these dreams are vanishing because, as indicated, packing towns in most cities are becoming ghost towns.

It seems that there is a responsibility on the part of management and the unions in the industry to make more frequent use of the conference table; for each to lay their cards on the table and examine carefully all of the reasons why these sad sights of closed plants are multiplying. A remedy certainly can be found between management and the unions, and when the remedy is found both should pound hard upon the door of Uncle Sam with a demand that "We have a right to live too."

We have no quarrel with our worker friends in other countries. They too have their problems. But, it would seem to us Americans that the security of workers' jobs should begin at home. Other countries, where our Nation is giving a helping hand, have no unemployment problems. They have our open door here for their products, and in some countries of our foreign friends there actually is a shortage of workers instead of unemployment and closed plants as we witness here.

Sooner or later, there will have to be regulations. Why isn't it done before closed doors will appear on every industrial scene to a greater extent than what exists today? A body can give only so much blood to save another without dying itself. Such is quite true on the world political scene. It is about time for action, because really, it's later than you think.

Petition of the American Colonies to the King of England

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 21, 1959

Mr. WILEY. Mr. President, recently I commented on my experience when I was in Canada to attend the dedication of the St. Lawrence Seaway. I said I heard the Prime Minister of Canada refer to an incident in American history with which I had not previously been familiar. It was an incident which had most important potentialities. I refer to a petition which was signed on July 8, 1775.

The first signature to the petition is that of John Hancock; and following his signature are the signatures of representatives of the colonies of New Hampshire, Massachusetts Bay, Rhode Island, and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, the counties of Newcastle, Kent, and Sussex, on the Delaware, Maryland, Virginia, North Carolina, and South Carolina.

The petition commences as follows:

To the KING'S MOST EXCELLENT MAJESTY:

Most gracious sovereign, we, your Majesty's faithful subjects of the colonies of New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, the counties of New Castle, Kent, and Sussex, on Delaware, Maryland, Virginia, North Carolina, and South Carolina, in behalf of ourselves, and the inhabitants of these colonies, who have deputed us to represent them in general Congress, entreat your Majesty's gracious attention to this our humble petition.

The union between our mother country and these colonies, and the energy of mild and just government, produced benefits so remarkably important, and afforded such an assurance of their permanency and increase, that the wonder and envy of other nations were excited, while they beheld Great Britain rising to a power the most extraordinary the world had ever known.

Mr. President, the petition is of such historic value that I believe it should be printed in the Appendix of the RECORD. It concludes as follows:

That Your Majesty may enjoy a long and prosperous reign, and that your descendants may govern your dominions with honor to themselves and happiness to their subjects, is our sincere and fervent prayer.

Mr. President, I repeat, the petition was called to my attention by Prime Minister Diefenbaker, in connection with a statement he made before a group of Canadians and Americans at a luncheon. The petition is of particular interest at this time when we are trying to have the Nations get together, for the petition is an instance of a similar attempt. If the attempt had been successful, the course of history might have been changed materially. However, we find that in that case some British Government official, who no doubt suffered from a big head, prevented the petition from reaching the King. It is most regrettable that at times we find in government today similar persons.

Mr. President, I send the petition to the desk, and ask that it be printed in the Appendix of the RECORD.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

To the KING'S MOST EXCELLENT MAJESTY:

MOST GRACIOUS SOVEREIGN, we your Majesty's faithful subjects of the colonies of new Hampshire, Massachusetts bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, the counties of New Castle, Kent, and Sussex, on Delaware, Maryland, Virginia, North Carolina, and South Carolina, in behalf of ourselves, and the inhabitants of these colonies, who have deputed us to represent them in general Congress, entreat your Majesty's gracious attention to this our humble petition.

The union between our Mother country and these colonies, and the energy of mild and just government, produced benefits so remarkably important, and afforded such an assurance of their permanency and increase, that the wonder and envy of other Nations were excited, while they beheld Great Britain riseing to a power the most extraordinary the world had ever known.

Her rivals, observing that there was no probability of this happy connexion being broken by civil dissensions, and apprehending its future effects, if left any longer undisturbed, resolved to prevent her receiving such continual and formidable accessions of wealth and strength, by checking the growth of these settlements from which they were to be derived.

In the prosecution of this attempt, events so unfavourable to the design took place, that every friend to the interests of Great Britain and these colonies, entertained pleasing and reasonable expectations of seeing an additional force and extention[1] immediately given to the operations of the union hitherto experienced, by an enlargement of the dominions of the Crown, and the removal of ancient and warlike enemies to a greater distance.

At the conclusion, therefore, of the late war, the most glorious and advantageous that ever had been carried on by British arms, your loyal colonists having contributed to its success, by such repeated and strenuous exertions, as frequently procured them the distinguished approbation of your Majesty, of the late king, and of parliament, doubted not but that they should be permitted, with the rest of the empire, to share in the blessings of peace, and the emoluments of victory and conquest. While these recent and honorable acknowledgments of their merits remained on record in the journals and acts of that august legislature, the Parliament, undefaced by the imputation or even the suspicion of any offence, they were alarmed by a new system of statutes and regulations adopted for the administration of the colonies that filled their minds with the most painful fears and jealousies; and, to their inexpressible astonishment, perceived the dangers of a foreign quarrel quickly succeeded by domestic dangers, in their judgment, of a more dreadful kind.

Nor were their anxieties alleviated by any tendency in this system to promote the welfare of the Mother country. For tho' its effects were more immediately felt by them, yet its influence appeared to be injurious to the commerce and prosperity of Great Britain.

We shall decline the ungrateful task of describing the irksome variety of artifices, practised by many of your Majesty's Ministers, the delusive pretences, fruitless terrors, aand unavailing severities, that have, from time to time, been dealt out by them, in their attempts to execute this impolitic plan, or of traceing, thro' a series of years past, the progress of the unhappy differences between Great Britain and these colonies, which have flowed from this fatal source.

Your Majesty's Ministers, persevering in their measures, and proceeding to open hostilities for enforcing them, have compelled us to arm in our own defence, and have engaged us in a controversy so peculiarly abhorrent to the affections of your still faithful colonists, that when we consider whom we must oppose in this contest, and if ft continues, what may be the consequences, our own particular misfortunes are accounted by us only as parts of our distress.

[1] In the printed version this word is exertion.

Knowing to what violent resentments and incurable animosities, civil discords are apt to exasperate and inflame the contending parties, we think ourselves required by indispensable obligations to Almighty God, to your Majesty, to our fellow subjects, and to ourselves, immediately to use all the means in our power, not incompatible with our safety, for stopping the further effusion of blood, and for averting the impending calamities that threaten the British Empire.

Thus called upon to address your Majesty on affairs of such moment to America, and probably to all your dominions, we are earnestly desirous of performing this office, with the utmost deference for your Majesty; and we therefore pray, that your[1] royal magnanimity and benevolence may make the most favourable construction of our expressions on so uncommon an occasion. Could we represent in their full force, the sentiments that agitate the minds of us your dutiful subjects, we are persuaded your Majesty would ascribe any seeming deviation from reverence in our language, and even in our conduct, not to any reprehensible intention, but to the impossibility of reconciling the usual appearances of respect, with a just attention to our own preservation against those artful and cruel enemies, who abuse your royal confidence and authority, for the purpose of effecting our destruction.

Attached to your Majesty's person, family, and government, with all devotion that principle and affection can inspire, connected with Great Britain by the strongest ties that can unite societies, and deploring every event that tends in any degree to weaken them, we solemnly assure your Majesty, that we not only most ardently desire the former harmony between her and these colonies may be restored, but that a concord may be established between them upon so firm a basis as to perpetuate its blessings, uninterrupted by any future dissentions, to succeeding generations in both countries, and to transmit your Majesty's Name to posterity, adorned with that signal and lasting glory, that has attended the memory of those illustrious personages, whose virtues and abilities have extricated states from dangerous convulsions, and, by securing happiness to others, have erected the most noble and durable monuments to their own fame.

We beg leave further to assure your Majesty, that notwithstanding the sufferings of your loyal colonists, during the course of the present controversy, our breasts retain too tender a regard for the kingdom from which we derive our origin, to request such a reconciliation as might in any manner be inconsistent with her dignity or her welfare. These, related as we are to her, honor and duty, as well as inclination, induce us to support and advance; and the apprehensions that now oppress our hearts with unspeakable grief, being once removed, your Majesty will find your faithful subjects on this continent ready and willing at all times, as they ever have been, with their lives and fortunes, to assert and maintain the rights and interests of your Majesty, and of our Mother country.

We, therefore, beseech your Majesty, that your royal authority and influence may be graciously interposed to procure us relief from our afflicting fears and jealousies, occasioned by the system before mentioned, and to settle peace through every part of your dominions, with all humility submitting to your Majesty's wise consideration whether it may not be expedient for facilitating those important purposes, that your Majesty be pleased to direct some mode, by which the united applications of your faithful colonists to the throne, in pursuance of their common councils, may be improved into a happy and permanent reconciliation; and that, in the mean time, measures may be taken for preventing the further destruction of the lives of your Majesty's subjects; and that such statutes as more immediately distress any of your Majesty's colonies may be repealed.

For by such arrangements as your Majesty's wisdom can form, for collecting the united sense of your American people, we are convinced your Majesty would receive such satisfactory proofs of the disposition of the colonists towards their sovereign and parent state, that the wished for opportunity would soon be restored to them, of evincing the sincerity of their professions, by every testimony of devotion becoming the most dutiful subjects, and the most affectionate colonists.

That your Majesty may enjoy a long and prosperous reign, and that your descendants may govern your dominions with honor to themselves and happiness to their subjects, is our sincere and fervent prayer.

John Hancock; Colony of New Hampshire, John Langdon; Colony of Massachusetts Bay, Thomas Cushing, Sam Adams, John Adams, Robt. Treat Paine; Colony of Rhode Island and Providence Pantations, Step Hopkins, Sam Ward; Colony of Connecticut, Elipht Dyer, Roger Sherman, Silas Deane; Colony of New York, Phil. Livingston; Ja. Duane; John Alsop, Fran; Lewis, John Jay Robt., R. Livingston, jun., Lewis Morris, Wm. Floyd, Henry Wisner; New Jersey, Will Livingston, John D Hart, Richa Smith; Pennsylvania, John Dickinson; B. Franklin, Geo. Ross, James Wilson, Chas. Humphreys, Edw. Biddle; Counties of New Castle, Kent, and Sussex on Delawar, Caesar Rodney, Tho. McKean, Geo. Read; Maryland, Mat. Tilghman, Theo. Johnson, Jun., Wm. Paca, Samuel Chase, Tho. Stone; Colony of Virginia, P. Henry, Jr., Richard Henry Lee, Edmund Pendleton, Benj. Harrison, Th. Jefferson; North Carolina, Will Hooper, Joseph Hewes; South Carolina, Henry Middleton, Tho. Lynch, Christ Gadsden, J. Rutledge, Edward Rutledge.[2]

[1] The word Majesty's is here inserted in the printed version.

[2] Endorsed: "Petition of the Congress to the King. Sept. 1, 1775—delivered to the Earl of Dartmouth by Messrs. Penn and Lee." The text is taken from the original petition, reproduced in facsimile in Stevens's Facsimiles of Manuscripts in European Archives relating to America, No. 454.

Hunting of Wild Horses on Federal Lands

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. BARING. Mr. Speaker, I am placing in the RECORD today a statement delivered by Mrs. Velma B. Johnston before the House Judiciary Subcommittee on July 15, 1959, in behalf of my bill, H.R. 2725, to prohibit the inhumane hunting of wild horses and burros and the poisoning of their watering holes in the grazing areas of six or seven of our Western States.

As you know this bill has received the attention of the Nation and many of the Members have received from hundreds to thousands of letters from their constituents. I am placing it in the RECORD so that the Members as well as the Nation may have a chance to read this excellent and factual report from a person who has personally accumulated the documented evidence over the last 10 years.

The statement follows:

Mr. Chairman and members of the Committee on the Judiciary, the fight for the mustang has come a long way in the past few years.

From a room in the courthouse of the pioneers in Virginia City, Nev., where are recorded the history-making events of the fabulously wealthy Comstock lode that changed the fate of a nation, it has come to the Capitol of that Nation—some 2,200 miles as the crow flies. From a mere handful of 50 or so firm believers in his right for survival, it has come to an awareness throughout the country of his desperate plight, resulting in a mighty plea on his behalf. Surely there is merit in this effort, or these things would not be so.

Two points I must clarify for the record:

First. Throughout my many years of work in connection with efforts to obtain legislation that will not only protect, but will control these colorful byproducts of the settling of our western country—the mustang and the burro—I have used the situation as it exists in Nevada as the basis of my statements. It is by no means because I wish to point to Nevada as the only place where this flagrant abuse of these animals is carried on—but rather because I do not have the facilities to take in as much territory as do those opposing such legislative measures, and I have confined my statements to the area about which I know. The truckloads of horses brought from Wyoming, Idaho, and other States beyond the boundaries of Nevada would indicate that exploitation of the animals is as widespread elsewhere as it is in the State that is my home.

With this in mind, I shall continue to use Nevada as the location for the account that follows. Its area is 110,540 square miles, and its population was estimated in July 1956, at 247,000, most of which is centered in and around the cities of Reno, Las Vegas, Sparks, Elko, Ely, Carson City, Henderson, Fallon, Austin, and Winnemucca. Consequently, the State is made up principally of uninhabited areas, more than 80 percent of which are public domain lands. Because of the almost negligible precipitation, the land is arid, but cattle raising, and sheep raising are important industries. For each man, woman and child in the State, there is one-half square mile of land should he care to use it. For each mustang there are 20 square miles of land, and we would like for him to be able to use some of it; for, of the hundreds of thousands of these animals that once roamed the State, there are approximately 5,000 left.

Second I use the term "mustang" throughout my material as it is set out in Roget's Thesaurus: range horse, mustang, broomtail, cayuse (all chiefly western United States), and as it comes to us from the Spanish mesteno: belonging to the graziers, strayed, wild. I use the term "wild horse" simply to get away from the overuse of the word "mustang."

There was a time in the early history of Nevada, when the mustangs overran the ranges to the extent that they seriously jeopardized what limited grazing was available. Every mouthful of range grass was needed for the growing herds of cattle and sheep, and ranchers took matters into their own hands; thousands of mustangs were captured and killed, and the remainder of the wild horses were driven into the rocky and barren desert hills where they learned to eke out a living.

However, the actual turning point in the history of the wild horse came with the rise of the canned pet food business, and the demand for fresh horse meat sold in pet

shops. Once the big slaughter got underway, the wild horse was doomed—for now his extermination served two purposes: a vast amount of range clearance was accomplished, and his carcass provided cheap meat for the processors. With this in mind, professional hunters moved in, for it was a lucrative business. In the years immediately following the end of World War II, more than 100,000 of the animals were removed from the State. The old technique of rounding up horses with crews of hard-riding cowboys was too slow and too costly, so the airborne cowboy came into being. The mustangs are driven at breakneck speed by planes from their meager refuge in the rough and barren rimrock onto flatlands or dry lake beds, where the chase is taken up by hunters on fast-moving trucks and the mustangs are pursued to exhaustion. Sometimes they are burdened with heavy and terrifying devices which are attached to them by skillful ropers operating from the trucks. Sometimes they are driven into box canyons from which there is no escape—other times into fan-shaped trapping corrals, where the violent contact with the enclosing wires have caused serious and painful injuries occasionally resulting in death from loss of blood. The horses are sometimes tied and left where they lie until sufficient are driven in to begin loading operations. Sidelining is one method of tying—a front and hind foot are tied together, and when the horse fights, because he will fight his confinement savagely, the legs are ropeburned until there is no hide left on them. To load them, they are dragged up a ramp by saddle horses, in any position in which the mustang drags best. Colts are left behind because they do not weight enough to warrant their long haul to the processing centers. They have little chance of survival. The requirements of the market are simple: the animals must be ambulatory and in quantity. The suppliers are paid by the pound—thus the more horses, the more money. Crowded into trucks for the long haul, loaded without regard to size, fighting as they will for release from their confinement, casualties are numerous, and their condition reflects the roughness of their treatment.

I have gone over the methods of operation briefly, in order to save your time, but the eyewitness stories to the preceding statements can be found on pages 20 to 24 of "Mustang Presentation: Part I," which is furnished to you for your record. Also included are pictures which you have no doubt seen, that were taken on an actual roundup in northern Washoe County, Nev., in the fall of 1951. The circumstances under which the pictures were taken are interesting, in that the photographer, Gus Bundy, went along as a truckdriver in order to obtain them. In the truck with him, was a photographer for Life magazine, Bud Gourley, who also took many pictures. The magazine did not use the material, and its no doubt still in its files. From Mr. Bundy's negatives, numbering 150 to 200, the selections were made to present the proper sequence. It would be impossible to obtain current pictures, just as it would be impossible to obtain pictures of a criminal reenacting his crime for the benefit of a jury. Favorable changes would of course be made. However, the same men who have engaged in this dubious business through the years are the same ones still operating, and there is no reason to believe that they have changed so effective a method of capture, particularly in view of the condition of the horses that they capture.

Wide scale operations were carried on for a period of years, with the clearance of the Bureau of Land Management responsible for the regulation and use of the public lands. They have been carried on with their full knowledge—in spite of protests from individuals outraged at the practice—and as an official in the Reno, Nev., area pointed out: "This program was carried out without cost to the Government except some assistance in building holding corrals and truck trails when needed, and unclaimed horses were taken by the people operating the airplanes under title from the State and sold as compensation for their work." What the officials have failed to take into account, is the fact that the humane aspect has been completely disregarded, and the public would have much preferred to have had necessary range clearance carried on at a price, provided it had been properly supervised, humanely carried out, and intelligently planned. We have no quarrel with the land agencies responsible for our public lands insofar as controls are concerned—but we do vigorously object to the manner in which the clearance has been carried on and the manner in which controls are proposed.

The most crowded course in the world is the course of least resistance, and it would appear to me that when confronted with the problem of the mustang when it was a problem, this course has been consistently followed. This bad pattern, once established, has been difficult to change.

At the stormy meeting in Virginia City, Nev., in 1952 when the board of county commissioners took the first step that had yet been taken toward the abolishing of airplane and mechanized roundups by adopting a resolution prohibiting the practice within the boundaries of Storey County, a newspaper carried the story, and of great significance is their account of the battle: "Their adversaries are a group of sheepmen in Storey County who claim that the free and uninhibited movements are injurious to grazing land. Also subscribing to this outlook are commercial rendering works officials who believe it their right to conduct wild horse chases by airplane, and corral and transport the animals to the rendering works." Permission for the proposed roundup that touched off the violent opposition had already been granted by the Bureau of Land Management for that district.

The necessity for wide-scale range clearance operations is behind us now, and the one point upon which we are all possibly in agreement is that, except in widely remote instances, the mustangs are no longer a threat to the ranges. Private interests have again won in their demands for the monopolistic use of the ranges to the exclusion of everything not commercially profitable. Because so few of the animals are left, it is now that we should not only pass legislation for their protection, but plan for their control as well, so that there will never again be an excuse for the mass extermination programs as heretofore.

Today's wild horse is not the glamorous mustang of long ago—the fiercely proud, valiant and beautiful animal that roamed our Western country when this country was young. He is, for the most part, underfed, scrubby, and inbred. Since he has become the target for wholesale mechanized roundups, he has been driven almost from the face of the earth, and has had to split up into small bands, and live where forage is scarce. He has been pushed to environments where no horse should be able to endure, yet he has adapted to that environment and, with barely a fighting chance, has survived. His habitat is high in remote areas where other livestock does not run, and he comes down only when driven to by lack of feed and water. For this, he is pursued and captured.

In the past, the wild horse bands furnished virtually the only supply of animals for ranch use, and even in recent years, many of the ribbon winners in stock horse contests have come from mustang bunches. They respond rapidly to good care, and although they do not become very large, they do become efficient, handsome, hardy all-around useful animals. They are alert and intelligent, besides being fast and strong. Their adaption to their rigorous environment has given them the ability to fend for themselves on the open range during bitterly cold winters and hot dry summers. They can and do buck hard when the occasion warrants it, but they make good cow ponies or saddle horses when treated with kindness. One of our own fine saddle horses is out of a mustang mare that was bred to a blooded stallion. Besides his beauty and good disposition, he has a rugged hardiness that none of our others have had.

In the case for the mustang, much has been said as to the benefits they bring to the ranges, and those subscribing to this belief are as strong as those who take the opposite view. This phase is discussed at length in the detailed presentation, and this report is not for the purpose of establishing their potential benefit or their potential detriment to the ranges. I, personally, prefer to believe they are indeed the benefit that many declare they are.

I have discussed at length, with a man who has done considerable work in range management and research, this matter of what to do with the mustangs. He has suggested a plan which was submitted in the original material, and which I outline here:

That the horses be placed under the strict ownership and control of the Government, with skilled custodians to periodically dispose of the inferior animals by shooting. They must know horses thoroughly and be excellent marksmen to insure humane handling and treatment of the horses. He feels that in time, a fine specimen of horse will be the result, proving to be an outstanding asset to the country. With ample feed and water, and lack of harassment, a mustang will respond remarkably fast in appearance and disposition. When the herds are built up into the fine animals they once were, before their constant harassment and pursuit by the airplanes, upon application to the agency responsible for them, individuals may acquire them for their own use—periodically the custodians to round up a number of the horses from which the applicants may make their selections. He does not feel that they should be hunted by any individual whatsoever, except under strict supervision of the professional custodians of the herds, and they should be at all times under the complete control of the Government agency responsible for them. It is his opinion, also, that it will be a long time before their numbers will increase to the point where they will present any threat to the ranges. He submits this also, for inclusion in protective legislation for the mustangs, and I heartily endorse it: That the same regulations, protection and control be made to apply to the burros of the western ranges, and that any law include horses, mares, colts, and burros. The little burros, offspring of the early-day prospectors' faithful animals which were turned out into the hills when they were no longer of use, have been the victims of widespread abuse and wanton destruction in many of the Western States in recent years. A fine editorial has appeared in the July 1959 issue of Western Horseman magazine, and a plan along the lines suggested above has been offered therein.

Because they cannot be successfully kept in enclosed areas, they will naturally roam, and it is possible that there will be individuals who, for purely selfish, financial, or sadistic reasons, will take matters into their own hands and in their own way dispose of any trespasser on the ranges. We can only hope that those individuals will be in the minority, and in any event, the abolishing of the comparatively easy means of airplane and

other mechanized methods now employed will cut down the percentage against them.

To delude ourselves with the thought that all of this is past history and won't happen again, I have this to say: Even in the past few months when mustang fever has been raging at high temperatures throughout the United States, and in the face of strong public opinion, there have been innumerable roundups—possibly in an endeavor to get all of the animals possible before the practice is stopped. Another bloody chapter was written on February 28, 1959, a few miles from Reno, Nev. Twenty-five or more of the animals were rounded up by a professional horse hunter from Wyoming, together with some local operators, in a remote public range area upon which the grazing rights belong to a prominent cattle rancher. A witness to the handling of the animals reported that the cruelty was extreme. The operators were apprehended, but the sheriff released them because there had been a permit granted by the Bureau of Land Management to the cattle rancher to have the horses rounded up in the area, and the roundup took place on public lands. The horses were kept for several days in a corral for shipment out of Reno, and one of the men from the sheriff's office, and some individual witnesses, took pictures of them for me. These pictures are included in "Mustang Presentation: Part II," handed to you today, and some of the injuries to the animals are plainly visible. No treatment for the injuries was administered. Left in the area of approximately 200 square miles where the roundup occurred, were a stallion, a colt and the carcass of a horse that did not survive the rounding up process. Three other roundups were averted by individual intervention.

A report was recently made to me by a Sparks, Nev., woman, a Mrs. Clark, who, with her husband, frequently goes into an area in northeastern Nevada where fine herds of deer have ranged the year round, and where forage is abundant. There were wild horse bands in that area, too. These are her words regarding a trip into that region in the fall of 1957: "We found the deer so frightened that they took down into the bottom of draws and ran like scared rabbits. Fawns were very scarce and we watched for hours in the brush where they hid. Even a hawk flying over frightened them into panic. We sighted about six head of wild horses which were all we could find in the area, and watched them at the watering hole. They would hardly take long enough to drink, but would just get a few sips, then run." Mr. and Mrs. Clark went into nearby Montello to see if anyone knew the cause of these conditions, so different from previous visits there, and were informed that extensive horse planing had been going on. "We think the very noticeable lack of fawns is due to the does having been run and losing their young, or possibly the terrified scattering of the herds caused abandonment of the very young and they did not survive," she added.

Nevada's laws prohibit the pursuit, for the purposes of capturing or killing, of any wild, unbranded horse, mare, colt, or burro, by means of airborne or motorized vehicles. The prohibition does not apply to Federal lands for the simple reason that had we not agreed to that amendment to our measure, as originally introduced, the bill would likely not have come out of committee. We knew at the time that it would not accomplish that for which we were striving, but passage of State legislation would be a foot in the door, and we agreed, with the full intent of later taking the matter through channels that would prohibit the planing on public lands, as we are now doing.

There are maps available from which one can easily determine the boundaries of the public lands, but there are no such clear black and white delineations either in the air or on the ground. Conflicts arise as to whether planing has been done on State or privately owned lands where it is prohibited, or on Federal lands where it is not. The law also requires that the participants in roundups obtain the permission of the board of county commissioners in the county in which the roundup is to take place, including public rangelands. Commissioners, being elected officials, are dependent for the continuation of their political careers upon the votes of their constituents. It could easily happen that in counties where the interests of the greater part of the voters are best served by mustangs annihilation, the issuing of such permits would not meet with sufficient opposition as to warrant their being withheld. County lines, clearly shown upon a map, are not as clearly established in the field.

In addition to Storey County, I know at present of another particular section in Nevada where the county commissioners have so far held the line, in spite of being besieged by as many as a dozen applicants at a time for a permit to capture horses. We watch this situation closely, for in this area, safely remote unless hunted by airplanes which would not be prohibited because they are public lands, are some bands of wild horses that have, for many years, enjoyed the protection of the cattle interests who have held the grazing rights, and hunting of the horses has not been permitted by these interests. Following a change of ownership, no such vigilant watch is kept for marauders, and opportunists in the area are eager to run those wild horses. Should this be accomplished, and the animals indiscriminately disposed of, a very wonderful chapter in the history of the West will come to an end, and nothing can ever restore it. When the mechanized age came into its own and Wells Fargo discontinued the use of horses to draw its stagecoaches and freight wagons, it was in this area that their fine animals were turned loose, and the horses in those bands today are descendants of the Wells Fargo horses. Yet their fate is dependent upon so fragile a thread as the outcome of an election which could easily put into office a county commissioner who might not be disposed in their favor.

It is not fair to these officials to place upon them the burden of decision between State and Federal jurisdiction—or local "for" or "against" factions. There aren't enough of the horses left to warrant open season on them and there is no margin of safety in the situation as it is.

The Department of the Interior has no objection to the enactment of H.R. 2725 which is proposed "to amend chapter 3 of title 18, United States Code, so as to prohibit the use of aircraft or motor vehicles to hunt certain wild horses or burros on land belonging to the United States, and for other purposes; provided the following amendment is added:

"*Provided*, That the aforesaid activities may be permitted, for purposes of carrying out Federal responsibilities, by the particular Federal land management agency responsible for management of the said public land or ranges, or such Federal agency may authorize such activities in accordance with the terms and conditions of permits issued by such agency."

Should this amendment be added to the proposed legislation, not only would the Federal land agencies be carrying on their monopolistic control of the public lands under the authority of the Taylor Grazing Act, but they would be strengthened in their position by an act of Congress, and we can not let this happen.

The Department is on record as opposing any form of cruelty, poisoning or indiscriminate slaughter of the animals and advances the opinion that the current problem arises from so-called bootleg horse gathering operations. In the first place, the legislation is not aimed solely at the bootleg operations which have played a large part in this problem. Its purpose is to stop the hunting and capture of the animals by airplane and trucks by anyone, for the numbers of the animals are so small that no longer is there any reason for the mass capture of them as has been done in the past. By removing this comparatively easy method of capture, we feel it will no longer be worth the while of the professional hunters to operate, either for themselves, for individual ranchers, or for the Government, for it has been the practice of the land management agencies which may not be equipped to carry on the operations within their own personnel to turn over the actual rounding up to private professional operators.

It may be possible for humane rounding up of the horses to be accomplished by plane, as the report states, but there has been no evidence of it in the roundups to our knowledge. Certainly the appearance of the animals after their so-called humane capture would indicate otherwise. As for proper supervision to which the Department report refers, when is it done, and by whom? We submit, for your consideration, our feelings on this matter, contained in a letter to Mr. E. J. Palmer, Supervisor, U.S. Bureau of Land Management, Reno, Nev., under date of April 28, 1959:

"My colleagues do not believe that humane herding of the horses and burros can be done by aircraft or mechanized vehicles. We also feel that if they are in such rugged terrain as to preclude the possibility of horseback roundups, then surely that terrain is not usable as range for cattle and sheep. Also, running of mares with young colts, or mares in foal, no matter how carefully it is done, can result in injury or death to the animals, and from a plane is is impossible to cut out particular ones in rounding up a band." The foregoing was in response to a request by the local district supervisor to consider the addition of an amendment similar to the one proposed by the Department of the Interior.

In its report, the Department is concerned that because of the vast areas of rugged public domain land, the enactment of our legislation might leave room for doubt as to the intent of a Federal agency in employing aircraft for other necessary functions. From our standpoint, the same rugged public domain land, sparsely settled and tremendously vast, precludes the possibility of proper policing and oftentimes a roundup is not known until the horses are captured. H.R. 2725 does not prohibit the use of airplanes or airborne equipment for spotting or for any of the other uses to which they are put by the Department that are stated in the report, but specifically refers to horses, mares, colts, or burros, and the rounding up of them by airplane or mechanized vehicles for the purpose of capturing or killing. It is elementary to assume that a plane flying low, with a band of horses running closely grouped on the ground ahead of it, is not scouting fires, patrolling the range, establishing trespass, etc. It is the nature of the wild horses to seek refuge from these planes, and they will scatter in many directions, or attempt to hide in the sparse foliage that dots the Nevada hills. It is because of this characteristic that a shotgun is usually carried in the plane and frequently used to flush the horses from hiding and to keep them bunched and running in the right direction. It is commendable that humane treatment of animals is consistently required by the Bureau of Land Management, and it is right they should require it. There again, because of the vastness of the operation, and the great distance from the source of the requirements, inhumane treatment more often results than not. Remember, these

men are operating on the basis of the more horses, the more money from the processors.

It is the opinion of the Department of the Interior, as expressed in its report to this committee, that there is little danger that either the wild horses or burros will be exterminated. We take exception to the statement on the grounds that not only has the actual removal of the horses from the ranges through capture and slaughter caused extensive reductions in their numbers, but those managing to elude their pursuers have been driven into ever more remote areas where feed and water is almost nonexistant resulting in the drastic weakening of the strain and the failure of many to survive in the barren areas. It would not take long, under these conditions, for the animals to become extinct through starvation and exposure to the extremely rigorous conditions under which they are obliged to exist.

The administration of the public lands is a big job, and it is not our desire to make it a more difficult one. The ranges are in bad shape, but I do not accept any inference that their condition in recent years is due to the so-called depredations of the wild ones. It is my observation and opinion that these conditions have been brought about by the misuse and abuse of these public lands by those owners of domestic stock who have consistently overgrazed the sparse forage, and by the agencies whose responsibility it is to prevent this overgrazing, but which have somehow been unable to do so.

I can appreciate the Department's anxiety, but I wish to point out that only controls are required now, and those in a few specific locations. The Department has never tried carrying these controls out without the use of planes—so how can it be so sure there is no other way than through the use of them. Prior operations were for range clearance, and that seems to have been accomplished insofar as the mustangs are concerned. The past record of atrocities and brutalities is not conducive to any favorable consideration of methods to continue along the same lines. The fact remains that in this area, at least, Government-authorized operations have been carried on by the same outside personnel that has carried on roundups for individual exploitation, and the same brutal pattern of operation has been followed. We cannot let this continue, and nothing has been offered to guarantee that it would be changed. For the record, our objections to any amendment to H.R. 2725 along the lines suggested in the report are emphatically registered.

Respectfully submitted.

(Mrs.) VELMA B. JOHNSTON.

Statement by the Honorable John C. Dreier

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement by the Honorable John C. Dreier, U.S. representative at the meeting of the Council of the Organization of American States, on the Dominican request for invocation of the Rio Treaty on July 10, 1959, as released by the State Department on that date.

STATEMENT BY THE HONORABLE JOHN C. DREIER, U.S. REPRESENTATIVE, AT THE MEETING OF THE COUNCIL OF THE ORGANIZATION OF AMERICAN STATES, ON THE DOMINICAN REQUEST FOR INVOCATION OF THE RIO TREATY JULY 10, 1959

Mr. Chairman, the Council is now for the third time in the last 3 months considering a situation involving a threat to the peace in the Caribbean area.

Last April, the Council was asked by the Government of Panama to invoke the Rio Treaty and send an investigating committee to that country because of an invasion of its territory by an armed force, consisting largely of Cubans, which had come from Cuba with the evident purpose of overthrowing the Government of Panama. The Government of Cuba took immediate measures to cooperate with the Government of Panama in this matter. Prompt action by the OAS was instrumental in resolving this problem in accordance with inter-American principles.

It was the hope of many members of the Council, including the representative of the United States, that the effective opposition of the Organization of American States to armed intervention of this kind would serve to discourage further efforts of that sort.

However, forces apparently exist in the Caribbean area that are determined to promote and assist revolutionary activities in other countries in violation of the principles of the Havana Convention in 1928 on the Duties and Rights of States in the Event of Civil Strife. On June 3, the Government of Nicaragua reported that its territory had been invaded by armed forces coming from another country with the purpose of overthrowing the Government of Nicaragua and that further invasions were threatened. The Nicaraguan Government requested the invocation of the Rio Treaty with a view to mainaining peace and security in the area. Again the Council responded favorably and took the steps which in the light of circumstances, seemed wise in order to carry out its responsibility for the maintenance of peace and security.

The case of Nicaragua is still before the Council acting provisionally as Organ of Consultation. The report of the Information Committee established by the Council indicates that in addition to the first two attacks on Nicaragua, at least 3 additional armed expeditions were organized with a view to entering that country. Recent information concerns a force of men which flew to Honduras a short time ago for the purpose of invading Nicaragua by its northern frontier.

At its last two meetings on July 2 and 6, the Council received further evidence that the situation in the Caribbean far from being improved as a result of the action of the Organization of American States with respect to the cases of Panama and Nicaragua had deteriorated further. The representative of the Dominican Republic charged that two invasions of his country were organized, trained, and equipped in territory of the Republic of Cuba from which they departed with the evident purpose of starting and promoting civil war in the Dominican Republic. The Dominican representative has also charged that large contingents are now being trained in Cuba for the purpose of initiating new invasions. This Council has received most categorical assurances from the Minister of State of Cuba that the charges contained in the Dominican note are without foundation.

At the same time, the representative of Cuba has expressed the view that it is his country which is suffering a threat of attack from the Dominican Republic rather than vice versa, although the Government of Cuba has not requested any assistance from the Organization of American States. The representative of Venezuela, likewise rejecting the charges made by the Dominican Republic, has also expressed his concern over the propaganda attacks from Dominican sources against the Government of Venezuela, its president, and Venezuela institutions.

Finally, Mr. Chairman, the Government of Haiti has informed the Council of its great concern over the growing tension in the Caribbean area which it feels constitutes a serious danger to its peace and tranquillity.

It became evident to my government some time ago, and particularly in the development of the Nicaraguan case, that the Organization of American States was faced with a very large and widespread problem with regard to the maintenance of peace and security in the Caribbean area. In many countries of the area, there are exiles seeking to overthrow the governments of their own countries. They have sought, and in many cases, have obtained, support from elements in various other countries.

In many cases, these exiles are motivated by high ideals of democracy and justice. Many of them are concerned only with what they consider to be the interests of their own countries. However, it is equally clear that some of those responsible for these revolutionary movements organized in foreign countries have either knowingly or unknowingly become associated with political elements whose interests are far removed from those of any government represented around this table. To put it in simple terms, Communists have attempted, and with some success, to infiltrate those revolutionary movements in accordance with their well-established policy of taking advantage of any sort of disturbance and unrest to promote their own sinister designs.

Under these circumstances, it has seemed to my Government that the consideration of individual controversies or conflicts between one government and another—or, as has been the case, between one government and unnamed attackers—constitutes a futile approach to the solution of a serious problem. My Government has therefore for some time considered the desirability of suggesting a meeting of Foreign Ministers under the Charter of the OAS to consider the whole problem of the current tensions of the Caribbean and how the American governments, cooperating through the Organization of American States, may restore peace and security, confidence and friendly relations among the sister republics of this important area. The United States has concluded that the time has come to proceed with an overall study of this kind. We have, therefore, been happy to join with the Governments of Brazil, Chile and Peru in proposing at this time that a Meeting of Consultation of Minister of Foreign Affairs be called under the Charter.

The purpose of the meeting of Foreign Ministers, as my Government sees it, would be to examine the present situation of the Caribbean on a broad front. The objective would not be to air or judge charges by one country against another. The task before the Foreign Ministers would rather be to review the reports and statements which have been made available to the governments and to the Organization of American States on the general subject of tensions in this area, to examine the cause thereof, and to suggest courses of action that will revitalize the principles on which the Organization of American States is based, principles which we know are essential to any system of cooperative international relations in this hemisphere.

It is evident, Mr. Chairman, that basic principles of the Organization of American States are indeed jeopardized by the present situation. One of these principles is that of nonintervention in the internal affairs of other states. The active participation of foreign elements in efforts to over-

throw the governments of states in this area constitutes a definite threat to that principle. If it is permitted to be violated in the present situation, it will be violated increasingly in the future. The foundation of our structure will then quickly crumble.

Another principle affected here is that of collective security as set forth in the clear terms of the Rio Treaty and the Charter of the Organization. The OAS has developed a system without parallel elsewhere in the world for guaranteeing the security of states against aggression. This system applies equally to all members of the Organization. My Government believes that the inter-American system of peace and security, which is flexible enough and broad enough to meet virtually any type of situation that affects the security of a member state and the peace of the continent, must at all times be supported and made effective if our inter-American relationship is to endure.

Finally, Mr. Chairman, there is a matter of deep principle affecting the Caribbean situation which has to do with the desire of people of this hemisphere for an increasingly effective exercise of representative democracy. My Government believes deeply that political democracy is the most desirable form of government for people who wish to live in freedom and dignity. We fully share the desires of those people who wish to see the exercise of democracy made more effective.

The development of democratic institutions is no simple matter, however. Revolutions against authoritarian rule do not necessarily result in perfect democracy. The achievement of effective democracy depends upon many factors of cultural, historical, economic nature which are brought together in the political complex of any given state. Above all, democracy is a benefit that every people must win for itself.

Moreover, my Government is convinced that the maintenance of international peace and security under a system of justice and law is essential to the growth of democracy in this hemisphere. We cannot conceive of democracy flourishing in an area where states are subjected to constant tension requiring the unproductive diversion of human and economic resources to military ends. It therefore seems to us that democratic progress which all of us seek requires among other factors a strict compliance with those very principles of nonintervention and collective security to which I have referred.

There are indeed other ways in which the Organization of American States can and should encourage political and democratic development. My Government believes that this problem should be frankly and squarely faced by the Organization of American States at the proposed meeting of Foreign Ministers on the Caribbean problem. We are prepared to discuss any proposals which the other member states of the Organization believe to be worthy of consideration within the principles and procedures of the Charter of the Organization.

Mr. Chairman, in view of the foregoing considerations, it is clear that my Government favors at this time the prompt approval of a resolution calling for a meeting of Foreign Ministers under the Charter of the OAS to consider in broad terms, and in the light of inter-American principles, the present serious situation in the entire Caribbean area. My delegation recommends, therefore, that the resolution that has been presented by the Governments of Brazil, Chile, Peru, and the United States be approved. The United States firmly believes that the holding of a meeting of Foreign Ministers at this stage offers the most effective and constructive approach to the serious problem of the Caribbean and the most desirable way of revitalizing and strengthening the principles of the Organization of American States.

Who Wants Farm Subsidies?

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 20, 1959

Mr. HOSMER. Mr. Speaker, Cotton Comments is a little bulletin published regularly by Robert Moore & Co. and edited by William C. Hope. The July 17 issue was dedicated to the matter of farm subsidies. It posed a basic question as follows:

WHO WANTS HIGH PRICE SUPPORTS?

With the Government sinking deeper and deeper into debt through its support of farm commodities; with the CCC surpluses expected to reach the astronomical figure of $13 billion through the influx of price-supported commodities from 1959 crops, and with Congress marking time in writing practical farm legislation, the above question elicits deep thinking on the part of every U.S. taxpayer.

After having made an exhaustive study of the subject, we believe the question can be answered as follows: he consumer does not want them because he has, at last, become alerted—through an effective editorial crusade that is spreading throughout the Nation—that these supports promote inflation and are primarily responsible for his paying more for farm produce in the marketplace, while, at the same time, being taxed heavily in order that farmers can be subsidized. During the past, astute and power-seeking politicians have led the consumer to believe that his food and clothing costs have skyrocketed due to unscrupulous middlemen. Such, however, is not the whole case because there is a built-in high first cost stemming from the effect of high price supports; this is before a middleman ever touches the commodities. This artificial first cost for food and fiber items robs consumers of their hard-earned dollars under the guise that it is necessary for a dynamic farm economy. Food and clothing take a big chunk out of every family's budget and any increase in these items means a lower standard of living for the average family, depriving it of many pleasures and comforts that it could otherwise have.

The administration does not want them. Ever since President Eisenhower took over the reins of Government in 1952, both he and Secretary Benson, who took office at the same time, have consistently fought against high support laws but they have been repeatedly rebuffed by Congress, which has followed the lead of a few so-called farm experts in its membership who have been interested primarily in perpetuating themselves in their political positions. The good men in Congress have complacently voted laws recommended by these so-called experts without ascertaining for themselves the actual damage these laws have been inflicting upon our citizenry and the Government's fiscal structure. Furthermore our voting populace are also at fault in that they have not elected men to Congress that are interested in a continuation of the free enterprise system that is the precious heritage of our forebears.

Secretary Benson has stated: "Edmund Burke once said, 'All that is necessary for the forces of evil to win in the world is for enough good men to do nothing.' Make no mistake, the pillars of our economic system are being threatened today. They are being threatened by a strange and unlikely coalition of do-gooders, self-servers and subversives. The kind of thinking we must embrace is the kind which believes in the free enterprise system, which values freedom, which accepts responsibility, which believes in the individual, and which resists the steady encroachment of an all-powerful Central Government. We have appled that kind of thinking to agriculture."

Secretary Benson has repeatedly called for a program that would take Government out of agriculture and has steadfastly promulgated and stood by the following, known as his four freedoms for farmers: "(1) More freedom to plant—so that farms can be run more efficiently; (2) more freedom to market—so that farm incomes can be increased; (3) more freedom to meet competition—so his four freedoms for farmers: "(1) more freedom from Government interference—so that farmers can again be independent and self-reliant." He has stressed the fact that farmers want Government at their side, not on their backs. The biggest threat we have today to our private marketing system is Government itself. We are permitting Government to become the dominant force in our economy when, in reality, it should play a secondary role. The free marketing system will be in danger if Government price manipulation continues to grow. Through its pricing and sales programs, Government can shrink or expand consumption. It can squeeze consumers out of the market or bring new consumers in."

President Eisenhower has given his unqualified approval to Secretary Benson's every word and action during their entire tenure of office and is reported to have said: "Ezra Benson will go down in history as one of the best Secretaries of Agriculture the Nation has ever had." There is no doubt of the fact that we would not presently be confronted with unmanageable surpluses if more people, both in and out of Congress, had heeded his advice when he took office back in 1952.

The farmer does not want them. A recent survey by the Farm Journal indicated that 78 percent of the farmers who answered believe that present farm price supports are too high, while some 55 percent said they thought the Federal Government should get out of the agriculture business entirely. Highlighting the fact that farmers are disgusted with governmental controls is furnished by the national cotton referendum held in December 1958 for the purpose of establishing quotas on the 1959 cotton crop. Out of 955,000 cottongrowers eligible to vote, only 275,000—or a mere 29 percent—exercised their franchise. Of those who did vote, 92 percent approved quotas, but this 92 percent represented only 26 percent of the total of 955,000 eligible voters. The fact that 680,000 eligible voters did not bother to vote at all readily indicates that a great majority of cotton farmers are lackadaisical about going to the polls, like so many other U.S. citizens. Chances are they are disgruntled with Government controls but do nothing positive to throw off these shackles, while allowing about one-fourth of their number to set the pattern for their participation under our price-control laws. Furthermore, could it be that the one-fourth who did vote in favor of quotas were herded to the polls by selfish interests? When the price-support program got underway in earnest back in 1938, there was a total of 2.3 million cotton farmers who were eligible to vote, with 66 percent voting and 61 percent registering a vote in favor of quotas.

The taxpayers do not want them. They are underwriting our agricultural program to the tune of about $7 billion annually, the third highest item in our Federal budget, being exceeded only by defense costs and interest on our sky-high national debt. However, as mentioned above, our taxpayers are just now becoming alerted to this vicious taxation by an alert and crusading national press.

The question is: Who, then, wants high-price supports? Is it not high income that is wanted?

International Lending Agencies

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following article from Banking magazine will be of interest to the Congress and the country.

INTERNATIONAL LENDING AGENCIES—OUT-OF-POCKET AND OUT-OF-HAND?

(By Herbert Bratter)

(Everybody likes a bargain. The "little guy" often feels he has a size-given right to get the better of a bargain with a "big guy"—a process that sooner or later cuts the "big guy" down to "little guy" size if he lets it gets out of hand. This situation rears its head in the international bank and lending agency situation, where the "little guy" borrower shops the market of "big guy" lending agencies—and comes home with hard cash in soft terms. What this means in terms of U.S. dollars follows.)

If you happen to be a Filipino operating a small industrial establishment and needing some equipment, materials, or services for which you have been unable to save the capital, you can get the money from Uncle Sam in the form of a dollar loan on easy terms, repayable in pesos over the years. The interest rate will not only be far below prevailing Philippine rates, but considerably less than the U.S. Treasury itself has to pay for long-term money.

If you are a Chinese in the shipbuilding business in Taiwan, you may borrow several million dollars from American banks, with the U.S. Government guaranteeing the loan, for a fee of 2 percent a year.

If you are an Iranian official with a road project in mind, a partner in a Guatemalan kenaf bag factory, a Dutchman wishing to emigrate from overcrowded Holland to spacious Australia, a Somalian engaged in fishing, the manager of a Ceylonese suburban railway, the mayor of Karachi wanting to install water and sewage facilities, Congress has made it possible for you to get the money you want from the Development Loan Fund. You will get the loan in dollars which you are free to spend anywhere in the free world for equipment or services; and you may pay it off gradually in your own currency, however soft it may be.

This new U.S. Government bank, the Development Loan Fund, provided for in the Mutual Security Act of 1957, began operations in 1958 and has already managed to get rid of some $700 million of U.S. taxpayers' money. Since the launching of this Washington financial bargain basement through January this year the DLF, according to one of its press releases, "had formally been presented with loan proposals totaling over $2.8 billion." This figure, the release omitted to mention, was achieved with the help of the active solicitation of U.S. official missions abroad, inspired by dispatches from the State Department on DLF's behalf.

While Congress ponders the DLF's request for another $700 million installment for dissemination in the vast underdeveloped nations of the non-Communist world, including Yugoslavia, which is considered to be "outside the bloc," the staff of the National Advisory Council under the direction of Secretary of the Treasury Anderson is busily preparing a brief to justify congressional investment in yet another billion dollar or bigger development bank, the International Development Association (the IDA). At the same time, in keeping with an administration promise to the Latin Americans, the President already has submitted for congressional approval the project for a billion-dollar (initially) mixed hard and soft currency institution to be called the Inter-American Bank.

The IDA, which has the blessing not only of the administration but also of Eugene Black, president of the World Bank, would be a subsidiary of that international lending agency. It is to be created by the nations which are members of the $10-billion World Bank and, as its name indicates, will operate to help the underdeveloped countries among its membership. The project gets its steam from the theory that, if IDA is not created, pressure in U.N. will be irresistible to set up the long-clamored-for SUNFED, the Special U.N. Fund for Economic Development. SUNFED, being U.N.-created, would include the U.S.S.R. in its board of directors. Mr. Black's reasoning seems to be that, if there is going to be some such body anyway, it will be better that it be subsidiary of the World Bank—as is the International Finance Corporation (IFC)—than to have a direct offspring of the U.N.

INTER-AMERICAN BANK

An Inter-American Development Bank has been proposed intermittently since 1889, and is evidently viewed by Latin Americans as another soft source of hard capital. Provisions for replenishment of the latter will be contained in the IADB's charter. It, too, will have a built-in bargain basement, called Fund for Special Operations, loans from which may be partially or wholly repayable in the borrower's local currency. Forty-five percent of the IADB's initial $1 billion is to be put up by Uncle Sam. But the Latin American countries are saying that they, of course, insist that the new IADB's management and operations not be subject to U.S. control.

We already have, of course, the 25-year-old Export-Import Bank, now a $7 billion bank, all of whose loans carry the going interest rate and all of which are repayable in dollars. Its capital was increased by $2 billion in 1958. Even though it was created to operate in areas and on projects in which private bank credit feared to tread, the EIB's repayment record has been excellent. Being a U.S. Government institution, it is bound to take political considerations into account in its operations; so that this institution, now under the presidency of Sam Waugh, formerly a commercial banker, endeavors to make loans which are not only self-sustaining but which will add to the overall dollar-earning capacity of its borrowers.

The operations of the World Bank—the International Bank for Reconstruction and Development—are in general similar in this respect to those of the Eximbank. The IBRD's loans are made in hard currencies and are expected to be repaid in the same or equivalent coin. And still they are designed to strengthen the economies of the borrowers. Unlike the Eximbank, much of the IBRD's resources for lending are obtained by the flotation of bond issues. IBRD may spend the proceeds of its loans wherever it seems best, whereas the Eximbank loans are in effect tied for the benefit of U.S. exports of goods and services. Eximbank always has been much more directly interested in exports than in imports, although it must be recognized that, if Eximbank's loans actually do serve to augment ultimately the dollar-earning capacity of the borrowers, ipso facto U.S. imports of merchandise ultimately are increased due to the Bank's activity.

The tendency of Eximbank to tie its loans to exports of U.S. goods is evident in the bank's press releases and in its testimony before Congress. This relationship between its loans and U.S. exports is something Congressmen can readily see and appreciate. When the Congress in its wisdom also created the DLF and agreed to U.S. membership in the World Bank and International Monetary Fund—the Bretton Woods institutions which are now in process of 100 percent expansion with Congressional assent—it evidenced less concern with their immediate effect on U.S. exports. The motivating force at the time of Bretton Woods was less selfish and more in the spirit of helping the world recover from the war and develop. Even so, it may be pointed out that dollars lent by such a bank as the DLF while initially spent, let us say, in Europe or Japan, ultimately will be returned by some recipient to this country either for the purchase of goods and services, for gold, or for investment here. At some time these dollars come home to roost, even though the DLF loan is repaid in local currency.

EXIMBANK'S POTENTIAL COMPETITORS

This economic fact, however, can be of small consolation to the Eximbank as it sees the current multiplication of U.S. and international banking projects. The existing DLF and the projected IADB and IDA, mentioned above, loom as competitors of the Eximbank. Potential borrowers from these new institutions will have the opportunity to play off one lender against the others, as indeed has happened in the past in cases where applicants approached both the IBRD and the Eximbank. More recently it has been happening in the case of the DLF. Borrowers who ordinarily would bring their loan applications to Eximbank at 5¼ percent (and now 6 percent) have been getting money at 3½ percent from DLF with no "strings" attached. All DLF loan applications must by law be first tendered to Eximbank. Only when turned down by EIB, for reasons it considers good and sufficient, may the DLF make the loan, regardless of those reasons.

Thus, when Yugoslavia wanted a $22,500,000 U.S. loan to equip a fertilizer plant with machinery purchased in Europe, Eximbank by reason of the place of purchase, turned down the application, but DLF lent the dollars. When Eximbank turned down Spain's request for a $22,600,000 railway and irrigation loan on the grounds that Spain's dollar-repaying capacity was exhausted, the applicant, unperturbed, got the money down the street at DLF, evidently without the necessity of being able to repay in dollars.

Iran, already the possessor of $53 million EIB line of credit, sought another $279 million in Washington earlier this year, for roads, water and power, street paving, and slaughterhouses. It contacted the EIB, the DLF, and the IBRD. In the end it favored the DLF with the borrowing of $47,500,000 at 3½ percent interest—instead of the 5 percent and 5½ percent it already was paying on its earlier EIB loans. With these low-cost DLF millions, Iran is now buying low-cost equipment outside the United States.

Several applications of other countries to the United States have in effect stipulated that what is wanted is financial help from DLF, not EIB, because of: (a) the lower interest rate; (b) the longer terms; (c) the possibility of servicing the debt in local currencies; and (d) the freedom to spend the borrowed dollars anywhere in the world.

LOANS ABROAD, GIVEAWAYS

The road traveled by American Government foreign aid since the wartime days of lend lease and postwar relief, rehabilitation and reconstruction has led to the DLF of today and brought us to the threshold of such new ventures as the IADB and IDA. Loans of Government money abroad, repayable in what someone has called "soap-wrapper money, are a thinly disguised form of giveaway. Even the loans of the Eximbank and World Bank repayable in dollars have been motivated primarily by a desire to aid the world. The economic problem posed by their repayment promises to be substantial, even with alleviation of the debt burden by the dollar's creeping shrinkage. If the United States should materially diminish its annual additions to the world pool of dollars in the form of foreign aid because of increasing American concern over imports and the declining competitive power of U.S. industry, our official banks may show signs of placing some limit to the amount of sound loans they can extend abroad.

Loss of Treasury Gold Since Early 1958

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Walter E. Spahr. Although he is executive vice president of the Economists' National Committee on Monetary Policy the views expressed are his own and do not commit any of the other members of that committee. Mr. Spahr is also professor emeritus of economics of New York University. The article appeared in the July-August 1959 issue of American Opinion.

LOSS OF TREASURY GOLD SINCE EARLY 1958

(By Walter E. Spahr)

Withdrawals since February 19, 1958: Foreign withdrawals of Treasury gold, which have been attracting considerable attention, began during the week following February 19, 1958. On that date Treasury gold stood at $22,785 million. For the week ending December 31, 1958, the Treasury's gold was down to $20,526 million, a decline of $2,259 million in 45 weeks. For the week ending May 13, 1959, the Treasury's stock was $20,251 million, down $2,534 million during the 64 weeks since February 19, 1958.

No net exportation of gold; an increase in earmarking: There has not been any net exportation of gold during this period; each month February 1958–March 1959 (latest data available) has shown a net importation of gold—$234,600,000 for that period.

Gold earmarked for foreign and international accounts increased $2,594,300,000, February 1958, to March 1959, inclusive, standing at $8,664,300,000 on March 31, 1959—an alltime high level. Gold held under earmark for foreign account (at the Federal Reserve Bank of New York) is not included in the gold stock of the United States. Earmarked gold can arise either from withdrawals of Treasury stock by foreign central banks and governments or by certain international financial institutions, such as the International Monetary Fund; or from gold exportations to the United States with instructions that it go into the earmarked fund.

Comparison with past withdrawals: The withdrawal of $2,534 million, during the 64 weeks since February 19, 1958, amounts to approximately 11 percent of the $22,785 million of total gold stock for the week ending on that date. That is a relatively heavy percentage of withdrawal as compared with above average withdrawals in preceding years or periods. The withdrawal for the year 1958 ($2,259 million) was approximately 9.9 percent of Treasury stock for the week ending February 19, 1958, and approximately the same percentage if computed against total gold stock at the end of the year plus gold withdrawn. (Total gold stock is slightly larger than Treasury stock.) The preceding relatively heavy percentages of withdrawals (exports and earmarking), based upon total gold stock remaining at the end of the year plus gold withdrawn, were 7 in 1950; 6.7 in 1928; 6 in 1944; 5.5 in 1933. The average of the yearly withdrawals for the 36 years, 1922–57, was 1.3 percent. During 23 of these 36 years, there were additions to the Nation's (or Treasury) gold stock.

Ratios of Treasury gold stock to nongold money and deposits: The ratio of our Treasury gold stock to all our nongold money and bank deposits stood at 7.85 percent on March 25, 1959. This compares with 10.4 in January, 1953; 9.6 average for 1933, the first year we were off the gold standard; 8.6 average for the period 1915–32, a gold standard period following the creation of the Federal Reserve System, during which the range for the yearly averages was from 6.7 to 10.9 percent. The highest ratio was 24.6 in 1941.

Foreign short-term dollar claims on our gold: As of February 28, 1959, total foreign short-term dollar claims stood at $16,606 million, the peak in our history. Of these only official claims ($8,746 million) and those of international institutions ($1,541 million) are directly convertible into dollars—a total of $10,287 million as of February 28, 1959. Foreign gold withdrawals in 1958 amounted to 14.6 percent of the average monthly total foreign short-term dollar claims of that year ($15,520,330,000) or 12.3 percent of those claims at the end of the year plus gold withdrawals for the year.

Those foreign short-term dollar liabilities are potential claims on our Treasury gold stock of which only a relatively small percentage is in general ever exercised. For the 36 years, 1922–57, the average percentage of gold withdrawn amounted to 3.5 percent of foreign short-term dollar claims at the end of each year plus the gold withdrawals for the respective years. The range in yearly ratios of gold withdrawals to foreign short-term claims, so computed, for the years 1922–57, was from zero, which occurred in 23 of the 36 years to 37.1 percent in 1933. This 37.1 percent requires interpretation. In that year, foreign short-term dollar balances were at the lowest level for any of the years 1922–58—$892 million (end of year). That 37.1 percent withdrawal involved only 5.5 percent of our total gold stock for the same year. The withdrawal of gold in 1958 amounted to 12.3 percent of total foreign short-term dollar claims at the end of that year plus gold withdrawals for the year and involved 9.9 percent of our Treasury gold stock at the end of the year plus gold withdrawals for the year.

Thus we have 12.3 percent of claims exercised and 9.9 percent of gold stock withdrawn in 1958 as compared with an average of 3.5 percent of claims exercised and 1.3 percent of gold withdrawn during the period 1922–57.

The comparison involved is therefore unusually unfavorable to the year 1958 as compared with the period 1922–57. There are valid grounds for concern regarding, and for careful scrutiny of, these developments of 1958–59.

Surplus gold stock still available for withdrawal: For the week ending May 13, the Federal Reserve banks had a surplus above their legal reserve requirements of $8,560 million in gold certificate reserves. The U.S. Treasury, on May 12, had a free gold balance of $394,402,711, thus giving a surplus of gold available for foreign withdrawals equal to $8,954,402,711.

Since the Federal Reserve banks can, by paying tax penalties, go below their minimum reserve requirements of twenty-five percent if necessary, an even greater amount of gold could be paid out.

Of the total foreign official short-term claims of $10,287 million; as of February 28, 1959, which could be exercised, the principle of probability indicates that the prospects of a large percentage of such claims being exercised over a considerable period of time are relatively small unless our government persists in pursuing an inexcusable course of piling up additional foreign claims against our declining stock of gold. If we were to lose the highest percentage ever recorded, 1922–58, the 37.1 percent of total claims in 1933, and apply it to the exercisable claims of $10,287 million in February 1959, the additional amount to be demanded would be $3,816,477,000 to cover which we have a surplus of $8,954,402,711, and even more if the reserve requirements of the Federal Reserve banks are breached.

These facts do not mean that we could lose approximately $4 billion or $8 billion more of gold without experiencing serious consequences. Psychological reactions are important factors; and public reactions to a persistent and relatively heavy loss of gold are highly unpredictable. At some point in such withdrawals confidence in the future value of the dollar could be seriously impaired and the dollar could suffer a heavy discount in foreign exchange because of the expectation that the Federal Reserve banks and Treasury would in due course reach the end of their capacity to pay out gold at the standard rate. Placing an embargo on further exportation of gold could be expected to precipitate a sharp discount in the value of our dollars in foreign exchange; and this depreciation could be expected to bring domestic depreciation at closely-related rates. Maintenance of the value of our dollar in foreign exchange requires unhesitating redemption at par even if this involves impairment of the minimum Federal Reserve bank gold certificate ratio. There is, therefore, genuine danger in pursuing with recklessness the course now being followed by our Government. Piling up further foreign claims against our gold stock is inexcusable, particularly since there is no valid defense for permitting redemption of foreign claims in gold while our people are denied the right of redemption.

Various attempts have been made to demonstrate that our gold supply is already inadequate or presently in danger. Such attempts are not in accord with facts. Much of this effort comes from those who are attempting to obtain another devaluation of our dollar, and a common device employed by those people is to offset all foreign short-term dollar claims aaginst our gold stock and to treat potential claims as though they would prove to be actual claims. Such a procedure cannot be defended. If that procedure were applied to insurance companies or banks, for example, it could be demonstrated that all of them are in fact, bankrupt. The principle of probability based upon the lessons of experience is the only principle that is permissable if one's purpose is not to mislead. Every object of value is supplied in the light of the principle of probability; and we are faced with the principle of probability in respect to the future exercise of potential claims against our Treasury's stock of gold.

Attempts to explain the Treasury's loss of gold: The attempts frequently made to state the reasons for the Treasury's loss of gold

rest largely upon conjecture or guessing rather than upon adequate evidence. Foreign central banks and governments and international institutions which have dollars and choose to convert some of them into gold may do so; and they are not required to explain their actions and, apparently, ordinarily do not do so.

The common allegation that the gold withdrawals of 1958–59 are evidence of a flight from the dollar needs to be offset against the fact that while some dollars have been converted into gold the foreign short-term dollar claims have been climbing to a record height.

A frequent explanation, that a major cause of the conversion of nongold dollars into gold is to be found in the relatively sharp drop in exports as against imports, fares no better in the light of mounting foreign short-term balances while Treasury gold is being drawn down.

The point is that the official foreign holders of dollars may choose to convert a portion of their dollars into earmarked gold for any number of reasons that seem satisfactory to them, without explanation to us and without any official data as to reasons being available to us. We may notice at some subsequent date that a central bank's reserves in gold have increased or we may trace some other manifestation of the use of the earmarked gold; but in general we do not have access to data that would explain why the Treasury's gold stock declined and the volume of gold earmarked for foreign account increased in approximately the same amount. Gold is the most marketable monetary commodity in international exchange; and it may be utilized for an endless number of reasons. When we cash a check at our bank we are not required to explain what we propose to do with the money received. Foreign official drafts against our gold stock fall in the same general category.

Piling up of more foreign dollar claims against our gold stock and dissipating the stock itself: Our Federal Government, in various ways, continues to pile up more foreign dollar claims against our declining gold stock and is making further commitments and proposals to dissipate still more of the Treasury's gold stock—for example, to subscribe another $344 million of gold to the International Monetary Fund and to provide it with $1.375 billion, and the International Bank for Reconstruction and Development with $3.175 billion, additional potential dollar claims against our Treasury's gold. Foreign aid and other programs are also providing still more dollar claims against our gold stock. To these are added such proposals as that to create an International Development Association to finance projects which, apparently, good banking procedures could not support.

The picture is one of the prodigal and reckless spender and dissipator who even though his ultimate reserve is falling rapidly, and the potential claims against that reserve are relatively heavy and rising, nevertheless continues his foolish practices with unrestrained abandon.
